TO OUR READERS.

It is the custom of periodical works to say something to their Readers at stated periods ; such as the close of the year, the end of their volumes, the commencement of a new series, or the completion of a century's publications. As we hardly expect, *personally*, to enjoy the last mentioned opportunity, we are prone to seize the occasion of our attaining to the fifth year of our age, most cordially to thank our friends for nourishing us into so stout and vigorous a constitution, as to leave little doubt upon our minds, that this centenarian delight will be experienced, *literarily*, by our heirs and successors. To them we shall bequeath it, in trust, to dilate upon the influence their labours have had in diffusing a taste for literature, and in promoting, with letters, the dearest interests of Society ; in encouraging all the beneficent arts of Peace and Civilization ; in propagating a knowledge of Science ; and in spreading over the mass of mankind a love for those pursuits which refine, and ennoble, and bless humanity. Ours is a humbler duty. Through the kindness of our public reception, we have established this *new species of literary production* in a degree of reputation which our most sanguine hopes could not have anticipated for any thing in the lowly form of a weekly journal, and invested it with a weight and importance which we can without presumption declare is felt through almost every ramification of the subjects embraced by our plan, at home and abroad. Convinced that nothing could have obtained for us this enviable distinction, but the strictest devotedness to truth in all we write, we have made truth the basis of our labours : and in *Truth*, the indispensable principles of *Independence* and *Impartiality* are comprehended. Thus, at the end of four years, no readers of the *Literary Gazette* can say that it ever deceived them, by its report or misrepresentation of any fact.

Our Index for 1820 (to be given in an early Number) will best exemplify our zeal and diligence in providing for the general gratification of our subscribers : our success attests that our exertions have not passed unnoticed nor unrewarded : and we shall only add, that as we grow in time our strength increases, and our sphere enlarges so much, that we can now with ease accomplish what was wont to be difficult or impossible. We therefore look forward to the possession of a power which may extend our utility and enhance our value : and as proof that we are not inclined to slacken in our career, we shall only observe, that within the last two months, Original Letters from Paris, the admired essays entitled *Wine and Walouts*, the first accounts of Discoveries in the Arctic and Antarctic Circles, the important Experiments on Galvanism, Magnetism, and Polarity, the only details of the Royal Society of Literature, and many other matters of great general interest, have appeared in our columns.

We trust we may take leave, without imputation of egotism. In this stirring commercial country, every dealer, to obtain even due notice, must describe his wares, and adopt means to make them known. Beyond this, we despise effort ; and resting on the character of the *Literary Gazette*, bid our Readers 'Farewell !'

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom; but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 154.

SATURDAY, JANUARY 1, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*Travels in Nubia; by the late John Lewis Burckhardt. Published by the Association for promoting the Discovery of the Interior of Africa. London. 1819. 4to. pp. 543.*

Burckhardt has excited an interest in the British public only inferior to poor Mungo Park; and has been so very often the subject of articles in the *Literary Gazette*, that our readers must be familiar with the leading features of his life and pursuits. This would induce us to dwell very briefly on these points at present, even were we not influenced by another consideration of more irresistible temporary importance. It is, and we have reason to anticipate will continue to be, a marked characteristic of our Review (from the superior access to the novelties in literature with which we are favoured,) to be at least the earliest reporter of the cases of new publications. In executing this task, we trust it will be readily allowed to us, that any defects in our first notice of a work, should be pardoned in consideration of the speed with which we bring it before the general tribunal, and show, if not immediately preceding, contemporaneously with its appearance, of what kind and nature it is. As this highly valuable volume, therefore, is only published to-day, we hope that extracts rather than an epitome will be accepted from us as efficient service.

The life and travels of Burckhardt occupy 92 pages; next follows a journey along the banks of the Nile, from Assouan to Mahass, to the frontiers of Dongola; then a description of a journey from upper Egypt through the deserts of Nubia to Berber and Souakin, and from thence to Djidda in Arabia; and the whole concludes with an appendix, containing an itinerary from the frontiers of Bornou, by Bahr el Ghazal, and Darfour, to Shendy—some notices of Souدان—vocabularies of the Borgho and Bornou languages—and a translation of the notices on Nubia in Mukrizi's History of Egypt: the whole illustrated with maps and other elucidations.

We shall make our selections from the travelling narratives, without much attention to order. Leaving Scras, in Nubian journey from Assouan, VOL. IV.

which took 35 days to perform on dromedaries, to Mahass and back again, the author says—

In two hours and a half we came to a plain on the top of the mountain, called Akabet el benat, the rocks of the girls. Here the Arabs who serve as guides through these mountains have devised a singular mode of extorting small presents from the traveller: they alight at certain spots in the Akabet el benat, and beg a present; if it is refused, they collect a heap of sand, and mould it into the form of a diminutive tomb, and then placing a stone at each of its extremities, they appraise the traveller that his tomb is made; meaning, that henceforward, there will be no security for him, in this rocky wilderness. Most persons pay a trifling contribution, rather than have their graves made before their eyes: there were, however, several tombs of this description dispersed over the plain. Being satisfied with my guide, I gave him one piastre, with which he was content. \* \* \*

*March 15th.* The eastern mountains again approach the river, and consist here, as at the second Cataract, of graminet. We followed the narrow shore in an easterly direction, and passed several of the villages of Mahass. The houses are constructed only of mats, made of palm-leaves, fastened to high poles, the extremities of which rise considerably above the roof. The countenances of the people are much less expressive of good nature than those of the Nubians; in colour they are perfectly black; their lips are like those of the Negro, but not the nose or cheek bones; numbers of the then go quite naked, and I even saw several grown up girls without any thing whatever round the middle. The Nubian language here has certainly superseded the Arabic, which none of the peasants understand.

In approaching the place where the Nubian governors were encamped, I found several of the villages deserted; their former inhabitants had preferred abandoning their cotton-fields, and their prospects of a harvest, to submitting to the oppressive conduct of the followers of the governors, whose horses and camels were now feeding amidst the barley, while the mats of the deserted houses had been carried off to the camp, to serve as fuel. After a ride of four hours, we reached the camp of Mohammed Kashef, opposite the Wady Tinareh, a cluster of hamlets, situated round the brick castle of that name, and the chief place in Mahass; here was the termination of my journey southwards. I had told my guide to be cautious in his answers to Mohammed Kashef, and if he should be questioned respecting me, to say that he had been ordered by Hassan Ka-

shaf to accompany me, but knew nothing of my business; which was really true; for I had never allowed him to see me taking notes during our journey.

The two brothers, the Kashefs Hosseyn and Mohammed, had come to Mahass, in order to besiege the castle of Tinareh, which had been seized by a rebel cousin of the King of Mahass. The latter being Hosseyn Kashef's father-in-law, the Kashef was bound to come to his aid, and had accordingly brought with him about sixty men, with whom I found him encamped, or rather hutted on the western side of the river, close under the walls of the castle, while his brother Mohammed had possession of the eastern bank, with an equal number of men. They had been here for several weeks, and had often summoned the castle, to no purpose, although the garrison consisted only of fifteen men. They at length conceived the idea of cutting off the water from the besieged, by placing close in shore, just below the castle, a vessel, which they had sent for from Argo, and on board of which they put some men armed with muskets, who were protected from the fire of the garrison by a thick awning formed of the trunks of date trees thrown across the deck; these men, by their fire, having effectually prevented the besieged from obtaining water from the river, the garrison was under the necessity of making proposals for peace; pardon, and safe conduct were promised them, and the castle was surrendered on the evening preceding my arrival.

When I reached the camp of Mohammed Kashef, he was not present, but occupied with his brother, in taking possession of the castle. His people crowded round me and my guide, desirous to know what business had brought me among them, and supposing that I belonged to the suite of the two Mamelouk Begg, of whose arrival at Derr they had already been apprized. Shortly afterwards Mohammed came over from the opposite bank with his suite, and I immediately went to salute him. Born of a Darfour slave, his features resembled those of the inhabitants of Souدان, but without any thing of that mildness which generally characterises the Negro countenance. On the contrary, his physiognomy indicated the worst disposition; he rolled his eyes at me like a madman; and, having drank copiously of palm-wine at the castle, he was so intoxicated that he could hardly keep on his legs. All his people now assembled in and around his open hut; the vanquished rebels likewise came, and two large goat skins of palm wine were brought in, which was served out to the company in small cups neatly made of calabashes; a few only spoke Arabic; the Kashef himself could scarcely make himself understood; but I clearly found that I was

the topic of conversation. The Kashaef, almost in a state of insensibility, had not yet asked me who I was, or what I came for. In the course of half an hour, the whole camp was drunk; mosquitos were then brought in, and a feu-de-joie fired with ball, in the hut where we were sitting. I must confess, that at this moment I repented of having come to the camp, as a gun might have been easily levelled at me, or a random ball have fallen to my lot. I endeavoured several times to rise, but was always prevented by the Kashaef, who insisted upon my getting drunk with him; but as I never stood more in need of my senses, I drank very sparingly. Towards noon, the whole camp was in a profound sleep; and in a few hours after, the Kashaef was sufficiently sober to be able to talk rationally to me. I told him that I had come into Nubia to visit the ancient castles of Ibrim and Say, as being the remains of the empire of Sultan Selim; that I had had recommendations from Esne to himself and his two brothers, and that I had come to Mahass merely to salute him and his brother, conceiving that I should be guilty of a breach in good manners, if I quitted Say without paying my respects to them. Unfortunately, my letters from Esne, addressed to the three brothers, were in the hands of Hussien Kashaef, who would not return them to me when I quitted Derr, saying that I should not want them, as he had not given me permission to go beyond Sukkot. My story was, in consequence, not believed: "You are an agent of Mohammed," said the Kashaef's Arabic secretary; "but, at Mahass we spit at Mohammed Aly's head, and cut off the heads of those who are enemies to the Mamelouks." I assured him that I was not an enemy of the Mamelouks, and that I had waited upon the two Begs at Derr, who had received me very civilly. The evening passed in sharp enquiries on one side, and evasive answers on the other; and the Kashaef sat up late with his confidants, to deliberate what was to be done with me, while I took post with my camels, under cover, behind his hut. No one had the slightest idea that I was an European, nor did I, of course, boast of my origin, which I was resolved to disclose only under the apprehension of imminent danger.

He is compelled by these rude governors of Nubia to change his route.

The inhabitants of Mahass pretend to be descendants of the Arabs Koreysh, the tribe to which the prophet Mohammed belonged, and who, as is well known, were partly Bedouins, and partly husbandmen. It is the tradition of Mahass, that a large party of Koreysh took possession of the Wady at the same period when numerous Bedouins from the east invaded Egypt and Nubia. The chief, or king of Mahass, is of the family of Djama. He collects the revenue of his kingdom, and pays tribute to the governors of Nubia, who receive, annually, from each of the six principal places in his dominions, five or six camels, as many cows, two slaves, and about forty sheep, besides making extraordinary requisitions. I had the honour

of seeing the king of Mahass, a mean looking black, attended by half a dozen naked slaves, armed with sticks and lances. From hence, along the Nile to Semmar, about thirty-five days journey, there are upwards of twenty kings and kingdoms, every independent chief being styled Melek. The power of each of these petty sovereigns is very arbitrary, as far as relates to exactions upon the property of his own subjects, but he dares not put any of them to death, without entailing upon his own family the retaliation of blood by that of the deceased. All the respectable inhabitants of Mahass are merchants; they buy slaves in Dongola, Berber, and in the country of the Sherga, and dispatch a caravan to Cairo twice a year; Mahass is the nearest place in the black country, from whence slave traders arrive at Cairo; the distance is about a thousand miles. A male slave in Mahass is worth from twenty-five to thirty Spanish dollars, a female from thirty to forty. At Cairo they sell at a profit of one hundred and fifty per cent.; and the merchandize taken in return produces from two to three hundred per cent., or even more under the present circumstances, as the Mamelouks are eager purchasers.

Bornon is said to be 25 or 30 days distant from Mahass, with but little water on the road—

Dongola is noted for its breed of horses, great numbers of which are imported by the people of Mahass; they are chiefly stallions, the natives seldom riding mares. The breed is originally from Arabia, and is one of the finest I have seen, possessing all the superior beauty of the horses of that country, with greater size and more bone. All those which I have seen had the four legs white, as high as the knee, and I was told that there are very few of them without this distinctive mark. Prime stallions bear a high price, from five to ten slaves being paid for one. These horses do not thrive in northern climates, not even at Cairo, though Mohammed Aly has lately sent one as a present to the Grand Signior, for which he gave 750 Spanish dollars. The greater part of them are fed for ten months in the year merely on straw, and in the spring, upon the green crops of barley. The Mamelouks, since their irruption into Dongola, are all mounted upon these horses.

There are no elephants in Dongola; but the hippopotamus is very common in the river. Its Arabic name is Baruk, or Farass-el-Bahr; the Nubians call it Ind. It is a dreadful plague on account of its voracity, and the want of means in the inhabitants to destroy it. It often descends the Nile as far as Sukkot: the peasants, as I passed, told me that there were three of them in the river between Mahass and Sukkot. Last year several of them passed the Butn el Hadjar, and made their appearance at Wady Halfa and Derr, an occurrence unknown to the oldest inhabitant. One was killed by an Arab, by a shot over its right eye; the carcass at the flesh, and the skin \* and teeth

\* The whips known in the East under the

were sold to a merchant of Siout. Another continued its course northward, and was seen beyond the cataract at Assouan, at Derran, one day's march north of that place.

The remainder of our quotations here are from the general remarks on Nubia, with which Mr. Burckhardt concludes his first narrative.

Nubia is divided into two parts, called Wady Kenous, and Wady el Nouba (often named exclusively Sayd); the former extending from Assouan to Wady Schona, and the latter comprising the country between Schona and the northern frontier of Dongola. The inhabitants of these two divisions are divided by their language, but in manners they appear to be the same.

According to their own traditions, the present Nubians derive their origin from the Arabian Bedouins, who invaded the country after the promulgation of the Mohammedan creed, \* the greater part of the Christian inhabitants, whose churches I traced as far as Sukkot, having either fled before them or been killed; a few, as already mentioned, embraced the religion of the invaders, and their descendants may yet be distinguished at Tafa, and at Serra, north of Wady Halfa.

At present, the political state of the country may be said to be, nominally at least, the same as when Hassan Coosy (a leader of some Bosnians, sent by the Grand Signior to Nubia and, in short, what the Normans were to England) took possession of it. The present governors, Hosseyn, Hassan, and Mohammed, are his descendants; their father was name Soleyman, and had acquired some reputation from his vigorous system of government. The title of Kashaef, assumed by the three brothers, is given in Egypt to governors of districts. The brothers pay an annual tribute of about 120*l.* into the treasury of the Pasha of Egypt, in lieu of the Miry of Nubia, for which the Pasha is accountable to the Porte. In the time of the Mamelouk this tribute was seldom paid, but Mohammed Aly has received it regularly for the last three years. The three Kashaefs have also one hundred and twenty horsemen in the service, consisting chiefly of their own relations, or of slaves; these troops receive regular pay; presents are made to them occasionally, and they are considered to upon duty only when their masters are upon a journey. Derr is the chief residence of a governor;† but they are almost continuous

name of Korboj, are made of the skin of hippopotamus, and form an article of commerce with the Semmar and Darfour caravans.

\* The greater part of the Egyptian peasantry of Beniisouf have the same origin: they are the descendants either of Moggrebyen Arabian tribes. In Egypt I have even met the descendants of Syrian Bedouins.

† When the Turkish troops, under Ibrahim Beg, after driving the Mamelouks into eastern mountains, occupied Nubia as far as Wady Halfa, the three princes retired with their followers into Dongola, and remained there till the Turks withdrew towards Assouan, when they returned to Derr.

more about, for the purpose of exacting the taxes from their subjects, who pay them only on the approach of superior force. During these excursions, the Kashes commit acts of great injustice, wherever they fall that there is none to resist them, which is frequently the case. The amount of the tribute is shared equally amongst the three leaders; but they are all very avaricious, extremely jealous of each other, and each rules despotically as much as he can. I estimate their annual income at about 10000 each; or from 8 to 10,000, in the whole. None of them spends more than 1000 a year. Their principal wealth consists in dollars and slaves. In their manners they affect the haughty manner and deportment of Turkish grandees; but their dress, which is more than what a Turkish soldier would like to wear, ill accords with this assumed dignity.

The following is a curious method which the governors of Nubia have devised of extorting money from their subjects. When any wealthy individual has a daughter of a marriageable age, they demand her in marriage; the father seldom dares to refuse, and sometimes feels flattered by the honour; but he is soon ruined by his powerful son-in-law, who extracts from him every article of his property under the name of presents to his own father. All the governors are thus mar-

ried to females in almost every considerable village; Hussein Kasha has above forty sons, of whom twenty are married in the same manner.

The Nubians purchase their wives from the parents: the price usually paid by the Kenos is twelve Madoons, or thirty-six piastres. They frequently intermarry with the Arabs Ababde, some of whom cultivate the soil like themselves; an Ababde girl is worth six camels: these are paid for her father, who gives back three to his daughter, to be the common property of her and her husband; if a divorce takes place, half the value of the three camels goes to the latter. In Upper Egypt, when a wife insists upon being divorced, her husband has the right to take all her wearing apparel from her, and to shave her head: nobody will then marry her till her hair be grown again. The Nubian is extremely jealous of his wife's honour: and on the slightest suspicion of infidelity towards him, would carry her in the night to the side of the river, lay open her breast by a cut with his knife, and throw her into the water, "to be food for the crocodiles," as they term it. A case of this kind lately happened at Assouan.

I found the Nubians, generally, to be of a kind disposition, and without that propensity to theft, so characteristic of the Egyptians, at least of those to the north of Siout. Suffering indeed is almost unknown amongst them, and any person convicted of such a crime would be expelled from his village by the unanimous voice of its inhabitants; I did not lose the most trifling article during my journey through the country, although I always slept in the open air in front of the house where I took up my quarters for the night. They are in general hospitable towards strangers, but the Kenos and the people of Sukkot are less so than the other inhabitants. Curiosity seems to be the most prominent feature in their character, and they generally ask their guest a thousand questions about the place he comes from, and the business which brings him into Nubia.

If the government were not so extremely despotic, the Nubians might become dangerous neighbours to Egypt; for they are of a much bolder and more independent spirit than the Egyptians, and ardently attached to their native soil.

The Arabs on the mountains between Nubia and the Red Sea, are an extraordinary race.

The Bisharye, who rarely descend from their mountains, are a very savage people, and their character is worse even than that of the Ababde. Their only cattle are camels and sheep, and they live entirely upon flesh and milk, eating much of the former raw; according to the relation of several Nubians, they are very fond of the hot blood of slaughtered sheep: but their greatest luxury is said to be the raw marrow of camels. A few of these Arabs occasionally visit Derr or Assouan, with Saana, sheep and ostrich feathers, the ostrich being common in their

mountains; and their Saana is of the best kind. In exchange for these commodities they take linen shirts and Diourra, the grains of which they swallow raw, as a dainty, and never make it into bread.

Crocodiles seem hardly less dreaded in some parts than the Hippopotamus in others.

Crocodiles are very numerous about Shendy. I have generally remarked that these animals inhabit particular parts of the Nile, from whence they seldom appear to move; thus, in Lower Egypt, they have entirely disappeared, although no reasonable cause can be assigned for their not descending the river. In Upper Egypt, the neighbourhood of Ahmim, Dendera, Ommet, and Elfein, are at present the favourite haunts of the Crocodile, while few are ever seen in the intermediate parts of the river. The same is the case in different parts of Nubia towards Dongola. At Derr no body is afraid of encountering crocodiles in the river, and we landed there very often, swimming out into the midst of the stream. At Shendy, on the contrary, they are greatly dreaded; the Arabs and the slaves and females, who repair to the shore of the river near the town every morning and evening, to wash their linen, and fill their water-skins for the supply of the town, are obliged to be continually on the alert, and such as bathe take care not to proceed to any great distance into the river. I was several times present when a crocodile made its appearance, and witnessed the terror it inspired; the crowd all quickly retiring up the beach. During my stay at Shendy, a man who had been advised to bathe in the river, after having escaped the small-pox, was seized and killed by one of these animals. At Senaar crocodiles are often brought to market, and their flesh is publicly sold there. I once tasted some of the meat at Esm, in Upper Egypt; it is of a dirty white colour, not unlike young veal, with a slight fishy smell; the animal had been caught by some fishermen in a strong net, and was above twelve feet in length. The Governor of Esm ordered it to be brought into his courtyard, where more than an hundred balls were fired against it without any effect, till it was thrown upon its back, and the contents of a small swivel discharged at its belly, the skin of which is much softer than that of the back.

Next to Senaar, and Cabbé (in Darfour) Shendy is the largest town in eastern Soudan, and larger, according to the report of the merchants, than the capitals of Dongola and Kordofan. It consists of several quarters, divided from each other by public places, or markets, and it contains altogether from eight hundred to a thousand houses. It is built upon the sandy plain, at about half an hour's walk from the river; its houses are similar to those of Berber; but it contains a greater number of large buildings, and fewer ruins. The houses seldom form any regular street, but are spread over the plain in great disorder. I nowhere saw any walls of burnt bricks. The houses of the chief, and those of his relatives, contain court-yards

on November 1813, Mohammed Kasha entered Esm, in his way to Siout, for the purpose of visiting Ibrahim Pasha, the governor of Upper Egypt, who, it is well known, entered hostile designs against Nubia. Being anxious to conciliate the Pasha, he had brought with him presents of slaves, domesticated animals, and horses; but the chief object of the Kasha's journey was to complain against Hussein, his eldest brother, who had lately invested in two districts sons, Daoud and Khaili, with a view of the government of Nubia, and had sent his two brothers to divide the revenue equally with their nephews, thus creating five enemies of the country. At Esm, Mohammed met a troop of about one hundred soldiers, who had been dispatched by Ibrahim Pasha against Hussein, deeming it useless therefore to proceed further, he returned towards his home with the Turks, at whose approach the two brothers fled to the island of Oskase, beyond the second cataract of Wady Halfa, notwithstanding every promise of safety. The Turks pursued their march as far as Wady Halfa, collecting from every tribe in the name of Ibrahim Pasha, the land-tax of which they allowed Mohammed Kasha a twelfth of the whole amount, for his own subsistence. It was evidently the object of his ambition to seize the persons of all the governors; but in this it failed. After staying some years in the country, in the course of which they collected the land-tax from the summer and winter, the Turks returned to Upper Egypt. In 1815, the Turks again visited Nubia, and compelled the peasants to furnish the amount of the imposts in camels, instead of money; as soon as they withdrew, the Kashes moved to Derr, and, in their turn also exacted the land-tax from their subjects, who exposed both to the rapacity of the Turks and to their own governors, all equally meriting, owing to the uncertain duration of their native powers.

twenty feet square, inclosed by high walls, and this is the general description of the habitations of Shendy. The government is in the hands of the Mek; the name of the present chief is Nimr, i.e. Tiger. The reigning family is of the same tribe as that which now occupies the throne of Sennaar, namely the Wold Adjil, which, as far as I could understand, is a branch of the Funny. The father of Nimr was an Arab of the tribe of Djalein, but his mother was of the royal blood of Wold Ajib; and thus it appears that women have a right to the succession. This agrees with the narrative of Bruce, who found at Shendy a woman upon the throne, whom he calls Sittina (an Arabic word meaning our Lady). The Mek of Shendy, like the Mek of Berber, is subject to Sennaar; but, excepting the purchase money paid for his Government, on his accession, and occasional presents to the king and vizier \* of Sennaar, he is entirely independent, and governs his district, which extends about two days' journey farther to the south, quite at his own pleasure.

Gold is the second article in the Sennaar trade. It is purchased by the merchants of Sennaar from the Abyssinian traders; but I have not been able exactly to ascertain in what province of western Abyssinia it is found. The principal market for gold appears to be Ras el Fil, a station in the caravan route from Sennaar to Gondar, four days' journey from the former. This route is at present much frequented by Sennaar traders, as well as by that class of Abyssinian merchants called Djebert, who appear to be the chief slave and gold traders of that country.

The name of Noubia is given to all the Blacks coming from the slave countries to the south of Sennaar. The territory of Sennaar extends, as far as I could learn from the merchants of the country, ten days' journey beyond the city, in a south and south-east direction, and is inhabited exclusively by free Arab tribes, who make incursions into the more southern mountains, and carry off the children of the idolaters. These Noubia slaves (among whom must also be reckoned those who are born in the neighbourhood of Sennaar, of male Negroes and female Abyssinians; and who are afterwards sold by the masters of the parents) form a middle class between the true Blacks and the Abyssinians; their colour is less dark than that of the Negroes, and has a copper tinge; but it is darker than that of the free Arabs of Sennaar and Shendy. Their features, though they retain evident signs of Negro origin, have still something of what is called regular; their noses, though smaller than those of the Europeans, are less flat than those of the Negroes; their lips are less thick, and the cheek-bones not so prominent. The hair of some is woolly; but among the greater part it is similar to the hair of Europeans, but stronger, and always curled. The palm of their hands is soft, a

circumstance by which they particularly distinguish themselves from the true Negroes, whose hands, when touched, feel like wood.

Persons from the Hedjaz and from Egypt sometimes pass by Shendy on their way to Sennaar, in search of young monkeys, which they teach to perform the tricks so amusing to the populace in the towns of Arabia, Syria, and Egypt. I was repeatedly asked whether I had not come in search of monkeys, for that my equipments appeared too shabby for those of a merchant. These monkey-hunters are held in great contempt, because, as the Negroes say, they pass their whole lives in making others laugh at them.

The people of Shendy know little of musical instruments, however fond they may be of songs. The lyre (Tamboura) and a kind of fife with a diurnal sound, made of the hollow Dhoorra stalk, are the only instruments I saw, except the kettle-drum. This appears to be all over Soulan an appendage of royalty; and when the natives wish to designate a man of power, they often say the Nôgâra beats before his house. At Shendy the Mek's kettle-drums were beaten regularly every afternoon before his house. A favourite pastime of the Negro Arabs, and which is also known among the Arabs of Upper Egypt, is the Syredje, a kind of draughts; it is played upon sandy ground, on which they trace with the finger chequers of forty-nine squares; the pieces, on one side, are round balls of camel's dung, picked up in the street, and on the other those of goats. It is an intricate game, and requires great attention; the object is to take all the antagonist's pieces, but the rules are very different from those of Polish draughts. The people are unanimously fond of the game, two persons seldom sitting down together without immediately beginning to draw squares in the sand. The Mek himself will play with the lowest slave, if the latter is reputed a good player. If a bye-stander assists one of the parties with his advice, it gives no offence to the other; sometimes they play for a gourd of Bouza, but not usually. Chess is not quite unknown here, but I never met with any one who played it.

(To be continued.)

#### PEAK SCENERY.

*Or Excursions in Derbyshire: made chiefly for the purpose of Picturesque Observation. Illustrated with Engravings by G. Cooke, &c. from Drawings made by F. L. Chantrey, Esq. Sculptor, R. A. By E. Rhodes. Part II. Large 4to. pp. 120.*

The first part of this pleasing work was published about a year and a half ago, and reviewed in the Literary Gazette of May 9th, 1818. We there did justice to its beauty as a specimen of the fine arts, and to its agreeable qualities as a literary composition. The present continuation is in the same style of excellence, in so far as regards the taste of

the designs and the fine execution of the engravings: the letter-press descriptions, however, appear to us to be more sentimental and less amusing. It is not easy for a person who feels the—

boundless store

Of charms which nature to her votary yields,  
The warbling woodlands, the resounding shore,  
The pomp of groves, the garniture of fields;  
All that the genial ray of morning glows,  
And all that echoes to the song of even;  
All that the mountain's sheltering bosom shields,

And all the dread magnificence of heaven—

to continue writing on the picturesque, without becoming more and more inspired with the subject; and, probably, there is no species of authorship in which it is so difficult to communicate emotions, as that wherein an active reveller in the profusion of nature endeavours to transfuse his refined sensations into the mind of a mere passive reader. That which causes him to exclaim with rapture, "Lo! what a goodly fabric is here;" that which throws him into ecstasies; that on which he dwells with ineffable delight;—the cloud-capt mountain, living stream, and fairy dell, come all upon our numbed sense, with a force not much greater than a dream, or twice-told tale vexing the dull ear of a sleepy man. We are, therefore, willing to divide the slight censure we have passed on this volume, and to ascribe part of our languor to our own state of inaptitude, and only the remainder to that sort of exaggerated sensibility in Mr. Rhodes, which, it appears to us, is rather of a Gallic than a British character; and sometimes excites a smile instead of sympathy. But we ought to add to this, that all the remarks contained in the work, are simple, judicious, and impartial; and that, generally, we are carried along with the author in his glowing pictures of sweet and romantic scenery.

This Excursion begins at Tidwell, and embraces Buxton with its baths; the Valley of the Wye; Haddon, the ancient baronial seat of the Rutland family, and the still more ancient Vernons and Peverils; Chatsworth, the princely abode of the Duke of Devonshire; and most of the remarkable villages, views, &c. in this interesting part of Derbyshire.

The Plates are seven in number, viz.—Shirbrook Dell; the Wye from Priestcliff Monsul Dale; Rustic Bridge, *ibid.* Cross in Bakewell Church-yard; Haddon Hall, and Chatsworth House. Of these, Shirbrook Dell is singularly beautiful, and extraordinary for its natural features, which resemble a mighty portal into an Arcadia beyond the view of the Wye is also a remarkable landscape, and, with all the improvement of modern engraving, curiously reminds us of the Art in its rudest infancy; but our fi

\* The vizier of Sennaar, of the Adelan family, is said to be the real master there, while the king has a mere shadow of authority.

very little piece is the Rustic Bridge, the spirit, and grace, and fidelity of which, constitute a model for the ornamenting of publications, where the aid of the arts is required. Every one knows the trouble and difficulty of procuring works from engravers, the most eminent of whom are eminently tardy and careless in completing the subjects committed to their charge; inasmuch, that a finished quarto seems often to be a more easily attainable matter than a finished frontispiece to adorn it. Plates like this last, however, which do not need so much labour, are, in our opinion, admirably calculated to illustrate almost every species of writing; and, except in rare instances, we earnestly advise the adoption of a manner at once so full of effect, and so perfectly adequate to convey the impression of any object whatsoever.

The plate of Chatsworth is also very finely executed.

With regard to the literary portion of this production, a few extracts will best display it; and we select them with only a view to the variety of their topics. The following is a fair example of the author's descriptive powers.

At Blackwell-Mill, where the river is spread out into considerable breadth, the tide expands and assumes a different character. Here the stupendous rocky scenery of the Wyre subsides, and a series of deep dales succeeds, which are formed by high sloping hills, that are thinly covered with verdure, and in some places crested with craggy knolls and broken rocks. Within the hollow of these mighty hills which here prescribe the course of the river, lies Blackwell-Mill. Topley Pike, broad at its base, and lifting high its pointed summit o'er all surrounding objects, is here a giant's feature in the landscape. Along the side of this magnificent hill the new road from Bakewell to Buxton has been carried: one would almost wonder at so bold an attempt, but what cannot the talent and perseverance of man achieve?

While I was in the dale below, contemplating the steep acclivity of Topley Pike, I was startled from my reverie by the sound of a coachman's horn, which came gently upon the ear, when I was least prepared to expect such a greeting. Shortly a stage-coach appeared, which seemed actually to issue from the clouds, and I observed it pass rapidly along the side of the hill, where the eye could scarcely discern the trace of a road, and where to all appearance a human foot could with difficulty find a resting-place. Had I supposed this vehicle to have contained in it beings like myself, I might have shuddered with apprehension, but the coach, from its great height above me, looked so like a child's toy, and the sound of the horn was so soft and unobtrusive—so unlike the loud blast of a stage-coachman's hucle—and altogether the place was so unfitted for the intrusion of such an object, that it appeared more like a fairy scene, or a picture of imagination, than any thing real and substantial.

The feelings here are naturally ex-

pressed; and by reversing the picture, a very different order might be indulged. We have looked from the height of a mountain down upon the grandest procession of pomp and royalty; and it is not in language to denote how mean and trifling the little puppet-show looked when thus connected with the stupendous glories of the surrounding scenery. The figures in Chinese-ombres afforded the only parallel.—If the wilds of Derbyshire possess the sublime in landscape, rather than the splendour of mortal equipments, they seem also rich in another point, which has, heaven knows how often untruly, been considered a blessing in life.

As we entered Taddington (says Mr. R.) which is one of the meanest villages in Derbyshire, we visited the church-yard, or rather the open grass field in which the church stands, where we observed an old stone cross, the shaft of which is ornamented with various devices on every side, but all inferior in execution to those at Eyam and Bakewell, and altogether different in form, manner, and character. If long life may be regarded as a blessing, the inhabitants of Taddington appear to have been peculiarly blessed: the grave stones in the church-yard are not numerous, yet we observed more than an usual proportion that were inscribed to the memory of those who had died at a good old age. From eighty to one hundred years seems here the common term of existence. The parish clerk shewed us the new register, which commences with the year 1813. In the first page only, in the short space of six months, are recorded the deaths of four individuals, whose united ages amounted to three hundred and seventy-nine years; the oldest of these venerable personages attained the age of one hundred and seven, and one of the four has a sister now living in Taddington who is ninety-eight years old. These instances of longevity are extraordinary in so small a village, and they shew that the reputation Taddington has obtained for the healthfulness of its situation and the salubrity of its air, rests on a good foundation. Well might the old woman at Ashford, who, when she had weathered seventy-eight years of existence, and found the infirmities of old age approaching, express an anxiety to remove her residence and live at Taddington, observing, at the same time, that "folk did no die there so young as she was."

We copy another notice respecting the marbles at an adjoining village:

Ashford has been long celebrated for its marbles, which are obtained from the hills that afford it shelter, and are cut into form and polished at the mills originally erected by the late Mr. Henry Watson, of Bakewell, who obtained a patent to secure to himself the advantages of his mechanical skill and ingenuity. The grey marbles dug from the quarries in the vicinity of Ashford are less esteemed than formerly, and the works where they are sawn into slabs and polished, are

sinking into disuse and decay. This may be regretted, as the numerous shells and the great variety of figures which they contain, when cut transversely, exhibit an infinite variety of vegetable and animal remains, that are not less curious than beautiful. The black marble here procured is not surpassed, perhaps not equalled, in any part of the world; its deep, unvaried colour, and the compactness of its texture, fit it to receive the highest polish; a mirror can hardly present a clearer or a more beautiful surface: hence it is highly esteemed, but being difficult to work, it is too expensive for common occasions.—In Chatsworth House there are some columns of this marble, which are used as pedestals for busts, and some ornamented vases of exquisite beauty. Mr. White Watson, in his *Delineation of the Strata of Derbyshire*, mentions this material under the denomination of "Bituminous Fetid Limestone," and he intimates "that its colour is owing to Petroleum, with which it abounds." He farther observes, "this limestone is subject to decompose, in which operation the calcareous particles are disengaged and escape, and their interstices are occupied by water, the same still occupying the same space, bulk for bulk, as before; but on being squeezed, the water comes out as from a sponge. On being exposed to the air, by laying it in the grass (which it destroys, and sweeter herbage springs up in its place) till perfectly dry, the water evaporating leaves a very light impalpable substance, called Rotten Stone, much esteemed for polishing metals, &c." To those who are acquainted with the peculiar use of this substance, I need offer no apology for this short extract from Mr. Watson's account of its formation. The subject is treated more largely in pages 45 and 46 of his work; and I gladly refer to his interesting detail of that curious operation of nature by which Rotten Stone is produced, and I do this more freely as I understand the correctness of his theory has been disputed. Dirlow Moor, near Bakewell, where the surface is very wet, has the reputation of furnishing the best specimens of this very useful article.

At Bakewell there is an ancient ruin in the Church-yard; but its modern tombs afford us more curious matter.

On a black marble tablet, which is inserted on a grave-stone near the east end of the church, there is the following inscription to the memory of a child aged two years and eight months. As a specimen of country church-yard poetry it has a claim to more than common consideration.

"Reader! beneath this marble lies  
The sacred dust of Innocence;  
Two years he blest his parents' eyes,  
The third an angel took him hence;  
The sparkling eyes, the lisping tongue,  
Complaisance sweet and manners mild,  
And all that pleases in the young,  
Were all united in this child.  
Wouldst thou his happier state explore?  
To thee the bliss is freely given;  
Go, gentle reader! sin no more,  
And thou shalt see this flower in heaven."

Near the same place, on the contrary side of the pathway, there is an epitaph of a different character, in which the writer has enlivened the very extraordinary vocal powers of the parish-clerk. Some of the rhymes are managed with a Hindu-like felicity, and on reading the inscription I was induced to give it a place in my note-book. This person's name was Hoo; his father filled the situation of parish clerk before him, and if his grave-stone flatters not, with equal ability, it tells us in humble prose, that "the natural powers of his voice in clearness, strength, and sweetness, were altogether unequalled;" a commendation which is reiterated in verse on the neighbouring tomb-stone.

"The vocal powers here let us mark,  
Of 1732 p., our late parish-clerk,  
In church none never heard a layman  
With a clearer voice say "AMEN!"  
Who now with halcyon's sound,  
Like him can wake the roofs rebound?  
The choir lament his choral tones,  
The town so soon here lie his bones."

At the west end of the church, on a table monument, another inscription occurs still more amusing, if I may be permitted to use a phrase so little in harmony with those feelings which generally accompany a contemplation of the last resting-place of those who have gone before us to "that bourne from whence no traveller returns." An old man and his *two wives* occupy this tomb, where undisturbed by the jealous cares of life, they sleep together lovingly, so says the legend which nearly covers one side of the tomb—

"Know, posterity, that on the 9th of April,  
in the year of Grace 1757, the rambling remains  
of the above-said John Hale were in the 66th  
year of his pilgrimage laid upon his two wives.  
"This thing in life might cause some jealousy,  
Here all three sleep together lovingly.  
Here Sarah's chiding John no longer hears,  
And old John's rambling Sarah no more fears;  
A period's come to all their toilsome lives,  
The goodman's quiet—still are both his *wives*."

We shall now conclude with a brief allusion to Haddon Hall, which it seems might have served for the study of Cedric's residence in Ivanhoe.

The gallery, which occupies nearly the whole of the south part of Haddon, is a noble apartment; its style of architecture fixes the date of its erection in the time of Elizabeth, in whose reign this venerable structure passed from the Vernons into the possession of Sir John Manners, who was the second son of the first Earl of Rutland. In the windows of the gallery are the arms of both families in stained glass, and the boar's head and the peacock, their respective crests, liberally ornament this part of the house. This room is one hundred and ten feet long and seventeen wide, and the whole of the floor is said to have been cut out of one oak tree, which grew in the park. In the dining hall there is an elevated platform, a general construction in ancient halls, which is still retained in many colleges, wherein the high table is placed, at which the lord of the mansion presided at the head of his household and his guests. A gallery, which

on festive occasions was appropriated to mirth and minstrelsy, occupies two sides of this apartment. On the window-seat, near the principal entrance, we observed an iron fastening of a peculiar structure, which was large enough to admit the wrist of a man's hand, and which we were informed had been placed there for the purpose of punishing trivial offences. It had likewise another use, and served to enforce the laws and regulations adopted among the servants of this establishment. The man who refused duly to take his horn of ale, or neglected to perform the duties of his office, had his hand locked to the vainest somewhat higher than his head, by this iron fastening, when cold water was poured down the sleeve of his doublet as a punishment for his offence. One of the old servants of the family, who attended upon strangers when I first visited Haddon, when pointing out the uses to which this curious relique of former times was applied, facetiously remarked, "that it grew rusty for want of use."

Mrs. Anne Halciliffe, who was a native of Derbyshire, often visited Haddon Hall, for the purpose of storing her imagination with those romantic ideas, and impressing upon it those sublime and awful pictures which she so much delighted to portray: some of the most gloomy scenery of her "Mysteries of Udolpho" was studied within the walls of this ancient structure.

These passages furnish grounds for a competent judgment upon the *Second Part of Peck Snemery*; and, united with the excellence of the plates, we have no doubt, will cause the two remaining parts to be looked for with avidity.

*Travels of the Persian Prince, Mirza Aboul-Taleb-Khan, through Asia, Africa, and Europe; written by himself, translated into French by M. Charles Mela.*

(Revised from a French Journal.)

"This Persian Prince, whose portrait still decorates the print-shops of the Boulevards, excited extraordinary interest during his late visit to Paris. Our ladies were all anxious to gain introductions to him, and they would have thought him the most charming Ambassador in the world, could he have been prevailed on to bring his *Fair Circassian* to the Opera. It appears, however, that he visited Europe on a former occasion. About twenty years ago, having unexpectedly forfeited the favour of the Persian Court, he set out on his travels, as it were, by way of revenge. Prince Mirza had been betrothed to the niece of a *Nalabi*; he had been appointed to the office of *amildar*, which signifies superintendent of direct and indirect taxes; finally, he had been created a general, for in Asia, the art of levying taxes is very much like the art of war; and in a great victory he had had the honor to kill a *Rajah*. In spite of all these titles to public esteem, he was hurled from his exalted rank; but, instead of retiring to the country, or writing

for the opposition Journals, as our disagreeable European statesmen do, he bade adieu to the banks of the Ganges, and embarked on board of a European vessel, without caring whether he went; and, as he himself says, "in the hope that some accident might put a period to his life and his sorrows."

"Prince Mirza arrived in England. The he was enchanted by a thousand new objects. He forgot his political disasters, and observed and described every thing from Winds Castle to the humblest cottage, from a English kitchen to the institution of a jury. England became his favourite count. However, the Oriental observer is far from approving all the customs of the three Kingdoms. The English, he says, have two vices or defects:—They are haughty, vain, and, he thinks, insolent, choleric, and van they are atheists, gourmands, spendthrifts, egotists, and libertines; and they affect sovereign contempt for the customs of other nations. But this condemnation is succeeded by an enumeration of the good qualities of the English; which are, hospitality, delicacy, philanthropy, respect for their superiors, and above all, their profound respect for fashion. "This arbitrary law obliges the rich to change every year, not only the form of their dress, but also the household furniture. A lady of taste would consider herself disgraced, if her drawing room retained the same furniture for two years in succession. However, this extravagance encourages industry; and the low classes of the people may procure at a very cheap rate, those articles of which the rich are thus obliged to rid them-selves."

"But our traveller enters upon observations of a more important nature. In his quality of ex-*amildar*, he examines the state of the English finances, calculates their prodigality, and estimates the ways and means like a man of business; and, all things considered, he declares that England must, ere long, be not adopted, sink under the weight of her national debt. Prince Mirza observes, that only one mode of liquidation can save England. This expedient, it is true, has something oriental about it, which might naturally startle our European Statesmen. He proposes *bankruptcy*. The word is harsh, but the effect of the measure would be admirable. One party would pay less taxes, the other would have less revenue; every one would be satisfied, and would be the hour when the grand *amildar* of England set foot in England."

"The English ladies particularly are in the admiration of the Persian Prince. He was enchanted with the beauty of its features, the elegance of their forms, their graceful deportment: he styles them angels, celestial horrors, tulips, and Damascus roses. He wrote Persian odes to the English fashionables, in which he complimented on the *toba* and the *sudrak*—offence to the *Shah of Mecca*), and length the poor Ambassador, the *amildar*, the ex-minister, and dismissed general, so far lost his senses, so far from his misfortunes and Mahomet, that he claims in one of his odes:—"Fill my

with the juice of the grape! I do not hesitate to forswear the religion of my fathers."

"Judging from this poetical licence, it may naturally be supposed that all the admiration of Prince Mirza was exhausted on England. When he arrived in France, like an unhappy lover, he observed everything with eagerness and ill-humour. Perhaps some of his condemnations may be attributed to the effects of indigestion. Our *flâneur*, he says, gave him the heart-ache; our meat was always dried and burnt up; we are, in his opinion, barbarians in the art of cookery. The English excel in the pleasures of the table. But our ladies, our fair Parisians, displeased the Ambassador almost as much as our dinners. He had before told us, that they wanted the modesty and graceful manners of the beauties of Britain—he now tells us, that they have the habit of painting; that their head-dresses resemble those of Indian dancers; and that their short-waisted dresses give them the appearance of being hump-backed. He examined them closely, in the ball-room, the theatre, the public gardens; but not one ever made the slightest impression on him;—and yet, (he says,) I am naturally amorous, and easily captivated." It was doubtless in consequence of these reflections, that the Ambassador deemed it advisable, on his second visit to France, to bring with him a Circassian Slave, and thus to travel with a fragment of his Harem. Had our ladies perused this important book six months ago, they certainly would not have clapped so heartily whenever Prince Mirza-Aboul-Taleb-Khan appeared in public. To say the French ladies are hump-backed, and to compare the English ladies to the roses of Damascus! O, the abominable Persian!

"After such outrages, national honour compels me to close the book. We abandon the traveller to his fate:—he may visit the south of France and Italy;—he may go to Constantinople, and relate his adventures to his good friends the Turks;—in a word, he may finish his travels by passing through Moscow, Bagdad, Bassora, and Bombay—we care nothing about him. We are only sorry to be obliged to confess, that the narrative is instructive and entertaining; that the translation is executed with talent, and that the work has already come to a second edition."

*Anastasius; or Memoirs of a Greek.*  
3 vols.

(Continued.)

Our reluctance to part with Anastasius, is shown by the exception which the pleasant and profligate hero has caused us to make from our general rule, of closing the subjects of the year within the last Number of our annual volume. Our apology follows.

When released from the Bagnio, the destitute but pliant Greek has to seek for means to sustain life; and he happily gets employment as an interpreter in the European quarter. His introduction

to this situation is very humorously related; and nail as the diplomatic anecdotes which follow are curious illustrations of the genuineness of the work, we quote the whole passage.

Absorbed in this weighty consideration (how to subsist) I slowly walked down the hill of St. Demetrius, when I fancied I discerned at a distance a caravan of travellers, who, with a slow and steady pace, were advancing towards Pera, the residence of the Franks at Constantinople. I mechanically quickened my pace, in order to survey the procession more closely.

First in the order of march came a clumsy calash, stowed as full as it could hold of wandering travellers; next came a heavy araba, loaded with as many trunks, portmanteaus, parcels, and packages, as it could well carry; and lastly led up the rear, a grim-looking Tartar, keeping order among half a dozen Frank servants of every description, joggling heavily along on their worn out jades. At this sight the Drogmanian blood began to speak within me. "These are strangers, Anastasius," it whispered: "be thou their interpreter, and thy livelihood is secured." I obeyed the inward voice as an inspiration from Heaven, and, after smarting myself up a little, approached the first carriage.

"Welcome to Pera, excellencies!" said I, with a profound bow, to the party within. At these words up started two gaunt figures in night caps, with spectacles on their noses and German pipes in their mouths—whose respective corners still kept mechanically puffing whiffs of smoke at each other. The first action which followed was to lay their hands on the blunderbusses hung round the carriage: but seeing me alone, on foot, and to all appearance not very formidable, they seemed after some consultation to think they might venture not to fire, and only kept staring at me in profound silence. I therefore repeated my salute in a more articulate manner, and again said: "welcome, Excellencies, to Pera, where you are most anxiously expected. As you will probably want a skilful interpreter, give me leave to recommend a most unexceptionable person,—I mean myself. Respectable references, I know, are indispensable in a place where every one is on the watch to impose upon the unwary traveller; but such I think I can name. As to what character they may give me; that,"—added I with a modest bow,—"it becomes not your humble servant himself to state."

At so Christian-like a speech, uttered in the very heart of Turkey, the travellers grinned from ear to ear with delight. It produced another short consultation; after which the two chiefs cried out in chorus: "*Oui cher pacha!*" and bade me mount by their side. This enabled me, after a little complacent on Germany their birth-place, and on their proficiency in the French idiom, immediately to enter upon the duties of my office—for which I thought myself sufficiently qualified by the squibs which I had heard the Drogman of the Porte, Morosi, let off in company with my patron at the diplomatic camps of Pera.

"This edifice," said I, pointing to the first building of note in the suburb which we met on our way, "is the palace of the Ich-Oglans—the Sultan's pages. It is the most fruitful seminary of favourites, of Pashas, and of Sultan's husbands. In that direction lives that most respectable of characters the Imperial intendant—the Baron Heribert; who, with all the shrewdness of a thorough-paced minister, combines all the playful simplicity of a child. Further on dwells the French ambassador Monsieur de Choiseul-Gouffier—a very great man in little things; and opposite him lives his antagonistic taste, politics, and country, the English envoy Sir Robert Ainslie—of whom the world maintains exactly the reverse. Quite at the bottom of the street, likewise facing each other, live the envoys of Russia and of Sweden. The former I feel bound to respect, whatever be his merit; the latter really possesses much. He is an Armenian, who writes in French a history of Turkey. Lately he has made with his bookseller an exchange profitable to both,—he having given his manuscript, and the other his daughter: that is to say, the Armenian a single voluminous work, and the Frenchman a brief epitome of his whole shop. Wedged in between the palaces of Spain and Portugal is that of the Dutch ambassador, whose name, *Vaudeuildeken-totgelder*, is almost too long for these short autumn days; and whose head is thought to be almost as long as his name: inasmuch as he regularly receives, twice a week, the *Leyden Gazette*; which renders him beyond all controversy the best informed of the whole Christian *Corps Diplomatique*, in respect of Turkish politics. You see, gentlemen, the representatives of all the potentates of Christendom, from Petersburg to Lisbon and from Stockholm to Naples, are here penned up together in this single narrow street, where they have the advantage of living as far as possible from the Turks among whom they come to reside, and of watching all day long the motions of their own colleagues, from their most distant journeys to the sublime Porte, to their most ordinary visits to the recesses at the bottom of their gardens."

These little specimens of my *arroi-dire* seemed to please my German friends. They immediately noted them down in their huge memorandum books, which, no more than their short pipes, ever were left idle an instant. Scarce had the party stepped into the inn, which I was allowed to recommend, when they engaged me for the whole fortnight which they meant to devote to the survey of the Turkish Capital.

My travellers were of the true inquisitive sort. Every body used to fly at their approach; a circumstance highly favourable to my interest. Under the notion of always applying for information at the fountain-head, they would stop the earliest Turk they met, to ask why Moslemen locked up their women. One day they begged the Imperial minister, at his own table, to tell them confidentially whether Austria was to be trusted. They were very solicitous to know from the Russian envoy the number of Catherine's lovers; and they pressed hard for an anti-

ence of the Kislar-Aga, only to enquire whence came the best black eunuchs. Had they been in company with the Grand Mufti, they certainly would have asked his honest opinion of the mission of Mohammed; and they would scarce have neglected the opportunity, had it offered, of enquiring of the Sultan himself, whether he was legitimate heir to the Caliphate, as he asserted. In consequence of this straight-forward system, I was every moment obliged to interfere, and to pledge myself for the guiltless intentions of our travellers. The statistics of the empire, its government, politics, finances, &c. indeed, they troubled themselves little about. All such things they thought they could learn much more competently at home from the Leipzig gazetteer; but the botany and mineralogy of the country were what they studied both body and soul. Every day we brought home from our excursions such heaps of what the ignorant chose to call hay and stones, that the wags whom we met on our way used to ask whether these were for food and lodging; while the more fanatical among the Turks swore we carried away patterns of the country, in order to sell it to the infidels; and one party, by way of giving us enough of what we wanted, was near stoning us to death. Hereupon, to elude observation, my cunning travellers determined to dress after the country fashion: but this only made bad worse; for they wore their new garb so awkwardly, that the natives began to think they put it on in mockery, and were frequently near stripping them to the skin; in lieu of which, whenever they went out, they got so entangled in their shakshoos and trousers, their shawls and their papooshes, that our progress might be traced by the mere relics of their habiliments which strewed the road. Sole manager both of the home and foreign department, I however tried to give all possible respectability to their appearance, and never would suffer their dignity to be committed by paltry savings; at the same time that, to shew them how careful I was of their money, I took care sometimes to detain them an hour or two in driving a close bargain about a few paras,—especially when I saw them in a hurry. Accordingly, if they had any fault to find with me, it was for my over scrupulous economy. That failing alone excepted, they thought me a treasure; and so I certainly found them.

The fortnight of their intended stay having elapsed, they were all impatience to depart. Out of pure regard for science, I contrived to prolong their sojourn another fortnight, by various little delays, which with a little industry I brought about in the most natural way imaginable, but which I joined them in lamenting exceedingly; and when at last they set off—which I saw with my sincere regret—I was left by them in possession of a most flattering written testimonial of my zeal and fidelity. As to their behaviour to me, its liberality might be sufficiently inferred from the change in my appearance. I looked a different person.

The continuation of this course affords us a droll, and we dare say, not very in-

correct account of an adventure in which one of our own countrymen figured. Anastasius proceeds—

This first experiment gave me a taste for the Terghumian life. It also increased my means of success in that line. Until I took up my residence at Pera, I had little intercourse with that odd race of people yelet Franks, except through the stray specimens that now and then crossed the harbour, on a visit of curiosity or business to Constantinople. I now got acquainted with their ways, while they became familiarised with my person. This gradually procured me the advantage of seeing and serving in my new capacity, samples of almost every nation of Europe. Thus I formed a sort of polyglot collection of certificates of my own ability and merits, which I filed very neatly according to the order of their dates; and to a sight of which I treated every new comer whom I thought worthy of that distinction.

Once, however, the lofty manner and the imperious tone of an English traveller, newly arrived, completely deceived me. From his fastidiousness I made no doubt I was addressing some great Mylord. It was a button maker to whom I had the honour of bowing. He came red hot from a place called Birmingham, to shew the Turks samples of his manufacture. Unfortunately Turks wear no buttons, at least such as he dealt in; at which discovery he felt exceedingly wroth. My ill-fated back was destined to feel the first burst of his ill-humour. After spending nearly two hours in spelling every word of every one of my certificates—"this then," said he in a scarce intelligible idiom, which he fancied to be French, "is the evidence of your deserts?" "It is," answered I, with an inclination of the head. "And I am to make it the rule of my behaviour?" "If your Excellency be pleased to have that goodness," replied I smiling most agreeably. "Very well," resumed the traitor, never moving a muscle of his insipid countenance, "My Excellency will have that goodness." And up he gets, gravely walks—without uttering another syllable—to the door, turns the key in the lock, takes a little bit of a pistol scarce five inches long—also from Birmingham I suppose—out of his pocket, snatches up a cudgel as thick as my wrist, and turning short upon me, who stood wondering in what this strange prelude was to end, holds the pistol to my throat, and lays the cane across my back.

This operation performed to his satisfaction: "It was No. 5," coolly said the mercant, "whose contents I thought it right to comply with first; as being written by one of my countrymen, and because I make it a rule, in every species of business, to get the worst part over first. Had you understood our language—as an interpreter by profession ought—you might have known the certificate in question to be a solemn adjuration to all the writer's countrymen, to treat you as I have had the pleasure of doing; and all that remains for you to perform, is to give me a regular receipt, such as I may have to shew."

The pistol was still ticking my throat, I,

jammed up against the wall, and the button maker six feet high, and as strong as a horse. All therefore I could do in the way of heroism would have been to have let him blow out my brains at once—after which, adieu my turn, at least here below! I therefore signed, had the satisfaction of seeing the receipt neatly folded up and deposited in a little red morocco pocket-book with silver clasps, was offered a sequin for the exercise I had afforded, took the money, and, leaving the button maker to write home what mean rascals the Greeks were, departed fully impressed with the usefulness of learning languages.

Almost every evening the man of buttons used to walk from Pera, where he had his lodgings, to a merchant's at Galata, from whence he frequently returned home pretty late at night, without any escort; trusting to his small pocket instrument, and to his own colossal stature, for his safety. A dexterous thrust, at an unexpected turn, might easily have sent him to the shades below; but this would not have sufficed to assuage my thirst for just revenge. I wished to inflict a shame more deep, more lasting, than my own, and which, like Prometheus's vulture, should keep gnawing the traitor's heart while he lived. His great ambition at Constantinople was to boast the good graces of some Turkish female,—young or old, fair or ugly, no matter! On this laudable wish I founded my scheme.

Muffled up in the feridje which entirely covers the figure of the Mohammedan fair, and the veil which conceals their faces, I went and seated myself, immediately after dusk, on one of the tomb-stones of the extensive cemetery of Galata, where my traveller had to pass.

He soon arrived, and, as I expected, stopped to survey the lonely fair one, whose appearance seemed to invite a comforter. The hat took. My friend, on his nearer approach, aware that his pantomime was more intelligible than his idiom, had recourse to the universal language: he held up a sequin,—his regular fee on all occasions,—and my acceptance of which encourages my shepherd to become more enterprising. He now wishes to unveil me. I resist:—but by way of compromise for keeping concealed my features, I shew my necklace, my bracelets, my girdle. In an infantine manner I slip the manacles from my own wrists over those of my companion, and, before his suspicions are aroused, have the satisfaction to see him fast bound in chains, not only of airy love, but of good solid brass; and with a soft lip wish him joy of being at once handcuffed and pinnioned. It was now I shewed my face, and drew out my handjar. Seeing him disposed to remonstrate, "No noise," cried I, "or you die; but return me the receipt." Unable to stir, my prisoner in a surly tone bade me take it myself. I did so, and thanked him; "but," added I, "as we have not here—as with you—all the conveniences for writing, accept the acknowledgement of the poor and illiterate:" saying which, I drew the holy mark of the cross after the Greek form, neatly but indelibly, with the button-maker's own sequin, on his clumsy forehead;

poured into the wound some of the gunpowder out of his pouch; and, apologizing for the poorness of the entertainment, bade him good night and walked off.

A troop of Calcondyses of my acquaintance, reeling home from a tavern, happened to come up just as I retired, and took all that I had left. The next morning the man of buttons departed from Constantinople without sound of trumpet, before sunrise; and never since has been heard of in the Turkish dominions.

(To be continued.)

#### ANALYSIS OF THE JOURNAL DES SAVANS FOR AUGUST:

Art. IV. Travels in various Countries of the East, by Sir William Ouseley. Vol. 1. 4to.

We have had of late such frequent occasion to direct our attention to Persia, in noticing the travels of Mr. Morier, Lieutenant Col. Johnson, &c. that in the great press of other matter, we have hitherto omitted to notice the present important work.

Sir Gore Ouseley, the author's brother, having been appointed Ambassador Extraordinary, and Minister Plenipotentiary to the Court of Russia, it was natural that Sir William Ouseley, who had applied himself for many years to the study of the language and literature of Persia, should take this opportunity of visiting a country the history and antiquities of which were the constant objects of his meditations. He was, consequently, attached to the Embassy as private secretary to Sir Gore Ouseley. We shall pass over the descriptive part of the voyage, and merely say that this first volume terminates with the arrival of the Embassy at Schiraz.

This volume is divided into six chapters: 1st. from England to Madeira, Rio de Janeiro, and Ceylon. 2d. From Ceylon to the coasts of Malabar and Bombay. 3d. On the Persians and Guebres, the worshippers of fire. 4th. Voyage from Bombay to the Persian Gulph and Buschire. 5th. Encampment of the Embassy near Buschire. 6th. Journey from Buschire to Schiraz.

The nature of the antiquarian and erudite researches founded on the travels of Sir W. O., and which, according to the author's intention, were to constitute its chief merit, appears in the first chapter, in the notes by which it is accompanied. The ancient name of Taprobana, the other ancient and modern names of Ceylon, the principal productions of that island, the commercial intercourse of the ancients with China, inquiries relative to the situation of Ophir, an ancient expedition of a Persian monarch against the inhabitants of Ceylon, romantic adventures of Alexander, the visit of that prince accompanied by the philosopher Belinas to Adam's Peak, and many other accessory objects, are treated of, either in the text or the notes of this first chapter. What is most curious in these researches, are the quotations from a great number of oriental writers, always given in the original language, and translated with great accuracy. We have, however, observed

one passage, in which the author seems to have made a singular mistake.

Sir W. Ouseley, when speaking of the isle of Ceylon and its productions, and referring to a curious passage of the *Nochat alholoub*, a work by Hamd-Allah Kazwini, frequently quoted by the name of the Persian Geographer, employs a long note on the mineral substance called in Persian *Sunbadh*. Our author having quoted what we find in the *Tarhang Djekanguir* and in the *Burhan huti*, on the *Sunbadh*, or Emery, adds: "These notions appear to be partly borrowed from Hamd-Allah Kazwini, who in that part of his work which relates to mineralogy, describes the *Sunbadh*, as a sandy rough stone of which the lapidaries make use to pierce hard stones, and 'when pulverized and rubbed on beads that have decayed through age, it serves to restore them.' The meaning of the original is this: 'It is reduced to powder, and applied to inveterate wounds, and it cures them.' This property of emery is certified by the Greek physicians; and the whole passage of Hamd-Allah appears to be borrowed from Dioscorides, whose text signifies, however, to want some correction. (Dioscor. de Med. Mat. lib. V. cap. 166.) Sir W. Ouseley has been led astray by the double meaning of the original word, which signifies both wound and beard.

The second chapter contains the voyage from Ceylon to Bombay, the stay made in the last place, the visit paid by the traveller to the ancient monuments of Kineri, in the island of Salsette, and to the subterranean temple of Elephanta. The text of this chapter appears to us to elicit nothing new; but the notes, as in the preceding, contain various learned researches: for instance, on the loves of Joseph and Zuleika, which is a subject handled by many Persian poets; on the Banian tree; on the similarity that has been observed between the divinities of India and those of the Egyptians and the Greeks; on the period to which the monuments of Elephanta belong, &c. At the end of the second chapter, Sir W. mentions the Perses or fire worshippers, to whom, and their religion and customs, the whole third chapter is employed. Sir W. is of opinion, that the Trinity of God was at all times a principal point in the religion of the Persians; but if we examine the affair with full impartiality, I fear we shall find some exaggeration in the favorable idea which Dr. Hyde, and after him Sir W. Ouseley, have conceived, of the religion of the Perses. When speaking of the Perses, Sir W. takes occasion to do full justice to the labours of Mr. Anquetil du Perron, and expresses much regret that Sir William Jones did not perceive the value of the services rendered to literature by the learned Frenchman.

In the fourth chapter the author resumes the thread of his narrative, from the departure of the Embassy from Bombay, to their landing at Buschire. The most interesting part of this chapter, on the historical and geographical details relative to Ormuz, and the other islands in the Persian Gulph; and also to the maritime city of Siraf, which under the reign of the Abbassides was the

centre of the commerce of the Arabs with India and China. The notes on this chapter, though very interesting to the lovers of oriental literature, are not susceptible of analysis.

The remaining part of this volume will be examined in another article.

Art. V. *Tresor des Origines*, et *Dictionnaire raisonné de la langue Française*, par Ch. Pougens. Specimen. 4to.

We shall not enter into an examination of this specimen of the immense labours of Mr. Pougens, but merely state some circumstances relative to them. Mr. P. intends to publish, 1st. a *Tresor des Origines*, &c. in six volumes in folio; 2d. an abridgement of the same work, in 3 vols. 4to. and 3d. a great Dictionary of the French Language. These three lexicons will contain the results of the learned researches in which the author has employed upwards of forty years. When we are informed that Mr. Pougens has been wholly deprived of his eye-sight since the age of twenty-three, we must still more admire the extent of his labours, and the powers of his memory. We can hardly conceive how he could collect and so happily distribute so many facts, testimonies, and words of all languages, in his *Tresor*, and so many classical texts in his grammatical dictionary. The number of authors consulted to compose his *Tresor*, is above 4200. This specimen cannot but increase the eagerness of the learned to be soon in possession of these most important works.

Art. VI. *Esprit, Origine et Progrès des Institutions judiciaires, des principaux pays de l'Europe*, par S. D. Meyer. Tome Ier.

A highly important and interesting work, to which we may probably return when the subsequent volumes are published.

#### ORIGINAL CORRESPONDENCE.

##### ASIATIC LITERATURE.

*St. Petersburg, 30th November.*—The literary collection of the Imperial Academy of Sciences at St. Petersburg has been enriched, this summer, with a treasure which deserves particular mention in the annals of the Academy, not only on account of its novelty and value; but also of its importance, and the great influence which it may have in future, or the cultivation of a department of science which has long been neglected in Russia.

A collection of near five hundred Persian, Arabic, and Turkish MSS. has been added at once to the treasures already possessed by the Asiatic Museum of the Academy. They were collected in Syria, Mesopotamia, and Persia, by a person versed in those languages, namely, M. Bousseau, formerly the Consul General of France at Aleppo, and since at Bagdad, and taken to France, where they were immediately purchased for Russia, before any competition arose from other countries. His Majesty the Emperor has now made a present of them to the Academy of Sciences. It deserved to be acquired for Russia, and the first learned institution of the empire may be proud of having this treasure

confided to its care. Its Asiatic Museum, which was already distinguished by its fine collection of Chinese, Japanese, Manchou, Mongol, Kalmuck, and Tungusian writings, as well as of Oriental coins and antiquities, has by this sudden and great addition of Muselman MSS. gained in utility as much as it has acquired in higher rank among similar collections in foreign countries. For this new collection contains, in each of the three languages, and in almost every science, a number of the most distinguished and classical works of Islamism, which it would be in vain to look for in the whole continent of the Russian empire, in the libraries of the most learned Mollahs among its Mahometan inhabitants. Professor Froehn has published, in an extraordinary Supplement to the St. Petersburg Gazette, a valuable report upon this measure, of which the above is the introduction.

#### THE ORPHAN HOUSE OF LANGENDORFF IN SAXONY.

Mr. Editor.—The importance of ameliorating the education of the people becomes every day more evident: all governments are sensible of the necessity of it, but most of them are still far from placing this object in the first rank, as they will probably be obliged to do sooner than they are aware. That valuable time may not be lost, it is to be desired, that till governments give the efficacious aid which they alone can give, the friends of humanity may not relax in their endeavours to prepare the way. In England, it is true, benevolence does not want a spur when any plan is brought forward which affords even but a plausible prospect of relieving the distress of our fellow-creatures. But we are so used to do things on a large scale, that we are, perhaps, not sufficiently aware of the good that may be done with very limited means, and how often a single seed, planted in confidence of the blessing of heaven, has been gradually reared into a stately tree, producing the noblest fruits. The following is a remarkable example, and will doubtless interest your readers.

Christopher Bucher, a Saxon by birth, had from his youth felt an irresistible inclination to devote himself to the education of children. His benevolence was particularly directed to orphans. Serving as hostler at the inn at Weissenfels, he took pleasure in teaching some poor children, and often went to talk upon subjects of education with the clergyman of his village, who encouraged him to follow his impulse. One day he was at Leipzig, without money and without means to procure any. In his distress he retired into a corner of the stable, and throwing himself on his knee, implored the divine assistance. Finding himself strengthened by this pious act, he went to take a walk out of the gates of the town. A paper, containing some pieces of money, which a passenger had dropped, caught his eye: the sum was sufficient to relieve him from his embarrassment; he made inquiries, but in vain, to discover the owner; and thought he saw in this combination of circumstances a manifest sign

of divine protection. Some time had elapsed, when he found that he had acquired by his industry the sum of a hundred florins (about ten pounds), two carts, and three horses. He happened to break a wheel in the village of Langendorf: this accident appeared to him to be an invitation from providence to begin in this place the execution of his favourite project. The plan for building an Orphan-House was soon fixed upon. Two workmen who assisted him in building, were the first benefactors to the intended establishment, one giving twelve groschen (eighteen-pence) and the other ten groschen. A gardener of the name of Dunkel joined in this good work; he put the garden in order, and planted a vine.

It was with such slender means, but with confidence in God, that Bucher commenced what he had long considered as the object of his existence in this world. In 1712 he took up his abode here with four orphans.

*Prayer and work:* this was his principle: according to this he regulated the habits of his pupils, that they might, above all things, imbibe the fear of God; and then that they might learn to provide themselves for all their wants. Instruction, according to him, should tend to give to man the knowledge and the use of his own powers.

These principles, which he exemplified by practice, produced the happiest effects. Poor, but ardent in the cause of truth, persevering in the conviction that he had found it, Bucher made his enterprise succeed. In 1720 his pupils amounted to fifty-one; and he then received some assistance from the Duke of Weissenfels, and a hundred crowns per annum, with exemption from certain taxes, from the Elector of Saxony. Dunkel the gardener remained faithful during his life to his first resolution, and bequeathed to the establishment the fruits of his savings.

Bucher died in 1729. The simple and just ideas which had guided him, were abandoned after his death. It was desired to do better: the Directors introduced the study of the dead languages, and the school of Langendorf suffered by it. It was not till the year 1811, that the spirit of the founder resumed its influence. At this period the orphans of Langendorf were united with those of Torgau, and the two combined establishments were placed under the direction of the Rev. Mr. Wurker.

The number of pupils is now a hundred and sixty: ninety-eight boys and sixty-two girls. The former cultivate a piece of ground of 130 acres, and make their own clothes and most of the instruments which they use: the girls are employed in the internal economy, and in the labours belonging to their sex. This education is directed by the influence of the good examples which they receive from their superiors, and give to each other, without any emulation but that which proceeds from the desire of doing well, having neither rewards nor punishments. Idleness is represented to them as the most dangerous enemy to man; and this is a maxim which they soon comprehend, because all the pro-

duce of their labour is employed in increasing their own comforts. They are taught reading, writing, and arithmetic, with a little history and geography. Religious instruction is particularly attended to. Most of the teachers are former pupils in the establishment, assisted in their functions by the eldest of the present pupils, who, together with the directors, keep the books, and make the reports to the government. At the age of fifteen they may quit the house, and choose themselves a profession; but they still continue their connection with the director, who pays for their apprenticeship on account of the establishment. † The girls are put out to service in good families, and keep up, until they are of age, a correspondence with the director, a highly respectable man, and indeed their father; it is by this name that the teachers as well as the pupils call him. The merit of having brought back to its true destination, an establishment so interesting in its origin—a truly Christian charity; a great deal of simplicity, which does not exclude firmness of character; great talents, and indefatigable activity, tempered by a patience which is proof against every trial, eminently distinguish the Rev. Mr. Wurker.

#### LEARNED SOCIETIES.

##### OXFORD, Dec. 25.

The whole number of Degrees in Michaelmas Term was—D. D. three; B. D. one; B. C. L. two; M. A. thirty; B. A. sixty-five. Matriculations ninety-five.

##### CAMBRIDGE, Dec. 24.

There being two of Sir William Browne's Medals, (the one for the Latin Ode, and the other for the Greek and Latin Epigrams,) which have not been disposed of in former years, it is the intention of the Vice-Chancellor to give them to such resident Undergraduates as shall produce the best compositions of the above description; viz. one medal for the best Latin ode in imitation of Horace, and one medal for the best Greek and Latin epigrams, after the manner of the Antologia, and after the nature of Martial, respectively.

Subject for the Latin ode:

Χρυσία Φέρμιυξ.

For the Greek epigram:

Εἰς Ἀγάλας

τῆς μακαρίτης Καρολίνης;

Γενεθλίου καὶ τῆς Βριτανικῆς Ἀρχιεπισκοπῆς.

Θεοῦ τιμῆς.

For the Latin epigram:

"Optimus nos esse dum infirmi sumus."

• It seems singular that natural history is not included among the branches of instruction to initiate children into the secrets of nature in creases their reverence for the Creator; and, for those who labour in the fields, it renders agriculture doubly interesting; and consequently tends to make them love the station which God has assigned them. Proofs of this truth, if needed them, might be found at Hovey.

† At Hovey, they remain in the establishment till the age of twenty-one years, serving their apprenticeship before they quit the sphere where the good results of their education may be the best consolidated.

The subject of the Hulsean prize dissertation for the present year is—*The Importance of Natural Religion.*

## FINE ARTS.

## FRESCO PAINTINGS.

We translate the following from a respectable Italian Journal.

Frequent attempts have been made to separate Fresco Paintings from the walls on which they are executed, in order to rescue them from the destructive effects of time and weather; but all have been unsuccessful.

Antonio Contri, of Ferrara, was the first who made a public attempt in the beginning of the 18th century at Mantua. He succeeded in taking several heads of Giulio Romano from the wall, and transferring them to canvas; these were sent to the Imperial Court of Vienna. But this work required long and difficult preparations, which were hardly only calculated for even walls, and he taking off smaller paintings. To this it must be added, that the labours of Contri, as well as the later trials in France and other countries, were confined with more or less success to transferring paintings, piece by piece, from walls or linen to new linens, and never to pannels. Such attempts have lately been renewed in Naples, Modena, and other places; but the result has not yet proved fully satisfactory. Subsequently, the mode of sawing the paintings from the wall was adopted; this method, however, which was always attended with danger, was only applicable to pictures of a small size. Stefano Barezzi, a native of Milan, has the honor of having been the first to render an essential service to the Arts, in transferring to pannels, by a most simple, expeditious, and safe process, Fresco Paintings of whatever size from the wall, whether level or not, without doing the least damage to the original design.

His method consists in laying a piece of prepared linen against the wall, which extracts the painting, in such a manner, that the artist, with a sure and uniform motion, can draw off the linen in a perfect state with the painting, so that the wall itself remains quite white. This linen is then stretched upon a pannel, and again drawn from this, so that the painting itself remains fixed upon the pannel without sustaining the smallest injury.

Mr. Barezzi has in this manner already transferred several paintings of Luino and Marco d'Oggione, which are exhibited to connoisseurs for their inspection. The Roman Government, in consideration of the importance of this discovery, has come forward to animate the efforts of this artist, by assigning him the Church della Pace, (now shut up) where he can apply his method to some greater paintings of Marco d'Oggione. By this discovery, it is to be hoped that we shall see the last supper of Leonardo da Vinci, the remains of which are in the treasury of the monastery of della Grazie,

protected from total destruction, and this master-piece of human genius preserved.

## PETRARCH'S MONUMENT.

The monument erected to the memory of Petrarch at the fountain of Vaucluse, consists of a column about thirty feet high. It was begun in 1804, under the direction of M. Bourdon de Vetry, then prefect of the department, and was finished by M. Delatre, his successor. It cost between three and four thousand francs. In any other situation it might be viewed with pleasure, for it is well executed, and in good taste. But, standing as it does, in the deepest extremity of a narrow valley, overhung by a mountain seven hundred feet high, it is regarded by nearly all who have visited the celebrated fountain, as a mean and almost ridiculous monument.

It is therefore intended to erect another monument in its stead; yet it is thought advisable to fix the plan for the new one before the old is destroyed.

It has been suggested that a pure inscription would be sufficient: if this plan be adopted, the task of selecting one will devolve on the Royal Academy of Belles-Lettres. (French Paper.)

## ORIGINAL POETRY.

## A TRIBUTE TO THE MEMORY OF A RELATIVE AT TRICHINOPOLY.

Death, thou art fearful; she we lov'd is gone!  
No mortals' tears could stay the fatal blow;  
And the pale mourner must return alone,  
Without the partner of his woe and woe.

For him the land, and friends from childhood dear  
She left for ever—'twas a powerful spell—  
Ev'n then might hope have check'd the rising  
tear;

And yet she wept—it was her last farewell.

The years flow'd on in peace, and she was blest  
In wedded love,—her husband and her boy  
Shared ev'ry thought within her faithful breast,  
Sooth'd ev'ry care, and brighten'd ev'ry joy.

Still her soul panted for her native home,  
And chid the time which could her wish defer:  
Counting the glad days which indeed might come,  
Might come to all she lov'd—but not to her.

Shall I not grieve o'er thy untimely end?  
Shall I not mourn thee, stranger, as thou art?—  
A second parent to my earliest friend,  
Claims a warm place in this devoted heart.

And, gentle sister, tho' we'll hope thy gaze,  
Now fix'd on brighter scenes, thy first grief fled:  
Shall I not even at these distant days,  
Weep o'er the grave o'er which thy tears were shed?

Thy loss is stern—yet how to bear'n's high will;  
'Twere wrong to murmur at its least decree:  
A cherish'd partner left—be grateful still—  
She did not die when she was all to thee.

Belov'd, remember that the last death peal,  
Smote on a heart more fearfully bereft;  
Which felt more deeply than ev'n thine could  
feel,

Was left more lonely than e'en thine was left.

One fatal blow dissolv'd the bond of years;  
Yet sweet to think, tho' one was call'd to die,  
No self-upbraiding cans'd the mourner's tears,  
Or mingled with the parting spirit's sigh.

She died far from the land so lov'd, so fair,  
Far from the guardian of her early years;  
Her death—pangs lighten'd by no mother's care,  
Her cold grave water'd by no mother's tears.

That parent's life was fragile,—yet there came  
A beam of hope to light her aged eye;  
One tie still bound to earth her shatter'd frame,  
That tie is broken—she will weep and die.

She pray'd for lengthen'd life—she did not know,  
That lengthen'd life, would be but lengthen'd  
care:

That boon 'twas heav'n's dread pleasure to bestow,  
Which heav'n has granted—but with life—despair!

Would it were ours, to know for what we pray,  
That we might check presumptuous hopes and vain,  
Nor dream of pleasure in the distant day,  
Which heav'n has destin'd to be mark'd with pain.

Yet life must linger on thro' scenes like this,  
To find its glorious recompense above;  
To feel misfortune brighten into bliss—  
The love that wept on earth—eternal love.

Dec. 25, 1819. H.E.R.

## [By Correspondents.]

## SONNET.

"Thus rolls the restless world beneath the moon."  
DREYMOND.

Vain thoughts, vain hopes, and fond desires are fled,

Which curl flutter'd round my infant heart,  
And like fell dew's their baneful influence shed—  
More poisonous still when least we feel their smart.

My youth a dream, a fleeting cloud—is gone,  
Like that which passeth o'er a summer's day;  
Or this—when night recedes from opening morn,  
And with it bears the vapour false away.

But what is now the waking dream I find?  
Life's dull reality and sickly scene;  
Alas! if we but knew for what we pined,  
Scant our desires for such a world I ween—

A world; a joyless waste where wretches weep,  
And pain and sorrow their black vigils keep.  
J. H.

## LIGHT.

One after one appearing thro'  
The blissful sky's ethereal blue,  
The stars by their Creator given,  
Salute the earth and light the heaven.

High o'er the mountain tops afar,  
The moon rolls in her silent car,  
And rivers underneath her light  
Glide brightly thro' the hours of night.

Thousands, by Sleep's soft pow'r, have gleams  
Of happiness in healthy dreams;  
And Fancy's dear illusions give  
Scenes in which Love could ever live.

How happy those whom Care forsakes,  
Whom Sleep endears, whom Fancy takes;  
For such Night sweetly dies away,  
And gives the world another Day.

Islington. MARIA.

VERS SUR LA MORT D' ATTILA.

*Dieu ! renversez pour moi le sort de ce vaillant  
Qui recut dans la gloire, et mourut dans l'amour.*  
COREBAU.

IMITATED.

Of Attila, so famed in story,  
The opposite, oh ! let me prove :—  
Victorious, he lived with glory,  
And, all possessing, died in love.

W. J.

## BIOGRAPHY.

F. W. ELLIS.

The information of the death of Mr. Ellis at Madras is confirmed by the *Gazettes* received from that Presidency. The Editor of the *Madras Courier*, in speaking of this event, says: It is with unfeigned concern that we announce the death of Francis Whyte Ellis, Esq. of the Honorable Company's Civil Service, and Collector of Madras. It is unnecessary, and indeed it would be out of place, for us to eulogise the merits of a gentleman so generally known, and where known so greatly loved and valued, as the deceased. In our obituary we trust we shall have to record from some able pen the great loss sustained by the government and the public. The general acquirements and learning of Mr. Ellis were very respectable; but the object of his chief and unwearied pursuit was oriental literature, in the knowledge of which he was equalled by few. We believe we may say, without fear of being accused either of partiality or exaggeration, that no European gentleman was ever so well acquainted with the science of Hindoo law, and with the theology, habits, customs, and general literature of the Hindoos. Many of our readers will remember with pleasure the learned and interesting lectures delivered by him lately to the Literary Society of Madras; and we mention with regret, that at the very time when his melancholy death took place, he was actively engaged in researches to enable him further to elucidate the subjects which those lectures embraced. He has been cut off in the prime of life, and in the midst of his literary labours, many of which we know to be highly curious and interesting, and in an unfinished state.

The Editor of the *Madras Government Gazette* notices that this melancholy event took place at Rannad, on the morning of the 10th of March. This writer adds: In Mr. Ellis was united, with great activity of mind, an uncommon versatility of genius. The pursuits with which he was unceasingly occupied, were various and often dissimilar; but on whatsoever his talents were employed, whether the subject was enjoined by duty or prompted by inclination, he manifested the same ardour and the same happy sufficiency. Even his failures exhibited a mind fraught with intelligence and information. With the languages and literature of the Hindoos (particularly the nations of Southern India) he was eminently conversant, and of their institutions, civil and religious—of the habits and modes of thought—of all, in short, that

enters into the composition of national character, his knowledge was singularly accurate and extensive. As a public servant, he was always found more than equal to the duties with which he was charged, and always earned the meed of praise from those who were most capable of discerning merit.

Though possessed of social virtues, and of a kind and benevolent disposition, Mr. Ellis did not maintain a general intercourse with his own countrymen; but by those who knew him, he was loved and esteemed, and by the mild and intelligent natives of India, with whom he intimately associated, his name will long continue to be held in the most grateful and respectful remembrance.

A fatal accident suddenly terminated his valuable life in the 41st year of his age.

*Calcutta Journal.*

## THE DRAMA.

DRURY LANE.—On Monday the annual dose for the edification of London shopmen and apprentices, George Barnwell, was discarded from this theatre, and the Dramatist substituted in its stead. As we never conceived the effect of Mr. Barnwell's profligacy and hanging to be of a decidedly moral tendency, we can part with this lesson without regret: but, we think, that another tragedy, rather than a comedy, should take its place. Considering the composition of the audience at this holiday period, and not forgetting the pretty general addiction to noise and oranges, and munching and drinking; we are of opinion (we urge the point with all the humility its dubiety and importance impose,) that a deep, deep tragedy is the thing; and for these reasons: *Primo*, because a large proportion of the visitors would rather pay their money to see princesses and heroes in distress, than persons nearer their own acquaintance in the world, bustling about in the midst of common and likely occurrences; *secundo*, because obnoxious interruptions spoil a comedy entirely, but very little, if at all, injure a tragedy; *tertio*, because tragedy contrasts much better with, and is, therefore, better adapted to set off the succeeding pantomime; *quarto*,—but, we need not go on; three reasons are enough for any thing on earth, and at least two more than can usually be produced for the nearest affairs in private, or the most vital measures in public life. To return to the Dramatist—it was acted with great spirit, that is to say in plain English, *en farce*. The burlesque of comedy would have been highly reprehensible at any other season, and we trust that if performed after twelfth day, the play will be subdued into that true comic tone, which Elliston, Dowton, and Russell know how to appreciate and how to assume. It must be acknowledged, however, that the piece itself is of the buffoon genus: Vapid, is throughout a character inadmissible into the circle of society; Ennui has nothing but his yawns to recommend him; Florville, little besides his drunkenness; and Lord Scratch, nothing at all. To these parts Elliston, Harley, Russell, and Dowton were appoint-

ed; while Mrs. Edwin, Mrs. Harlowe, and Mrs. Robinson, personated the ladies, Marianne, Louise, and Lady Waitfort, in a commendable manner.

JACK AND THE BEAN STALK—the pantomime at this house, is the best they have had for some years; no great compliment, by the way, and so we must mend it by adding, that it is a very passable production as matters of that kind are to be estimated. For the information of such as may not be acquainted with the fact, we shall mention, that Jack the Giant Killer, is a nursery story of considerable antiquity and celebrity in this land of learning. An author of "machinery, tricks," &c. could hardly take a more famous model; and it is but rendering justice to the present work to say, that it proceeds upon one of the most dignified, romantic, interesting, and perilous narratives of adventures within the whole compass of early literature. Whether it may or may not be sufficient to determine the question between the Aristotelian and chivalrous dramas, so eruditely carried on at this time by the greatest scholars in Germany and France, it is impossible to anticipate; but it does seem to us to combine so much of historical truth with the wild and poetic of imagination, and so much unity of action with the want of all regard to the other unities, as to offer a powerful argument in support of the theories of Messrs. Schegel. With regard to the plot, it is simply consistent with the ancient history; except that the renowned Jack mounts the bean stalk, which reaches to the skies, and on the top of which is the wicked Giant's castle, only once, instead of the mystic three, and owes his preservation not to Mrs. Ogre, but to a waiting maid upon that illustrious personage, called Janetia, who is kept for a *bonne bouche*. The hero kills the Ogre and becomes Harlequin, and Janetia, Columbine, under the auspices of a good Fairy of the Harp: while the Ogress raises two evil spirits, Pantaloon and Clown, to pursue them for the murder of her bulky husband. Then follows the usual train of adventures. Of the changes and mechanism, the most amusing are the growth of the bean; the animation of a sculptor's warehouse, whence issue gigantic legs, arms, torsos, and various classical figures; the wild-boats at Exeter Change let loose from their cages; and the transformation of a tea-equipage into a brilliant display of fire-works, in which the Clown and his senior partner are whirled round, to the infinite delight of the young and the old. The best scenes are the Gates of the Ogre's Castle (Dixon); the interior of the same (Marinari); and a Sea-view (Andrews.) There is rather a sameness in some of the tricks, such as the return of an inscription wherever any of the harlequinades vanish; and the counter-changes depending on puns, or *jeux de mots*, of a steam-shaving apparatus into a lawyer (close shaver); a Daniel's life-preserver into Death, and again into roast beef and porter, the true life preservers, &c. There is also some what too much of fine singing. The Ogre was represented in the grandest style by Mr. Hudson, a genuine giant we believe, for we

see what a little boy near us called "a big fellow," among the crowd in the Menagerie scene. Bologna was an active Harlequin; Miss Tree a so-so Columbine; Mr. Elliott a very good Pantaloon, which, viewing his tumbles, whirls, and other sufferings, we would not be for a hundred pounds a night; and Southby a strong, clever, and effective Clown, especially in feats of bodily marvels. He performed one practical joke of indecency on the tailor's inexpressibles, which we hope has been retrenched.

COVENT GARDEN. The Christmas treat at Covent Garden is founded on the adventures of the redoubted Don Quixotte, and his faithful Squire. These are very ably dramatized, or rather pantomimized, and ingeniously adapted to the purposes of this species of representation. It is rather a superior thing of the kind, and both in conduct and ornament rises above the common level. The incidents selected from Cervantes are well chosen, and the transparencies (painted by Wright), which illustrate the origin of romance, are beautiful. The general order of pantomime is indeed disturbed, if not reversed on this occasion. The Knight and Sancho retain their characters throughout, and Pantaloon (the housekeeper,) is attached to them. Instead of the lovers being persecuted, they are the persecutors, for the wand works all the mischief to the Don, and all the pummellings and misadventures to his faithful follower. By this magical instrument, the Windmill is turned into a real giant, oppressing forlorn sacks of corn transformed into damsels, and again into its original form; the flocks of sheep do become soldiers, and revert to mutton; and all the other incidents, even to the tossing of our old friend Panza in the blanket, are dependent, more or less, upon its "charmed touch." The scenery is pre-eminently entitled to admiration. The Spanish Inns, Sierra Morena, and Realmus of Romance, (by Griever), are wonderfully fine; and Whitmore and Pugh have also several excellent and characteristic scenes. This splendour of decoration is well diversified by the humorous mishaps of the Governor of Barataria, whose wife and daughter are happily introduced to augment the fun. The wonderful ape is also a prominent actor in the affair of the *Shewman*; and the whole piece, including *Romance*, *Dapple*, &c. &c. a very satisfactory entertainment for the rising generation. We therefore especially recommend it to the Managers to perform it after some short and pleasing drama, for three nights in the week, so that children may enjoy it, without enduring the pre-fatigue of a five-act play.

MARY STUART. This tragedy which we hardly expected to see again, was revived on Wednesday, with many judicious alterations and curtailments. Though much improved by these, it is still deficient in force and interest. With the exception of the final scene, there is really nothing of tragic importance: in this, Mary, through a door in the centre of the stage, ascends the scaffold thrown impressively into gloom, and covered with iron soldiery: it is shut, and Leicester returns for a few minutes in an agony of self-

reproach and despair; and when opened again, only a fearful and appalling void is visible, and the curtain drops upon the wretched favourite. Another scene, between Mortimer and Leicester, should also be exempted from the charge of general insipidity; but all the rest is unimpassioned and dull. The death of Mortimer, who, we hear, stabs himself in prison, is huddled over in a singularly insignificant manner, and the entire absence of any feature which could impart that dramatic effect to the Scottish Queen, which she enjoys even in sober history, is an objection fatal to this play. On the contrary, the bosom of Elizabeth appears to be most torn and lacerated by deep emotions; and there is such a diffusion over all the characters, of what ought to be concentrated, whether of pathos, of grandeur, of grief, or of suffering, that we care for all pretty nearly alike, and very little for any. Elizabeth's visit to Kenilworth Castle affords an opportunity for one of those gorgeous spectacles in which this theatre delights, and is so unrivalled. The dresses are appropriate and magnificent, and the acting unimpeachably, except perhaps in Mary, now performed by Miss Foote, whose face and form are better fitted for the character than her mental endowments; but we must still come to our past conclusion, that the tragedy is not possessed of vigour to promise it any length of nights. We observed in the declamation, that the language was not very correct: "unspotted blood," for example, was one of the phrases; and we fear that the German author, therefore, has not been improved by his translator.

## VARIETIES.

ANECDOTES.—"Why did Adam bite the apple?" said a school-master to a country boy. "Because he had no knife," said the boy.

One of the Paris opposition papers has revived the following anecdote.—"A minister is sick. His colleague, M. P., to induce him to take the medicine presented by the physician, said, 'Take it, I intreat you; I'll be hanged if it does not do you good.' 'Take it,' added the doctor; 'after the assurance that Monsieur has given you, you must be convinced that, *one way or other*, the remedy must have a good effect.'"

An epidemic disorder broke out in • • which carried off many inebriates in a short time. "Thank God!" said the countess of L—, when the names of several of the victims were mentioned in a company, "The nobility are spared; none die but the vulgar."

THE REWARD OF MERIT.—On the 17th of November, the King of France conferred the decoration of the Legion of Honour on sixteen of the persons, whose productions at the late exhibition of French industry seemed most to merit the distinction. We should like to see something of this kind in England; for though in our country public opinion is the sovereign power to which all appeal, it would still be gratifying (as on the present occasion at Paris) were chemists,

printers, manufacturers, engineers, artists, potters, &c. rewarded and encouraged by some mark of honour from their monarch, especially when the throne is filled by a prince possessed of so fine a judgment as the Regent.

Among Canova's recent models at Rome, statues of a Magdalene, an Endymion sleeping with a hound by his side, and a Nymph reclining on a Tiger's skin, are much spoken of.

A remarkable effect of Lightning.—About twenty years ago, during a violent thunder storm, the lightning struck a pane of glass in a house door, so that the mistress of the house, who was in the hall behind the door, was cast several paces backwards, and thrown on the floor. She however received no injury, nor was the pane of glass broken. The electric fluid had however left upon it a beautiful painting, (if we may so express it,) resembling, on the whole, a head, which was formed of numerous smaller heads. From that time, this pane of glass was never wet with the dew, and never froze, though the other panes were affected by the weather as usual. Great care was taken of this remarkable pane, till some days since it was broken by carelessness; when it appeared that the lightning had split it, making two panes out of one, and leaving in the middle the traces of the electric fluid. Before it was broken no one could see that there was a division. The panes, which are not much broken, were collected as carefully as possible.

The French Journals state that M. Noel de la Morinière, who is about to proceed to Lapland, will be accompanied by his son, a young officer of infantry, who has obtained leave of absence for that purpose.

Another traveller, the Chevalier Gamba, is on the point of departing for Asia and the banks of the Caspian Sea, to fulfil a mission interesting to the arts and sciences; he will be accompanied by his son, an officer of cavalry. M. M. Harnt, Plee, and Godefroy, the naturalists, who are on the point of departing from Rochefort, are to be accompanied by their brothers, who will afford them considerable assistance in their investigations.

The ancient Danes were distinguished for their contempt of death; and this is well put by one of their writers, describing the close of a hero's life in few words,—"Agnar fell, laughed, and died."

A confessor advised a dying man to recommend him to his patron saint, as his time was come, and he must soon appear in the presence of his Maker. "As that is the case," replied the invalid, "I will save my friend the trouble, and carry my recommendations myself."

In 1762, a Lieut. Campbell, of the Middlesex militia, condemned for forgery, on the eve of his exit, sent invitation cards to many of his brother officers. "Lieut. Campbell's compliments to . . . , he requests the pleasure of his company to-morrow morning to take a cup of chocolate, and do him the honour to accompany him to Tyburn, to be present at his execution."

## LITERARY NOTICES.

An Inquirer is informed, that there are copies of the *MONUMENTUM PACIS*, which was described in our Number 151, to be seen at Ackermann's in the Strand.

We have had more than one occasion to express our very favourable opinion of the works of Mr. James, whose naval and military elucidations of the occurrences of the late American war, possessed all the merit belonging to productions of their class—patient research, diligent comparison, and sound reasoning on well established facts. It is therefore with pleasure that we observe an announcement, from the same pen, of an entire Naval History of Great Britain, commencing in the year 1793, and brought down to the present period. We have no doubt it will do credit to the author, to our brave sailors, and to the country.

**IMPROVEMENT IN MODERN GREECE.**—Mr. Theocles Pharmacies, one of the editors of the Greek Mercury, has published a very useful work, containing extracts from most of the ancient Greek authors, and accompanied with very excellent new Greek notes, under the following title: "Elements of the Greek Language, for the use of Greek Schools," 4 parts, in 12mo. Every volume contains a very convenient vocabulary.

A valuable work has just been completed at the Madras Commercial Press. It is the New Testament, translated from the original Greek into Telugoo, by Mr. Pritchett, a learned Missionary. It is in two volumes, comprising 888 pages octavo. The Telugoo types have been principally cast by Mr. Urquhart, of the Commercial Press, by whom the work has been printed, in a manner very creditable to that establishment. Mr. Urquhart, with a laudable zeal, is now actively employed in casting Canarese types for another edition of the work in that language.

*Maximes et Pensées du Prisonnier de Ste. Helene*, a MS. found among the papers of Las Cazes, is the title of a forthcoming work, announced a few days ago in Paris.

## ADDRESS

TO THE PUBLIC.

Were it not that custom demands something from us at this season, we should be glad to waive our privilege; for though we are not so ungrateful, as not most heartily to feel the great kindness and encouragement which has been bestowed upon our labours, it is always so painful to fall into egotism, (or as editors should say, *nosism*) that we could gladly compromise our expression of thanks into the mere wishing of a happy new year to all our friends, rather than be obliged to tell what we have done, and mean to do, in order to merit public favour. Yet we are conscious of standing on such pleasant terms with our readers, that it is an easy matter to perform this annual task,

with good-will on their side, and sincerity on ours.

The Literary Gazette has continued to succeed beyond our anticipations, and is now seen, not only throughout Britain, and in many places on the Continent, but in the East and West Indies, America, and distant settlements where we had not hoped to establish ourselves till after years of longer probation. This is the best proof we can offer of its being generally liked, and of its having faithfully performed its promise, to afford a "complete analysis of the literature of the age; a comprehensive view of the progress of art and science; an entertaining miscellany of light reading; and an instructive repository of general knowledge." We should indeed be ashamed to repeat these large conditions on which we set out, if we could not with honest pride place our hands upon our three volumes already published, and boldly ask, whether or not, they have been fulfilled. And this we may, with the less impeachment of our modesty, do, because we claim no praise, but that of extreme diligence, and refer the truly valuable of our contents to the contributions which have been poured upon us by the most distinguished individuals of the age, who have been pleased to think that a work of this kind was eminently calculated for the promotion of British arts, bibliography, and science, and the diffusion generally of taste, literature, and instruction.

There is only one feature in the Literary Gazette to which we shall particularly allude, as having undergone considerable improvement: we mean the branch of Reviewing. At a period when so many admirable works issue from the press, it can hardly fail to be considered a recommendation, that we have extended our facilities in this respect, and provided to be, almost invariably, the earliest publication from which an acquaintance with new books can be obtained. Thus in No. 153, there was a long review of Ivanhoe, anterior to its appearance; in No. 152, *Tobin's Life*, under similar circumstances; in the few preceding Numbers, Southey's *Brazil*, Macculloch's *Western Isles*, *Anastasius*, &c. &c.; and in this, *Burckhardt's Nubia*; none of which could have been seen before the favour of their publishers, in compliment to the service which this sheet by its fair notices, and immediate and wide circulation renders the general cause of letters, enabled us to submit their claims, and explain their nature, to the literary

world. As these books are from eminent authors and booksellers, we venture to presume, that few volumes of great attraction will henceforth appear without an immediate contemporary, and often anticipatory description in the Literary Gazette.

Having trespassed much longer than we intended on this subject, we beg to conclude, with briefly stating, that "Sketches of Society" will very soon be regularly resumed; and that in every other department, our augmented means will be superadded to that exertion which has procured success to our past course.

\*. Volumes, parts, and most of the single Numbers, from January 1817, are now to be had at our office, or by giving the order to any bookseller or news-vender in town or country.

## METEOROLOGICAL JOURNAL.

DECEMBER, 1819.

*Thursday*, 23.—Thermometer from 45 to 52.

Barometer from 29, 45 to 29, 52.

Wind W.N.W. 3, and 1.—Morning cloudy,

the rest of the day generally clear.

Rain fallen, 1.25 of an inch.

*Friday*, 24.—Thermometer from 24 to 36.

Barometer from 29, 56 to 29, 50.

Wind S.W. 3.—Morning clear; the rest of the day generally misty.

*Saturday*, 25.—Thermometer from 25 to 35.

Barometer from 29, 52 to 29, 64.

Wind N.N.W. 1, and 2.—Generally clear; clouds passing. A  $\frac{1}{2}$  halo formed at times in the evening.

*Sunday*, 26.—Thermometer from 21 to 32.

Barometer from 29, 60 to 29, 70.

Wind S.W. and S. 1.—Morning clear; the rest of the day foggy and cloudy.

*Monday*, 27.—Thermometer from 22 to 23.

Barometer from 29, 66, to 29, 67.

Wind E. b. S. 3.—Generally clear till the evening, when it became rather hazy, and a fine halo was formed from about 6 o'clock.

*Tuesday*, 28.—Thermometer from 26 to 35.

Barometer from 29, 67, to 29, 72.

Wind N.E.  $\frac{1}{2}$ .—Cloudy; a little snow or sleet fell in the afternoon about 4.

*Wednesday*, 29.—Thermometer from 25 to 32.

Barometer from 29, 74, to 29, 84.

Wind N. 1.—Morning cloudy, the rest of the day generally clear.

On Monday, the 3d of January, 1820, at 4 hours, 53 minutes, 15 seconds (clock time), the second Satellite of Jupiter will emerge from an eclipse.

On Friday, the 7th, at 5 hours, 12 minutes, 23 seconds (clock time), the first Satellite of Jupiter will emerge from an eclipse.

In Crown Folio, price Four Guinea. (A few Copies re-  
main for sale on large paper, price Eight Guinea.)

HALLAMSHIRE.—THE HISTORY AND  
TOPOGRAPHY OF THE PARISH OF SHEP-  
FIELD IN THE COUNTY OF YORK: with Histori-  
cal and Descriptive Notices of the Parishes of Eccle-  
field, Hanworth, Treeton, and Whiston, and of the Chi-  
rurgy of Sheffield. By JOSEPH HUNTER, an Honorary  
Member of the Society of Antiquaries of Newcastle  
upon Tyne.

\* \* This Work contains an account of a district of  
considerable extent hitherto undescribed, and is embell-  
ished with several highly finished engravings from  
drawings of Mr. Edward Blore.

London: Published by Lackington, Hughes, Harding,  
Mavor, and Jones, Finsbury Square.

Price 4s. 4s. or large Paper 6s. 6s. in boards.

THE HISTORY OF ANCIENT WILTSHIRE,  
NORTHERN DISTRICT. By Sir RICHARD  
COLT HOARE, Bart. F. R. S. & F. A. S.

The History of the Northern Portion of Ancient  
Wiltshire is written on the same plan with the former  
Division of the County, South Wiltshire, and will de-  
scribe the Antiquities worthy of remark in the Northern  
District. This Portion forms the First Part of the pre-  
sent Division of the Work, and will terminate the Au-  
thor's Researches, as far as regards the History of the  
Britons in Wiltshire.

The Second, and concluding Part of the Volume, will  
be allotted to the Romans, and will describe their Towns,  
Rations, Villas, and Roads of Communication, the latter  
of which will be accurately marked out on Maps.

The Size, Style of Printing, and the Embellishments,  
accord with the three Portions of the Work already pub-  
lished, forming the First Volume, or Southern Wiltshire;  
the present Division of the County will be completed in  
two Parts, forming the Second Volume, or Northern  
Wiltshire.

The few remaining Copies of the three preceding Parts  
of the History of Ancient Wiltshire may be had of the  
Publishers, price 4s. 4s. each, or large Paper 6s. 6s.

London: Printed for Lackington, Hughes, Harding,  
Mavor and Jones, Finsbury Square.

Price 6s.

THE EDINBURGH REVIEW; or CRITICAL  
JOURNAL, No. LXIV.

Contents: Papers, State of the Country, Climbing  
Boys, History of France in Italy, Comparative Skill  
and Industry, of France and England, Mission to Ashan-  
t, Congress of Vienna, Marcell on Calculus Disorders,  
Dr. Clarke on Blow pipes and Volcanoes, Necessity of  
Parliamentary enquiry, Mr. Owen's Plan for relieving the  
National Distress, Turnpike Roads, Establishments at  
Hovey, Quarterly List of New Publications.

Edinburgh: Printed for Archibald Constable and Co;  
and Longman, Hurst, Kees, Orme, and Brown, London.

Handsome printed in quarto, with elegant Engravings,  
price 12. 1s. in boards, Vol. IV. Part 1. of,

SUPPLEMENT to the ENCYCLOPÆDIA  
BRITANNICA: Edited by Macvey Napier, F. R. S.  
London and Edin. This half volume is prefaced with the  
Second Part of a Dissertation on the progress of the  
Mathematical and Physical Sciences, by the late Pro-  
fessor Playfair; and contains the following Articles and  
Treatises, written by John Barrow, Esq. F. R. S. M. B. of  
the Royal Institute of France, William Jacob, Esq.  
F. R. S., Dr. Lusk, J. R. M. Culloch, Esq., James Mill,  
Esq., and other well known writers, viz.: In Topogra-  
phy, Edinburgh, Edinburghshire, Essexshire, Fermanagh  
County, Flintshire, Flintshire, In Geography and  
Statistics, Egypt (including an Exposition of the Hie-  
rotopographical System), Elba, England, Europe, Faroe Is-  
lands, Florida, In Biography, Edral, Edwards, (Bryan),  
Edwards, (Jonathan), Ernest, Ferguson (Dr. Adam),  
Fergus, Pettie, Fillingim, In Arts, Science, and In-  
dustry, Education, Electricity, Diptrophage, Em-  
bankment, Entomology, Fluents, In Political Econo-  
my, Emigration, Exchange, Fisheries.

Printed for Archibald Constable and Co. Edinburgh;  
and Hurst, Robinson, and Co. London.

## The Evelyn Manuscripts.

Handsome printed in 2 vols. Royal Quarto, embellished  
with Portraits and other engravings by the first Ar-  
tists, price 35. 15s.

MEMOIRS of JOHN EVELYN, Esq. the ce-  
lebrated Author of the Sylva, &c. Edited by W.  
BRAY, Esq. Fellow and Treasurer of the Society of  
Antiquaries, Author of the History of Surrey, &c.

This extremely curious and interesting work is printed  
from the original MSS. in the Library at Wotton. It  
comprises his diary, with observations on men and man-  
ners; the politics, literature, and science of his age, dur-  
ing his travels in France and Italy; his residence in  
England towards the latter part of the protectorate, and  
his connection with the courts of Charles II. and the two  
subsequent reigns, interspersed with a vast number of  
original anecdotes of the most celebrated persons of that  
period. To the Memoirs are subjoined original letters  
from Sir Edward Nicholas Secretary of State to King  
Charles I. during some important periods of that reign,  
with the King's answers: also selections from the corre-  
spondence of John Evelyn, and numerous letters from  
Sir Edward Hyde (Lord Chamberlain) to Sir Edward Nichol-  
as, and to Sir Richard Buren, Ambassador to France,  
during the reign of the British Court.

Printed for Henry Colburn, Public Library Conduit  
Street.

Very handsomely and closely printed in Columns, in  
4 vols. royal 4to. with complete Indexes, price 12. 15s.

ATHENÆ OXONIENSES: THE HISTORY  
of all the WRITERS and BISHOPS who have had  
their EDUCATION in the UNIVERSITY of OXFORD  
from the Year 1500. To which is added, FASTI OX-  
ONIENSES: Or, the Annals of the said University. First  
Written by ANTHONY A WOOD, M. A. of Merton  
College; and now very considerably augmented, in Text  
and Notes, by PHILLIP BLISS, Fellow of St. John's  
College, Oxford.

\* \* Subscribers to this valuable body of English Bi-  
graphy (which contains upwards of two thousand two  
hundred Lives) not yet having received all their volume,  
are recommended to complete their sets without delay,  
as the publishers cannot undertake to supply any separate  
volume after six months have elapsed.

London: Printed for Lackington, Hughes, Harding, Ma-  
vor, and Jones; F. C. & J. Rivington; Payne and Ma-  
son; Longman, Hurst, Kees, Orme, and Brown; Cadell and  
Davies; & A. Arch. J. Newman; Black, Kingsbury,  
Parbury, and Allen; R. H. Evans; J. Booth; Baldwin,  
Craddock, and Jay, and J. Parker, Oxford.

3d. Edition, in 3 Vols. 12mo. price 12. 1s.  
LONDON, or a MONTH at STEVENS'S;  
a Satirical Novel; with numerous Anecdotes of dis-  
tinguished Characters. By a LATE RESIDENT.  
London: Printed for Sherwood, Neely, and Jones,  
Fleetstreet-row.

In the Press, by the same Author,  
EDINBURGH; a Satirical Novel,  
"I shall show the Fines of Edinburgh, not as a parallel,  
but as a contrast to those of London; nor shall I emit a  
portrait or a character, because the original was my friend  
or my acquaintance."—Introduction.

**A SKETCH OF THE RISE AND FALL OF THE MANUFACTURING SYSTEM OF GREAT BRITAIN:** in which are shown the Mischiefous Effects of our present Restrictive Laws; and the Beneficial Results that would accrue from a Free Trade. Price 2s. 6d.

In this pamphlet are particularly considered the mistaken notion of the Corn Laws being beneficial to the Agricultural Interest; the very great Advantage of opening the Chinese Seas, &c.

London: Printed for John Miller, Burlington Arcade.

#### Canova.

On the first of January was published, embellished with a fine portrait of the celebrated Canova, the First Number of a New Volume of the

**NEW MONTHLY MAGAZINE AND LITERARY PANORAMA.** Contents.—I. Memoirs of Canova. 2. Ivanhoe, a Romance, by the author of Waverley, &c. 3. Criticisms on the modern Poets. No. 11. Thomas Moore, Esq. 4. Ten Original Letters of David Hume and Dr. Robertson. 5. On Arabian Poetry, especially the Romance of Abbat. 6.

On the Character and Writings of Madame de Staël, with curious Anecdotes. 7. San Marino and Rimini, an extract from an unpublished Journal of a Tour in Italy. 8. Professor Grottefend on the Babylonian Inscriptions. 9. Memoirs of John Tobin, by Miss Benger. On Historical Tragedies. 10. History and present state of Music. 11. Life in London, a Sketch. 12. Petrarch and Laura, by Madame de Genlis. 13. Travels round my Chamber. 14. Anatastius, or Memoirs of a Greek, by Thomas Hope, Esq. 15. On Duelling, with Anecdotes. 16. Encouragement of the Fine Arts and Manufactures of England. 17. On the new Settlement of the North West Coast of America. 18. Introduction of the System of Bell and Lancaster at Senegal. 19. The Indians of Newfoundland. 20. Varieties, Literary and Scientific. 21. Monthly Register of New Publications. 22. New Inventions and Discoveries. 23. Review of the Fine Arts. 24. Dramatic Notices. 25. Reports, Literary, Meteorological, Agricultural, and Commercial. 26. New Acts of the British Legislature. 27. Historical Digest of Political Events. 28. Interesting Occurrences, Promotions, Births, Marriages, and Deaths, with Biographical Particulars of the most celebrated Persons.

The commencement of a new volume being a favourable opportunity for taking in the work, those who may wish to become subscribers are requested to send their orders immediately to their respective Booksellers. London: printed for Henry Colburn and Co. Conduit Street; Bell and Baskerville, Edinburgh; John Cuming, Dublin; and sold by every Bookseller throughout the Kingdom.

Handsomely printed in small 8vo, with Ten Plates, price 7s. 6d. a New Edition of

**A NEW SYSTEM OF DOMESTIC COOKERY,** formed upon PRINCIPLES OF ECONOMY, and adapted to the Use of Private Families. Comprising also the ART of CARVING. Observations on the Management of the KITCHEN and POULTRY YARD; Instructions for HOME BREWERY, WINES, &c. COOKERY for the SICK, and for the POOR; many very useful MISCELLANEOUS RECEIPTS, and DIRECTIONS proper to be given to SERVANTS both in Town and Country. To which is prefixed an ESSAY on DOMESTIC ECONOMY and HOUSEHOLD MANAGEMENT, comprising many Observations which will be found particularly useful to the Mistress of a Family. BY A LADY.

As this is really one of the most practically useful books of any which we have seen on the subject. The Lady who has written it, has not studied how to form expensive articles for luxurious tables, but to combine elegance with economy, she has given her directions in a plain sensible manner, that every body can understand; and these are not confined merely to cookery, but are extended to a variety of objects in use in families; by which means the utility of the book is very much increased indeed.

Printed for John Murray, Albemarle Street; and sold by every other Bookseller in England, Scotland, and Ireland, of whom may be had, lately published,

THE NEW FAMILY RECIPE BOOK, a New Edition, greatly improved, handsomely printed in small 8vo. price 7s. 6d. in boards.

SATURDAY, JANUARY 8, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*Memoirs of the Protector, Oliver Cromwell, and of his Sons Richard and Henry. Illustrated by Original Letters and other Family Papers.* By Oliver Cromwell Esq. a Descendant of the Family. With portraits from original pictures. London, 1820. 4to, pp. 733.

The season for active publication having now arrived, new works pour in upon us in such abundance, as to afford but short time for critical deliberation. It is therefore well for our rapidly revolving periodical, especially at this productive period, that it professes generally, in the language of Bayle, "to be a reporter, and not a judge." We can state facts, where it would be hazardous to deliver opinions; and it requires much less time to be enabled to describe what a book is, than to tell what we think of it.

This volume is of massive size, and has some fine plates: so much for externals. It is sensibly written, displays ample research, and furnishes some original documents, from family papers, touching the private life of the extraordinary man whose biography, inseparably linked as it is with one of the most eventful epochs of English history, it places in the full light of record. It also contains interesting particulars relative to his children: so much for internals; at least, en masse.

The work may, perhaps more correctly than in the title page, be designated a Historical Essay on the era between the accession of Charles I and the death of Cromwell, and a Defence of the latter against all the imputations which have been thrown upon his memory. In this respect it proves, or attempts to prove, as far as our hasty judgment goes, far too much; and, certainly, nothing can be more loose than many of the arguments, nor more inconclusive than many of the inferences drawn from them. But in other cases, the Lord Protector seems to be satisfactorily exculpated from charges brought against him after the restoration, and as currently credited as repeated, down to the present day. It is thus impossible

VOL IV.

to view the performance in any other light, than as an acceptable addition to our stock of literature, both as a specimen of eminent biography and of British History.

It is a rather curious circumstance, to notice the difference between the usurper Cromwell and the usurper Buonaparte: both men wonderfully exalted, both lauded to the skies, and both painted as fiends. But Cromwell died in the full possession of the authority which he attained; and in this displayed greater genius than his follower, who arrived at much wider power only to afford an instance of that madness which success creates to wreck its minion. In the latter case a new philosophy performed the service which in the former was done by a renovated religion: infidelity did the work of fanaticism. When we spoke of the difference between these personages, however, we rather contemplated what was connected with literature than with politics. More than a century and a half has elapsed since the death of the famous Oliver, and it is only now that a historian of his race comes forward to vindicate his character. Not so with Napoleon; he, in his solitary banishment, is his own annalist, his own vindicator, his own eulogist. And then, the multitude of his other panegyrists, French, Polish, Flemish, Italian, and even English!... Surely this affords a very singular and striking proof of the strength and liberty effects upon the condition of society which must be operated by that prodigious engine.

But we will not detain our readers longer from such examples from this volume as our limits permit us to make; only premising, that from its nature it is little susceptible of that species of elucidation, and that there is not a single aspersion upon Cromwell which it does not endeavour to refute, from that of having a chief concern in the king's murder to that of being unamiable in private life.

Nothing has appeared to be more firmly established, than that Cromwell was originally a brewer; after showing that he belonged both paternally

and maternally to good and ancient families, the following is the author's testimony on this head.

The same writer (Mr. Noble), from the writers of those times, describes Cromwell's father as (having a small fortune) carrying on a large brewing business, the accounts whereof, he says, were wholly attended to by his wife; who, after his decease, continued to carry it on; whereby she was enabled to give her daughters sufficient fortunes to marry them into genteel families. Dr. Harris gives the same account from Dugdale and other authorities, and very justly adds, that, if true, it could not be deemed discreditable to the family, the young brothers of the best families in this country engaging in trade, and thereby raising themselves to fortune and independency. It has been also said that Cromwell himself was engaged in the same business for his support. All this has been said by Cromwell's enemies, for the purpose of degrading him; but no evidence to be relied on is produced in support of these assertions. The truth is, nothing certain is likely to be known of his early life, or the pecuniary circumstances of his parents. But it should be observed, that Cromwell, in his speech to his parliament, of 12th September 1654, says, "I was by birth a gentleman, neither living in any considerable height, nor yet in obscurity;"—and that he had been called to several employments in the nation, and to serve in parliaments. This account of himself, publicly given in the face of the nation, open therefore to contradiction if not true, is surely a sufficient confutation of all the stories of his and his family's narrow circumstances, and their engagements in trade in consequence. Lord Clarendon, in his anxious desire to lower Cromwell's consequence, would not have omitted to avail himself of these circumstances, had he credited them. In Peck's *Memoirs of the Life and Actions of Cromwell*, are three panegyrics of Cromwell, supposed by Peck to have been written by Milton, upon different occasions; in the third of which he describes him as grown rich at home. [Does not this look like trade? A man with a large family and small estate was not likely to become so, without some such means.] The time of his birth is ascertained to have been upon the 25th April, 1599, and it appears to have been at Huntingdon. That his father, during his life, and his mother, after his father's death, were careful of his education, is probable; but his being first under the tuition of one person and then of another; his propensity or non-propensity in learning; his aspiring, stubborn, obstinate temper, incurring severe correction; and the

accounts of the boisterousness of his disposition rendering him a terror to the neighbourhood; and, above all, the incredible story of his disagreement with and giving the King's son, the then Duke of York, afterwards King Charles, a blow, when at play at Hinchinbrooke; also his supposed dream of his future greatness, and his acting in the comedy of *Lingus*—there must be the fabrications of the different writers after the Restoration, who chose to suppose there must be something marvellous and criminal in the very earliest moments of this extraordinary man's life. Indeed, it is quite improbable that all, or any of the trifling incidents of his childhood and youth, should have been noticed, and then preserved during a period of between fifty and sixty years; nor was it very likely that the witnesses to these things should have been then living, and in possession of memory and mental powers sufficient to have accurately remembered and related them. [They might however have been handed down from sire to son, and it is very likely that many true as well as false anecdotes of a person who had risen so high would be thus preserved.] Lord Clarendon mentions Cromwell's supposed dream, and relates, that during his deliberation respecting the proposed taking upon himself the office of King, he revolved in his mind this dream or apparition, that had at first informed and promised him the high fortune to which he was then already arrived; which, he says, had been generally spoken of even from the beginning of the troubles, and that he remembered that it had only declared that he should be the greatest man in England, and should be near to be King, which seemed to imply, that he should be only near, and never actually attain the crown. How his Lordship should thus acquire the knowledge of Cromwell's inmost thoughts is not conceivable: had he for a moment indulged in his own mind a thought upon so silly a subject, he would probably have been ashamed to communicate it to his nearest friend. Sir Phillip Warwick mentions this dream. He relates that, after the rendition of Oxford, (which was in June 1646), he was frequently with his wife's sister, near Huntingdon, where he had occasion to converse with Cromwell's physician, Dr. Simcott, who assured him, that for many years, he (Cromwell, his patient) was a most splenic man, and had fancies about the cross in that town; and that he had been called up to him at midnight, and such unseasonable hours, very many times, upon a strong fancy, which made him believe he was then dying. Sir Phillip then adds, "And there went a story of him," that, in the day-time, lying melancholy upon his bed, he believed that a spirit appeared to him, and told him that he should be the greatest man (not mentioning the word King) in this kingdom; which his uncle, Sir Thomas Steward, told him was traitorous to relate. This must be the same story that Lord Clarendon relates; but, it is very evident, from Sir Phillip's change of expression, that this story of the dream made no part of the doctor's relation, and that it was mere common report. Sir Phillip does

not say when Cromwell was in this low splenic state. Had Cromwell had such a dream, the doctor must have heard it in his attendance upon him in the state of mind he describes him, most likely to produce unpleasant or extraordinary dreams; and, in his relation of his complaints, he could not have forgotten one so extraordinary. There can be no doubt that this dream was a fabrication after the event, and probably after the Restoration, when every idle story to his prejudice met with a welcome reception.

This is a fair specimen of the writer's mode of reasoning: and it will, we presume, confirm the idea we have thrown out respecting it. We quote a few other passages on the same subject.

At the time of the King's forementioned first visiting Hinchinbrooke, in his way from Scotland, which was in 1603, Cromwell was not more than four years old; and in 1616 and 1617, when the King is said again to have visited Hinchinbrooke, he must have been between seventeen and eighteen years of age, and the prince one year older than him; and the two latter times, Cromwell must have known better than this to conduct himself, supposing nothing to have prevented him. At college, he is described by different historians,—one, to save the trouble of examination, following another,—as living a dissolute and disorderly course of life, being more famous whilst there for foot-ball, cricket, cudgelling, and wrestling, than for study, and as being of a rough and blustering disposition, acquiring the name of Royster. Some writers say, he continued at college one year, others two: upon the strictest search and enquiry at the college, no trace is to be found there of the time of his quitting, and it is not likely that there should be any other authentic source of information, after the lapse of forty years to the Restoration. [Is not this an unsupported assumption?] No ground, therefore, of belief is left that he quitted the college before the usual time of quitting, or that he misbehaved himself whilst there. The discipline may be presumed to have been very strict, and consequently the youth kept very orderly, to afford Archbishop Land, then bishop of London, cause to complain (as he does in his considerations, presented by him to the King in the year 1628, for better settling the church-government) of this college and of Emanuel being the nurseries of puritanism. Al! therefore, that is related of Cromwell's dissipated life at college, and his short continuance there, must be wholly invention, for the purpose of vilifying him, and rendering him odious and contemptible from the very outset of his life. In the pursuit of this object, he is supposed to be sent by his mother to Lincoln's-inn, soon after his return from Cambridge, where his mind is said to have been ingrossed by the juice of the grape and the charms of the fair, with a habit of gaming, instead of attending to his law studies. For the purpose of carrying on the story, he is then described as returning to Huntingdon a finished rake, where he followed his vicious

courses,—the tavern and the dissipated residence; but this is a monstrous behaviour proven, as equals consorting with him. This conduct, it is added, with forgetting to pay his reckoning, made him an unwelcome visitor, even to the publicans; nor were the young women less fearful of him, from the rude invectives they received from him. This climax is reached by the relation of a story of his filthily bedaubing his cloaths, and dancing in that state at a Christmas festival given by his uncle Sir Oliver Cromwell; and by other irregularities, whereby he is said to have forfeited his uncle's good opinion. The stories of his successes whilst in town, in Lincoln's-inn, must fall to the ground, because he never was there. The most diligent search has now been made, and his name is not found in its records; and Sir James Burrows, in his anecdotes and observations relating to Cromwell and his family, also says, that upon search his name does not there appear. Nor is it likely that in those days, a youth of eighteen or nineteen years of age should be sent to an inn of court. His son Richard was certainly of that society. To conclude the subject of the supposed vices and follies of Cromwell's early life,—the short time allowed for their commission, presents a powerful obstacle to the belief of them. Some of them do not belong to the early age of sixteen or seventeen; nor was he, during his father's life, likely to be guilty of excesses of any sort. If he remained only one year at college, he would be eighteen years of age when he quitted it; and he must have been married before he was twenty-one, his first child appearing to have been baptized in the year 1621, when he could not be more than about twenty-two; so that three years must have been the utmost of the vicious part of his life: but no evidence to be relied on, is afforded of his having improperly quitted his college, or of his having resided in town, or of his having there or elsewhere lived a licentious life: his early marriage is a circumstance in favour of his previous sobriety.

This is rather better logic than what precedes it; but it is worthy of remark that the author, while he refuses an credit to assertions made after the Restoration, calls upon us to believe that written during the Protectorate. We attach equal value to the flatteries of power, and the calumnies on fallen greatness. We extract another illustrative passage:

In Thurloe's State Papers is a letter from Bevering, the Dutch deputy in England, Jongestall, at the Hague, dated August 12-22, 1653, wherein he says, "Last Saturday I had a discourse with His Excellency Cromwell above two hours, being without a body present with us. His Excellency spoke his own language so distinctly, that I could understand him. I answered again in Latin." Mr. Nolle says he (Cromwell) answered, which is a mistake. Bevering writes to the same effect to Nieupoort, on t

June 24 of August. Although Cromwell did not here speak Latin, yet he must have well understood the language, as he could not then have had an interpreter with him, nobody being present at the meeting besides Cromwell and the writer: who, though he appears to have understood the English language when clearly and distinctly spoken to him, did not sufficiently understand it to converse in it; he therefore preferred carrying on the conversation in Latin, in which Cromwell must have been well versed to be able to continue it for more than two hours. Hence, it also appears that Cromwell spoke his own language well and correctly, and expressed himself clearly and intelligibly, and not in the confused manner generally attributed to him.

Whitlock, in his account of Cromwell's reception of the Swedish ambassador in 1655, when Protector, says, the ambassador spoke in the Swedish language, and that after he had done, being but short, his secretary did interpret it in Latin; and that after the interpreter had done, the Protector stood still a pretty while, and putting off his hat to the ambassador, with a carriage full of gravity on his face, he answered him in English. That his speech was not interpreted, because the ambassador understood English; and that after it was done, the ambassador gave copies of his speech in Swedish and in Latin to the Protector. This is surely a further proof of Cromwell's familiar acquaintance with the Latin tongue, in which he would probably have answered the ambassador, had he not understood English. The same year, in his journal of his Swedish embassy in the year 1653 and 1654, also says, that at dinner at Grocer's Hall, in the city of London, Cromwell discoursed in Latin with a Swedish ambassador.

It is conceived, has been said in derogation of the common assertion of Cromwell's deficiency in the knowledge of the Latin language, and of his own tongue, and it is supposed early loss of time in idleness and dissipation.

May we consider it no very important matter now, whether Cromwell understood Latin well or ill; but to those who attach any interest to the point, it will be evident that the foregoing goes much farther to prove that he was as indifferent than a tolerable Latin.

His not speaking Latin in answer to the Dutch Deputy using that language, is a very strong fact towards the conclusion; and even the Swedish language is a negative argument the other way; and although the author suggests the admission "distinctly," by a foreigner, into "well and correctly," as applied by a native (expressions of extremely different meanings) he entirely fails in convincing us of the point he labours to demonstrate. It is subjoined is infinitely more to the point.

All Cromwell's supposed excesses are, it is observable, confined to the years preceding his coming of age; because then he is to be produced in a state of repentance preparatory to his marriage, which is supposed to have been brought about by his relations, the Hampdens and the Barringtons; and then, it is said, that his settling part of his paternal estate upon his wife, is a proof that he had not spent it, as some imagined, adding, that there had not been time for it.

Then comes a charge of a very serious nature, of his endeavouring to mend his supposed broken fortune, by annexing the estate of his maternal uncle, Sir Thomas Steward, to his own, by representing him as a person unfit to govern it, and petitioning to His Majesty for a commission of lunacy, which the King refused. But, most extraordinary to relate, this same uncle, for the purpose of reconciling this story with his uncle's will in his favour, is supposed to have been prevailed upon to forgive him, and to leave him his estate. This supposed attempt to deprive his uncle of his estate, would have been so atrocious and unpardonable, that the reasonable conclusion must be, that this disposition in favour of Cromwell proves the falsehood of the story. Mr. Noble, in his third edition, gives a copy of this will, which is dated January 29, 1635, by which he gives all his landed property to his nephew, Oliver Cromwell. He desires to be buried in the cathedral church of Ely, in the tomb of his grandfather.

In continuance of these farcical representations, Cromwell is now, upon his marriage, to become too good: the strictness of his manners, it is said, had recommended him to the notice of the austere non-conformists, who viewed him from the established church, and he became sometimes a preacher amongst them. This is not likely to be true; all his children appear, by the foregoing registers, to have been baptized according to the rites of the established church; nor are the above grants to him of the leases by the dean and chapter of Ely, an inconsiderable proof that he had not yet become a non-conformist, which was at that time a hated character. Nor does he appear to have been considered by the then government as its inveterate enemy, although he had opposed some of its measures in the parliament of 1627; for, in the sixth year of the reign of the King (1631), it appears, in the records of Huntingdon, that by the charter then granted to that town, Thomas Beard, D. D., Robert Barnard, Esq., and Oliver Cromwell, Esq., burgesses for their lives, together with the high-steward, the recorder, the mayor, the senior alderman, and the chamberlain for the time being, were created justices for that borough.

The author follows his famous ancestor from his residence at Huntingdon to St. Ives—denies that he was profligate during the few years he lived there—and thence to Ely. His more public transactions are too well known to tempt us to dwell on the parts which treat of them; and we therefore conclude our

present notice with three of his letters, which will afford very accurate grounds for judging of the style of that time, and of the writer's manner in addressing his nearest relatives.

The following is a copy of an original letter, in the British Museum, from Cromwell to his daughter Iretton, given by Dr. Harris: it is dated, London, 25th October, 1646, and is addressed to her at Combury, the general's head quarters.

"Deere Daughter,"

"I write not to thy husband, partly to avoid trouble; for one line of mine, begitts many of his, wch I doubt makes him sitt up too late; partly because I am myself indisposed at this tyme, havinge some other considerations. Your friends at Ely are well; your sister Clapole is (I trust in mercye) exercised with some perplexed thoughts: she sees her own vanitye and carnal minde, bewailinge it; she seeks after (as I hope alsoe) that wch will satisfie; and thus to be a seeker, is to be of the best sect next a finder; and such a one shall ever faithfullye humble seeker be att the end. Happie seeker, happie fuder. Whoever tasted that the Lord is gracious, without some sense of self-vanitie and badnesse? Who ever tasted that graciousnesse of his and could geesse in deier and lesse then pressinge after full enjoyment. Deere hart, presse on; lett not husband, let not any thinge cool thy affections after Christ. I hope hee will be an occasion to inflame them. That wch is best worthy of love in thy husband is, that of the image of Christ he beares; look on that, and love it best, and all the rest for that. I pray for thee and him: doe soe for me. My service and deere affections to the generall and generallnesse; I heere she is very kind to thee; it adds to all other obligations. My love to all. I am thy deere father.

OLIVER CROMWELL."

The following is a copy of an original letter in the possession of the Cromwell family. It is dated 13th Aug. 1649, and is addressed, "For my beloved daughter Dorothy Cromwell (Richard Cromwell's wife) at Hurslye, theise.

"My deere Daughter;

"Your letter was very welcome to mee. I like to see any thinge from your hand, because indeed I stick not to say I doe entirelye love you, and therefore I hope a word of advise will not be unwelcome nor unacceptable to thee; I desire you both to make it above all things your business to seeke the Lord, to be frequently calling upon him that Hee would manifest himselfe to you in his Sonne, and be listeninge to what returns Hee makes to you, for Hee will be speakinge in your care and in your hart, if you attend thereunto, I desire you to provoke your husband likewise therunto. As for the pleasures of this life and outward businesse lett that bee upon the by, bee above all these things by faith in Christ and then you shall have the trewe use and comfort of them, and not otherwise. I have much satisfaction in hope your spirit is this way sett, and I desire you may growe in grace and in the knowledge of our Lord

and Saviour Jesus Christ, and that I may heere thereof, the Lord is very near wch wee see by his wonderfull workes, and therefore Hee looks that wee of this generation draw neere him, this late great mercye of Ireland is a great manifestation thereof. Your husband will acquaint you with itt, wee should bee much stirred up in our spirits to thankfulness, wee much need the Spirit of Christ to enable us to prayse God for soe admirable a mercye: the Lord blesse thee my deere daughter.

"I rest thy lovinge father,  
"O. CROMWELL."

"I heere thou didst lately miscarrie: prithe take heede of a coach by all means; borrowe thy father's nagge when thou intendest to goe abroad."

The following is also a copy of an original letter in the possession of the Cromwell family. It is date (Carricke, 2d April 1550; and is addressed "For my beloved Sonne Richard Cromwell, Esq., at Hurstly, in Hampshire."

"Dick Cromwell;

"I take your letters kindlye: I like expressions when they come plainely from the heart, and are not strayned nor affected. I am perswaded it's the Lord's mercye to place you where you are; I wish you may owne itt and be thankfull, fulfilling all relations to the glory of God. Seeke the Lord and his face continually, lett this bee the businesse of your life and strength. And lett all things bee subservient and in order to this. You cannot finde, nor behold the Face of God but in Christe, therefore labor to knowe God in Christ, wch the Scriptures makes to bee the sum of all, even life eternall. Because the true knowledge is not littell or speculative, but inward, transforminge the minde to itt, its unitinge to, and participating of the Divine nature. (2 Pet. i. 4. Its such a knowledge as Paul speaks off. Phillip. the 3d. 8, 9, 10. How little of this knowledge of Christ is there amongst us! My weake prayers shal be for you, take heede of an unactive vaine spirit. Recreate yourselve wth Sir Walter Ralpheys Historie; it's a bodye of historie, and will add much more to your understandinge then fragments of storie. Intend to understand the estate I have settled: its your concernment to knowe itt all, and how itt stands; I have heerefore suffered much by too much trustinge others; I know my brother Maior will be helpfull to you in all this: you will thinke (perhaps) I need not advise you to love your wife. The Lord teach you to how to doe itt, or else itt will be done unfavourably. Though marriage bee noe instituted sacrament, yett where the undefiled bed is, and love, this union aptly resembles Christ, and his church. If you can truly love your wife what doeth Christ beare to his church and every poore soule therein, who gave himselfe for itt and to itt. Commend mee to your wife; tell her I entirely love her and rejoyce in the goodness of the Lord to her. I wish her every way fruitfull. I thanke her for her lovinge letter. I have presented my love to my sister and cozen Ann, etc. in my letter to my brother Maior.

I would not have him alter his affaires because of my debt. My purse is as his, my present thoughts are but to lodge such a sum for my two little gyrls: its in his hand as well as any where. I shall not be wantinge to accommodate him to his minde. I would not have him sollicitous. Dick, the Lord blesse you every way. "I rest,

"Your lovinge Father,  
"O. CROMWELL."

Altogether, this is more a useful, than a literary work, and its defect is, that of being too much studied for the Cromwell family.

*Observations, Anecdotes, and Characters of Books and Men.* By the Rev. Joseph Spence. Arranged with Notes by the late Edmund Malone, Esq. London, 1820. 8vo. pp. 302.

This work, as originally announced, was to consist of two volumes; but it now appears, and very carelessly done too, in one only. "Arranged" it can hardly be called; and whoever has had the task of editing what Malone threw together from Spence, has bestowed very little pains upon the subject. It seems as if many parts of Spence's common-place book had been transcribed without order or reference; and the only thing like classification into the three heads, of "Popiana," "English Poets and Prose Writers (and a few Foreign Writers)," and "Miscellaneous," is disregarded in every division. Irregularity and confusion are the consequences; and not only are the same anecdotes, &c. repeated in substance, but frequently in words. Of this, pages 144 and 148, 153 and 155, where we find the identical notices (one of them even reprinted verbatim the third time,) which we have perused in the preceding Popiana.

Notwithstanding this very reprehensible inattention, there are a good many amusing and curious matters in this publication; and though the far greater proportion of its contents wants the recommendation of novelty, it will pass muster as a pleasing parlour companion.

Spence (says the advertisement) lived in an age when taste first appeared amongst us, and literature first began to diffuse itself among the nation. By his habits a man of letters; by his skill a classical and elegant critic; and by the sweetness of his manners and perpetual curiosity, Spence was well adapted to promote, as well as to record the many conversations he has preserved for posterity. Pope was "the god of his idolatry," for Pope was the creator of an epoch in our literature. This period was a transition from one age to another. The immortal writer had to open an

age of taste and correctness, and to develop the arts of composition; he had to teach us to learn to think; he had to escape from our native but undisciplined invention, and to restrain our prurient imagination in conception and expression; and to polish a diction colloquially feeble or unskillfully perplexed. Literature assumed a new form; the triumphs and the factions of literature arose with the interests they excited in the public feelings, but the progress of his own works was an object, not only of his egotism, but of the curiosity of other men, and the delight of the retentive fondness of Spence.

Some indulgence may however be claimed for one portion of Spence's anecdotes; in the literary class, the reader will find many with which he is not unacquainted; but if they appear to him as twice-told, he must recollect that Spence was the first teller.

The first period in this extract is a very bold, inconsiderate, and unfounded assertion; taste and literature were both of earlier birth than last century. "To teach us to learn to think," is another strange passage, which, if it is not nonsense, is a fallacy; and as for the concluding sentence, some regard to weeding out the most trite and well known anecdotes, would have been a wiser course than such an apology for reiterating them.

We select, without further preface or remark, the most striking and novel extracts.

In the Moral Poem I had written an address to our Saviour, imitated from Lucretius's compliment to Epicurus; but omitted it by the advice of Dean Berkley. One of our priests, who are more narrow than yours, made a less sensible objection to the Epistle on Happiness: he was very angry that there was nothing said in it of our eternal happiness hereafter; though my subject was expressly to treat only of the state of a man here.—*Mr. Pope.*

When I was looking over some things I had brought from Italy, to pick out what might be of use to his grout, and came among the rest to some bonds and medals that had been blest at Loretto, he laid them gently aside, and said "these would be good presents for a papist."—*The same.*

I endeavoured (says he smiling) in this poem to collect all the beauties of the great writers into one piece: there was Milton's style in one part, and Cowley's in another; here the style of Spenser imitated, and there of Statius; here Homer as Virgil, and there Ovid and Claudian. "I was an imitative poem then, as your other exercises were imitations of this or the story?" "Just that."—*The same.*

On Lord Hyde's return from his travel his brother-in-law, the Lord Essex, told him with a great deal of pleasure, that he had got a pension for him. It was a very handsome one, and quite equal to his rank. A Lord Hyde's answer was, "How could you

tell, my lord, that I was to be sold; or, at least, how could you know my price so exactly?"—*The same.*

Mr. Pope never flattered any body for money in the whole course of his writings. Alderman Barber had a great inclination to have a stroke in his commendation inserted in some part of Mr. Pope's works. He did not want money, and he wanted fame. He would probably have given four or five thousand pounds to have been gratified in this desire; and gave Mr. Pope to understand as much. Mr. Pope would not comply with such a baseness; and when the alderman died he left him only a legacy of a hundred pounds, which might have been some thousands if he had obliged him only with a couplet.—*Mr. W.*† [who had it from Mr. Pope, and I have been assured of it by others who knew both Mr. Pope and the Alderman very well.]

The list for prose authors, from whose works such a dictionary should be collected, was talked over several times. There were eighteen; of them named by Mr. Pope, but four of that number were only named as authorities for familiar dialogues and writings of that kind.—*The same.*

Should I not write down Hooke and Middleton? Ay; and I think there's scarce any more of the living that you need name.—*The same.*

The list of writers that might serve as authorities for poetical language was begun upon twice, but left very imperfect. There were but nine § mentioned, and two of those only for the burlesque style.—*The same.*

Here am I, like Socrates, distributing my morality among my friends, just as I am doing.—*Mr. Pope* [on sending about some of his ethic epistles as presents, about three weeks before we lost him.]

There is so much trouble in coming into the world, and so much uneasiness in going out of it, that—it is hardly worth while to be here at all! *Lord Bolingbroke.* [His lordship's melancholy attitude that morning (the 21st), leaning against Mr. Pope's chair, and crying over him for a considerable time with more concern than can be expressed.]

Ah! great God, what is man?—*The same.* [Looking on Mr. Pope, and repeating it several times, interrupted with sobs.]

When I was telling his lordship that Mr. Pope, on every catching and recovering of his mind, was always saying something kind—

• It was on this account that Mr. Pope complimented him with that passage—

— "d disdain what Cornbury disdaineth."  
† *Mr. W.* here quoted as an authority about Alderman Barber, was probably Warburton.—*M.*

• Lord Bacon, Hooker, Hobbes, Ben Jonson, Lord Clarendon, Barrow, Tillotson, Dryden, &c. Wm. Temple, L'Estrange, Locke, Spratt, Atterbury, Congreve, Addison, Vanburgh, Swift, Lord Bolingbroke.

† Ben Jonson, Congreve, L'Estrange, Vanburgh.

• Spencer, Shakspeare, Fletcher, Waller, Butler, Milton, Dryden, Prior, Swift.

• Butler and Swift. Fletcher was mentioned only as an authority for familiar dialogue and the lighter kinds of writing.

ly either of his present or absent friends, and that this in some cases was so surprising, that it seemed to me as if his humanity had outlived his understanding, Lord Bolingbroke said, "it has so!" and then added, "I never in my life knew a man that had so tender a heart for his particular friends, or a more general friendship for mankind."

I have known him these thirty years, and value myself more for that man's love and friendship, than—(sinking his head, and losing his voice in tears.)—*The same.*

I am so certain of the soul's being immortal, that I seem to feel it within me as if it were by intuition.—*Mr. Pope.*

When a friend asked him whether he would not die as his father and mother had done, and whether he should send for a priest, he said, "I do not suppose that it is essential, but it will be very right, and I heartily thank you for putting me in mind of it."—*The same.*

In the morning, after the priest had given him the last sacraments, he said, "there is nothing that is meritorious but virtue and friendship, and indeed friendship itself is only a part of virtue."

Mr. Pope died the 30th of May, 1744, in the evening; but they did not know the exact time, for his departure was so easy, that it was imperceptible even to the standers-by.

Lord Dorset used to say of a very good-natured dull fellow, it is a thousand pities that man is not ill-natured, that we might kick him out of company.—*The same.*

Wycherly was a very handsome man. His acquaintance with the famous duchess of Cleveland commenced oddly enough. One day as he passed that duchess's coach in the Ring, she leaned out of the window, and cried out, loud enough to be heard distinctly by him, "Sir, you're a rascal; you're a villain." Wycherly from that instant entertained hopes. He did not fail waiting on her next morning; and with a melancholy tone begged to know how it was possible for him to have so much disoblighed her grace? They were very good friends from that time; yet, after all, what did he get by her? He was to have travelled with the young duke of Richmond. King Charles now and then gave him a hundred pounds—not often; and he was an equerry.—*Mr. Pope.*

Rowe was first bred at Westminster, and then at the Temple. He had about 300*l.* a year and his chambers there. His father was a serjeant at law. He was of a pretty personage, and a very pretty sort of man.—*Mr. Lewis.*

Frowd for his precious soul cares not a pin—a. For he can now do nothing else but Cinn—a. was an epigram made by Mr. Rowe on Phil. Frowd's uncle, when that gentleman was writing a tragedy of that name.—*Mr. Pope.*

A little after Dr. Young had published his Universal Passion, the Duke of Wharton made him a present of 2000*l.* for it. When

• Dennis says, he was equerry to the duke of Buckingham, as Master of the Horse to the king. Letters, p. 219.

a friend of the duke's, who was surprised at the largeness of the present, cried out, "What! two thousand pounds for a poem!" The duke smiled, and said it was the best bargain he ever made in his life, for it was fairly worth four thousand.—*Mr. Raelin.*

When the Doctor was very deeply engaged in writing one of his tragedies, that nobleman made him a very different present. He procured a human skull, and fixed a candle in it, and gave it to the Doctor, as the most proper lamp for him to write tragedy by.—*The same.*

Sir Isaac Newton, a little before he died, said, "I don't know what I may seem to the world; but as to myself, I seem to have been only like a boy playing on the sea-shore, and diverting myself in now and then finding a smoother pebble or a prettier shell than ordinary, whilst the great ocean of truth lay all undiscovered before me."—*Ramsay.*

'Tis not at all improbable that Sir Isaac Newton, though so great a man, might have had a hauntering after the French prophets. There was a time, I can assure you, when he was possessed with the old fooleries of astrology; and another when he was so far gone in chemistry as to be upon the hunt after the philosopher's stone.—*Lockier.*

When the Bishop of Rochester was in the tower, upon its being said in the drawing-room, "What shall we do with the man?"—Lord Cadogan answered, "Fling him to the lions." The Bishop was told of this, and soon after in a letter to Mr. Pope, said that he had fallen upon some verses by chance in his room, which he must copy out for him to read. These were four extreme severe lines against Lord Cadogan.

By fear unmoved, by shame unaw'd,  
Offspring of hangman and of bawd!  
Ungrateful to the ungrateful man he grew by,  
A bold, bad, boisterous, blust'ring, bloody booby.

*Ann.*

The Jews offered my Lord Godolphin to pay five hundred thousand pounds, (and they would have made it a million) if the government would allow them to purchase the town of Brentford, with leave of settling there entirely, with full privileges of trade, &c. The agents from the Jews said, that the affair was already concerted with the chief of their brethren abroad; that it would bring the richest of their merchants hither, and of course an addition of above twenty millions of money to circulate in the nation. Lord Molesworth was in the room with Lord Godolphin, when this proposal was made; and as soon as the agent was gone, pressed him to close with it. Lord Godolphin was not of his opinion. He foresaw that it would provoke two of the most powerful bodies in the nation, the clergy and the merchants; he gave other reasons too against it; and, in fine, it was dropped.—*Lockier.*

When Henry the Fourth of France was reconciled to the church of Rome, it was expected that he should give some remarkable testimonial of his sincerity in return—

ing to the true faith. He accordingly ordered a cross to be erected at Rome, near the church of Santa Maria Maggiore, with this inscription, *In hoc signo vinces*, on the principal part of it. This passed at first as very catholic, till it was observed that the part in which the inscription is put is shaped in the form of a canon, and that he had really attributed only to his artillery what they had taken to be addressed to Heaven.—*Piccolini*, at (Rome.)

Dante's poem got the name of *Comedia* after his death. He, in that piece, had called Virgil's works tragedies (or sublime poetry), and, in deference to him, called his own comedy (or low); and hence was that word used afterwards, by mistake, for the title of his poem.—*Dr. Cœchii*.

*Second Tour of Doctor Syntax in search of the Picturesque, a Poem, in Eight Monthly Numbers. No. I. 2vo. pp. 32.*

A poem written by the same author (Mr. Coombe, we believe), and ornamented by the same artist, Mr. Rowlandson, as the first highly popular tour of this imaginary and eccentric divine. As the first number of such a work must be rather introductory, than in the full flush of a writer's power for entertainment, we shall be very concise in our remarks upon the renewed setting out of our old and amusing favourite. As there is no emblem of pretence in his escutcheon, it provokes no severity of criticism; and we are well enough pleased to go ambling, sometimes hobbling along, with a sort of versification, which resembles the parson's nag in its paces, never hunter-like attempting a stile, but varying a steady walk with an occasional halt, or an easy canter. As for the story: the doctor loses his beloved wife, at a moment of paternal expectancy; and after remaining some time at Squire Worthy's, finding no cure for his melancholy, again sets out on a journey for relief in search of the picturesque. These incidents, and the parish gossip respecting them, occupy the pages of number one. The three designs represent the Doctor lamenting the loss of his wife, the funeral, and the departure; none of them well calculated for a display of the good comic or humorous talent of Rowlandson. A death-bed is too serious for a joke; and though Hamlet is a good authority for grave pleasantry, we are not very partial to that subject for jesting. The commencement of the journey—but we anticipate that these are the least laughable of the prints which we may look for in the remaining publications.

It is worthy of a notice, *en passant*, that the excellent head of Syntax is a plagiarism from that of "My Uncle," by Dagley, in D'Israeli's amusing book, "Elm Flams."

A short extract or two will illustrate the poetry; and we take them before and after the melancholy catastrophe we have stated,

After a long clouded day,  
The sun broke forth with genial ray,  
And mild prosperity display'd  
Its welcome form in smiles array'd;  
Each virtue woo'd, each duty done,  
Time on swift pinions travels on,  
Nor fears of future evil lour  
To dim with care the present hour.  
—Thus Syntax and his darling wife  
No longer knew domestic strife;  
And since it was their lot to bide  
By Keswick's Lake's admired side,  
They might have claim'd, or I'm mistaken,  
With conscience clear, the flitch of bacon;  
A symbol that is known to prove,  
The perfect state of married love;  
And which, when thus enjoy'd, is given  
As the first boon on this side heaven.

Madam, who now had thought to fret her,  
Of all her whims had got the better;  
Among her higher neighbours, she  
Receiv'd and gave the frequent tea,  
And every stated feast that came  
Display'd the hospitable dame;  
While from the poor, in parish pride,  
She ne'er was known to turn aside.  
As in the millenary art  
She loved to be a little smart,  
The doctor, too, in better station,  
Hath somewhat chang'd his form and fashion;  
Nay, to describe him *à la lettre*,  
His outward show was rather better,  
Than when he liv'd by pedant rule,  
A curate with an humble school:  
His coat was not to thread-bare worn,  
His hat had not that squeeze forlorn,  
And his queer wig would now unfold  
Something that might be call'd a curl:  
Besides, his Dolly's pride, I ween,  
Took no small pains to keep him clean.  
—With eloquence and learning fraught,  
He preach'd what his Great Master taught:  
But no grave airs his hours molest,  
Joy was the inmate of his breast.  
Which, in its various forms, he found  
The way to scatter all around.  
Sage with the learned, with the 'Squire  
He told his tale by water's fire;  
Or 'mid the pipe's surrounding smoke  
He never fail'd, with pleasant joke,  
To animate the social hour,  
When summer forms her verdant bowers.  
Nor from contentious pride,  
Was his old fiddle laid aside:  
 Oft did its sounding strings prolong  
The jocund air and merry song.  
His pencil too perform'd its duty  
In sketching many a landscape beauty:  
 Scarce rose a cot within the bound  
 That his dominion did surround,  
 Whose witen'd walls did not impart  
 Some bounty of the Doctor's art.  
—The parents to his Reverence bent,  
 The children smiled where'er he went:  
 Of grateful praise the warm acclaim,  
 Ne'er fail'd to wait upon his name.  
 Syntax was by the 'Squire careen'd  
 And oft exclaim'd, my lot how blest!

While Madam Worthy would commend—  
 His Dolly as her fav'rite friend.  
 In short, as sister and as brother,  
 Their doors were open to each other.

'Twas thus four fleeting years were past,  
 In happiness not made to last;

A month at least was gone and o'er,  
 But Syntax was not as before;  
 For thus, on serious thoughts intent,  
 He had not found his merriment.  
 He did all duties, it is true,  
 With the same care he used to do;  
 But, in his daily parish walk,  
 He seem'd to have forgot to talk;  
 Was silent where he always spoke,  
 And nodded where he us'd to joke.  
 'E'en with the Ladies and the 'Squire  
 His thoughts had lost their wonted fire;  
 His tongue assum'd a lower tone,  
 Spoke but few words and soon had done.  
—Since the last sad and solemn scene,  
 He had not to the Vic'rage been,  
 But just to see th' old woman granted  
 All that the living creatures wanted:  
 For his dear Doll took great delight  
 In Bantam-fowl, and num'rous flight  
 Of chosen doves, none such were found  
 In all the various dove-cotes round.  
 The people watch'd him as he oft  
 Sat on the gate and look'd aloft:  
 They thought that a superior ken  
 Was given to all such learned men,  
 And that they saw with their keen eye,  
 Strange shapes and figures in the sky,  
 Which oft, as they believ'd, were given  
 To mark the destitute of heaven.  
 But his was no prophetic view,  
 As the birds in their circles flew,  
 He saw as his dear Doll had done,  
 Their plumage glist'ning in the sun;  
 And shaw'd, in melancholy measure,  
 The memory of her former pleasure.

The last is rather a pleasing specimen, and we cannot do better than close with it.

*Burchard's Nubian Travels, 4to.*  
(Continued.)

This interesting volume which we introduced and largely extracted from in our last Number, has since issued from the press; and, as far as our observation goes, seems to fulfil the expectations of those who looked for much intelligence from this quarter, as well as the general public, with which Burchard's untimely fate has in a manner consecrated his adventurous exertions in the cause of African Discovery: It comprehends all his information upon the north-eastern parts of Africa, and is the prelude to the further publication of his remarks on other countries, especially on Arabia, into which he crossed the Red Sea (at so low a latitude as from about 10° to 21°) when he left the valley of the Nile at Shendy, and crossed the river Athara (Astabaras) and the district of Taka, \*

\* At Col. 2, Page 3, in our last.—The proce-

to Souakin, whence he sailed to Jidda, on the Asiatic side.

Pursuing the extracts in our last, we retrograde a little down the Nile from Shendy to Berber.

When they sleep they generally spread a carpet made of pieces of leather sown together, stretching themselves out upon this, and preferring, according to the general custom of the Arabs, to sleep without any pillow, and with the head lying upon the same level with the rest of the body. In the store-rooms Dhourra is kept, either in heaps upon the floor, or in large receptacles furnished of mud, to preserve it from rats and mice. Swarms of these animals nevertheless abound, and they run about the court-yards in such quantities that the boys exercise themselves in throwing lances at them, and kill them every day by dozens. Besides the Dhourra, the store-rooms generally contain a few sheepskins full of butter, some jars of honey, some water-skins for travellers, and if the proprietor be a man in easy circumstances, some dried flesh. The inner court is generally destined for the cattle, camels, cows, and sheep, and it has a subdivision, where are preserved the dry Dhourra stalks, which becomes the usual food of the cattle, when the summer heats have dried up all the verdure which the inundation had produced. The outer court in the generality of houses, contains a well of brackish water, fit only for cattle; here the male inhabitants of the house and strangers sleep, during the hot season, either upon mud benches adjoining the rooms, or upon *Angareys*, or upon the ground; here the master's favourite horse is fed, and here all business is transacted in the open air. I have already mentioned a room of public women, often met with in these habitations. Indeed there are very few houses of people called here respectable, where such women are not lodged, either in the court-yard itself, or in a small room adjoining the yard, but without its gate; in the house where I lodged, we had four of these girls, one of whom was living within the precincts, the three others in contiguous apartments. They are female slaves, whom their masters, upon marrying or being tired of them, have set at liberty, and who have no other livelihood but prostitution, and the preparation of the intoxicating drink called *Bouza*. Female slaves are often permitted to make a traffic of their charms before they are at liberty, in order that they may acquire a sufficient sum of money to purchase it.

In marrying, the bride's father receives, according to the musselman custom, a certain sum of money from the bride-groom, for his daughter, and this sum is higher than is customary in other parts inhabited by Arabs. The daughters of the Mek are paid as much as three or four hundred dollars,

which the father keeps for them as a dowry. Few men have more than one wife, but every one who can afford it keeps a slave or mistress either in his own or in a separate house. Kept mistresses are called companions, and are more numerous than in the politest capitals of Europe. Few traders pass through Berber without taking a mistress, if it be only for a fortnight. Drunkenness is the constant companion of this debauchery, and it would seem as if the men in these countries had no other objects in life. The intoxicating liquor which they drink is called *Bouza*. Strongly leavened bread made from Dhourra is broken into crumbs, and mixed with water, and the mixture is kept for several hours over a slow fire. Being then removed, water is poured over it, and it is left for two nights to ferment. This liquor, according to its greater or smaller degree of fermentation, takes the name of *Merin*, *Bouza*, or *Om Belbel*, the mother of nightingales, so called because it makes the drunkard sing. Unlike the other two, which being fermented together with the crumbs of bread, are never free from them, the *Om Belbel* is drained through a cloth, and is consequently pure and liquid. I have tasted of all three. The *Om Belbel* has a pleasant prickly taste, something like Champagne turned sour. They are served up in large roundish gourds open at the top, upon which are engraved with a knife a great variety of ornaments. A gourd (*Bonuma*) contains about four pints, and whenever a party meet over the gourd, it is reckoned that each person will drink at least one *Bonuma*. The gourd being placed on the ground, a smaller gourd cut in half, and of the size of a tea-cup, is placed near it, and in this the liquor is served round, to each in turn, an interval of six or eight minutes being left between each revolution of the little gourd. At the beginning of the sitting, some roasted meat, strongly peppered, is generally circulated, but the *Bouza* itself (they say) is sufficiently nourishing; and, indeed, the common sort looks more like soup or porridge, than a liquor to be taken at a draught. The *Fakirs* or religious men, are the only persons who do not indulge (publicly at least) in this luxury; the women are as fond of it, and as much in the habit of drinking it, as the men.

The effects which the universal practice of drunkenness and debauchery has on the morals of the people may easily be conceived. Indeed every thing discreditable to humanity is found in their character, but treachery and avidity predominate over their other bad qualities. In the pursuit of gain they know no bounds, forgetting every divine and human law, and breaking the most solemn ties and engagements. Cheating, thieving, and the blackest ingratitude, are found in almost every man's character, and I am perfectly convinced that there were few men among them or among my fellow travellers from Egypt who would have given a dollar to save a man's life, or who would not have consented to a man's death in order to gain one. Especial care must be taken not to be misled by their polite protestations, and fine professions, especially when they come to

Egypt: where they represent their own country as a land inhabited by a race of superior virtue and excellence. On the contrary, infamous as the eastern nations are in general, I have never met with so bad a people, excepting perhaps those of Souakin. In transactions among themselves the *Meyrefab* regulate every matter in dispute by the laws of the strongest. Nothing is safe when once out of the owner's hands, for if it happens to be the weaker party, he is sure of losing his property. The Mek's authority is slighted by the wealthier inhabitants; the strength of whose connections counterbalances the influence of the chief. Hence it may well be supposed that family feuds very frequently occur, and the more so, as the effects of drunkenness are dreadful upon these people. During the fortnight I remained at Berber, I heard of half a dozen quarrels occurring in drinking parties, all of which finished in knife or sword wounds. Nobody goes to a *Bouza* hut without taking his sword with him; and the girls are often the first sufferers in the affray. I was told of a distant relation of the present chief, who was for several years the dread of Berber. He killed many people with his own hand, upon the slightest provocation, and his strength was such, that nobody dared to meet him in the open field. He was at last taken by surprise in the house of a public woman, and slain while he was drunk. He once stripped a whole caravan, coming from Daraua, and appropriated the plunder to his women. In such a country it is of course looked upon as very imprudent to walk out unarmed after sun set; examples often happen of persons, more particularly traders, being stripped or robbed in the village itself. In every country the general topics of conversation furnish a tolerable criterion of the state of society; and that which passed at our house at Ankheyr gave the most hateful idea of the character of these people. The house was generally filled with young men who took a pride in confessing the perpetration of every kind of infamy. One of their favourite tricks is to bully unexperienced strangers, by enticing them to women who are the next day owned as relations by some *Meyrefab*, who vows vengeance for the dishonour offered to his family; the affair is then settled by large presents, in which all those concerned have a share. The envoy whom Ibrahim Pasha sent in 1812 to the king of Sennar was made to suffer from a plot of this kind. Upon his return from Sennar to Berber, he was introduced one evening to a female, at whose quarters he passed the night. The Mek of Berber himself claimed her the next morning as his distant relation. "Thou hast corrupted my own blood," said he to the envoy, and the frightened Turk paid him upwards of six hundred dollars, besides giving up to him the best articles of his arms and baggage.

Nearly at Shendy, the most southern point to which Burchhardt penetrated, the various routes converge of Bruce in 1772, of Poncet in 1669, and of Du-Roule in 1775. It is far to the West of the latter (after following the same route

and subsequent extracts, relating to the valley of the Nile in Nubia, between the southern frontier of Upper Egypt, and the northern frontier of Dongola, the brief description of the Arab Tribes is quoted, and the word "*Nubia*," I, 15 from the bottom, should be "*Shendy*."

to Selima) that the track of Browne, 1793-6, through the Kubbabish Arabs, unto Darfour, stretches. Of all these travellers, Bruce got farthest to the South; his journey into Habesh, or Abyssinia, being more than three hundred miles beyond Burckhardt, and nearly a hundred beyond Poncet, whose ultimate stage was Gondar, whereas Bruce went to the source of the Blue River, and round the immense Lake of Denbea.

As the most novel part of Burckhardt's route, and not the least interesting of his descriptions, occur where he traverses the country between Shendy on the Nile, and Souakin on the Red Sea; we shall at present confine ourselves to that portion of his journey, which occupied about six weeks. He set out on the 17th May, with a caravan, described us follows—

The caravan consisted of at least two hundred loaded camels, twenty or thirty dromedaries, carrying the richest traders, without any other loads; about one hundred and fifty traders, three hundred slaves, and about thirty horses, destined for the Yemen market; they were led the whole way by the slaves. The greater part of the loads consisted of tobacco, which the Souakin people had themselves brought from Sennar, and of Damour, from the same place. The caravan was under good care. Its chief was one of the principal men among the Arabs of Souakin, connected by marriage with the first tribes of the Bisharee and Hadendola Bedouins, through whose territory our road lay; but notwithstanding this, I clearly perceived that there was a constant dread of the Bisharein. The people yielded without reluctance to the orders of the chief in every thing that related to the march of the caravan. The only strangers who had joined the Souakin merchants were a party of Tekayrne (sing. Tekoury) or black traders, consisting of five masters, ten camels, and about thirty slaves. I joined this party, as we were all strangers, and glad of each other's assistance; I encamped near them during the whole of the journey to the coast, separating myself from the Souakin traders, who were also divided into many different parties. I soon became tolerably familiar with my companions: they rendered me many little services, of which no one stands more in need than a caravan traveller, and I was never backward in returning them; so that we continued to be upon good terms: I cannot say a friendly footing, for nobody, even in the Negroe countries, is inclined to form an intimacy with a poor man.

Of these Tekayrne one was from Darfour, another from Korlofan, and three had come originally from Bornou, from whence, many years ago, they had travelled with the caravan to Fezzan, and from thence to Cairo. The principal among them, who became the head of our mass, Hadji Aly el Bornaway, had travelled as a slave-trader in many parts

of Turkey, had been at Constantinople, had lived a long time at Damascus, (where many Tekayrne serve as labourers in the gardens of the great), and had three times performed the Hadj: he was now established at Korlofan, and spent his time in trading between that place and Djidda. His travels, and the apparent sanctity of his conduct, had procured him great reputation, and he was well received by the Mekas and other chiefs, to whom he never failed to bring some small presents from Djidda. Although almost constantly occupied, (whether sitting under a temporary shed of mats, or riding upon his camel upon the march,) in reading the Koran, yet this man was a complete bon vivant, whose sole object was sensual enjoyment. The profits on his small capital, which were continually renewed by his travelling, were spent entirely in the gratification of his desires. He carried with him a favourite Borghio slave, as his concubine; she had lived with him three years, and had her own camel, while his other slaves performed the whole journey on foot\*. His leathern sacks were filled with all the choice provisions which the Shendy market could afford, particularly with sugar and dates, and his dinners were the best in the caravan. To hear him talk of morals and religion, one might have supposed that he knew vice only by name; yet Hadji Aly, who had spent half his life in devotion, sold last year, in the slave market of Medinah, his own cousin, whom he had recently married at Mekka. She had gone thither on a pilgrimage from Bornou by the way of Cairo, when Aly unexpectedly meeting with her, claimed her as his cousin, and married her: † at Medinah, being in want of money, he sold her to some Egyptian merchants; and as the poor woman was unable to prove her free origin, she was obliged to submit to her fate. The circumstance was well known in the caravan, but the Hadji nevertheless still continued to enjoy all his hallowed reputation.

On the 22d of May they reached the river Atbara.

The luxuriant vegetation which now surrounded us filled with pleasure even the stony hearts of the slave traders; one of whom, alluding to the dreary tract we had passed, exclaimed: (Baud el moult el Djenna), "After death comes paradise." We marched for about a quarter of an hour among high trees, from the boughs of which we had much difficulty in disentangling the camels' loads. There was a greater variety of natural vegetation here than I had seen any where on the banks of the Nile in Egypt. I observed different species of the Mimosa, Down trees of the largest size, whose luxuriant clusters of fruit excited the wishes of the slaves; the Nebek tree, with its fruit ripe; the Aloë, of the size of the Nebek, besides a great

number of others, unknown to me; to these must be added an abundance of wild herbage, growing on a rich fat soil, similar to that of Egypt. The trees were inhabited by great numbers of the feathered tribe, whose song travellers in Egypt very rarely hear. I saw no birds with rich plumage, but observed small ones of several different kinds. Some sweet notes struck my ears, which I had never before heard, and the amorous cooings of the turtle doves were unceasing. We hastened to the river, and eagerly descended its low banks to allay our thirst. Several camels, at the sight of the water, broke the halters by which they were led, and in rushing or stumbling down the banks, threw off their loads, and occasioned great clamour and disorder.

We remained but a short time at this place, and then continued our route along the banks of the river for about an hour, for the most part among the date trees, which line the borders of the desert. These trees were larger than any I had seen in Egypt. At the end of one hour we forded the river, without any difficulty, as the water hardly reached above the knees of the camels. In less than half an hour from the opposite bank, we came to the village of Athara, so named from its vicinity to the river. As the caravan was to remain here some days, the first care of every one was to choose a proper halting-place. The Souakin merchants alighted on an open ground in front of the village, where they formed several parties among themselves. The Tekayrne and myself took possession of some thick thorny bushes on one side of the village, within which, after a few hours labour with the axe, each cut a small birth just large enough to contain himself and his baggage, while the slaves were ordered to sleep before the entrance. We thus secured our goods from pilferers, and by spreading a few mats over the bushes, procured a comfortable shade.

The tribe of Bisharein Arabs, the population of these parts, are of the most infamous character; treacherous, cruel, avaricious, and revengeful: and the author observes—

The inhospitable character of the Bisharein would alone prove them to be a true African race, were it not put beyond all doubt by their language. Not a drop of milk could be had without purchasing it, and the women obliged us to pay for the use of some old earthen pots which we were in need of during our stay; no one would even interpret between us and such of the people as were ignorant of Arabic, without exacting at least a handful of Dhouira for his trouble. This avaricious spirit is conspicuous in all their actions, and it is not merely caravan passengers, from whom it is natural for them to extort some profit, that are thus treated: the poor negro pilgrims who pass this place in their way to Taka complain bitterly of the pitiless inhabitants of the banks of the Atbara.

Dhouira, and a small quantity of Loubie or kidney-beans, are sown in the wood close to the river, without any previous pre-

\* Several of the Souakin merchants had concubines with them, whom they always carry with them on their travels.

† In all the Musselman countries the female cousins can be demanded in marriage by the males of the family.

paration of the ground. Water-wheels are unknown. The extent of fertile soil is equal on both sides of the river; but nothing is cultivated on the left bank, on account of the depredations of the Djalein on that side. In years when the river does not overflow the banks, they draw all their supplies from Taka. The same trees grow near the village which I saw on the west bank; the Nebek was the most common; its fruit is so abundant that the camels are sometimes fed upon it. The Oshour occupies the intervals between the larger trees, and leaves but little space for the growth of the Dhourra. A great number of turtle-doves and pigeons flew about; they have numerous enemies in a species of eagle, which is very little larger than the eagle Rakkham of Egypt; the body is quite black, the head bald, and of a deep purple red, like that of the turkey. The Bisharein say that tigers abound in the woods, and that very large serpents are sometimes seen; but though I crossed the woods every day to bring water from the river, I never saw any quadrupeds, except innumerable hosts of rats, of the largest size, running among the Dhourra stubble, great numbers of which the slaves killed, and were delighted to eat. The large ants, which are said to be extremely obnoxious in Kordofan and Darfour, are never seen any where to the east of the Nile. During high water crocodiles are found in the river, but no hippopotami. The rhinoceros is unknown here.

The cattle of the Bisharein are very fine, and in great abundance. Their camels had just been sent to the nearest mountains, where some rains had fallen, to feed upon the fresh herbage, while those in our caravan were driven every morning into the woods to feed upon the twigs of the acacias.

The flocks of sheep and goats were following the camels to the mountains; we bought two large sheep for one dollar's worth of Dammour. The chief and some of his relatives keep horses, and wear coats of mail; there are a couple of asses belonging to every tent.

The river Athara joins the Mogren at about two days from this village, beyond which the united stream bears the latter name.

(To be continued.)

Anastasius; or *Memoirs of a Greek*. 3 vols.

The picture of a French tourist, to whom the revenge detailed in our last Number, recommended him, is as well-drawn as that of the Germans.

His object in undertaking the long journey to Turkey seemed to be to play on the guitar, and to compose French love songs. Twice a week a messenger of the embassy was dispatched to Paris, with M. de Vial's effusions, in order that his friends at home might see how he employed his time abroad. *Par contre*, he had determined as soon as he returned to France, and found himself at leisure, to write a detailed account of Turkey—rather however as it ought to be, than as it

was. For M. de Vial disapproved of the Ottoman system in toto; and hence he deemed it sheer loss of time to visit the curiosities of its capital. The only thing he could have liked—had he not been too busy learning the *romekia*—was an *affaire de cœur* with the favourite Sultana; and for a long while he continued exceedingly anxious to give the ladies of the imperial Harem a fête on the Black Sea; but that project failing, from their sending no answers to his notes, he wondered who could bear the dowdies of Constantinople, that had seen the *Trois Sultanes* of Marmontel at the Paris opera. In truth, M. de Vial had no patience with the barbarians. Their language was a gibberish, *où l'on n'entendait rien*; and they had so little *savoir vivre*, that they let their heads be chopped off like cabbage tops. Desirous however of treating them to a sight of the last Paris fashions, he decked out his nether man in pea-green coloured cloth, and got himself chastised by a hot-headed Emir, for thus profaning the forbidden colour—almost too sacred with the Turks for the head itself.

In his turn M. de Vial sent the cousin of Mohammed a challenge, with which the Emir lit his pipe. At last, after a whole day uselessly employed in ogling the Sultana mother through a huge telescope, from the tower of Galata, the chevalier felt seized with a desperate fit of ennui, laid in a reasonable stock of embroidered handkerchiefs, to throw to the Paris belles after a Turkish fashion which the Turks know nothing of, and determined to bid adieu to Persa.

We shall not follow our hero through the rest of his Terjumanian career; but proceed to a truly oriental amour with Esmé, the young wife of an aged Turkish Effendi of rank. The lady and her situation are thus described by an old Jewess, the go-between on the occasion.

If the lady, by whom I have the honour of being employed, were one of your ordinary women, on whom the wind blows as freely as on the weeds of the desert, all would be easy enough. Females who go out at all hours to the bath, and to the market place, and to the Bezesteen, or to visit their friends, do whatever they please. But *adieu Esmé* is none of those, I'll warrant you. This exalted fair one has in her own apartment baths of marble and gold; twenty slaves are always ready at her nod to execute whatever whim may cross her fancy; the richest goods of every country are all spread out before her at her toilet; her own chamber opens on gardens whose roses make those of Sheeraz look pale. In short—poor thing!—she can find nothing to want abroad, and when she does go out, it seems rather for the purpose of seeing how superior is all that she leaves at home. Then she generally only travels alone in a close carriage. Her visits are confined to two or three of her near relations; and she so seldom finds an excuse for stirring out on foot, that the day you met her was the first time these six months she had stepped across her own threshold. Even when she indulges in a little excursion of the

sort, she only moves, as you see, accompanied by a swarm of servants, or rather, of spies.

The intrigue which ensues has a fatal termination—

For when (says Anastasius) long impunity had made me so daring as to invade the Effendee's own roof; when suspicions arose in the husband's mind, which he resolved to verify; when on he rushed to his harem; when right and left flew the women's slippers, placed as a spell at its threshold; when open burst the door of the sanctuary, and jealousy carried its search into the inmost recesses of the gynæceum; when what became of the hapless Esmé, Heaven, the Effendee, and the Black Sea alone can tell,—not a hair of my head received the smallest injury. That very impetuosity of my enemy which seemed to doom me to certain and immediate destruction, proved the means of my preservation. In the very act of making my escape, the door which turned back upon its hinges turned back upon my person, and concealed the intruder behind its friendly screen, until the Effendee and his troop had passed by. I then slipped away unperceived by any creature within. Some slaves, however, who kept watch on the outside, seeing me run, and in evident confusion, set up a hue and cry. Finding they gave me chase, I darted into a mosque, whose open gate seemed to invite my entrance. All I wanted was to throw my pursuers off the scent. A few old Moslemen were in the djamee, mumbling their evening prayers; and while the mob outside howled after the adulterer, the congregation within began to scream at the Yaour. Thus placed between two fires, all hopes of escape forsook me. I felt as if I must—but for some special miracle—soon be torn to pieces!

One human measure only remained to save my life. I drew my dagger, threw my cloak over my face, leaped my back against the mihrab, and cried, "I am a Moslem!"

Thus protected all his perils vanish, and a new course is opened to the proselyte.

(To be continued.)

#### ANALYSIS OF THE JOURNAL DES SAVANS FOR SEPTEMBER.

Art. I. Bowdich's Mission to Ashantee.  
Art. II. Shepherd's Life of Poggio Bacciolini.

This work having been published in 1802, is of course entirely out of the sphere of our criticism. No translation of it having before appeared in France, the present volume will be an acquisition to French literature. It is by the same gentleman who translated Adams' Roman Antiquities, and is equally to be commended for its perfect faithfulness, and for the correctness and elegance of the style. The translator has added some valuable notes.

Art. III. Sir Charles Morgan's Philosophy of Life.

On the first publication of this work, we did not fail to take due notice of it. Mr. Abel Remusat gives a copious, and we think

impartial review of the book, differing, however, from the author's opinions in many important particulars.

#### EUSEBIUS.

Art. IV. Eusebii Pamphili Chronicon Canonum Libri duo, &c. 1 vol. 4to. Published by J. Zohrab and Angelo Mai, Milan.

Few works have excited before their publication such general interest as this which we now announce to our readers. The discovery of an Armenian version of the Chronicle of Eusebius, made at a time when this Chronicle still existed entire, and from an original which has been so long lost to us, promised to fill up one of the greatest blanks in ancient history. The learned world expected to find in it, not only the complete system of the Chronology of Eusebius, but also, what was of much greater importance and authority, the original testimonies of more ancient authors, which that learned and laborious writer was supposed to have preserved entire, as there are so many examples in his *Evangelical Preparation*, a work filled with so much erudition both sacred and profane. We hoped to see at length, rescued from the night of ages, the long series of those ancient monarchs of the East, whom the same jealous reil, which concealed them from the gaze of their subjects, seems to have hidden also from us; or at least, we hope to learn the opinion of the ancients themselves on these famous dynasties, respecting which we possessed hardly any thing but insulated testimonies, and modern systems.

After some farther preliminary observations, in which Mr. Raoul Rochette pays a just tribute to the literature of the Armenians, he proceeds to give an exact analysis of this work, shewing what are the new facts, which it adds to our knowledge of ancient history. We shall not in this place go into this analysis, which it would be necessary to translate entire; first, because the work having found its way to this country, our learned readers will not fail to refer to it themselves; and, secondly, because we wish to subjoin to this article, a communication which we have received from another quarter, and which we have hitherto kept back for the purpose of being employed in this place. We subjoin, however, part of the conclusion of M. R. Rochette's review.

"Such is the faithful and rapid sketch of the first twenty-two chapters of this Chronicle, which certainly add very little to our knowledge, in comparison to what we thought we might expect from it; happily the second part will offer us some indemnity, and the expectation of the learned world will not be wholly deceived. I terminate this article, with two observations; first, that the greater part of the original testimonies collected in the Chronicles of Eusebius, had been preserved to us by Synellus; and, secondly, that the Greek extracts published by Scaliger, at the end of his edition of Eusebius, really belong to the *Chronicle*, since they are exactly translated in the Armenian Version." The following is the communication, to which we alluded above.

VENICE.—The long expected edition of

the two books of the Chronicle of Eusebius, has at length appeared, from the press of the Armenian Convent, in the Island of St. Lazarus, with great typographical splendor.

This fine edition does great credit to these learned monks, natives of the East, venerable for their way of life, appearance, learning, and costume, distinguished by their philanthropy, their zeal for the sciences, and by their institution for the education of young Armenians. It cannot but be a great mortification to those worthy men, to see the Chronicle of Eusebius, on which they have bestowed all possible care and expence, published in an unworthy manner at Milan, and this by the unfaithfulness of one of their own brethren, Dr. Joh. Zohrab, who without their knowledge clandestinely took a MS. to Milan, where he joined Mr. Angelo Mai, who was, most probably, wholly unacquainted with the nature of the transaction. That nobody may be deceived by the highly respectable name of the learned and indefatigable Mai, who has performed such important services to literature, it is a duty to set the affair in its true light; and setting aside the unfairness of the proceeding, to warn the public against the Milan edition, published with the names of Mai, and Zohrab, in 2 vols. 4to., after a comparison with the edition published here; and the more so, as the Bibliotheca Italiana, and other highly respectable journals, have spoken of the Milan edition as a work of merit. But now the original edition is published, there can be no doubt of their respective merits, whether we consider the sources, or the manner in which the editors have performed their task. As for the first, the highly deserving Jo. Bapt. Ancher, to whom the convent entrusted the editing of the work, has fully detailed in the preface the history of the discovery. The Armenian MS. was brought during the last century, from Jerusalem to the Library of the Armenian Seminary at Constantinople: it is on parchment, and of the 12th century, as appears from the characters of the writing, and from the seal of an Armenian Patriarch, named Gregory (though there were several of this name), affixed to the 152d Olympiad, and engraved in this edition. By the desire of the monks of this convent, the learned Armenian, George Resch, at Constantinople, made a copy, and sent it hither in 1790. But in doing this, he improperly proceeded in the arbitrary manner which Scaliger adopted in putting together the Chronicle of Eusebius, and altered his copy accordingly: he at the desire of Ancher again copied the work in 1794, with the greatest fidelity, and sent it by Joh. Zohrab, who was just returning from Constantinople to Ancher, he communicates in the preface the correspondence which took place on the subject. The MS. is consequently the property of the convent; and the boast of Zohrab, as if he had had it copied, is vain, since he was no more than the bearer. But the source of his edition, is the first interpolated MS. on which he made, in a hurry, some small corrections, from the second true copy, and took it to Milan. The careful Ancher, on the contrary, during his second year's residence at Constantinople, compared the second co-

py with the original, and found that it perfectly corresponded with it, with the exception of a few errata, which he corrected.

If the sources of the Milan edition, upon which every thing depends, are corrupt and unauthentic, the manner of editing it will be found equally unsatisfactory. The Armenian text, which ought surely to be given with the first edition, is omitted; here it is printed in the most elegant characters. Mai, who is unacquainted with the Armenian language, has translated it into Latin, with the help of Zohrab; \* here Joh. Bayet, Ancher, who is versed in both languages, has translated (what was especially necessary), word for word, so that in these passages, where the corresponding Greek fragments are preserved, the difference of the readings is evident. In the Milan edition there are few, and unimportant remarks, here very copious ones, with a good register. The former is a work done in a hurry; the latter is executed after long preparation and expence. With what caution Ancher proceeded is evident from his delay in publishing, because he hoped to receive another MS. from the East, though the work was ready for the press in 1795, as appears from the licence (printed in the preface) of the Censor of the *Riformatori dello Studio di Padova*. Then came the years of war and revolution, unfavourable to the publication of such works. Ancher went as Armenian Missionary to Constantinople, did not return till 1815 to Italy, and remained then three years at Rome. On his return the edition was announced and commenced; and when he heard of what was doing at Milan, he descended but without success to offer to publish an edition in common.

In the same convent, a Latin translation will be published, of the work of Philo of Alexandria, 'On Providence,' which has been preserved only in an Armenian translation.

#### ORIGINAL CORRESPONDENCE.

##### THE PERSIAN AMBASSADOR.

The Persian Ambassador is, say the Newspapers, surprized and angry at the review of the "Travels of the Persian Prince Mirza Aboul-Taleb-Khen," which appeared in the Literary Gazette last week, from the French, and was copied by a Morning paper under the title of "Tour of His Excellency the Persian Ambassador;" and we can assure his Excellency that we had no desire to insult sentiments to him which neither were his nor such as he approved. Neither did we so directly designate him, as was done by the change of title which our copyists adopted for the sake of passing the article of an originally their own; though it is evident that the French critic has, from the similarity of names, fallen into an error as to the identity of his highness. It seems that the whole of the extracts are a selection from the Travels of MIRZA ABUL TALIB KHAN, an Indian, of Persian extraction, who never resided in Persia, and who travelled in Eu-

\* Who, says Mr. Raoul Rochette, appears not to be familiar with the Latin.—Ed.

some 20 years ago. The Ambassador keeps a Journal, but no part has yet been translated or published in any European language.

To the Editor of the Literary Gazette.

Sir,—As I have observed you have occasionally favoured your readers with specimens of monumental inscriptions, I beg leave to hand to you the enclosed, which seems to me to be a model for compositions of this sort. The inscription is copied from the tomb in All Saints Church, Hertford, and is from the classic pen of Lord John Townshend. If it meets with your approval, its insertion in the Literary Gazette would I think be acceptable to your numerous readers, and much oblige

Yours, &c. R. R.

To the Memory of

Isabella Georgiana Townshend,

Third daughter of Lord John Townshend and

Georgiana Ann his wife:

She died the 17th of September 1811, aged 20.

Oh! gone for ever! loved, lamented child!  
So young, so good, so innocent, and mild,  
With winning manners, beauty, genius, sense,  
Fond filial love, and sweet benevolence,  
The softest, kindest heart, yet firmest mind,  
In sickness patient, and in death resign'd.  
Never—oh never yet a fairer bloom  
Of opening virtues found an early tomb.  
How hard thy trials, how severe thy woes,  
She, she alone, thy sorrowing mother knows;  
Who three long years with sad foreboding heart,  
Bankrupt of every hope from human art,  
Still wept and watch'd, and still to heav'n for aid

Her fruitless vows, with meek devotion paid;  
But thou! pure spirit! fled to endless rest,  
Dear child! my heart—dread Bella! thou art blest:

And oh! the thought that we again may meet—  
Oh! not another gleam of hope so sweet  
Dawns on thy father's breast with welcome ray,  
To soothe his grief and cheer his closing day.

## ARTS AND SCIENCES.

### PRINTED MAPS.

The celebrated Mr. Firmin Didot is now employed in engraving the dies for moveable types for printing maps, which will, it is affirmed, equal those engraved on copper, and which invention seems to be exclusively his own. Many attempts have already been made to print maps with moveable types, among which the specimens from the press of Messrs. Haas of Basil, and Periaux of Rome (who exhibited in the Exhibition of Arts this year, a beautiful map of the department of the lower Seine) are particularly distinguished; but they do not satisfy the expectations of connoisseurs: it is therefore hoped, that Mr. Firmin Didot, by his talent and zeal, will succeed in conquering the difficulties which have hitherto opposed the complete success of this important branch of typography.

We must observe, that the art of printing maps with moveable types, is originally a German invention: It is well known that one of the earliest printers, Conrad Sweynbreyer or Schweinhelm, introduced this art

into Rome, in company with Arnold Panartz, on the occasion of printing the twenty-seven maps for the cosmography of Ptolemy. He died before the work was quite finished, and it was therefore executed by another German, Arnold Buckinck (Bürking) at Rome, in October 1478. The practice was continued for some time in the 16th century, but afterwards abandoned, probably because it was too difficult and tedious, till the second half of the 18th century, when two Germans, almost at the same time, and without knowing any thing of each other, renewed the attempt. The first who published a specimen was Augustus Gottlieb, a Prussian, deacon at Carlsruhe, and who corresponded with the celebrated printer William Haas of Basil, that he might cut types for him on a certain plan, to be used in map-printing. His first attempt was made in 1776. It anticipated Breitkopf in the publication and execution of his ideas, and was called typometry. In the same year, however, appeared the *Environ*s of Leipzig, by Breitkopf, as a specimen; and his second attempt, in 1777, in which, and also in succeeding essays which were not made public, he constantly endeavoured to improve his invention.

Mr. Didot will now probably find some method to facilitate the very troublesome process. That may be, *Nam inventis facile est addere.*

### DISCOVERY OF AN ARABIAN ANTIQUE IN POLAND.

Some months ago, there was found in making a road near Brielany in Poland, a brass tablet, on which was delineated the celestial globe, with an Arabian inscription. The Society of the Lovers of the Sciences, begged from Mr. Chiarini, Professor of Oriental Languages to the university of Warsaw, an explanation of this antique. He was of opinion, that the tablet formed a part of an astronomical instrument made by an Arabian. Soon after this, another such astronomical instrument, with similar tables and inscriptions, was found in the convent of the Friars at Warsaw. Mr. Chiarini read a treatise on this subject, on the 24th of November, at the sitting of the Society, and stated, that the brass tablet which had been found, constituted, as it appeared to him, part of an Arabian Astrolabe. The instrument at present in the hands of the Friars, came from Italy about two centuries ago with the first Friars. The inscriptions on it mentioned the cities of Almeida, Toledo, Cordova, and Seville in Spain. The inscription on the fragment which was found near Brielany mentions the cities of Cairo and Medina.

## LEARNED SOCIETIES.

### CAMBRIDGE, Dec. 31.

The Hulsean prize for the present year is adjudged to the Rev. Edward White, B.A. of Corpus Christi college, for his essay on "*The fitness of the time when Christ came into the world.*"

## FINE ARTS.

### EXTRACT OF A LETTER FROM ROME.

Nov.

The Barbarini Faun is at last released and sent off to Munich, where a Saloon of the new collection of Statuary will be named after it. Besides the desire of keeping in Rome works of art of this importance, a law-suit gave rise to the delay which has taken place. It is well known that this statue ornamented the Tomb of Adrian, and was found in erecting the new fortifications of the castle of St. Angelo.

While the old private collections are gradually decreasing, the discoveries in Quintiliolo near Trivoli show how much the bosom of the earth still cowers. A very beautiful fragment of the statue of a Youth, and a Nereid, are added to those already mentioned; and I hope that these discoveries will remain undivided, and fill a room in the Borgheese Museum.

The great patron and introducer of the English Father Taylor, formerly a Dominican Monk, died lately, and will certainly console himself in the other world for the curses of the laqueus, and the whole tribe who impose upon strangers. He wrote last year a very circumstantial letter on the prices, drink-money, tariffs, &c. in Rome. This was—whether with or without his consent, I do not know,—printed in London, and the idea suggested that every Englishman travelling to Italy ought to take a copy with him. As all articles are set down on the most economical scale, as a Roman Abbé is accustomed to buy, it is natural that such a book be considered as a real act of treason to the state, by the inhabitants of the Spanish place, the coachmasters, &c. Many Englishmen, indeed, make shift with the plan of the city, without any leavings.

The Church of San Paolo *f. l. m.* will now undergo the repairs of which it is so much in need; several parts which are wanting in the folding doors (very clumsily cast in the middle ages at Constantinople), are to be repaired by the ingenious Prussians, as Messrs. Hopfgart and Jollage are called here. Another attempt is making in the Colosseum, to drain off the subterraneous waters into the Circus Maximus. The incurable disorder of the architect Mr. Stern, and that of the public treasury, which is at least difficult to be remedied, leave the Campo Vaccino, the Arch of Titus, and the Temple of Peace, in the same ruinous condition. Count Blacas intends to continue the excavations of her grace the Duchess of Devonshire, near the pillar of Phocas. Naro's law suit, on account of a sepulchral Monument of which he has taken possession, will be determined in a few days.

The whole affair of the fishery in the Tiber has, like all inconsiderate attempts to effect something of importance, done more harm than good.

Belzoni, says another of our letters from Rome, has happily returned from Egypt, and will proceed from Venice, where he is at present performing quarantine, to England, to receive payment for the antiquities he

has discovered. Several Englishmen have lately made excavations in Cyrene. They discovered several beautiful statues and other interesting antiquities, and sent them off to London.

## ORIGINAL POETRY.

## A FAMILIAR STORY.

It was a winter morning. I had turned into a shop to buy some glittering thing for poor Cecilia: many a golden toy, Crusted with diamonds and gems lay there, And he who sold them, with obsequious look, Watch'd every motion, and commended much His wares, their workmanship and rare device, The water of each stone, its size and hue. I stood there undetermined, when a man Came slowly in. He shook the rain away, And wip'd the blinding sleet from off his eyes, (I thought I saw a tear) and in a voice Of proud, yet hesitating address, told The master of the house, he wish'd to sell Some trifles—for a friend. The fellow scowled, And, in impatient utterance, bade him wait. The colour mounted to the stranger's cheek; But quick subsiding, left a paleness there— More visible than before; and then he sigh'd Like one who must endure the sharp neglects And scoffs of this money-getting world. I could not suffer this: I am not wont (You know it) to heap weights upon the fallen, So gave up my precedence. I mark'd well The stranger's look: It was the face of one Who had spent a life in study,—deeply mark'd As if the lightning of the passions had Been there and marr'd it. On his lips there sat a melancholy smile. Shyly he glanced Around, then softly whispered his demand. It was too much—the tradesman's look replied. 'You cannot then?' he spoke—then, with a sigh, And such a look as man gives when he parts With all he loves for ever, did he thrust His shaking hand into his breast, and pluck'd A bauble thence—a picture, as I thought: He held the thing in silence for a time, Clench'd hard—at last, relaxing from his grasp, He seem'd to venture on a glance, and wip'd The dimness from the glass, and laid it down, Pointing toward it, "Dead Victoria," (He shuddered as he spoke) "the last is gone, The last memorial now has passed away. Must it be thus?—and yet, what matters it?— Art thou not writ upon my heart for ever?— If thou canst bear me from thy starry home, Thy home amongst the angels, pity me, And pardon that I here do give thee up.— (Thy likeness)—sell thee, beauty, to defray The bitter world's necessities. Not for me, Not for my wretched self, abandon'd, lost. Oh! I could stare upon misfortune still With a bold front, and bid my grief be dumb; For I have been accustom'd long to face The biting winds of winter—man's neglect— Injustice, hate, bitter and freezing want,— Without a hope, save one—beyond the grave."— He push'd the picture from him, and beseech'd The man to keep it for a time—perhaps He might redeem it. But let me end my tale: I made a friend and sav'd him; and when I Sat in darkest anguish by my dying bride, And rav'd and curs'd the world, and bid adieu Heav'n and its mighty mercies, he did tend (This stranger) like a ministering spirit round My couch, and saved me from a bloody death. He soothed my anguish, and did lead my thoughts

Upwards, and taught me—hope. At last he died: And now there's not one left, but thee my friend, My old acquaintance, unto whom my friend Turns with a full confiding. Never 'till now Didst thou or any other hear me tell How first I knew De Lacy: aye, he was The desolate stranger of that winter's day.

O.

## THE VENUS DE MEDICIS.

Array'd in nought but her own loveliness  
She stands, a being of celestial mien;  
Such as, 'tis said, the gods did once caress;  
In form—in grace, the type of beauty's queen.  
'Twould seem that genius once, with soaring wing,  
On nature's privacy had stol'n so near,  
That, as her hand was sweetly fashioning,  
A faultless being for some brighter sphere,  
He bore the image in his eye away,  
And, swift descending to his native earth,  
With one impassion'd touch impress'd that clay,  
And gave the paragon of beauty birth.  
*Camden Town.* H. A. D.  
30th Dec. 1819.

## IMITATION OF BURNS.

The sun's a lowin' i' the sky,  
The laverock is a' croon,  
Heard ye not the curlew cry,  
They wauken'd him sae soon.  
Fresh dighted is the swaird wi' dew,  
And draps are on the bushes,  
The morn, my Jeanie, 's like to you,  
Wi' tears as well as blushes.  
Then up, how can ye sleeping hide  
To hear the burdie's sang,  
When we have mony a mile to ride,  
And a weary way to gang.  
Up, up, or the glazied pane 'll be brak,  
Dinna ye hear me rappin',  
Deil's i' the lassie, winna she wake,  
I'll be na langer stappin'.

EVAN.

## LINES,

Written at an Inn within sight of Conobro's Castle,  
Yorkshire.

## (A Scene in the Romance of Ivanhoe.)

Here lofty Conobro's rears his crest sublime,  
Tho' full of years, yet unshaded by Time:  
As some proud chief, still destined to command,  
In feudal pomp o'erlooks the prostrate land.  
His ample form with vernal honours graced,  
Whose sheltering beauty hides wide Havoc's  
waste.

The smiling Vale that peaceful rests below;  
The gliding stream meandering in its flow,  
In fitful flash reflecting beams of light,  
As windings give it to the dazzled sight,  
Save when it wanders on in sombre mood,  
Beneath the margin of the darkening wood.  
The grey smoke wafted by the gentle gale,  
That scarce with motion stirs the slacken'd sail;  
And high the splashing mill a mingled sound  
Is heard to rise mysteriously profound,  
As if some dire Enchanter's magic spell  
Escap'd in echoes from his secret cell.  
 Ofttimes upon the breeze soft notes ascend,  
But soon in harsher strains discordant end.

Vainly the passing stranger seeks the cause,  
In some portentous change of nature's laws:  
• He learns that, fashion'd for the work of death,  
The cannon's bore is heard upon the heath.

The charm now fled, no more with placid mien  
Or softest beauty swells the sylvan scene.  
Old Conobro's awful brow thick clouds o'er-  
spread,

And angry seems to rise his time-crown'd head;  
And as imagination holds her power,  
She rules the impulse of the varied hour †.

D.

• The works of the Messrs. Walker of Rotherham, for the boring of cannon.

† These lines were written, and many sketches of the sylvan scenery in which Ivanhoe is laid, were taken as singularly beautiful, by the artist from whose pen they came, many years ago. This shows how fine an eye the author of that romance has for nature, and how accurate, as well as picturesque, are his descriptions. Of the effect of this book we could cite no higher instance than that of a gentleman, who after reading the account of the Tournament, and rising to go out, called his servant to bring *his Armet*, instead of *Ast*. The general power of these novels has never been more highly and happily expressed than by a literary lady, who is so enthusiastic an admirer of them, as to say, "It is a happy thing to live in this age, were it only for the pleasure of reading them."

## HODGE.

The wild winds blow,  
Fast falls the snow,  
And Nature looketh drear:  
The fields and trees  
The shepherd sees  
Deck'd in their wintry gear.  
The gobbling ducks,  
The hen that clucks,  
And cock that struts so bold:  
The loving cows,  
And heaving ewes,  
Seem pinched by the cold.  
The toiling steed  
Regrets the mead  
Where he was wont to browse;  
The lazy hog  
Grunts at the dog  
That keeps him from the house.  
But Grey-malkin,  
All snug within,  
Enjoys the blazing fire;  
And sleek and fat,  
Doth graily pat  
The mouse that dares her ire.  
Now Hodge returns!  
The faggot burns,  
The sparkling ale goes round;  
The brown nuts too  
Appear in view,  
And mirth and glee abound.  
The rosy maid,  
Of man afraid,  
Refuses to be kist;  
And matrons grey  
Fling care away,  
To play at loo and whist,  
Such are the joys—  
No care annoys  
The happy countryman;  
The winter howls,  
The north with snows—  
Wedge higher fills his can!

He heedeth not  
The storm a jot,  
Whilst all around is warm :  
The hail may fall,  
The wind may howl—  
These give him no alarm.

His barton's full,  
The cow and bull  
Shew Hodge's thrifty care ;  
And more than this,  
His men I wiss  
The farmer's kindness share.

No churl is he,  
But lythe and free—  
He hears a gen'rous heart ;  
And those that are  
In fortune spare,  
Acknowledge his desert.

Now I will show  
What mickle woe  
Attends a town-led life ;  
And eke repeat  
What seemeth meet,  
Or single or with wife.

The air is thick,  
The mud doth stick,  
And clog up all the way ;  
The busy crowd,  
So dull and proud,  
Wear out the dingy day.

At night they roam  
Are seldom home,  
But in the tavern meet :  
With throat like drum  
His wife doth come,  
A bitter shrew and quean.

"What, at your pot,  
You lazy sot !"  
She says in frantic fret :  
But she, poor thing,  
Gets a drab-bing,  
Which sure none can regret.

The single man  
Looks pale and wan,  
Th' effect of early riot :  
It moves my ruth  
To see the youth  
So lost to health and quiet.

For, ere he be  
Full six times three,  
By vile debauch he's undone ;  
And friends lament  
In discontent  
The wickedness of London.

The maidens flaunt  
And gallivant,  
Bedizen'd out so fine ;  
To church they run,  
But never one  
To list to the divine.

'Tis but to see  
A certain he—  
To plan how to deceive :  
Mim, pert and vain,  
Looks with disdain  
On those that Love believes.

In each new face  
She finds a grace  
Which her old lovers lack ;  
And then, God wot,  
She heedeth not,  
But stuns ye with her clack.

Thus have I shown,  
That in the town  
The people do not well :  
But honest Hodge  
Doth Fortune dodge,  
And gives and lives himself'.

His ruddy cheek  
And pimply beak  
Shew little woe or care ;  
He's early up  
Then takes a cup,  
And wends to field or fair.

Meanwhile the cit  
Sees visions flit  
Of contracts, stocks, and loans ;  
Thrice cent per cent  
He grasps content—  
He starts—awakes, and groans !

J. H.

## SKETCHES OF SOCIETY.

ANECDOTE OF GENERAL THEODORE REDING  
VON BIBEREGG.

Commanding the Swiss troops in the service of  
Spain.

(Extracted from the Journal of a German  
Officer in the Spanish service at the battle  
of Baylen.)

I cannot refrain (says the officer) from relating an anecdote, which throws such a pleasing light on the character of the immortal Don Theodore Reding, a man who by his intrepidity, personal valour, and sound judgment in the military art, greatly contributed to the success of that day. On the evening before the battle, several dragoons of one of our most distant pickets of cavalry brought bound into the camp, about twenty Andalusian peasants, who were conducting a number of mules and asses loaded with water, by a secret road, to the French, when they were seized by our people. The heat was so excessive, that persons of eighty years of age remembered nothing to equal it. The peasants trembling awaited their sentence, before the General's tent, well knowing that death was the consequence of their crime. At last the commander appeared. Curiosity had drawn together some young officers, to whom Reding said : "Gentlemen, form a circle. These men, (continued he, addressing us with great seriousness,) were conveying to the enemy, who are, we know, suffering for want of water, that necessary article ; now determine their punishment—I will collect your votes." The gallows according to the Laws of War," said the first, the second, and the third. The peasants turned pale. Some voted for shooting them ; the most compassionate for drawing lots and punishing every fifth man. "But do not let us," said the General, "decide too hastily in a case of such importance ; which of you, gentlemen, can know how many of us may survive to-morrow? What induced you, (turning to the peasants,) to act in this manner? You ought to contribute to our success ;—you, whose interest it is to do the French all possible harm, even you bring provisions to the enemy's camp !"

"General, we have done wrong, (said one

of the peasants,) but have some excuse to offer. Our huts and our corn were a prey to the flames. We are all fathers of families, and no prospect but starvation remained to us for the approaching winter. We knew very well that the French paid two reales for a glass of water,—with this money we hoped to relieve ourselves from want. Our sons are here in the army, and we also are prepared to die fighting for our country. A part of this very money was intended for powder, as we are too poor to procure our ammunition, as is required of us." Tears sparkled in the eyes of the Hero. He went into his tent, came out with a purse in his hand, and gave every peasant a piece of gold worth five ducats, saying, "Divide the water among your countrymen, and leave the French to me ; to-morrow they will have something to drink." He would not stop to receive their thanks, but immediately after this noble action withdrew. It is remarkable, that in this battle Swiss were seen fighting against Swiss, who here murdered each other for the pay which they received from foreign nations. The French Swiss regiments, who wore a red uniform, were called by ours the Red Swiss, and they were in fact not a little inveterate against each other. Two Redings commanded Spanish troops, and one a French Brigade. Don Theodore would not see this latter, Don Carlos Reding, when he was made prisoner.

## THE DRAMA.

Our return of the drama this week is *nil* ; novelty has been produced at either of the great houses, and we are not so much in love with theatrical antiquities, as to compose an essay upon them. The pantomimes continue their attractions. The Bean-Stalk seems to be productive ; and Grimaldi having exchanged his squire's for a clown's dress, is more at home than ever in the blanket, wherein he is so happily, since by proxy, tossed.

NEW DRAMA.—A Musical Drama, taken from the popular novel of the Antiquary, is in rehearsal at Covent Garden Theatre. Liston is to represent Oldbuck the Antiquary ; Emery, Ochiltree ; and the principal musical characters by Duruset, Miss Stephens, and Miss Tree.

## THEATRE DU VAUDEVILLE.

*La Somnambule*, a Vaudeville in 2 Acts.—Nina went mad for love ; but Cecile, the heroine of the new Vaudeville, merely becomes a *sleep-walker* because her lover has forsaken her through unfounded jealousy. Cecile, in revenge, resolves to bestow her hand on another admirer. Every thing is arranged for the wedding ; and the intended bridegroom arrives, accompanied by Gustave, the faithless lover, of whose adventure he is ignorant. Gustave sees the fair phantom during the night, and some words which Cecile utters in her sleep convinces him that his suspicions of her were groundless. The author, it would appear, takes it for granted

that a woman necessarily speaks truth in her sleep; though many a fair dreamer might be inclined to dispute the principle.

Be that as it may, Gustave, too generous to destroy his friend's happiness, determines to set off on the following day; but Cecile's shawl, which is found in his chamber, explains the whole affair to Frederick, and he renounces the hand of his intended bride, in favour of her former lover. This, it must be allowed, was the most prudent course that could be adopted by a gentleman about to marry a *sleep-walking wife*.

#### THEATRE DE LA PORTE SAINT MARTIN.

First representation of *Les Petites Danaïdes*, ou *Les 99 Victimes*.—This is a parody on the Tragedies and Operas that have been founded on the story of the Danaïdes. M. Sourniois, a restaurateur, takes place of King Danaus. He has fifty daughters, who are married to their fifty cousins. Cupid is irritated that Hymen should thus deprive him of so many subjects, and he deposes a dream of M. Sourniois, which gives him the nightmare; and informs him that one of the bridegrooms intends to send him *ad patres*. Terrified at this warning, Sourniois, who has not been made acquainted with the name of the *delinquent*, thinks the surest way is to dispatch all his sons-in-law at once.

He summons his daughters to meet him in the evening in the cellar. Cupid, who is also in attendance, examines the casks, and finds in one of them fifty knives, which he transforms into fifty daggers.

Sourniois' daughters range themselves in circles round the barrels. "My little angels," says the father, "you must perform me an act of service: do me the favour to kill your husbands this evening." Forty-nine swear to execute the barbarous orders, and they conceal the daggers in their ridicules. M. Sourniois, however, observes that Madeline has not sworn like the rest; he suspects that she intends in *petto*, to save M. Pincoff, her husband; and he reproaches her for her weakness.

This scene resembles one in Gombauld's tragedy of the Danaïdes: when Danaus exhorts his daughters to murder their husbands, one of them seriously asks:—

"Pourriez-vous donner la mort, comment les prendrons-nous?"

"Il faut les enlever!"—

replies Danaus. Hypermnestra then observes that her husband never sleeps, and that the strongest wine cannot intoxicate him. In this instance the tragic poet is at least as burlesque as the author of the parody.

Madeline prevails on her dear Pincoff to fly. The forty-nine bridegrooms retire to rest, and soon meet their fate. Their ghosts are seen rising to heaven, with their cotton night caps; and Sourniois and his daughters are hurled to the infernal regions, where they are doomed to endure endless grotesque torments.

The piece was received with warm approbation.

#### VARIETIES.

There have been, for the last few days, several spots visible on the sun's disc; some of them very large. It is remarkable that these spots change their figure and position, and disappear and re-appear with unusual rapidity.

Rousseau could not endure spoiled children. One day, as some children were playing in the gardens of the Tuileries, Bernardin observed to him; "These are beings whom you have rendered happy; your advice has been followed." Rousseau replied, "I spoke against those who tyrannize over children; but now it is the children who lord it over their governesses and tutors."

Among the advertisements of the present period, are several of "*Finishing Academies*."

A countryman stepped up to Mr. — a bookseller at Doncaster, who was standing at his own door, and enquired if this were the Green Dragon? Mr. — led him gently out to the middle of the street, and pointing to his sign, the *Bible and Crown*, said, "Is that like a Green Dragon, friend?" "I do not know," replied Hodge, not in the least disconcerted for I never seed one."

A discussion respecting oysters, at present occupies public attention in Belgium and Holland. A bank of oysters has recently been discovered in the neighbourhood of Antwerp. These oysters, it appears, do not agree with the Belgians; but the Dutch, on the contrary, are very fond of them and hence a serious dispute has arisen in the journals of the two countries. The Batavians say the oysters are not *English*; but the Belgians like them the better for that, and pride themselves in giving the preference to their own native oysters; the moderates, who may be said to belong to the stomach faction, eat both impartially. Thus political feeling attaches itself to every thing! Where will party spirit next find a niche—since it has penetrated even into oyster-shells!

A child of little more than seven years of age, named Faustin Hingues, is at present the object of enthusiastic admiration at Naples, for his extraordinary performances on the violin.

#### LITERARY NOTICES.

Mlle Vauvilliers Histoire de Jean d'Albert, Reine de Navarre.—M. Dauou.

Feroozabad. 'The Kimoos or the Ocean.—M. Silvestre de Sacy.

George Reinbeck, Dramatic Works (in German).—Mr. Vanderbourg.

P. Basile de Glemont. Supplément au Dictionnaire Chinois-Latin.

BURNING OF WIDOWS.—About a year ago, Bykuntanth Banoojee, Secretary to the Brahmyu or Unitarian Hindoo community, published a tract in Bengali, a translation

of which has been made into English, wherein he not only maintains that it is the incumbent duty of Hindoo Widows, to live as ascetics, and thus acquire divine absorption, but expressly accuses those who bid down a widow with the corpse of her husband, and also use bamboos to press her down and prevent her escape, should she attempt to fly from the flaming pile, as guilty of deliberate woman murder. In support of this charge, as well as of his declaration of the illegality of the practice generally, he has adduced strong arguments founded upon the authorities considered the most sacred. This treatise has excited a strong sensation in India, where the horrible custom against which it is directed is still lamentably prevalent.

#### METEOROLOGICAL JOURNAL.

DECEMBER, 1819.

Thursday, 30.—Thermometer from 21 to 33.  
Barometer from 29, 72 to 29, 62.

Wind S.W. and S. 4.—Cloudy and hazy, most of the day. A fine coloured halo formed about 10 o'clock this morning, and continued for about an hour.

Friday, 31.—Thermometer from 18 to 24.

Barometer from 29, 57 to 29, 52.  
Wind N.E. 4 and S.W. 4.—Early part of the morning clear; the rest of the day hazy.

JANUARY, 1820.

Saturday, 1.—Thermometer from 13 to 29.

Barometer, from 29, 60 to 29, 72.  
Wind N. 4, and W. by S. 4.—Morning clear; the rest of the day foggy and cloudy.

Sunday, 2.—Thermometer from 17 to 40.

Barometer from 29, 60 to 29, 66.  
Wind S. 4.—Foggy and cloudy; with rain at times.

Monday, 3.—Thermometer from 33 to 25.

Barometer from 29, 67, to 30, 15.  
Wind N. 3 and 4.—Morning cloudy, with a little snow, the rest of the day clear.

Rain fallen .375 of an inch.

Tuesday, 4.—Thermometer from 19 to 29.

Barometer 30, 26 stationary.  
Wind S.W. 4.—Generally hazy.

Wednesday, 5.—Thermometer from 14 to 24.

Barometer from 30, 31 to 30, 35.  
Wind S.W. 4.—Generally hazy.

Rime particularly thick in the morning.  
On Tuesday the 11th, at 5 hours, 35 minutes, 54 seconds (clock time), the third Satellite of Jupiter will emerge from an eclipse.

Lat. 51. 37. 32. N.

Lon. 0. 3. 51. W.

Edmonton, Middlesex. JOHN ADAMS.

#### TO CORRESPONDENTS.

R. R.'s communications are received with acknowledgments.

Y. is a more accurate than liberal critic, on the adverb "only" being, certainly loosely and erroneously, placed before instead of after the words "inferior" and "published," in the first col. of our last Number. The sense requires the latter; and it was sheer haste in preparing for Saturday a review of a quarto volume, not seen till Thursday afternoon, which caused the careless blunders. Erratum.—In our last Number, in the review of Sir W. Osney's *Travels*, col. 2, p. 9, line 52, for "Trinity" read "Unity" of God.

Miscellaneous Advertisements,  
(Connected with Literature and the Arts.)

British Institution for promoting the Fine Arts  
in the United Kingdom.  
NOTICE TO EXHIBITORS.

THE Pictures, &c. intended for Exhibition  
in the British Gallery, the ensuing season,  
will be sent there for the inspection of the Committee,  
on Friday the 14th, and Saturday the 15th of January  
next, between the hours of ten o'clock in the forenoon,  
and six in the afternoon; after which time no picture,  
nor other work of art will be received. (By order)

British Gallery, Pall-Mall, JOHN YOUNG,  
London, Nov. 27, 1819. Keeper.

BOOKS AND STATIONERY.

At Mr. Bullock, at his Egyptian Hall, Piccadilly, on  
Wednesday next, to-wit, on the 1st of December, on

A SMALL LIBRARY OF BOOKS, among  
which are *Salt's Views in India*, coloured plates;  
*and Spots of the East*; *Campbell's Naval History*,  
4 vols. 8vo. 10s.; and a variety of valuable  
and interesting works in Modern English Literature,  
also, elegant Beams of Paper, compressed in thick and  
thin paper and laid post and foolscap, brown,  
chocolate, mottled, blotting, and cartridge paper.  
To be viewed two days preceding.

BOOKS PUBLISHED THIS DAY.

Price 1s. (returned to Purchasers.)  
A CATALOGUE OF THE LIBRARY OF THE  
late JOHN PLAYFAIR, Esq. F.R.S. &c. &c. &c.  
and Professor of Natural Philosophy in the University  
of Edinburgh. To be SOLD BY AUCTION, without  
reserve, by Mr. Haldenry, at the Rooms, No. 4, Hanover  
square, on Thursday, the 20th of January,  
1820, and continuing Days, at one o'clock precisely.  
Catalogues to be had of Longman, Hurst, Kees,  
and Co. and Brown, London.

Handsome printed in 8vo.  
OEUUVRE OF FRENCH LITERA-  
TURE, consisting of interesting Extracts from the  
best French Writers, in Prose and Verse, with Bio-  
graphical and Critical Remarks on the Authors and  
their Works. In Two Volumes. Vol. I. Prose.

Years 1818, 1819; some Account of John Canning, an Agri-  
cultural Labourer and Poet. Living Authors, No. 1. The  
Author of the Scotch Novels; Models of Art; or Service  
from M. Bonnet to the Editor; Ancestral Enormities;  
Memoirs of Mr. Hardy Vaux; Tombstone Warehouse,  
or Magasin des Modes Monumentals at Paris; Influence  
of Religious and Patriotic Feeling on Literature. The  
Traveller, No. 1. Vaux; Advantages and Disadvantages  
of Rome, as a School of Arts; French criticisms on a  
celebrated German Work; Searching the Tyber for Re-  
mains of Antiquity. Letters from Venice, No. 1. The  
Venetian Nobility; Farewell to England; Midnight  
Hours; The Collector, No. 1.; The Ivy; Sonnet from  
Scarron; Winter, Bath. The Drama, No. 1. Notices  
of the Fine Arts; Gleanings from the Foreign Journals.  
Critical Notice of Anastasius; of Ivanhoe; and of the  
Sicilian Story, by Barry Cornwall; Literary and Sci-  
entific Intelligence; Report of Music; Rural Economics;  
Medical Report; Commercial Report; Historical and  
Critical Summary of Public Events; Colonial Intelli-  
gence; Public Documents, &c. &c.

Norway Scenery.  
Price Three Guineas, the 8th Number of  
BOYDELL'S PICTURESQUE SCENERY OF  
NORWAY.

London: Printed for Hurst, Robinson, and Co. (late  
Boydell's) 40, Chancery-lane.

The present Number, which completes the work,  
contains plates 71 to 80, with descriptive letter-press to  
plates 31 to 80. The Work may be had complete, in  
Two Volumes, folio, price Twenty-four Guineas, half-  
bound.

THE GUARDIAN, a New Weekly Paper,  
conducted on Principles of Attachment to our present  
Establishment in Church and State. Published  
every Saturday Evening, at 208, Strand.

In 2 vols. 8vo. with 20 Engravings from Original Draw-  
ings, price 21. 2s. 6d.

TRAVELS IN ITALY, GREECE, and the  
IONIAN ISLANDS, in a Series of Letters, descrip-  
tive of Manners, Scenery, and the Fine Arts. By H. W.  
Williams, Esq.

Printed for Archibald Constable and Co. Edinburgh;  
and Hurst, Robinson, and Co. Chancery-lane, London.

These Letters will be found to contain much original  
and important information. The attention of the  
traveller and the reader is particularly directed to the  
remarks and criticisms on works of art, into which the  
author was naturally led by his professional habits; ex-  
hibiting an ample and accurate account of the paintings,  
sculpture, and architectural monuments, which form  
the chief attraction of these interesting countries. The  
plates are numerous, and executed in a valuable manner;  
among the most curious of them are a fine simile of a de-  
sign sketched by Buonaparte, while in Elba, for the  
uniform of his Guards; the Skull of Raphael; Design  
of a Cemetery, intended as a hint for the improvement of  
our burying-grounds in Britain; Caskets of Otranto; Por-  
trait of the Priest of Delphi; Monks of Parnassus;  
Greek Dance; specimens of impressions of Leaves, taken  
on copper by a new and simple method, &c.

Madame de Staël's Works.  
Editions in French and English.

The second Edition, in 2 vols. 12mo. price 10s. 6d.

AN ESSAY ON FICTIONS, — ZULMA, and  
other TALES. By MADAME DE STAEL HOL-  
STEIN.

Printed for Henry Colburn and Co. Conduit Street, of  
whom may be had, by the same author,

2. LETTERS on the Character and Writings of  
ROUSSEAU, &c. &c.

3. THE INFLUENCE OF LITERATURE upon SOCI-  
ETY, with a Life of the Author, 2 vols. 8vo. 11. 1s.

4. ON THE INFLUENCE OF THE PASSIONS, 10s. 6d.

5. MEMOIRS of her FATHER, M. NECKER, 10s. 6d.

6. CORINNE, or LITTALIE, 3 vols. 18s.

7. DELPHINE, 4 vols. 11.

In 3 vols. price 31s.  
HAROLD — THE EXILE —

In truth he was a strange and wayward wight,  
Fond of each gentle and each dreadful scene.  
In darkness and in storm he found delight;  
Nor less than when on ocean waves serene  
The southern sun diffused his dazzling sphere.  
Even and vicissitude amused his soul;  
And if a sigh would sometimes intervene,  
And down his cheek a tear of pity roll,  
A sigh, a tear so sweet, he wished not to control.  
Sold by Colburn and Co. Conduit Street, and all Book-  
sellers.

In 3 vols. price 18s.  
THE HERMIT IN LONDON: Or Sketches  
of ENGLISH MANNERS; forming a Companion  
to the *Hermit de la Chaux-de-Fonds*.

"Tis pleasant through the loop-holes of retreat  
To peep at such a world; to see the stir  
Of the great Babel, and not feel the crowd."  
Cooper,  
Printed for Henry Colburn and Co. Conduit Street.

In 4 vols. 24s. 6d. In French, 3 vols. 18s.

JULIEN DELMOUR, or the NEW ERA; a  
Novel, actually founded on Events that have occurred  
in France during the last 30 Years, and containing  
many curious and original anecdotes connected with the  
French Revolution. By MADAME DE GENLIS.

Like the ingenious author of *Giuliana*, Madame de  
Genlis has described personages of all ranks, and criti-  
cised every thing which in manners appeared to her repre-  
sentable or ridiculous.  
Printed for Henry Colburn and Co. Conduit Street.

Handsomely printed in small 8vo, similar to Domestic Cookery, price 7s. 6d. in boards, a New Edition, greatly improved.

### THE NEW FAMILY RECEIPT-BOOK: A

Collection of more than *Eight Hundred* truly valuable Receipts (omitting those in Medicine and Cookery) in various Branches of Domestic Economy, selected from the Works of British and Foreign Writers of unquestionable experience and authority, and from the attested Communications of Scientific Friends. Dedicated, by permission, to Dr. CHARLES TAYLOR, Secretary to the Society of Arts, Manufacturers, and Commerce; to whose superintendence the work has been submitted, and to whom the Editor has been indebted for many Valuable Communications.

"This book is a proper and almost indispensable companion for the 'New System of Domestic Cookery': it contains a large quantity of truly valuable Receipts than any book of the same kind ever contained. There are few things which the reader can seek for Domestic Use, on which he will not find some useful information."

Printed for John Murray, Albemarle Street; sold also by every other Bookseller in England, Scotland, and Ireland, of whom may be had, lately published.

A NEW SYSTEM OF DOMESTIC COOKERY; a New Edition, small 8vo, 7s. 6d. boards.

A new Edition, in one Volume small 8vo, with Four Plates, and a general Chart, price 7s. 6d.

### VOYAGE OF DISCOVERY TO COREA AND LOO CHOO. By Capt. BASIL HALL, Royal Navy. F.R.S.

In order that this edition may appear in the most popular form, the narrative alone has been retained; while the nautical and scientific matter, together with Mr. Clifford's Vocabulary, are confined to the quarto edition.

Printed for John Murray, Albemarle Street.

#### Spence's Anecdotes.

In One Volume 8vo, price 9s. 6d. (uniformly with Dr. Kitchin's Anecdotes.)

**ANECDOTES OF BOOKS AND MEN.** By the Rev. JOSEPH SPENCE. Printed from the arranged Copy of the late EDMUND MALONE, Esq. Printed for John Murray, Albemarle Street.

#### Spence's Anecdotes.

By W. H. Carpenter, Lower Bruton Street, London; and Archibald Constable and Co. Edinburgh.

**OBSERVATIONS, ANECDOTES, AND CHARACTERS OF BOOKS AND MEN.** Collected from the Conversation of Mr. Pope, and of other eminent Persons of his Time. By the Rev. JOSEPH SPENCE. Now first published from the Original Papers; with a Preface, Notes, and Life of the Author, by S. W. SINGER.

Beautifully printed in 3 vols. post 8vo, price 1l. 10s. 6d. **IVANHOE. A Romance.** By the Author of Waverley, &c.

Printed for Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. Chesham, London.

By whom will be published in a few days, **ILLUSTRATIONS OF IVANHOE.** Engraved by Charles Heath, from designs by R. Westall, R. A.

In 8vo, price 7s. boards.

**A LETTER on the NATURE and TREATMENT of the YELLOW FEVER:** containing Hints to Officers and others, for the Prevention of this Disease. By JAMES VEITCH, M.D. Staff Surgeon of the Navy, and lately Principal Surgeon of the Royal Naval Hospital at Antigua.

"Dr. Veitch is an animated and an impressive writer, and the work before us is worthy the consideration of every one who is interested in the subject upon which it treats. His strictures, where he differs from others, display a combination of decision with courtesy."

London Medical Repository.

"Dr. Veitch is a man of abilities and ample experience in the Diseases of Tropical Climates, and the present work is worthy of him, and must be considered as no small addition or trifling auxiliary on the side of the non-contagionists." *Medical Chirurgical Journal, and Rev. London*; printed for Burgess and Hill, Medical Booksellers, 55, Great Windmill Street, Haymarket.

A Medical Circulating Library and Reading Room.

Handsomely printed in quarto, with elegant Engravings, price 1l. 10s. in boards, Vol. IV. Part 1. of,

### SUPPLEMENT to the ENCYCLOPEDIA

BRITANNICA: Edited by Macvey Napier, F. R. S. Lond. and Edin. This half volume is prefaced with the Second Part of a Dissertation on the progress of the Mathematical and Physical Sciences, by the late Professor Playfair; and contains the following Articles and Treatises, written by John Barrow, Esq. F. R. S. M. Hon. of the Royal Institute of France; William Jacob, Esq. F. R. S. Dr. Leech, J. B. M. Colloche, Esq. James Mill, Esq., and other well known writers, viz.: In Topography, Edinburgh, Edinburghshire, Essexshire, Fermanagh County, Fifehire, Flintshire. In Geography and Statistics, Egypt, (including an Exposition of the Hieroglyphical System), Ebla, England, Europe, Faroe Islands, Florida. In Biography, Edris, Edwards, (Bryan), Edwards, (Jonathan), Ernest, Ferguson (Dr. Adam), Fermat, Fichter, Philargier. In Arts, Science, and Philosophy, Education, Electricity, Elliptograph, Embankment, Entomology, Florida. In Political Economy, Emigration, Exchange, Fisheries.

Printed for Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. London.

Visitor's Letters on the History and Progress of the Fine Arts, Letter 11. 7. Boxiana; or Sketches of Pugilism, by one of the Fancy, No. V. 8. Cotton's "Voyage to Ireland." 9. Remarks on some of our late Numbers, by a liberal Whig. 10. On the Military Errors of the Duke of Wellington, by Othardy. 11. On the Discovery of the Remains of Robert Bruce. 12. Letter from the Arctic Land Expedition. 13. Letter relative to the late Dr. Gordon. 14. On the nature of the imitative Principles, and some other Faculties, pointed out by Gall and Spurzheim, by Peter Morris, M.D. 15. Cromek's Remains of Nithsdale and Galloway Song. 16. The Clydesdale Yeoman's Return. An excellent new Ballad, by Dr. Scott. 17. The Warbler, No. 11. 18. The Warbler, No. 111. 19. Literary and Scientific Intelligence. 20. Works preparing for Publication. 21. Monthly list of new Publications. 22. Monthly Register.

Printed for T. Cadell and W. Davies, Strand, London; and William Blackwood, No. 17, Prince's Street, Edinburgh.

Price 3s. 6d.

**ST. BARTHOLOMEW'S EVE. A Tale of the Sixteenth Century.** In Two Cantos. By an Under-graduate of the University of Oxford.

Oxford: printed and sold by Mansel and Slater; sold also by Messrs. G. and W. Whitaker, 18, Ave Maria Lane, London; and E. Goode, Cambridge.

For a Review of this Poem, see Lit. Gazette, No. 145.

Very handsomely and closely printed in Columns, in 4 vols. royal 8vo, with complete indexes, price 15l. 18s.

### ATHENÆ OXONIENSES: THE HISTORY

of all the WRITERS and BISHOPS who have had their EDUCATION in the UNIVERSITY of OXFORD from the Year 1600. To which is added, FASTI OXONIENSES: Or, the Annals of the said University. First Written by ANTHONY A WOOD, M. A. of Merton College; and now very considerably augmented in Text and Notes, by PHILLIP BLISS, Fellow of St. John's College, Oxford.

"Subscribers to this valuable body of English Biography (which contains upwards of two thousand two hundred Lines) not yet having received all their volumes, are recommended to complete their sets without delay, as the publishers cannot undertake to supply any separate volume after six months have elapsed.

London: Printed for Lackington, Hughes, Harding, Mass, and Jones; F. C. & J. Rivington; Payne and Foss; Longman, Black, Rees, Orme, and Brown; Cadell and Davies; J. and A. Arch; J. Mawman; Black, Kingsbury, Parbury, and Allen; R. H. Buns; J. Booth; Baldwin, Cradock, and Joy, London; and J. Parker, Oxford.

In Crown Folio, price Four Guineas. (A few Copies remain for sale on large paper, price Eight Guineas.)

**HALLAMSHIRE,—THE HISTORY AND TOPOGRAPHY OF THE PARISH OF RHEFIELD IN THE COUNTY OF YORK:** with Historical and Descriptive Notices of the Parishes of Ecclefield, Hunsworth, Treeton, and Whistons, and of the Chapelry of Bradfield. By JOSEPH HUNTER, an Honorary Member of the Society of Antiquaries of Newcastle upon Tyne.

"\*This Work contains an account of a district of considerable extent hitherto undescribed, and is embellished with several highly finished engravings from drawings of Mr. Edward Blower.

London: Published by Lackington, Hughes, Harding, Mass, and Jones, Finsbury Square.

Price 4l. 4s. or large Paper 6l. 6s. in boards.

### THE HISTORY OF ANCIENT WILTSHIRE, NORTHERN DISTRICT. By Sir RICHARD COTTE MOORE, Bart. F. R. S. &c. F. A. S.

The History of the Northern Portion of Ancient Wiltshire is written on the same plan with the former Division of the County, South Wiltshire, and will describe the Antiquities worthy of remark in the Northern District. This Portion forms the First Part of the present Division of the Work, and will terminate the Authors' Researches, as far as regards the History of the Britons in Wiltshire.

The Second, and concluding Part of the Volume, will be allotted to the Romans, and will describe their Towns, Stations, Villas, and Roads of Communication, the latter of which will be accurately marked out on Maps.

The Size, Style of Printing, and the Embellishments, accord with the three Portions of the Work already published, forming the First Volume, or Southern Wiltshire; the present Division of the County will be completed in two Parts, forming the Second Volume, or Northern Wiltshire.

The few remaining Copies of the three preceding Parts of the History of Ancient Wiltshire may be had of the Publishers, price 4l. 4s. each, or large Paper 6l. 6s.

London: Printed for Lackington, Hughes, Harding, Mass, and Jones, Finsbury Square.

In 12 Vols. 8vo. with engraved Titlepages and Vignettes. Beautifully printed by Ballantyne and Co. Price 7l. 4s. boards.

**NOVELS AND TALES of "The Author of Waverley,"** comprising Waverley, Guy Mannering, The Antiquary, Rob Roy, Tales of my Landlord, first second, and third series, with a copious Glossary.

Edinburgh: Printed for Archibald Constable, and Co. and Hurst, Robinson, and Co. Chesham, London. 6 when may be had, separately.

1. Waverley, 3 vols. 12mo. 1l. 1s. boards.
2. Guy Mannering, 3 vols. 12mo. 1l. 4s. boards.
3. Antiquary, 3 vols. 12mo. 1l. 4s. boards.
4. Rob Roy, 3 vols. 12mo. 1l. 4s. boards.
5. Tales of my Landlord, First Series, 4 vols. 12mo. 1l. 10s. boards.
6. Second Series, 4 vols. 12mo. 1l. 12s. boards.
7. Third Series, 4 vols. 12mo. 1l. 12s. boards.

3d. Edition, in 3 Vols. 12mo. price 1l. 1s.

**LONDON, OR, A MONTH at STEVEN'S** a Satirical Novel; with numerous Anecdotes of distinguished Characters. By a LATE RESIDENT.

London: Printed for Sherwood, Neely, and John Paternoster-row.

In the Press, by the same Author, **EDINBURGH; a Satirical Novel.**

"I shall show the Vice of Edinburgh, not as a parallel but as a contrast to those of London; nor shall I omit portrait or a character, because the original was my friend or my acquaintance."—Introduction.

London: Printed for the Proprietors, by W. POPE, 67, Chancery Lane; Published every Saturday, **WILLIAM CHALK**, at the Literary Gazette Office 208, Strand, where Communications (post paid) requested to be addressed to the Editor.

No. 156.

SATURDAY, JANUARY 15, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

### POISONING OF FOOD.

*A Treatise on Adulterations of Food, and Culinary Poisons; exhibiting the Fraudulent Sophistications of Bread, Beer, Wine, Spirituous Liquors, Tea, Coffee, Cheese, Pepper, Mustard, &c. &c. &c. And methods of detecting them.* By Frederick Accum, &c. London, 1820. pp. 372.

As we may safely prognosticate that this volume will soon be as widely diffused as its curious and vitally important character merits, we seize the earliest opportunity of making it known to our readers, since in a very few weeks the original would supersede, in every hand, our claim to novelty. We have heard at various times of this and that fraud, in the substitution of spurious and often deleterious articles for the necessities of life; but never could we conceive so frightful a picture of imposition and villainy as thus bringing the poisonous ingredients into one point of view presents. One has laughed at the whimsical description of these cheats in Humphrey Clinker, but it is really impossible to laugh at Mr. Accum's exposition. It is too serious for a joke to see that in almost every thing which we eat or drink, we are condemned to swallow swindling, if not poison—and that all the items of metropolitan, and many of country consumption, are deteriorated, deprived of nutritious properties, or rendered obnoxious to humanity by the vile arts and mercile's sophistications of their sellers. So general seems the corruption, and so fatal the tendency of most of the corrupting materials, that we can no longer wonder at the prevalence of painful disorders, and the briefness of existence (on an average) in spite of the great increase of medical knowledge, and the amazing improvement in the healing science, which distinguish our era. No skill can prevent the effects of daily poisoning; and no man can prolong his life beyond a short standard, where every meal ought to have its counteracting medicine. Had Shakespeare written now, in London,

VOL. IV.

he surely would have altered the exclamation of Jacques,—

"As I do live by food I met a fool;"

for to be german to the matter, he should say:—

"As I do die by food, I met a fool."

In short, Mr. Accum acts the part of Dionysius with us; only the horse-hair by which he suspends the sword over our heads allows the point gradually to enter the flesh, and we do not escape, like Damocles, with the simple fright: yet it is but justice to acknowledge, that in almost every case he furnishes us with tests whereby we can ascertain the nature of our danger; and no man could do more towards enabling us to mitigate or escape from it.

Advising our readers to abstain from perusing the annexed synopsis till after they have dined, that they may have one more meal in comfort ere they die, we proceed to the various heads under which the author ranges his dread array.

Of all the frauds (says he in his preliminary observations) practised by mercenary dealers, there is none more reprehensible, and at the same time more prevalent, than the sophistication of the various articles of food.

This unprincipled and nefarious practice, increasing in degree as it has been found difficult of detection, is now applied to almost every commodity which can be classed among either the necessities or the luxuries of life, and is carried on to a most alarming extent in every part of the United Kingdom.

It has been pursued by men, who, from the magnitude and apparent respectability of their concerns, would be the least obnoxious to public suspicion; and their successful example has called forth, from among the retail dealers, a multitude of competitors in the same iniquitous course.

To such perfection of ingenuity has this system of adulterating food arrived, that spurious articles of various kinds are every where to be found, made up so skillfully as to baffle the discrimination of the most experienced judges.

Among the number of substances used in domestic economy which are now very generally found sophisticated, may be distinguished—tea, coffee, bread, beer, wine, spirituous liquors, salad oil, pepper, vinegar, mustard, cream, and other articles of subsistence.

Indeed, it would be difficult to mention a

single article of food which is not to be met with in an adulterated state; and there are some substances which are scarcely ever to be procured genuine.

Some of these spurious compounds are comparatively harmless when used as food; and as in these cases merely substances of inferior value are substituted for more costly and genuine ingredients, the sophistication, though it may affect our purse, does not injure our health. Of this kind are the manufacture of factitious pepper, the adulterations of mustard, vinegar, cream, &c. Others, however, are highly deleterious; and to this class belong the adulterations of beer, wines, spirituous liquors, pickles, salad oil, and many others.

There are particular chemists who make it a regular trade to supply drugs or nefarious preparations to the unprincipled brewer of porter or ale; others perform the same office to the wine and spirit merchant; and others again to the grocer and the oilman. The operators carry on their processes chiefly in secrecy, and under some delusive firm, with the ostensible denotements of a fair and lawful establishment.

These illicit pursuits have assumed all the order and method of a regular trade; they may severally claim to be distinguished as an *art* and *mystery*; for the workmen employed in them are often wholly ignorant of the nature of the substances which pass through their hands, and of the purposes to which they are ultimately applied.

To elude the vigilance of the inquisitive, to defeat the scrutiny of the revenue officer, and to ensure the secrecy of these mysteries, the processes are very ingeniously divided and subdivided among individual operators, and the manufacture is purposely carried on in separate establishments. The task of proportioning the ingredients for use is assigned to one individual, while the composition and preparation of them may be said to form a distinct part of the business, and is entrusted to another workman. Most of the articles are transmitted to the consumer in a disguised state, or in such a form that their real nature cannot possibly be detected by the unvary. Thus the extract of *cochlear indicæ*, employed by fraudulent manufacturers of malt-liquors to impart an intoxicating quality to porter or ales, is known in the market by the name of *black extract*, ostensibly destined for the use of tanners and dyers. It is obtained by boiling the berries of the *cochlear indicæ* in water, and distilling, by a subsequent evaporation, this decoction into a stiff black tenebrous mass, possessing, in a high degree, the narcotic and intoxicating quality of the poisonous berry from which it is prepared. Another substance, composed of extract of quassia

and liquorice juice, used by fraudulent brewers to economise both malt and hops, is technically called *nutrum*.

The quantities of *cochlearia indicus* berries, as well as of black extract, imported into this country for adulterating malt liquors, are enormous. It forms a considerable branch of commerce in the hands of a few brokers: yet, singular as it may seem, no inquiry appears to have been hitherto made by the officers of the revenue respecting its application. Many other substances employed in the adulteration of beer, ale, and spirituous liquors, are in a similar manner intentionally disguised; and of the persons by whom they are purchased, a great number are totally unacquainted with their nature or composition.

An extract, said to be innocent, sold in casks, containing from half a cwt. to five cwt. by the brewers' druggists, under the name of *bittern*, is composed of calcined sulphate of iron (copperas), extract of *cochlearia indicus* berries, extract of quassia, and Spanish liquorice.

During the long period devoted to the practice of my profession, I have had abundant reason to be convinced that a vast number of dealers, of the highest respectability, have vended to their customers articles absolutely poisonous, which they themselves considered as harmless; and which they would not have offered for sale, had they been apprised of the spurious and pernicious nature of the compounds, and of the purposes to which they were destined.

The baker (he continues) asserts that he does not put alum into bread; but he is well aware that, in purchasing a certain quantity of flour, he must take a sack of *sharp wheats* (a term given to flour contaminated with a quantity of alum,) without which it would be impossible for him to produce light, white, and porous bread, from a half-spoiled material.

The wholesale mealman frequently purchases this spurious commodity, (which forms a separate branch of business in the hands of certain individuals,) in order to enable himself to sell his decayed and half-spoiled flour.

Other individuals furnish the baker with alum mixed up with salt, under the obscure denomination of *stuff*. There are wholesale manufacturing chemists whose sole business is to crystallise alum, in such a form as will adapt this salt to the purpose of being mixed in a crystalline state with the crystals of common salt, to disguise the character of the compound. The mixture called *stuff*, is composed of one part of alum, in minute crystals, and three of common salt. In many other trades a similar mode of proceeding prevails.—Potatoes are soaked in water to augment their weight.

The practice of sophisticating the necessities of life, being reduced to systematic regularity, is ranked by public opinion among other mercantile pursuits; and is not only regarded with less disgust than formerly, but is almost generally esteemed as a justifiable way to wealth.

It is really astonishing that the penal law

is not more effectually enforced against practices so inimical to the public welfare. The man who robs a fellow subject of a few shillings on the high-way, is sentenced to death; while he who distributes a slow poison to a whole community, escapes unpunished.

Thus devoted to disease by baker, brewer, grocer, &c. the physician is called to our assistance; but here again the pernicious system of fraud, as it has given the blow, steps in to defeat the remedy.

Nine tenths of the most potent drugs and chemical preparations used in pharmacy, are vended in a sophisticated state by dealers who would be the last to be suspected. It is well known, that in the article of Peruvian bark, there is a variety of species inferior to the genuine; that too little discrimination is exercised by the collectors of this precious medicament; that it is carelessly assorted, and is frequently packed in green hides; that much of it arrives in Spain in a half-decayed state, mixed with fragments of other vegetables and various extraneous substances; and in this state is distributed throughout Europe.

But as if this were not a sufficient deterioration, the public are often served with a spurious compound of mahogany saw-dust and oak wood, ground into powder mixed with a proportion of good quinquina, and sold as genuine bark powder.

Every chemist knows that there are mills constantly at work in this metropolis, which furnish bark powder at a much cheaper rate than the substance can be procured for in its natural state. The price of the best genuine bark, upon an average, is not lower than twelve shillings the pound; but immense quantities of powder bark are supplied to the apothecaries at three or four shillings a pound.

It is also notorious that there are manufacturers of spurious rhubarb powder, ipecacuanha powder, James's powder, and other simple and compound medicines of great potency, who carry on their diabolical trade on an amazingly large scale. Indeed, the quantity of medical preparations thus sophisticated exceeds belief. Cheapness, and not genuineness and excellence, is the grand desideratum with the unprincipled dealers in drugs and medicines.

Those who are familiar with chemistry may easily convince themselves of the existence of the fraud, by subjecting to a chemical examination either spirits of hartshorn, magnesia, calcined magnesia, calomel, or any other chemical preparation in general demand.

Indeed, some of the most common and cheap drugs do not escape the adulterating hand of the unprincipled druggist. Syrup of buckthorn, for example, instead of being prepared from the juice of buckthorn berries, (*rhamnus cathartica*) is made from the fruit of the blackberry bearing alder, and the dogberry tree. A mixture of the berries of the buckthorn and blackberry bearing alder, and of the dogberry tree, may be seen pub-

licly exposed for sale by some of the vendors of medicinal herbs.

Instead of worm-seed (*artemisia antonica*) the seeds of tansy are frequently offered for sale, or a mixture of both.

A great many of the essential oils obtain from the more expensive spices, are frequently so much adulterated, that it is easy to meet with such as are at all fit for use: nor are these adulterations easily detectable.

Most of the arrow-root, the ferula of Maranta arundinacea, sold by druggists, is mixture of potatoe starch and arrow-root.

The same system of adulteration extends to articles used in various trades and manufactures. For instance, linen tape, and various other household commodities of this kind, instead of being manufactured of lin thread only, are made up of linen and cotton. Colours for painting, not only those used by artists, such as ultramarine\*, carmine†, a lake‡; Antwerp blue§, chrome yellow and Indian ink¶; but also the coarsest colours used by the common house-painter: more or less adulterated. Thus, of the latter kind, white lead\*\* is mixed with carbonate or sulphate of barytes; vermilion with red lead.

Soap used in house-keeping is frequently adulterated with a considerable portion of fine white clay, brought from St. Stephen in Cornwall. In the manufacture of printing paper, a large quantity of plaster of Paris is added to the paper stuff, to increase the weight of the manufactured article. The selvage of cloth is often dyed with a permanent colour, and artfully stitched to the edge of cloth dyed with a fugitive dye. Frauds committed in the tanning of skin and in the manufacture of cutlery and jewelry, exceed belief.

It is so horribly pleasant to tell how we are in this way be-swinded, be-trayed, be-drugged, and be-devil that we are almost angry with Mr. Cum for the great service he has done the community by opening our eyes to the risk of shutting our mouths for ever.

\* Genuine ultramarine should become deep of its colour when thrown into concentrated nitric acid.

† Genuine carmine should be totally soluble in liquid ammonia.

‡ Genuine madder and carmine lakes should be totally soluble by boiling in a concentrated solution of soda or potash.

§ Genuine Antwerp blue should not be deprived of its colour when thrown into chlorine.

¶ Genuine chrome yellow should not re-verse with nitric acid.

‡ The best Indian ink breaks splintery, a smooth glossy fracture, and feels soft, gritty, when rubbed against the teeth.

\*\* Genuine white lead should be completely soluble in nitric acid, and the solution remain transparent when mingled with solution of sulphate of soda.

†† Genuine vermilion should become volatilised on being exposed to a red heat; it should not impart a red colour to wine, when digested with it.

His account of water is so fearful, that we see there is no wisdom in the well; and if we then fly to wine, we find, from his analysis, that there is no truth in that liquid: bread turns out to be a crutch to help us onward to the grave, instead of the staff of life; in porter there is no support, in cordials no consolation; in almost every thing poison, and in scarcely any medicine, cure. But we proceed to particulars.

**WATER.**—It is to the presence of common air and carbonic acid gas that common water owes its taste, and many of the good effects which it produces on animals and vegetables. Spring water, which contains more air, has a more lively taste than river water.

Hence the insipid or rapid taste of newly boiled water, from which these gases are expelled; fish cannot live in water deprived of those elastic fluids.

100 cubic inches of the New River water, with which part of this metropolis is supplied, contains 2.25 of carbonic acid, and 1.25 of common air. The water of the river Thames contains rather a larger quantity of common air, and a smaller portion of carbonic acid.

Rain water collected with every precaution as it descends from the clouds, and at a distance from large towns, or any other object capable of impregnating the atmosphere with foreign matters, approaches more nearly to a state of purity than perhaps any other natural water. Even collected under these circumstances, however, it invariably contains a portion of common air and carbonic acid gas. The specific gravity of rain water scarcely differs from that of distilled water; and from the minute portions of the foreign ingredients which it generally contains, it is very soft, and admirably adapted for many culinary purposes, and various processes in different manufactures and the arts.

Some rivers, however, that do not take their rise from a rocky soil, and are indeed at first considerably charged with foreign matter, during a long course, even over a richly cultivated plain, become remarkably pure as to saline contents; but often fouled with mud containing much animal and vegetable matter, which are rather suspended than held in true solution. Such is the water of the river Thames, which, taken up at London at low water mark, is very soft and good; and, after rest, it contains but a very small portion of any thing that could prove pernicious, or impede any manufacture. It is also excellently fitted for sea-store; but it then undergoes a remarkable spontaneous change, when preserved in wooden casks. No water carried to sea becomes putrid sooner than that of the Thames.

Whoever will consider the situation of the Thames, and the immense population along its banks for so many miles, must at once perceive the prodigious accumulation of animal matters of all kinds, which by means of the common sewers constantly make their way into it. These matters are, no doubt,

in part the cause of the putrefaction which it is well known to undergo at sea, and of the carburetted and sulphuretted hydrogen gases which are evolved from it. When a wooden cask is opened, after being kept a month or two, a quantity of carburetted and sulphuretted hydrogen escapes, and the water is so black and offensive as scarcely to be borne. Upon racking it off, however, into large earthen vessels, and exposing it to the air, it gradually deposits a quantity of black slimy mud, becomes clear as crystal, and remarkably sweet and palatable.

It might, at first sight, be expected that the water of the Thames, after having received all the contents of the sewers, drains, and water courses of a large town, should acquire thereby such impregnation with foreign matters, as to become very impure; but it appears, from the most accurate experiments that have been made, that those kinds of impurities have no perceptible influence on the salubrious quality of a mass of water so immense, and constantly kept in motion by the action of the tides.

Some traces of animal matter may, however, be detected in the water of the Thames; for if nitrate of lead be dropped into it, "you will find that it becomes milky, and that a white powder falls to the bottom, which dissolves without effervescence in nitric acid. It is, therefore, (says Dr. Thomson) a combination of oxide of lead with some animal matter."

There are a great many other excellent observations on the various sorts of water, and the modes of conveying and preserving them for use: it appears generally that leaden pipes and cisterns, and copper vessels are highly dangerous; but we must refer to the book for the details.

**BREAD.**—We have already given a taste of this subject, but the adulteration of so important a necessary, demands further notice.

This is one of the sophistications of the articles of food most commonly practised in this metropolis, where the goodness of bread is estimated entirely by its whiteness. It is therefore usual to add a certain quantity of alum to the dough; this improves the look of the bread very much, and renders it whiter and finer. Good, white, and porous bread, may certainly be manufactured from good wheaten flour alone; but to produce the degree of whiteness rendered indispensable by the caprice of the consumers in London, it is necessary (unless the very best flour is employed), that the dough should be *bleached*; and no substance has hitherto been found to answer this purpose better than alum.

Without this salt it is impossible to make bread, from the kind of flour usually employed by the London bakers, so white, as that which is commonly sold in the metropolis.

The best flour is mostly used by the biscuit bakers and pastry-cooks, and the inferior sorts in the making of bread. The bakers' flour is very often made of the worst

kinds of damaged foreign wheat, and other cereal grains mixed with them in grinding the wheat into flour. In this capital, no fewer than six distinct kinds of wheaten flour are brought into market. They are called fine flour, seconds, middlings, fine middlings, coarse middlings, and twenty-penny flour. Common garden beans, and pease, are also frequently ground up among the London bread flour.

From experiments, (continues the author, after describing the process of baking at length) in which I have been employed, with the assistance of skilful bakers, I am authorised to state, that without the addition of alum, it does not appear possible to make white, light, and porous bread, such as is used in this metropolis, unless the flour be of the very best quality.

Another substance employed by fraudulent bakers, is subcarbonate of ammonia. With this salt, they realise the important consideration of producing light and porous bread, from spoiled, or what is technically called *sour flour*. This salt, which becomes wholly converted into a gaseous state during the operation of baking, causes the dough to swell up into air bubbles, which carry before them the stiff dough, and thus it renders the dough porous; the salt itself is, at the same time, totally volatilised during the operation of baking. Thus not a vestige of carbonate of ammonia remains in the bread. This salt is also largely employed by the biscuit and ginger-bread bakers.

Potatoes are likewise largely, and perhaps constantly, used by fraudulent bakers, as a cheap ingredient, to enhance their profit. The potatoes being boiled, are triturated, passed through a sieve, and incorporated with the dough by kneading. This adulteration does not materially injure the bread. The bakers assert, that the bad quality of the flour renders the addition of potatoes advantageous as well to the baker as to the purchaser, and that without this admixture in the manufacture of bread, it would be impossible to carry on the trade of a baker. But the grievance is, that the same price is taken for a potato loaf, as for a loaf of genuine bread, though it must cost the baker less.

I have witness, that five bushels of flour, three ounces of alum, six pounds of salt, one bushel of potatoes boiled into a stiff paste, and three quarts of yeast, with the requisite quantity of water, produce a white, light, and highly palatable bread.

Such are the artifices practised in the preparation of bread.

**WINE.** It is sufficiently obvious, that few of those commodities, which are the objects of commerce, are adulterated to a greater extent than wine. All persons moderately conversant with the subject, are aware, that a portion of alum is added to young and meagre red wines, for the purpose of brightening their colour; that Brazil wood, or the husks of elderberries and bil-

+ There are instances of convictions on record, of bakers having used gypsum, chalk, and pipe clay, in the manufacture of bread.

berries &c. are employed to impart a deep rich purple tint to red Port of a pale, faint colour; that gypsum is used to render cloudy white wines transparent; that an additional stringency is imparted to immature red wines by means of oak-wood sawdust\*, and the husks of filberts; and that a mixture of spoiled foreign and home-made wines is converted into the wretched compound frequently sold in the town by the name of *genuine old Port*.

Various expedients are resorted to for the purpose of communicating particular flavours to insipid wines. Thus a *nuttty* flavour is produced by litter almonds; factitious Port wine is flavoured with a tincture drawn from the seeds of raisins; and the ingredients employed to form the *bouquet* of high-flavoured wines, are sweet-brier, oris-root, clary, cherry laurel water, and elder-flowers.

The flavouring ingredients used by manufacturers, may all be purchased by those dealers in wine who are initiated in the mysteries of the trade; and even a manuscript receipt book for preparing them, and the whole mystery of managing all sorts of wines, may be obtained on payment of a considerable fee.

The sophistication of wine with substances not absolutely noxious to health, is carried to an enormous extent in this metropolis. Many thousand pipes of spoiled cyder are annually brought hither from the country, for the purpose of being converted into factitious Port wine. The art of manufacturing spurious wine is a regular trade of great extent in this metropolis.

The particular and separate department in this factitious wine trade, called *crusting*, consists in lining the interior surface of empty wine bottles, in part, with a red crust of super-tartrate of potash, by suffering a saturated hot solution of this salt, coloured red with a decoction of Brazil-wood, to crystallize within them; and after this simulation of maturity is perfected, they are filled with the compound called Port wine.

Other artisans are regularly employed in staining the lower extremities of bottle-corks with a blue red colour, to appear, on being drawn, as if they had been long in contact with the wine.

The preparation of an astringent extract, to produce, from spoiled home-made and foreign wines, a "genuine old Port," by mere admixture; or to impart to a weak wine a rough austere taste, a fine colour, and a peculiar flavour; forms one branch of the business of particular wine coopers: while the mellowing and restoring of spoiled white wines, is the sole occupation of men who are called *refiners of wine*.

Casks are crusted as well as bottles; but—

The most dangerous adulteration of

\* Dried blubberies are imported from Germany, under the fallacious name of *berry-dye*.

\* Sawdust for this purpose is chiefly supplied by the ship-builders, and forms a regular article of commerce of the brewers' druggists.

wine is by some preparations of lead, which possess the property of stopping the progress of accecence of wine, and also of rendering white wines, when muddy, transparent. I have good reason to state that lead is certainly employed for this purpose. The effect is very rapid; and there appears to be no other method known, of rapidly recovering ropy wines. Wine merchants persuade themselves that the minute quantity of lead employed for that purpose is perfectly harmless, and that no atom of lead remains in the wine. Chemical analysis proves the contrary; and the practice of clarifying spoiled white wines by means of lead, must be pronounced as highly deleterious.

Lead, in whatever state it be taken into the stomach, occasions terrible diseases; and wine, adulterated with the minutest quantity of it, becomes a slow poison. The merchant or dealer who practises this dangerous sophistication, adds the crime of murder to that of fraud, and deliberately scatters the seeds of disease and death among those consumers who contribute to his emolument.

Perhaps the following extract on this subject will convey information to the majority of our readers, though unconnected with the poisoning practice.

When the must is separated from the husk of the red grape before it is fermented, the wine has little or no colour: these are called *white wines*. If, on the contrary, the husks are allowed to remain in the must while the fermentation is going on, the alcohol dissolves the colouring matter of the husks, and the wine is coloured: such are called *red wines*. Hence white wines are often prepared from red grapes, the liquor being drawn off before it has acquired the red colour; for the skin of the grape only gives the colour.

All wines (besides brandy, or alcohol,) contain also a free acid; hence they turn blue tincture of cabbage, red. The acid found in the greatest abundance in grape wines, is tartaric acid. Every wine contains likewise a portion of super-tartrate of potash, and extractive matter, derived from the juice of the grape. These substances deposit slowly in the vessel in which they are kept. To this is owing the improvement of wine from age. Those wines which effervesce or froth, when poured into a glass, contain also carbonic acid, to which their briskness is owing. The peculiar flavour and odour of different kinds of wines probably depend upon the presence of a *volatile oil*, so small in quantity that it cannot be separated.

BEER. If from wine we descend to beer, we learn that we run still greater risks.

"Malt liquors, and especially porter, the favourite beverage of the inhabitants of London, and of other large towns, is amongst those articles, in the manufacture of which the greatest frauds are frequently committed.

"The statute prohibits the brewer from using any ingredients in his brewings, except malt and hops; but it too often happens that those who suppose they are drinking a nutritious beverage, made of these ingredients only, are entirely deceived. The beverage may, in fact, be neither more nor less than a compound of the most deleterious substances; and it is also clear that all ranks of society are alike exposed to the nefarious fraud."

In the reign of Queen Anne, an act was passed prohibiting the use of cocculus indicus, or any other unwholesome ingredients in brewing; but it was not till our time that the adulteration of this beverage became so general and pernicious.

"The fraud of imparting to porter and ale an intoxicating quality by narcotic substances, appears to have flourished during the period of the late French war: for, if we examine the importation lists of drugs, it will be noticed that the quantities of cocculus indicus imported in a given time prior to that period, will bear no comparison with the quantity imported in the same space of time during the war, although an additional duty was laid upon this commodity. Such has been the amount brought into this country in five years, that it far exceeds the quantity imported during twelve years anterior to the above epoch. The price of this drug has risen within these ten years from two shillings to seven shillings the pound.

"It was at the period to which we have alluded, that the preparation of an extract of cocculus indicus first appeared, as a new saleable commodity, in the price-currents of *brewers' druggists*. It was at the same time, also, that a Mr. Jackson, of notorious memory, fell upon the idea of brewing beer from various drugs, without any malt and hops. This chemist did not turn brewer himself; but he struck out the more profitable trade of teaching his mystery to the brewers for a handsome fee. From that time forwards, written directions, and receipt-books for using the chemical preparations to be substituted for malt and hops, were respectively sold; and many adepts soon afterwards appeared every where, to instruct brewers in the nefarious practice, first pointed out by Mr. Jackson. From that time, also, the fraternity of brewers' chemists took its rise. They made it their chief business to send travellers all over the country with lists and samples exhibiting the price and quality of the articles manufactured by them for the use of brewers only. Their trade spread far and wide, but it was amongst the country brewers chiefly that they found the most customers; and it is amongst them, up to the present day, as I am assured by some of these operators, on whose veracity I can rely, that the greatest quantities of unlawful ingredients are sold."

The author relates the origin and progress of Porter brewing, and gives a curious account of the "Entire Butt Beer," as it is called. From observing this "Entire" on all publicans *signs*, one would fancy that it was the *ne plus ultra* of admirable porter!

"It consists of some beer brewed expressly for the purpose of keeping: it likewise contains a portion of return from publicans; a portion of beer from the bottoms of vats; the beer that is drawn off from the pipes, which convey the beer from one vat to another, and from one part of the premises to another. This beer is collected and put into vats. Mr. Barclay also states that it contains a certain portion of brown stout, which is twenty shillings a barrel dearer than common beer, and some bottling beer, which is ten shillings a barrel dearer; and that all these beers, united, are put into vats, and that it depends upon various circumstances, how long they may remain in those vats before they become perfectly bright. When bright, this beer is sent out to the publicans, for their entire beer, and there is sometimes a small quantity of mild beer mixed with it.

"The present entire beer, therefore, is a very heterogeneous mixture, composed of all the waste and spoiled beer of the publicans—the bottoms of butts—the leavings of the pots—the drippings of the machines for drawing the beer—the remnants of beer that lay in the leaden pipes of the brewery, with a portion of brown stout, bottling beer, and mild beer."

But disagreeable as this, the beer, is, there is below the lowest depth a lower still.

"A more easy, expeditious, and economical method has been discovered to convert any sort of beer into entire beer, merely by the admixture of a portion of sulphuric acid. An imitation of the age of eighteen months is thus produced in an instant. This process is technically called to bring beer forward, or to make it hard.

"The practice is a bad one. The genuine, old, or entire beer, of the honest brewer, is quite a different compound; it has a rich, generous, full-bodied taste, without being acid, and a vinous odour; but it may, perhaps, not be generally known, that this kind of beer always affords a less proportion of alcohol than is produced from malt beer. The practice of bringing beer forward, it is to be understood, is resorted to only by fraudulent brewers."

"If, on the contrary, the brewer has too large a stock of old beer on his hands, recourse is had to an opposite practice of converting stale, half-spoiled, or sour beer, into mild beer, by the simple admixture of an alkali, or an alkaline earth. Oyster-shell powder and subcarbonate of potash, or soda, are usually employed for that purpose. These substances neutralise the excess of acid, and render sour beer somewhat palatable. By this process the beer becomes very liable to spoil."

One would think that this were enough; but no!

"These sophistications may be considered—

\* Mr. Barclay has not specified the relative proportions of brown stout and of bottling beer which are introduced at such an augmentation of expense.

† Mr. Child, in his Treatise on Brewing, p. 23, directs, to make new beer older, use oil of vitriol.

ed, at first, as minor crimes practised by fraudulent brewers, when compared with the methods employed by them for rendering beer noxious to health by substances absolutely injurious.

"To increase the intoxicating quality of beer, the deleterious vegetable substance, called *cocculus indicus*, and the extract of this poisonous berry, technically called *black extract*, or, by some, *hard maltum*, are employed. Opium, tobacco, *nux vomica*, and extract of poppies, have also been used.

"This fraud constitutes by far the most censurable offence committed by unprincipled brewers: and it is a lamentable reflection to behold so great a number of brewers prosecuted and convicted of this crime; nor is it less deplorable to find the names of druggists, eminent in trade, implicated in the fraud, by selling the unlawful ingredients to brewers for fraudulent purposes."

"That a minute portion of an unwholesome ingredient, daily taken in beer, cannot fail to be productive of mischief, admits of no doubt; and there is reason to believe that a small quantity of a narcotic substance (and *cocculus indicus* is a powerful narcotic), daily taken into the stomach, together with an intoxicating liquor, is highly more efficacious than it would be without the liquor. The effect may be gradual; and a strong constitution, especially if it be assisted with constant and hard labour, may counteract the destructive consequences perhaps for many years; but it never fails to shew its baneful effects at last. Independent of this, it is a well-established fact, that porter drinkers are very liable to apoplexy and palsy, without taking this narcotic poison."

To this appalling description, we shall only add, that many other vile ingredients, wormwood, quassia, capsicum, grains of paradise, &c. are used for similar purposes, and defy chemical skill to detect them; and, finally, that even the froth or cauliflower head, is produced by a deleterious mixture called "beer-heaving," composed of common green vitriol, (sulphate of iron), alum, and salt.

TKA. This substance has been so fully before the public of late, that we shall not enter into Mr. Accum's details, founded on the examination of *Twenty-seven samples of imitation leaves*!!

"All the samples of spurious green tea (he tells us) (nineteen in number) which I have examined, were coloured with carbonate of copper (a poisonous substance), and not by means of verdigrise, or copperas."

COFFEE, is counterfeited by an equal extent, principally by means of pigeon's beans and peas.

Respecting SPIRITUOUS LIQUORS there are some interesting facts. Besides the tricks played on the subject of Proof—

"The mode of judging by the taste of spirituous liquors is deceitful. A false strength is given to a weak liquor, by infusing in it acid vegetable substances, or by adding

\* Mr. Twining, an eminent tea merchant, asserts, that the leaves of spurious tea are boiled in a copper, with copperas and sleep's dung.

to it a tincture of grains of paradise and Guinea pepper. These substances impart to weak brandy or rum, an extremely hot and pungent taste.

Brandy and rum is also frequently sophisticated with British molasses, or sugar-spirit, coloured with burnt sugar.

"The flavour which characterises French brandy, and which is owing to a small portion of a peculiar essential oil contained in it, is imitated by distilling British molasses spirit over wine lees; but the spirit, prior to being distilled over wine lees, is previously deprived, in part, of its peculiar disagreeable flavour, by rectification over fresh-burnt charcoal and quicklime. Other brandy merchants employ a spirit obtained from raisin wine, which is suffered to pass into an incipient ascendency. The spirit thus procured partakes strongly of the flavour which is characteristic of foreign brandy.

"Oak saw-dust, and a spirituous tincture of raisin stones, are likewise used to impart to new brandy and rum a ripe taste, resembling brandy or rum long kept in oaken casks, and a somewhat oily consistence, so as to form a durable froth at its surface, when strongly agitated in a vial. The colouring substances are burnt sugar, or molasses; the latter gives to imitative brandy a luscious taste, and fulness in the mouth. These properties are said to render it particularly fit for the retail London customers.

"The following is the method of compounding or making up, as it is technically called, brandy for retail:

	Gallons.
"To ten puncheons of brandy ..	1081
Add flavoured raisin spirit .....	118
Tincture of grains of paradise ..	4
Cherry laurel water .....	2
Spirit of Almond cakes .....	2

1207

"Add also 10 handfulls of oak saw-dust; and give it complexion with burnt sugar."

Arrack is imitated by adding a small quantity of pyroligneous acid, and some flower or acid of benzoic to rum; and gin is doctored in a variety of fraudulent ways, which often render it expedient to fine it with a solution of sub-acetate of lead—a practice, "highly dangerous, because part of the sulphate of lead produced, remains dissolved in the liquor, which it thus renders poisonous. Unfortunately, this method of clarifying spirituous liquors, I have good reason to believe, is more frequently practised than the preceding method, because its action is more rapid; and it imparts to the liquor a fine complexion, or great refractive power; hence some vestiges of lead may often be detected in malt spirit.

"The weakened spirit is then sweetened with sugar, and, to cover the raw taste of the malt spirit, a false strength is given to

\* Wine lees are imported in this country for that purpose: they pay the same duty as foreign wines.

† This operation forms part of the business of the so-called brewers' druggists. It forms the article in their *Price-Currents*, called *spirit for colour*.

it with grains of paradise, Guinea pepper, capsicum, and other acrid and aromatic substances."

Good Heavens! we think we hear it exclaimed, is there no end to these infamous doings? does nothing pure or unpoisoned come to our tables, except butcher's-meat, which has been rendered far less nutritive than formerly by new methods of feeding? Why, we must answer, hardly any thing: for our author proceeds to shew that *Cheese* (Gloucester he mentions) has been contaminated with red lead, a deadly poison mixed with the colouring saffron, when that article was scarce: that *Pepper* is adulterated with factitious pepper-corns "made up of oil-cakes (the residue of lin-seed, from which the oil has been pressed), common clay, and a portion of Cayenne pepper, formed in a mass, and granulated by being first pressed through a sieve, and then rolled in a sack;" and further, that "ground pepper is very often sophisticated by adding to a portion of genuine pepper, a quantity of pepper dust, or the sweepings from the pepper warehouses, mixed with a little Cayenne pepper. The sweepings are known, and purchased in the market, under the name of P. D. signifying pepper dust. An inferior sort of this vile refuse, or the sweepings of P. D. is distinguished among vendors by the abbreviation D. P. D. denoting, dust (dirt) of pepper dust."

As we read on, we learn the method of manufacturing adulterated vinegar, adulterated cream, adulterated lozenges, adulterated mustard, adulterated lemon acid, poisonous Cayenne, poisonous pickles, poisonous confectionary, poisonous catsup, poisonous custards, poisonous anchovy sauce, poisonous olive oil, poisonous soda water; and, if not done to our hands, of rendering poisonous all sorts of food by the use of copper and leaden vessels. Suffice it to record, that our pickles are made green by copper; our vinegar rendered sharp by sulphuric acid; our cream composed of rice powder, or arrow root in bad milk; our comfits mixed of sugar, starch, and clay, and coloured with preparations of copper and lead; our catsup often formed of the skins of distilled vinegar with a decoction of the outer green husk of the walnut, and seasoned with all-spice, cayenne, plumato, onions, and common salt—or if fouled on inshrooms, done with those in a putrefactive state remaining unsold at market; our mustard a compound of mustard, wheaten flour, cayenne, hay salt, radish seed, turmeric, and pease flour; and our citric acid, our lemon-

† The common white pepper is factitious, being prepared from the black pepper in the following manner:—The pepper is first steeped in sea water and urine, and then exposed to the heat of the sun for several days, till the rind or outer bark loosens; it is then taken out of the steep, and, when dry, it is rubbed with the hand till the rind falls off. The white fruit is then dried, and the remains of the rind blown away like chaff. A great deal of the peculiar flavour and pungent hot taste of the pepper is taken off by this process. White pepper is always inferior in flavour and quality to the black pepper.

ale, and our punch, to refresh or to exhilarate, usually cheap tartareous acid modified for the occasion.

Against all these, and many other impositions, Mr. Accum furnishes us with easy and certain tests: his work, besides, contains many curious documents and useful recipes; and it is replete with intelligence, and often guides to the right while it exposes the wrong. We should have been glad if he had sometimes afforded us his own experience, rather than the loose statements of newspapers; but, upon the whole, with its facts, tables, lists, and inquiries, we never met a publication more likely to be deservedly and universally popular.

*Country Neighbours, or The Secret: Tales of Fancy.* By S. H. Burney, Author of *Clarentine*, *Traits of Nature*, &c. Vols. II. and III. 12mo. London, 1820.

We have been disappointed by nothing in this novel, but the name, which led us to anticipate a production of a different kind from that before us. *Country Neighbours*, we thought, would have been country folks; but they are rather fashionable, living near each other in the country. Not to speak of preceding publications from the same hand, the popularity of the first volume of these tales, entitled "The Shipwreck," at a period when the excellence of works of this class dooms all mediocrity to oblivion, was a pledge of merit in the author, and led us to expect, what we have received, very considerable delight from her renewed labours. Her forte in this instance appears to be accurate observation on life and manners, and lively delineation of character. There is also much spirit in the dialogues; and nothing can be more strictly moral and instructive to youth than the incidents, conduct, and denouement of the story. The style, we would say, was generally good; but we have an utter dislike to scraps of French and Italian, and still more to Italics, in order to procure emphasis on words:—if the sense does not point out this necessary adjunct, a writer has but little to hope for, from the aid of the type-founder.

It is not our intention to let out "the Secret," and we shall not therefore go into Miss Burney's details. Two families, the Stavordales, and the Tourbervilles, both headed by ancient baronets, are the principal country neighbours; and among the surrounding satellites, a

country surgeon and his wife, a village curate, a sort of Will Wimble, besides trusty servants, &c. &c. figure on the canvass. Blanch, the heroine, is rather an original portrait, and all prudence and perfection at sixteen—a licence allowable rather to a novelist, than to a student of nature: Sir Reginald Tourberville is a proud, unrelenting, but worthy man, unhappy in his offspring, but blest with a paragon of a nephew, Mr. Trenayne, the hero. But the chief strength of drawing is in the Stavordales. Sir Geoffrey is sketchy, but very natural. His lady is a more elaborate, and perfect picture, exceedingly shrewd, clever, and observant. The elder daughter, Anne, the relator of the story, of a certain age, amiable and kind hearted—one might suppose drawn from that intimacy of knowledge which is called self. Isabella, the next sister, verging towards the days of increased hopelessness, but a fine woman, and an inveterate coquette of the *Trappist* order. She lays herself out for all comers, is a little envious of younger attractions, and after high aims is in the end gratified, with the Will Wimble to whom we have alluded. Martha, the youngest daughter, is a disagreeable animal, but a thorough likeness from the life, we will be bound for it.

As we have denied ourselves the privilege of going into the fable, in order that our curious readers might not justly accuse us of being always *Marplots*, our grounds for amplification are much narrowed; and, probably, with the honest eulogy which we feel entitled to pronounce on *Country Neighbours*—that of being seldom dull, and always to the purpose, with a vast balance of clever and entertaining matter—we may be excused further illustration beyond an example or two.

Mr. Trenayne has been severely hurt, and his mother, a sentimental lady of quality, comes to see him at Sir G. Stavordale's.

"With something like returning composure, after the alarming incidents of the day, we were all assembled in the evening at tea, when the trample of horses, and the sound of wheels caught our attention; and the next moment a ring (which would have been as loud as it was impatient, but for the precaution which had been taken of muffling the bell) was heard at the gate; and even before the summons could be answered, the steps of a carriage were let down, the hasty advance of some person up the gravel-walk could be distinguished,—and, the instant the house-door was opened, Lady Earlsford rushed into the hall, and thence, with looks of wild perturbation, into the room where we were sitting:—

"My son, my son!" she exclaimed, "guide me to him! Shew me where lies my unaged, agonizing son!"

"My dear Lady Earlsford," began my mother, in a gentle, but expostulating tone.

"Attempt not to oppose me!" interrupted our strange visitor, with yet increasing vehemence, "drive me not mad by further resistance! Oh, I have waited for this moment of freedom with an intenseness of solicitude which no language can describe! My brother—my cruel, inflexible brother, has watched all my movements—kept guard over me throughout the day—condemned me to torture, hour after hour, the horrors of suspense without the slightest touch of pity!—and now, when at length the blessed period of deliverance from restraint so inhuman is arrived, when at last, even his vigilant tyranny is eluded, think you, Lady Stavordale, I will be withheld by your usurped authority? No, no!—Shew me to my poor Florence's room, or be assured, that I will explore every corner of your house, till I find him."

"We all stared at her with amazement. Her looks were as unsteady as her language was extravagant; and my dear father mistaking what he heard, either for temporary derangement, or authoritative insolence, marched up to her, and, as is generally the case with a placid man, when provoked, going way to more anger than was useful, he cried:—

"Are you in your right senses, Madam? Do you know what you are saying? Where you are? and to whom you are speaking?—I beg we may have no more of these tragedy rants!—Your own whilst he is under my roof, shall not be disturbed without the permission of his medical adviser. You are in no state of mind, Heaven knows, to see him with impunity to himself! He has taken a composing medicine; and I tell you again, Lady Earlsford, positively and absolutely, you shall not break in upon him!"

"There—there's your placid man for you!" whispered my mother—"stop him who can, when once set off!"

"Whilst my father had been speaking, the features of Lady Earlsford assumed successively an expression of boundless surprise—of indignant haughtiness—and finally of hysterical agitation.—She sunk upon a seat, her chest heaving, her hands clenched together, her eyes rolling in vacancy, and every vein in her throat swelled almost to bursting! I was extremely terrified; and flew to her, to loosen the collar of her dress, and to open the window near which she was seated; whilst my mother tried to make her swallow some hartshorn and water; and Philippa came forward with a smelling-bottle. But all these attempts to assist her were without avail. At last, the strongest with which I ever saw any one assailed, came on, and whilst it lasted, her struggles, her cries, her convulsive distortions were dreadful. We were forced to call in the assistance of two of the nurses to hold her; for my father's heart, compassionate as it usually is, seemed just then quite hardened; and, as he walked up and down the room, shaking his head, and mut-

tering to himself:—"Crack-brained sentimental!—Passionate fool!—Disgusting highflyer!"—he now and then stopped a moment, and regarded her with such looks of dislike and impatience, that had she come to herself whilst undergoing so ungallant an inspection, I verily believe she would have started up to load him with reproaches. But luckily for us all, before she entirely recovered her consciousness, Mr. Crosby, dear, useful Mr. Crosby, came in. The fit told its own nature, though not its origin; and he, of course, ascribed it to material sensibility, delicate nerves, and all the refined and amiable feelings for which Lady Earlsford is so celebrated.—My father smiled disdainfully, and left the room; and my two sisters and Blanch followed him; and our new patient, when sufficiently restored to observe who remained, felt rejoiced, no doubt, at the absence of her barbarous host. The tremor and debility caused by the violence of so recent an attack, deprived her, for above an hour, of all power to stir from the sofa on which she had been extended. Mr. Crosby, during this time, remained in patient attendance upon her, administering alternate doses of sympathy and camphor-julep, which, by degrees, so effectually revived her, that she was able to apologize to my mother for the trouble which she had occasioned; and once again to renew her importunity for leave to see her son.

"Mr. Crosby being present, we gladly left to him the task of refusing, or the responsibility of complying, with a request, which we had hoped would not have been re-urged. He negatived the application with a firmness which we had scarcely ventured to expect; but managed the matter so skillfully, that, far from incurring her displeasure, he rather soothed her wounded feelings by the arguments to which he had recourse. • •

"When they were gone, my mother sat down, and laughed so immoderately at the recollection of the whole scene, that I could not entirely forbear participating in her unexpected risibility. Yet, I anticipated consequences from what had passed, which she either did not, or would not, foresee.

I hinted at these apprehensions, expecting that their justice would, in some degree, be allowed; but the only effect which they produced upon my mother, was that of rebounding her mirth:

"That a quarrel," she cried "a *toute courance*, such as you prognosticate, should arise between my dear, peaceable Sir Geoffrey, and the only decidedly romantic, soft, heroine-like fine lady within fifty miles circumference, is so comical a violation of all probability, that I shall never be able to compose my countenance when I think of it! Why, it will be something akin to there being an inveterate feud between the lamb and the dove! I have not the least idea how your father will accommodate himself to the novel dignity of having an irascible character to support. The danger is, that he will forget his cue in three days' time, and should they chance to meet, will amble up to the lady, with an offer of his arm to lead her down to dinner, as if they were the best friends in the world! He

may puff and strut to night; and cry pooh! and phaw! as much as he pleases; but I defy him to bear malice for eight and forty hours together, against any human being!"

"But can we, my dear madam, rely with equal confidence upon the speedy placability of Lady Earlsford?"

"Except to herself, that is a matter of no moment," replied my mother. "Her rancour, it she chooses to harbour any, cannot possibly do Sir Geoffrey the smallest injury. So much of 'the milk of human kindness' is known to abound in his composition, that if she venture to speak harshly of him, she will be universally scouted. He has now lived several years upon this estate; he has rendered himself accessible to every description of persons; he has allowed himself to be cheated by the low; elbowed by the upstart; and teased by the litigious; yet has never been seen with a frown upon his brow, nor ever been heard to address a petulant sentence to either hour, squire, man or woman. The duce is in it, my dear Anne, if, after serving so long an apprenticeship to the art of governing his temper, he may not permit himself, for once, the indulgence of bouncing a little at a half-crazy Viscountess, without danger of incurring universal odium!"

"I saw no use in pursuing the subject further, and readily assented to my mother's proposal of joining the rest of the family in the library."

"My father, when we entered the room, either was, or affected to be, exceedingly busy, looking over and arranging a number of papers, which lay upon the table before him. Blanch was quietly reading; Philippa copying some music, and Martha,—for want of better amusement, was gone to bed. The supper-tray stood at a little distance; and my mother, going up to it, and helping herself to a biscuit and a glass of wine, asked my father whether she might have the pleasure of pouring out one for him."

"It will cheer your spirits, my dear," added she, "which have seemed unusually depressed to night."

"My father took off his spectacles; and looking up with the most perfect good humour: "my dear," said he, "pray use no ceremony. I fully expect a little castigation for my recent misdeemeanor, and as I cannot but allow, that I sufficiently deserve it, I am entirely resigned to the necessity of listening to the lecture which you, no doubt, are prepared to give me."

"Not I, in good truth, Sir Geoffrey!—I have, on the contrary, been plying most ably the dismal forebodings of your daughter Anne, who, from the wholesome little breeze of this evening, anticipates the total blight and destruction of all the pretty little promising blossoms of friendship just beginning to expand between the three houses of Earlsford, Tourberville, and Stavordale: Now I have far different expectations; and flatter myself that, on hearing you have exerted sufficient spirit to reduce a fine lady—determined to *have her will* or *have her fit*—to the latter alternative, the farmers, and cottagers, and sportsmen, and

other impertinents in this neighbourhood, who have so long taken advantage of the easiness of your temper, will learn to perceive that you are not so wholly divested of gall as they had imagined; and will begin,—dating from this memorable evening,—to hold you in higher respect than they ever have done before."

In a few days the Lady is permitted to satisfy "the sentiment" and, the relation concludes:—

"She now sees him daily; and, I am told, behaves with tolerable composure. Clavering, however, says, that she still would be better any way else; for that nothing can be more awkward than her occasional attempts to play the part of *maecæ*. She mistakes one medicine for another, bringing him drops when he ought to take powders; if he asks for drink she gives it to him scalding hot; always forgets which arm was injured; takes every thing to the wrong side of the bed; hurts him, when she means to assist him in sitting up; and, as Clavering expresses it, *figlets* about him so much more than is necessary, that 'were she any body but his mother, ma'am, I do think, I should be apt to turn her out of the room and lock the door!'"

This is as perfect an example as we could offer of the author's skill and talent for judicious observation. It belongs to the highest order of novel writing; and we are sorry to mention immediately after it, one of her grossest oversights. Blanch is painted as a beautiful character; the daughter of an Italian mother, and the ideal belle of feminine loveliness in face and person, but by nothing so distinguished as by her firm integrity and adoration of simple truth. Anne Stavorale partakes of these qualities; and Miss Burney is anxious to exemplify the measureless value of perfect sincerity. Yet in the very page where this good lesson is taught, she is guilty of the sin she is endeavouring to shun. Tremayne wants to seem worse to his mother than he really is, in order to remain longer near Blanch, and he asks Lady Stavorale, Anne, and Blanch to countenance his deception. Against this (when he has left them) the young lady resolutely, virtuously, and uprightly protests, and both the elder ladies become converts to the principle, which they had not so strictly maintained before, that candour and truth instead of equivocation and duplicity, should be observed towards Lady Earlsford. Anne especially holds out for the open course, and yet in pursuing it, she is guilty of a mean subterfuge: for when Lady E. expresses her surprise that Tremayne should have walked out while pretending to be so very ill, and knowing that he did this and had prevailed on her (Anne) tacitly, to do it, to blind his mother, she answers the following question in the following manner.

"But how odd," observed the viscountess, [that he should never have mentioned this walk to me?]"

"He thought, probably, that *see* had informed you of it; and we left to *him* the pleasure of surprising your ladyship with the news."

We are aware that this may be called a

slight perversion; but in matters of vital principle, no departure from the strictest rule is slight, and Miss Burney committed a great mistake in allowing the most trifling example of the worst, to creep into an otherwise admirable enforcement of the best, of doctrines. Lest, however, we should be thought to be more severe than is requisite on a writer whose moral feelings we greatly admire (if we did not, we should not have touched on this passage), we shall offer another short extract from her Country Neighbours, which should reconcile the most fastidious to its inculcations.

Blanch has left the Stavorales on a visit.

"Yet (says Anne), my mother and I, in the course of the day, often looked round with feelings of regret amounting almost to dejection, and missed our bright-eyed, heart-cheering young inmate even more than we had ourselves anticipated. Though she is not prone to utter fond professions, still, those whom she really loves, see it in her looks,—know it by her alacrity to oblige—feel it in her sympathy with their pains or pleasures. Her laugh exhilarates—her seriousness soothes—her conversation interests all who approach her. She is, as my mother expresses it, "original without being queer;"—independent without being self-sufficient;—and her sacred love of truth is so inseparably blended with every other quality of her nature, that it at once inspires confidence, animates attention, and secures attachment. Ah, well may she so enthusiastically reverence the incomparable mother to whom she owes the early development of such invaluable rectitude! I have heard her say, that in her childhood she had, from possessing high spirits, and an active imagination, a strong propensity to indulge in romancing, to invent fantastical dreams, and to embellish every trivial incident with the glaring colours of fiction. Her mother took alarm at these infantine flights of fancy, and never relaxed in her endeavours to root out a habit which she justly deemed so dangerous. Her labours, accompanied by no personal severity, but unremittently directed to the great object of awakening the child to the voice of conscience, were blessed with such complete success, that Blanch adds: "I have my dear mother's own authority for saying, that, since I was eight years old, she never knew me deviate in a single instance from the strictest veracity; and whatever I told her, how improbable soever it might seem at first, she would, after looking earnestly in my face a moment, smilingly declare that she implicitly believed, because her little Bianca had said it!" Happy child to be in such wisely plastic hands! and happy mother, to have so docile a subject to mould!"

Upon the whole this is a work which, whether for amusement or advantage, we can most fearlessly recommend. It is equally honourable to the heart and head of the author, and few superior works of the class to which it belongs, could be put into the hands either of young or old.

*Anecdotes, Observations, and Characters of Books and Men. Collected from the*

*Conversations of Mr. Pope, and other eminent Persons of his Time. By the Rev. Joseph Spence. Now first published from the original Papers, with Notes, and a Life of the Author. By Samuel Weller Singer. London, 1820. 8vo. pp. 501.*

This is a publication similar to that, under nearly the same title, noticed in our last. Both, we understand, spring from the same source, and we owe their separate appearance to some misunderstanding among the editors and publishers. After the death of Mr. Spence, his memoranda were gratefully sent in a compliment to the Duke of Newcastle, from the repositories of whose successor the volume which we have reviewed was derived. But it now seems, that the above compliment consisted of only a copy of the original papers, or rather of a part of them; and it is from the latter that the work before us is drawn.

It contains, as will be seen from the number of pages, more matter than Malone's edition; and is upon the whole better arranged. Still there is a great deal that might have been advantageously omitted, not merely anecdotes, on account of their being well known, but also hints and observations on subjects and countries, which are familiar to our era, though the best scholars a hundred or seventy years ago were uninformed respecting them. There were even some points which their native want of value should have excluded.

The editor, Mr. Singer, is the author of the "Researches into the History of Playing Cards," &c. which issued from the press a few years since; and his present labour is calculated to revive a favourable recollection of that curious and entertaining work. Part of his Biographical Sketch is rather inelegantly written; as for instance, where he says "Spence's benevolence was most liberal and unconfined; distress of every sort, and in every rank of life, never preferred its claim to his attention in vain;" but his narrative is candid and judicious. Of Spence and his Polymetis, which Gray slighted, we at present know little. Lempriere has consigned the former to oblivion, and Time done nearly as much for the latter. Dr. Johnson described him as "a man whose learning was not very great, and whose mind was not very powerful;" but he acknowledges that his criticism was commonly just, that

what he thought, he thought rightly, and that his remarks were recommended by coolness and candour. He lived in intimacy, however, with distinguished persons, and his common-place book was enriched with many entries of uncommon interest. These have by degrees slipped into public; and now that we have the original in a whole form, it boasts less of novelty than it at first possessed. Spence seems also to have been an amiable and pleasant man: perhaps more to be esteemed than some of the magnates who undervalued him. As Regius Professor of Modern History at Oxford, and travelling Tutor to two noblemen of the highest rank (Lords Middlesex and Lincoln), as the intimate friend of Pope, Lowth, Young, Warton, &c. he must have been a man both of talent and worth. He died in 1768, in the 70th year of his age, and was buried at Byfleet.

We copy, without regard to order, from the volume before us, what appears to be the most striking, and least (if at all), known passages. Like the work itself, they may form an amusing Canto.

Each of the four columns that support the dome of St. Peter's at Rome, takes up as much ground as a little chapel and convent, in which one of the architects employed in that work lived: and yet they do not appear big to the eye, because every thing is great about them.—They were designed by Michael Angelo, and he insisted earnestly that nothing should be added or altered in his design. Bernini afterwards undertook to make a staircase within each of these columns; just as they had hollowed and prepared the inside of one of them\*, the whole building gave a crash; (and the Italian tradition says it was as loud as thunder). They put up the stairs in that, but would not attempt any more of them.—*Ramazz.*

Mareschal Turénue was not only one of the greatest generals, but one of the best-natured men too, that ever was in the world.—Among several other little domestic examples he gave the following. The general used to have a new pair of stockings every week; his gentleman, whose fee the old ones were, had taken them away in the evening, and had forgot to put any new ones in their place. The next morning the Marshal was to ride out to reconnoitre the enemy, and rose earlier than usual. The servant whose business it was to dress him, was in a great deal of confusion at not finding any stockings. "It's very odd," says the Marshal, "that I should be allowed no stockings; but 'tis very lucky that I am obliged to ride out! Here, give me my boots, they'll do as well, nobody will see whether I have any on or not."—*R.*

\* There was originally a well for a staircase, and Bernini only put up the stairs in it.—*Mr. L.* from one of the workmen at St. Peter's in 1751.

[There is scarce a genteel family at Avignon, but has the pictures of Petrarch and Laura in their houses. A lady of that country, who piques herself much on being descended from Laura, took it very ill of Mr. R. that he should say, "Petrarch's love for Laura was only Platonic." Ramsay was obliged to recant the heresy; and wrote a satire against Platonic Love.—*R.*

[Dr. Swift lies a-bed till eleven o'clock, and thinks of wit for the day.—*Dr. Lockier.*

In the coffee-house yesterday I received a letter, in which there was one word which consisted of but one syllable, and that syllable of but one letter, and yet the fellow had contrived to have three false spellings in it.] *Dr. L.*

Where we translate it, "the Lord set a mark upon Cain," the original signifies a token; and in the Hebrew, to set a token upon any thing, and to preserve it, are equivalent expressions.—*Dr. L.*

The same word in Hebrew signifies blessing and cursing, as they say in Italian: "tu è benedetto;" you are a cursed rascal.—Where we make Job's wife advise him to curse God and die; it should be, Bless God and die, bless him for the good you have hitherto received; and die, to avoid the evils that are now come upon you.—*Dr. L.*

To call by their names was an expression among the Hebrews, equivalent to the being master or having dominion over any thing. Thus God is said to call the stars by their names; and Adam to have given names to all animals.—*Dr. L.*

In all thy travels I never met with any one Scotchman but what was a man of sense: I believe every body of that country that has any, leaves it as fast as they can.—*Dr. L.*

No one will ever shine in conversation, who thinks of saying fine things: to please, one must say many things indifferent, and many very bad.—*Dr. L.*

This large statue of Pompey, was probably the very same, at the feet of which Caesar fell; for it was found on the very spot where the senate was held, on the fatal day of March: They discovered it in clearing away the ground to make some cellars, for a house that now stands there. The greatest part of the statue lay under that house, but the head of it reached under the ground belonging to their next neighbours. This occasioned a dispute between the two proprietors, which was at last decided by Cardinal Spada. He ordered the head to be broken off, and given to the latter; and the body to the former: you may now see the mark where they were joined again. This decision was not made out of a whim, but very prudentially. From the first, that cardinal had a great desire to get the statue into his own possession, and by this means, he got it much cheaper than he could otherwise have done: for after this division of it, the whole cost him but five hundred crowns.—*Ficoroni at the Palazzo Spada in Rome.*

That arm, behind the Laocoon, was begun by Michael Angelo, and he left it unfinished, "because," (as he said), he found he could do nothing worthy of being joined to so admirable a piece." It lies there as a testimony of the

superiority of the best ancient artists over the modern; for, of all the modern sculptors Michael Angelo is universally allowed to be the best.—*F.* at the Belvedere in the Vatican.

There are three sorts of Egyptian statues: First, Those that are good without any mixture of their bad taste; and this manner is very ancient, before they were conquered by the Greeks. Secondly, After they were conquered, and their spirits debased, they made the figures of their deities frightful, on purpose to keep the people in awe; and this was the cause of their bad taste, some parts out of nature and some in. Thirdly, As every thing is apt to degenerate and grow worse and worse when once fallen, they at last, in many of their figures, deserted nature entirely; and made every part monstrous and out of all proportion.—*F.*

It was Sixtus the Fifth that began the palace on Monte Cavallo, and placed the two large equestrian statues there, from whence it has its name. They were found in Constantine's baths, and were brought originally to Rome from Alexandria. The names of Phidias and Praxiteles on the bases are certainly fictitious, and some of the antiquarians say, that they were put there by the people of Alexandria.—*F.*

There are ten thousand six hundred pieces of ancient sculpture of one sort or other now in Rome (reliefs, statues, and busts). And six thousand three hundred ancient columns of marble. What multitudes of the latter sort have been sawed up for tables, or wainscoting chapels, or mixed up with walls, and otherwise destroyed! And what multitudes may there yet be undiscovered under ground! When we think of this altogether, it may give us some faint idea of the vast magnificence of Rome in all its glory.—*F.*

The first four hundred years of the Roman History are supposed to have been fabulous by Senator Bionarotti, and he gives several good reasons for his opinion. He suspects that Rome, in particular, was built by the Greeks; as Tarentum, Naples, and several other cities in Italy were.—*Dr. Cocheri.*

There is a book of immense erudition, which is almost unknown: it is called *La Crusca Provenzale e Catalana*: in two volumes, in folio. It was written by a Spanish Abbe at Rome; and he proves in it, that the Tuscan is absolutely derived from the old Catalan language. He left Rome soon after publishing it; and carried almost all the copies with him into Catalonia.—*Storck.*

I wonder how they came not to find out printing sooner? (We had been just speaking of the manner in which the emperors of Rome impressed their names with seals or stamps on their grants and letters.) This method was so common that their very shepherds impressed theirs on their sheep and cattle. It was in fact a sort of printing, and it would have been as easy to impress a whole line as two words, and a page as a whole line. Had they gone but these two easy steps farther, it would have been just what the Chinese printing is now.—*S.*

At the Court of Tulous, the officer said, "My lord is the best of masters; but alas! he grows very old, and, I fear, can't last long; I would with all my heart, give ten years out of my own life to prolong his if it could be done."—Upon seeing us affected by what he had said; he added: "that this was no great merit in him; that most of his fellow servants, he believed, would be willing to do the same: that the goodness of their master to them, and the greatness of their affection for him, was so remarkable and so well known, that a friend of the Count's once said to him; I don't know what it is you do to charm all the people about you; but though you have two hundred servants, I believe there is scarce any one of them that would not die to save your life."—That may be, (replied the Count), but I would not have any one of them die, to save it!

There was a God called Pennus, much worshipped, on the great St. Bernard, some remains of his temple, and I think of his statue, are still to be seen there.—*Count Riché.* [Pen signified high or chief. Hence the *Alpes Pennine*, and the *Apennines* in Italy. And with us the *Pen* or *pen*, near High Wycomb in Buckinghamshire: the old *Pennocrisium* or *Penkridge* in Staffordshire: *Pendennis* in Cornwall: *Pennmenawr*, and many others in North Wales.—*Spence.*]

The side Oratories at St. Paul's were added to Sir Christopher Wren's original design, by order of the Duke of York: who was willing to have them ready for the popish service; when there should be occasion.—It narrowed the building, and broke in very much upon the beauty of the design. Sir Christopher insisted so strongly on the prejudice they would be of, that he actually shed some tears in speaking of it; but it was all in vain. The Duke absolutely insisted upon their being inserted, and he was obliged to comply.—*Mr. Harding.*

There was a Lord Russell who, by living too luxuriously, had quite spoiled his constitution. He did not love sport, but used to go out with his dogs every day, only to hunt for an appetite. If he felt any thing of that, he would cry out, "Oh, I have found it!" turn short round, and ride home again, though they were in the midst of a fine chase.—It was this Lord, who, when he met a hagar, and was entreated by him to give him something, because he was almost famished with hunger, called him "a happy dog!" and envied him too much to relieve.—*Pope.*

From what are designated "Supplemental Anecdotes from Mr. Spence's Papers," and of later date, we select the following.

Sir Isaac Newton, though he scarce ever spoke ill of any man, could hardly avoid showing his contempt for virtuous collectors and antiquarians.—Speaking of Lord Pembroke once, he said, "let him have but a stone doll and he is satisfied. I can't imagine the utility of such studies: all their pursuits are below nature."—*Fr. Chute.*

"How could the Duke of York make my mother a papist?" said the Princess Mary

to Mr. Burnet.—"The Duke caught a man n-bred with her, (said the Doctor,) and then had power to make her do any thing."—The Prince, who sat by the fire, said, "Pray, madam, ask the Doctor a few more questions."—*Dean of Winton.*

Monsieur de Montesquieu, the author of the Persian Letters, is now with Lord Waldegrave, and is come to England with him: He says there are no men of true sense born any where but in England.—*Mr. Brandereth.*

Monsieur de Voltaire says, that "the English plays are like the English puddings: nobody has any taste for them but themselves."—*Fanshawe.*

Mr. Pope said one day to Mr. Saville: "If I was to begin the world again, and knew just what I do now, I would never write a verse."

Reynolds of Exeter, when at Eton, dreamed that his father was dead, and that he was walking in the meadows very melancholy; when a strange woman came up to him, who told him that she was his mother, who died soon after he was born.—She said to him, "Yes, your father is dead, and your mother-in-law has had too much influence over him: he has left all his property to the younger sons: but there is an estate which he had no right to leave away from you: the writings are in Mr. . . . 's hands, go to him, and you may recover it."—Reynolds having no news from home of this kind, soon forgot his dream. About a year after, he goes down to his friends, and finds his father very well: but he had been, at the very time of Reynolds's dream, extremely ill, and recovered beyond expectation.—The friends, to whom he related his dream, when he described to them the person of the woman who appeared to him, said they who had been well acquainted with her, could not have described his mother's person more exactly. About a year after, his father fell ill again, died, and left all to his younger children.—Upon this Reynolds's dream came again into his mind: He goes to the gentleman named to him by his mother in that vision, and finds that it is exactly as he had been told, recovers the estate mentioned, and enjoys it at this day.—*The Dean of Christchurch, 1726.*

Tonson and Lintot were both candidates for printing some work of Dr. Young's.—He answered both their letters in the same morning, and in his hurry misdirected them.—When Lintot opened that which came to him, he found it began, "That Bernard Lintot is so great a scoundrel, that, &c."—It must have been very amusing to have seen him in his rage, he was a great sputtering fellow.—*Dr. Young.*

"Why do you refuse the wine to the lady?"—Why, in process of time it was found that there were several inconveniences in allowing it to them, (spilling the wine giving some offence, &c.) which our Saviour did not foresee, at the time of its institution: and so the church was forced to remedy it afterwards. *The Cure \* \* \*, at his Bastide near Nice.*

Sir Isaac Newton's house at Colworth is a handsome structure.—His study boarded round, and all jutting out. We were in the room where he was born. Both of us melan-

choly and dismal an air as ever I saw. Mr. Percival, his tenant, who still lives there, says he was a man of very few words; that he would sometimes be silent and thoughtful for above a quarter of an hour together, and look all the while almost as if he was saying his prayers: but that when he did speak, it was always very much to the purpose.—*May 14, 1755.—Spence.*

The Duchess of Portsmouth, when she was in England in 1699, told Lord Chancellor Cowper, that Charles the Second was poisoned at her house, by one of her footmen, in a dish of chocolate.—*Dean Cowper.*

Mr. Pope was with Sir Godfrey Kneller one day, when his nephew, a Guinea trader came in. "Nephew, (said Sir Godfrey), you have the honour of seeing the two greatest men in the world."—"I don't know how great you may be, (said the Guinea-man), but I don't like your looks: I have often bought a man, much better than both of you together, all muscles and bones, for ten guineas."—*Dr. Warburton.*

What a singular book is "The business of the Saints in Heaven," by Father Lewis Henriquez: printed at Salamanca in 1631. He attempts to prove, in the twenty-second chapter, "That every saint shall have his particular house in heaven; and Christ a most magnificent palace: That there shall be large streets, and great piazzas, &c."—He says in the twenty-fourth chapter, that there shall be a sovereign pleasure in kissing and embracing the bodies of the blessed; that there shall be pleasant baths, and that they shall bathe themselves in each others sight. That they shall swim like fishes; and sing as melodiously as nightingales, &c."—He affirms, in the forty-seventh chapter, "That the men and women shall delight themselves in masquerades, feasts, and ballads;—and in the fifty-eighth, "That the angels shall put on women's habits, and appear to the saints in the dress of ladies, with curls and locks, waistscoats and faringales, &c." See the "*Moral practice of the Jesuits*," by the doctors of Sorbonne: it has been translated into English, and published in 1671.—*Spence.*

Ambrose Phillips was a neat dresser, and very vain.—In a conversation between him, Congreve, Swift, and others, the discourse ran a good while on Julius Caesar. After many things had been said to the purpose, Ambrose asked what sort of person they supposed Julius Caesar was? He was answered, that from medals, &c., it appeared that he was a small man, and thin-faced.—"Now, for my part," said Ambrose, "I should take him to have been of a lean make, pale complexion, extremely neat in his dress; and five feet seven inches high:" an exact description of Phillips himself. Swift, who understood good breeding perfectly well, and would not interrupt any body while speaking, let him go on, and when he had quite done, said; "And I, Mr. Phillips, should take him to have been a plump man, just five feet five inches high: not very neatly dressed, in a black gown with pudding-sleeves."—*Dr. Young.*

There is an interesting Appendix of

letters from Mr. Spence, and to him, written by eminent persons, of which we shall give an example in our next.

*Burckhardt's Nubian Travels, 4to.  
(Continued.)*

The next tribe whose territory the caravan crossed, was the Hadeudou, who seem to be only less infamous, but not less odious than their neighbours.

On the 1st of June they passed Om Daoud, a large encampment of the tribe of Nefidjab of the Bisharcin; this is the most southern boundary of the Bishary dominions, and the beginning of the territory of the Hadeudou, a very powerful tribe, of which I shall again have occasion to speak; the son of their Shikha had come with us from Shendy, and we had therefore little to fear, except from their pilfering habits. The caravan halted near the village, and I walked up to the huts to look about me. My appearance on this occasion, as on many others, excited an universal shriek of surprise and horror, especially among the women, who were not a little terrified at seeing such an outcast of nature as they consider a white man to be, peeping into their huts, and asking for a little water or milk. The chief feeling which my appearance inspired I could easily perceive to be disgust, for the Negroes are all firmly persuaded that the whiteness of the skin is the effect of disease, and a sign of weakness; and there is not the least doubt, that a white man is looked upon by them as a being greatly inferior to themselves. At Shendy the inhabitants were more accustomed to the sight of not of white men, at least of the light brown natives of Arabia; and as my skin was much sun-burnt, I there excited little surprise. On the market-days, however, I often terrified people, by turning short upon them, when their exclamation generally was: "Owcz bilahi min es-sheytan erradjim!" (God preserve us from the devil!) One day, after bargaining for some onions with a country girl in the market at Shendy, she told me, that if I would take off my turban and shew her my head, she would give me five more onions; I insisted upon having eight, which she gave me; when I removed my turban she started back at the sight of my white closely shaven crown, and when I jocularly asked her whether she should like to have a husband with such a head, she expressed the greatest surprise and disgust, and swore that she would rather live with the ugliest Darfour slave.

*June 2d.*—We travelled this morning about four hours, in a south-east direction, over a plain of cultivable soil, though distant several miles from the river. No mountains were any where visible. We rested during the mid-day hours in a grove of Nebek, Syale, and Alothe trees. I here observed several unknown birds; one was of the size and shape of a black-bird, with a long tail striped with white. I saw some large crows with a white neck. The Bisharcin seemed to have no names in their language for these different birds; amongst them it is a great scandal to

eat the flesh of birds, and I several times heard them sneeringly call the Egyptians "bird-eaters." On resuming our journey we entered the sandy desert in the direction of S. E. b. E. In the afternoon the Souakin traders chased with their swiftest dromedaries a wild beast which they desecrated at a distance; they called it in Arabic, *Homar el Wahsh*, which means the wild ass. It did not come near enough to be distinctly seen; but they say it is of the size of a Hyena, with a head and tail much resembling those of an ass: it has no horns. In the Arabian deserts they speak of an animal to which they give the same name; whether it is really the same animal I am not certain. The ground was covered in every direction with innumerable footprints of the Gazelle species, some of which appeared to belong to animals of a much larger size than any I had yet seen.

Next day an unexpected sight struck our traveller's eyes, and we felt deeply his regret at not being able to explore the object thus mentioned.—

In approaching the river, I saw at a distance, two insulated hills close to each other in the plain, and at a short distance from the river; and when we drew nearer to them, I was extremely surprised to see upon the summit of the largest a huge fabric of ancient times. Being naturally short-sighted, and my vision having been further impaired by two attacks of ophthalmia while I was in Upper Egypt, I could not trust my eyes, and therefore asked my companions what it was that appeared like a building upon the hill. "Don't you see," they replied, "that it is a church?" (Kenise, a name often applied by the Egyptians to their ancient temples, which they ascribe to the Christians) "and no doubt the work of infidels." We continued to approach the hill, and encamped at about half an hour's distance from it. As soon as we had alighted, and placed our baggage in order, I started for the hills, in great eagerness to examine those Ethiopian remains; but a loud cry from the Souakin people brought me back. "The whole country," they said, "is infested by the peasants of Goz Radjeb; you will not be able to move a hundred paces alone, without being attacked." Indeed several suspicious looking persons were seen lurking among the trees that lined the banks of the river farther on. My companions added, that the hill was inhabited by Hadeudou robbers, who lived in caverns in it, and were at war with all their neighbours. As they could have no interest in deceiving me, I readily believed them, and returned, but with the intention of abandoning my design, but in the hope of being able the next day to concert measures with some of the country people who might come to barter with us, for their accompanying me to the ruins, which I was then fully determined to visit, whatever might be the consequences. Unfortunately I was deceived in my expectations; and I shall never forgive myself for the momentary irresolution which prevented me from examining the most interesting object which occurred during my journey.

The account of Taka is highly curious —

Taka is as celebrated for its herds of cattle as for its Dhourra; they are very numerous; the cows are particularly handsome, and have all humps on the back, like those on the Nile; they serve as in Darfour and Kordofan, for a medium of exchange. The price of a large fat cow was four pieces of Damour, or ninety-six Mouds of Dhourra, which is equivalent to about two Erdeybs, or thirty bushels. The price of a strong camel is one fourth more. As it was now the hottest part of the year, just before the period of the rains, when the ground is quite parched up, I saw few cattle. According to the annual custom, the herds had been sent several months before to the Eastern desert, where they feed in the mountains and fertile valleys, and where springs of water are found. After the inundation, they are brought back to the plain. The camels of Taka are highly prized, from an idea that the young shoots of the acacia trees, on which they feed in the woods, render them stronger than camels fed with other food. The people use the skin of the long neck of the camel, sowed up on one side, and left open on the other, as sacks to transport their grain in when travelling; their form is very convenient for loading. The quantity of cattle would be even greater than it is, were it not for the wild beasts which inhabit the forests, and destroy great numbers of them; the most common of these are lions, and what they call tigers, but which I suppose to be leopards or panthers. I never saw any of these animals, but I heard their howlings every night. The flocks of the encampment, near which a few sheep are always kept, are driven in the evening into the area within the circle of tents, and the openings in the thorny enclosure already described, are filled up with a heap of thorns. No one dares stir out of this entrenchment during the night; it is sufficiently strong to be impenetrable to the wild beasts, which prowls about it the whole of the night, filling the air with their dismal howls, which are answered by the incessant barking of the dogs within. It rarely happens that either lions or tigers are killed in these countries; when such an occurrence happens, it is in self-defence; for the inhabitants having no other weapons than swords or lances, have little chance of conquering the king of the forest, of which this district appears to be a favourite haunt. Some of the Shikhs, but very few, have lions skins in their tents; they appeared to be of middling size; but if the testimony of the Hadeudou may be credited, a lion here sometimes reaches the size of a cow. Persons are frequently killed by them. In the woods wolves, gazelles, and hares abound; and the Bedouins relate stories of serpents of immense size, which often devour a sheep entire. The fiercest animals, however, that inhabit these

• The Souakin merchants are equally unused to fire-arms. A few Arabians sometimes pass this way armed with matchlocks, in company with the Souakin caravans, on their road to Shendy or Sennaar.

woods are the Bedouins, or nomadants of Bedja, themselves. Great numbers of asses are kept by all these Bedouins. In the mountains of Negrey, the Giraffa is said to be very numerous. I saw a piece of the skin of one in the tent of a Hadendoa. Locusts are always seen in Taka, which seems to be their breeding-place, from whence they spread over other parts of Nubia. However innumerable their hosts may be, they appear to be incapable of destroying the verdure of this country, as sometimes happens in Egypt and Syria. Those I saw were of the largest size, with the upper wings of a red, and the lower of a yellow colour. The trees are full of pigeons, and crows in large flocks. I do not remember having seen any birds remarkable for their plumage. From the acacia trees gum arabic is collected, which is sold at Souakin to the Djidda merchants; from Djidda it finds its way to Egypt; but it is of an indifferent quality, owing, probably, to the moisture of the soil: for the best gum is produced in the driest deserts.

The encampment where we remained consisted of from one hundred and fifty to two hundred tents, divided into four Douars, or circles; these were separated from each other by fences lower than the general thorny enclosure, by which the whole were surrounded. In every settlement in Taka, as at Shendi and Atbara, there are several Bouza huts, and many public women, with some of whom even the most respectable of the Souakin merchants took up their quarters. These women seemed to me to be more decent in their behaviour than those of the same description in the countries on the Nile; at least they seldom appeared abroad during the day, whereas the others were seen walking about at all hours. Both sexes wear the common Nubian dress, a Damour shirt, and a cloak of the same stuff thrown over the shoulders. I observed one peculiarity amongst the women, that of wearing brass or silver rings on their toes; many of them wear leathern aprons, instead of the Damour cloth which the Nubian women generally wrap round the middle; the same custom prevails amongst the Bedouins of the Hedjaz. In their tents they suspend various ornaments of white shells (Woda), from the Red Sea, intermixed with black ostrich feathers. All the women go unveiled, and the most respectable think it no shame whatever to receive a man in their tent, and to be seen chatting with him during the husband's absence. This, however never happened to me, for whenever I presented myself before a tent, the ladies greeted me with loud screams, and waved with their hands for me to depart instantly. Nothing astonished them more than my beard and mustachios; for the beards of the Bedouins never grow long or thick, and they cut their mustachios very short, it being a disgrace amongst them to wear them long, and considered as great a mark of slovenliness as an unshorn beard amongst Europeans.

Treachery is not considered here as criminal or disgraceful, and the Hadendoa is not ashamed to boast of his bad faith, whenever it has led to the attainment of his object.

The Souakin people assured me that no ostrich can bind a man of Taka; that which alone they hesitate to break is when they swear, "By my own health." A Hadendoa seldom scruples to kill his companion on the road in order to possess himself of the most trifling article of value, if he entertains a hope of doing it with impunity; but the retaliation of blood exists in full force. Amongst the Hallenga, who draw their origin from Abyssinia, a horrible custom is said to attend the revenge of blood; when the slayer has been seized by the relatives of the deceased, a family feast is proclaimed, at which the murderer is brought into the midst of them, bound upon an Angareg, and while his throat is slowly cut with a razor, the blood is caught in a bowl, and handed round amongst the guests, every one of whom is bound to drink of it, at the moment the victim breathes his last. I cannot vouch for the truth of this, although several persons asserted it to be a fact, and I heard no one contradict it.

Their own quarrels, and their national enmity to the Bisharein, with whom they are never known to be at peace, have rendered the people of Taka a warlike nation. They use the same weapons as the inhabitants of the Nile countries; bows and arrows are unknown amongst them. Their chiefs keep horses, and arm themselves with coats of mail. They are said to be brave, but I never saw scars on any part of their bodies except the back. The same remark applies to all the people of Nubia, where I have never seen any individuals with scars upon their breasts, while the backs of most of the men bear the marks of large wounds, in which they seem to pride themselves. The shield is said to protect the sides from blows. I found a custom here, which in my journey towards Dongola I had been told of, as existing amongst the Bisharein; when a young man boasts of his superior prowess, in the presence of another, the latter draws his knife and inflicts several flesh-wounds in his own arms, shoulders, and sides; he then gives the knife to the boaster, who is bound in honour to inflict still deeper wounds upon his own body, or yield for ever in reputation to his antagonist. They are certainly a strong and hardy race of men; and are more robust and muscular than any Bedouins I ever saw. During winter they live almost wholly upon flesh and milk, tasting very little bread; and it is to this they attribute their strength.

The principal article sold by the foreign merchants at Taka, is tobacco, as well the product of Sennaar as of Persia and the Yemen: that which comes from the latter countries is called here Suratty, and is the yellow leaved sort called Tombac in the Hedjaz and Egypt, and which is smoked in the East in the Persian pipe or Nargyle; being much stronger than the Sennaar tobacco, it is preferred in Taka principally for the manufacture of snuff, of which the people are very fond; the snuff is prepared by mixing natron or salt with the pulverised tobacco. No man or woman is seen without a small gourd, the size of a goose's egg, in

which they carry their snuff. The Souakin traders sell here also natron, which they bring from Shendi: all kinds of spices, especially cloves, which are in great demand among the Hallenga; incense, beads, and hardware; but the chief articles are tobacco, Damour, and clothes. Dhoura is taken in exchange for all these articles, and is the main object with the merchants from Souakin, because that place depends solely upon Taka for its supply of this necessary of life, none, or very little, being cultivated in its neighbourhood.

(To be continued.)

## ARTS AND SCIENCES.

### ROYAL INSTITUTION.

The operations for the season commenced with great vigour in Albemarle Street on Tuesday, when Mr. Millington began a course of lectures on Experimental Philosophy, to be continued twice a week. The plan he has marked out for himself seems to be one of infinite importance; and when we consider the clearness of his arrangements, and the extent of his information, we are led to anticipate a most luminous and interesting development of the subject undertaken. Mr. Brande of course resumes his chemical illustrations; but the most novel and attractive feature in the programme for this year, is a series of lectures upon Poetry by one no less competent to perform the task admirably than Mr. Thomas Campbell. A course of lectures on Botany, by Sir J. H. Smith and another on Architecture by J. Soane, Esq. complete the whole; and if we reflect on the great and various talent engaged, we must say that the present bids fair to be the most distinguished era of this valuable Institution.

### SONNET.

The sun has sunk behind the western hill,  
O'er whose dark summit comes the evening gray;  
The murky mists which ope the valley fill,  
Hang like the pall of the departed day.  
The monsters sleep with each its head reclined  
Beneath the shelter of its downy wing;  
No sound is floating on the peaceful wind,  
Save the soft murmurs of the bubbling spring.  
But hark! I hear the distant village chime,  
Breaking the silence of his lower sphere.  
It jostly warns me of the lapse of time,  
In accents smooth and soothing to my ear,  
Telling that years roll on, nor wait for me,  
Till all be lost in dark eternity.

London, Jan. 8.

W. H. T.

## CONSOLATION.

Hush'd is that voice that whisper'd peace,  
And gone that lovely smile,  
That grief alway'd, bade sorrows cease,  
And rais'd my hopes the while.  
No more shall beam th' entrancing ray,  
That shot from Mary's eye;  
Her bed is now the cold, cold clay—  
I saw her droop and die.

The world, with all its busy crowds,  
Is solitude to me;  
And o'er my spirit grief's dark clouds  
Are gathering heavily.

But ah! a thought comes o'er my mind,  
Oh grief away, away,  
Is day her soul is not confin'd,  
But soars to realms of day.

Then will I hope that after death,  
Our souls shall mingle there;  
And such e'en with my dying breath  
Shall be my constant pray'r.  
Lewis, Jan. 8. W. H. T.

## "Sweet Cell,

Where Joy is felt like Sadness, and our Grief  
A Melancholy pleasant to be borne"—WILSON.

There is gloom in the air, "and my spirit within  
Is rapt and heavy with care;  
For I leave the charm'd light of an eye that  
could win

A soul from the shroud of despair.  
To him who in loneliness dreams o'er the past,  
And glides o'er the present in fashionless  
peace,

How bright are the fugitive visions that cast,  
A awe-thrilling flash o'er the shadowy waste,  
Where he slumbers in fancied release!

Yet what hath "the world," save that gleam, to  
console

The slave of its spurious delights—  
What bliss at his heart, or what beam in his  
soul?

His weary associate requies?  
Sate to soar on the pinion of fame is denied,  
Oh grant me in honour'd seclusion to dwell;  
And well could I deem that my fate were sup-  
plied.

If sympathy but'd some dear form to my side,  
To grace and enliven my cell!  
Jan. 2. C.

## EAST INDIA THEATRICALS.

At Calcutta there is a Theatre, called *The Chowringhee Theatre*, which has for the last five years been under the direction of an Amateur Dramatic Society. It is principally supported by subscription; and in July last, its general report was so satisfactory, that the proprietors renewed the management in the same hands for five years more. Thanks were voted to the amateur performers; and about a week before, one of these gentlemen spoke an address, which was introduced in the Government Gazette.

The theatrical amusements at Chowringhee on Friday last, were honoured by the presence of the Marquis and Marchioness of Hastings. Her Ladyship was received by the audience with enthusiasm, and in a manner that strongly marked the hearty welcome with which her return to India is hailed. When the curtain drew up, the following appropriate address was delivered by one of our most distinguished ana-

—When in those walls the Drama reared its head,  
And kindling radiance from its cradle shed;

To cheer the dulness of our Indian day,  
And chase the foggy mist of spleen away,  
Who—in the van of taste and feeling came,  
To aid his struggles into life and fame?  
Who—deigned to smile upon its infant course,  
And teach its efforts confidence and force?  
Oh, need the muse its patroness proclaim,  
When every heart is swelling with the name!  
A name a thousand thoughts at once connect,  
With all we love, we boast of, and respect!

Yes, from the loftier claims that asked her care,

The hours that rank for Charity could spare;  
The leisure ever prompt to seek distress,  
To soothe affliction and despair repress;  
E'en from the luxury of doing good,  
The Muse, a London once not vainly wooed  
To listen to the lighter strains—designed  
To mend the manners and to raise the mind,  
And grace with Ennvy's gems and flowery strife,  
The graver attributes of human life,

Propitious winds across the willing main,  
We t'wixt her presence to these realms again;  
And now again she comes once more to cheer  
The Muse her fostering favour helped to rear;  
And shall that Muse be mute? What though no  
fire

From inspiration caught, her strain inspire;  
What though her measured phrase too faint ap-  
pear,

To bid such lofty worth a welcome here!  
Still shall her voice be raised, secure, around  
A prompt spontaneous echo will be found,  
From every bosom and from every tongue  
To aid that feeble voice—that welcome to pro-  
long!

## BIOGRAPHY.

## ALY BEY (OR BADIA).

The author of the celebrated *Travels in Africa*, is thus described in Burkhardt's *Travels*. Another traveller of a singular description passed here two years ago. He called himself Aly Bey, and professed to be born of Tunisian parents in Spain, and to have received his education in that country. Spanish appears to be his native language, besides which he spoke French, a little Italian, and the Magrebeyn dialect of Arabic, but badly. He came to Aleppo by the way of Cairo, Yafia, and Damascus, with the strongest letters of recommendation from the Spanish Government to all its agents, and an open credit upon them. He seemed to be a particular friend of the Prince of the Peace, for whom he was collecting antiquities; and from the manner in which it was known that he was afterwards received by the Spanish Ambassador at his arrival in Constantinople, he must have been a man of distinction. The description of his figure and what he related of his travels, called to my recollection the Spaniard Badia and his miniature in your library (this letter is addressed to Sir J. Banks). He was a man of middling size, long thin head, black eyes, large nose, long black beard, and feet that indicated the former wearing of tight shoes. He professed to have travelled in Barbary, to have crossed the Libyan Desert between Barbary and Egypt, and from Cairo to have gone to Mekka and back. He travelled with eastern magnificence, but here he was rather shy of show, and

himself out of doors; he never walked out but on Fridays to the prayers of noon, in the great Mosque. One of the before mentioned dervishes told me that there had been a great deal of talking about this Aly Bey, at Damascus and Hamar; they suspected him of being a Christian, but his great liberality and the pressing letters which he brought to all people of consequence, stopped all further enquiry. He was busily employed in arranging and putting in order his journal during the two months of his stay at Aleppo.

## THE DRAMA.

KING'S THEATRE.—Last Saturday Rossini's Comic Opera of *Cinderella, La Cenerentola*, was produced at this theatre; and a Signor Torri made his debut as the Prince of Salerno. The story differs from the original in making the Prince visit the abode of Cinderella's father, Don Magnifico, (Ambrogetti) changing characters with his valet, Dandini (Piacchi); in other respects we have the proud sisters, the ball, and the marriage of Cinderella (Bellocchi). The opera went off extremely well. The music is, in general, very good, and the overture beautiful. The new singer has a pleasing tenor voice, and acquitted himself so as to give entire satisfaction. He has a great deal of the manner of Braham; but is by no means equal to him either in power or discrimination. In such comparisons he must indeed be content with the praise of a second rate artist; and especially when his style, as it sometimes does, resembles that of a pupil rather than a master. His acting is above the usual stamp of musical performers: his last song was finely executed and encoored, and he sang it better the second time than the first—a proof that diffidence might be the cause of his not fully displaying his abilities. Madame Bellocchi was in high voice and sang charmingly. Ambrogetti was great in his part. Romero, who personated a pilgrim, is but an indifferently actor, and a worse singer. Miss Mori gains ground in every new character; and Mrs. Gatti's voice and action were well suited to the other sister, Thibide. We have no doubt that the opera will improve much on repetition; and in that expectation content ourselves with this short notice of its first representation.

COUNT GARDEN.—On Tuesday the "ever pleasing ever new" play, *As you like it*, introduced to the public an aspirant for dramatic honours, hitherto unknown upon the stage. The newspapers state her to be a Miss Wensley, and of respectable family in Somersetshire; and indeed, her lady-like appearance and manners, allowing for the embarrassment of her situation, seem to justify the report. The part chosen for her debut was Rosalind, removed, undoubtedly, by several of its later occupants, from the perilous and trying difficulty of its preceding contrast, but still an arduous and hazardous undertaking. To counterbalance this, as well as the timidity which the occasion naturally creates, there was a very benevolent disposition to applause in a marked number of the

audience; besides the common feeling by which all must be actuated at the sight of a handsome young female, for the first time, facing thousands of eyes all fixed on her, and attempting to perform a novel task, requiring great talent and perfect self-possession. We notice this, not invidiously, but as entirely disapproving of unwise, exaggerated, partial plaudits, instead of leaving a British Theatre to the free expression of sentiments which we firmly believe would be much warmer and much more auspicious to the party, were not an opposite current excited by injudicious and rather dogmatical predilection. That genuine public to which, after all, both plays and players must look for support, will, especially in matters like the present, if left to itself, take up the cause of merit with sufficient zeal; but it becomes cold even to merit, which seems to have so many friends as not to need its patronage; and the unlucky object of this ostentatious sustentation, being of necessity soon deprived of its aid, sinks unregarded to a level probably below its real desert. Miss Wensley has a pretty countenance, and a fine person, inclining to *emboupoint*. She displayed a neck of some prominence, and rather calculated to serve as a heaving index to the female agitations of the Debutante, than to comport with the male attire of Ganymede. On her performance in the first two acts, it would be severe, perhaps unjust, to speak in plain terms; for being almost overpowered by her terror, it may be believed that she did not fairly exhibit the extent of her abilities. It seemed however, that her voice was weak, and ill adapted to the expression of pathos. A foreign friend, with us, not moved by her tender scenes, declared that she wanted the power of physis, meaning thereby, (heaven mend his English!) physical power; but much of this may be attributable to tremulous apprehension and nervous sensibility. In the after-scenes she gained more command, and became more playful and spirited. The cuckoo song, that John Bull test, was sung in an arch and captivating manner; and, in conclusion, the attempt ended more successfully than it began, being neither a triumph nor a failure. Mr. Macready played Jacques, for the first time. His portraiture was altogether of a masterly order. The description of the wounded deer not so exquisitely touching as we have heard it delivered; but the celebrated passage, "all the world's a stage," given in a style of excellence, such as we can most truly say we never witnessed before, even in Kemble or Young, admirable as they were in this speech. Its effect was acknowledged by bursts of applause, hardly restrained till the actor finished.

### VARIETIES.

¶ Marshal d'Aluxelles was considered to be a misanthrope, which his answer to a person who rallied him on his celibacy seems to justify—"I never," said he, "saw a woman whose husband I should have liked to be; nor a man, of whom I would have chosen to be the father."

**POTATOES.**—According to the most recent inquiries, naturalists declare Lima to be the true country whence potatoes were propagated. They are worth all the mines at Peru.

**BOX NOT.**—The Chevalier Duplessis, a very middling poet, author of a bad opera called *Pizarro*, used to indulge himself in the bitter satire against other poets. Once, as he affirmed with great vehemence in the theatre in Paris, that he did not know a worse lyric poet than Guillard, Chéron, a very witty actor, said to him, "Ah, Chevalier, you forget yourself."

Sir W. Congreve has, we hear, invented a gun, which will discharge conical shot with a precision hitherto unattained in gunnery.

The plans drawn by M. Delbret, the Architect, for the construction of the Royal Academy of Fine Arts, in the Rue des Petits Augustins, have been approved, and the foundation of this interesting building will be laid next spring. (*French Papers*).

On the 5th ult. M. Pons of Marseilles observed the comet which was discovered on the 28th of November by M. Blanpain, Director of the Observatory of Marseilles. On the 11th of December, the new comet ascended in a direct line to the north, and having crossed the constellation of Virgo, it apparently took a direction towards *Berenice's Comb* and the bounds of *Bootes*; so that with the aid of good telescopes it may be visible for some time to come.

### LITERARY NOTICES.

**Curious Manuscript.**—A very interesting piece of literary intelligence is the discovery of the Life of the celebrated Duguesclin, in MS., written in verse, on parchment, and in folio, with twelve neat miniature paintings representing his battles with the English. Another MS. of the twelfth century, likewise in folio, contains pretty fables and moral tales. Among many other very important MSS., concerning Charles VII. and Francis I. there is also the Journal of Charles V. which was written by his secretary Vandenesse. He was inseparable from this monarch from 1514 to 1559; he wrote in French. Robertson and the other historians of Charles V. were not acquainted with it; in the Royal Library we find proofs that the learned Meermann intended to copy it.

### METEOROLOGICAL JOURNAL.

JANUARY, 1820.

Thursday, 6.—Thermometer from 19 to 36.

Barometer from 30, 25 to 30, 32.

Wind S.W. 4.—Morning generally clear, the rest of the day cloudy and hazy.

Friday, 7.—Thermometer from 26 to 32.

Barometer from 30, 40 to 30, 62.

Wind E. b. N. 2.—Clear about noon, the rest of the day generally clear.

Saturday, 8.—Thermometer from 23 to 30.

Barometer from 30, 30 to 30, 78.

Wind N. E. 2.—Morning clear, the rest of the day cloudy, with a little snow in the morning.

Sunday, 9.—Thermometer from 20 to 30.

Barometer from 30, 86 to 30, 67.

Wind N. E. 2, and N. b. W. 3.—Clouds generally passing; clear at times.

Monday, 10.—Thermometer from 17 to 32.

Barometer from 30, 67, to 30, 61.

Wind N. E. 4.—Morning clear, the rest of the day cloudy.

Tuesday, 11.—Thermometer from 23 to 33.

Barometer 30, 15 to 29, 56.

Wind S.W. 4.—Cloudy; snowing most of the day.

Wednesday, 12.—Thermometer from 17 to 28.

Barometer from 30, 15 to 30, 33.

Wind E. b. N. and N. E. 4.—Cloudy, with a little snow at times, till the evening, when it became clear.

### TO CORRESPONDENTS.

\* In order to make room for our review of *Acme's* book, which is of such universal interest as to render it expedient to take the subject *en bloc*, we have abridged and postponed our articles. *Anastasia* will be resumed in our next, and other interesting matters taken up.

The lines signed W. B. are too irregular for insertion; the following thought is however prearranged—

Farwell!—the repetition

Of this word seems but poorly to express Affection of the heart; like the church-bell So often tolled for funerals, that at length Solemnity and death seem obsolete.

# Miscellaneous Advertisements, (Connected with Literature and the Arts.)

## Distortions.

**DR. Weatherhead** commences his Winter Course of Lectures on the Distortions and Dis- cures of the Bones and Joints, on Thursday the 24th Inst. Particulars to be had of Dr. W. at his house No. 16, Upper Montagu St. Montagu Square.

## BOOKS PUBLISHED THIS DAY.

*The London Magazine* (Second Edition.)  
**MESSRS. Baldwin, Cradock, and Joy** did not at first think it necessary to notice publicly a charge which has been brought against them, very wantonly at least, to use no harsher word, of having mislaid the title of their new periodical work from the Prospect of a contemporary Magazine. Some of our friends however have suggested, that respect for the Public requires them, once for all, to contradict what they flatter themselves, their previous reputation had sufficiently prevented from being believed. They can prove incontrovertibly that their present enterprise, including its Title, as it now stands, and all its other arrangements, was fixed so long ago as the Spring of 1819. Warn, on the 18th of November, Messrs. Baldwin, Cradock, and Joy first saw the announcement of the new-ly being a slinking name, they immediately sent to its Publisher a printed Copy of their Prospectus, which had been circulated several Weeks before. The coincidence is unpleasant: on their part it is accidental. It is, however, there be any superior claim to the Title assumed, perhaps it will be considered to belong to that illustrious predecessor carried on *The London Magazine* for half a Century; a Circumstance, in fact, which originally suggested the Continuation of the Name.

Handsomely printed in 8vo, price 12s.  
**CHEFS-D'ŒUVRE OF FRENCH LITERATURE**, consisting of interesting Extracts from the Classic French Writers, in Prose and Verse, with Biographical and Critical Remarks on the Authors and their Works. In Two Volumes. Vol. I. Prose.  
"Quid sit pulchrum, quid turpe, quid utile, quid non."

Printed for Longman, Hurst, Rees, Orme, and Brown, A. B. Dulau and Co.; and Boony and Sons.  
"A few copies to be had in Royal 8vo, price 18s."  
The French Language, whether considered as a study of ornament or utility, is of equal importance. As a branch of polite education, it opens the most valuable sources of intellectual enjoyment; while its utility must be universally acknowledged, when, without exaggeration, it may be pronounced the language of the library. The above work is not only designed for the library of the scholar, but for the amusement and instruction of youth. It may be safely placed in the hands of the students, to guide his course of reading, and to stimulate him to explore those treasures which an attentive perusal of the most celebrated French authors will open to his view. Nothing has been admitted, however distinguished for ability, that can possibly give offence either to morals or to religion; for genius is all claim to respect when it basely descends to mislead the judgment or to corrupt the heart." *Préface.*

Price 1s. 6d.  
**SPEECH OF LORD JOHN RUSSELL**, in the House of Commons, on December 14th, 1819, on moving Resolutions relative to Corrupt Boroughs, with Extracts from the Evidence on the Grandpound Bribery Indictments. London: Printed for Longman, Hurst, Rees, Orme, and Brown, Paternoster Row; and J. Ridgway, Piccadilly.

In 12mo, price 6s. 6d. 2ds.  
**AN HISTORICAL EPITOME OF THE OLD AND NEW TESTAMENTS**; in which the events are arranged according to Chronological Order. By a MEMBER of the CHURCH of ENGLAND, for the use of Schools. Printed for G. and W. B. Whitaker, 18, Ave-Maria Lane, London.

A few Copies for the use of Families may be had, on fine paper, price 18s. 6d. 2ds.

to 2 vols. 8vo. with 20 Engravings from Original Drawings, price 2l. 2s. 6d.

**TRAVELS IN ITALY, GREECE, and the IONIAN ISLANDS**, in a Series of Letters, descriptive of Manners, Scenery, and the Arts. By H. W. Williams, Esq.

Printed for Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. Cheap-side, London.

"These Letters will be found to contain much original and important information. The attention of the traveller and the reader is particularly directed to the remarks and criticisms on works of art, into which the author was naturally led by his professional habits; exhibiting in simple and accurate account of the paintings, sculpture, and architectural monuments, which form the chief attraction of these interesting countries. The plates are numerous, and executed in a suitable manner; among the most curious of them are a fac-simile of a design sketched by Buonaparte, while in Elba, for the uniform of his Guards; the Skull of Raphael; Design of a Cemetery, intended as a hint for the improvement of our burying-grounds in Britain; Castle of Granato; Portrait of the Priest of Delphi; Monks of Paros; Greek Dance; specimens of Impressions of Leaves, taken on copper by a new and simple method, &c.

Elegantly printed in 1 vol. imperial 4to. embellished with 50 coloured Plates, Portraits, Maps, Plans, &c. price 6l. 6s. boards, or in Four Parts, at 1l. 15s. 6d. each, the last three of which are sold separately, to complete sets.

**THE DUKE OF WELLINGTON'S CAMPAIGN IN THE NETHERLANDS**, in 1815, in Connection with PRINCE BLÜCHER, comprising the Battles of Ligny, Quatre Bras, and Waterloo. With a detailed Narrative of the Political Events connected with those memorable Conflicts, drawn up from the first Authorities, and dedicated to the Duke. By WILLIAM MUDDFORD, Esq. Illustrated by numerous public and private Official Documents, and other Papers hitherto unpublished, communicated by Officers of the highest distinction.

In this important undertaking, no exertion has been spared to produce a memorial of the exploits of our gallant countrymen truly worthy of them; to transmit to posterity a record, which may be consulted with conscious exultation—which the future historian, who shall recount these immortal deeds, may examine with confidence—and which the living who partook of all the toils, dangers, and the glories of them, may turn to as the authentic monument of their own exploits.

The Plates illustrate not merely the field of battle, but all the intermediate country from Brussels to Charleroi, proceeding in regular succession; so that the reader may, as it were, actually walk over the ground which our army trod, from the moment it quitted Brussels till the battle of Waterloo was fought. They form in a manner one vast picture, so consecrated throughout, that what appears in perspective in the first plate is represented in the foreground of the second, and so through the whole series.

To military men, and especially to those who were in the battle, these Graphic Illustrations must be peculiarly valuable and interesting, as they will be enabled to ascertain almost the very spots where themselves stood—where their brave comrades were killed or wounded—where they sustained the shock of the enemy—where they repelled his onset—and where they at last so gloriously conquered. London: printed for Henry Colburn and Co. Conduit Street, and T. Egerton, White-hall.

The following works are preparing for publication by John Miller, Burlington Arcade, and will appear early in February.

**THE SKETCH BOOK**, by GEOFFREY CRAYON, Gent. The first American Edition with alterations and additions, by the Author. In one handsome vol. 8vo.

GIOVANNI SBOGARRO, A Venetian Tale, in two vols. 12mo.

A VOYAGE TO SOUTH AMERICA performed by order of the Government of the United States in the Congress Frigate. By H. M. BRACKENRIDGE Esq. Secretary to the Mission. In 2 vols. 8vo.

## The Coinage.

**ANNALS OF THE COINAGE OF BRITAIN** and its Dependencies, from the earliest period of authentic History to the present time. By the Rev. ROGERS RUDDING, B. D. Vicar of Maldon, in Surrey, F. R. A. and H. N. A. 8, of Newcastle-upon-Tyne.

In five large Volumes Octavo, and one Quarto Volume; containing a Series of Coins, extending through a period of 1000 years, including the late issues of Sovereigns and Crown-Pieces, price 6l. 6s. boards.  
"The additional Plates and Supplemental Matter, not contained in the 4tho. edition, are printed separately for the Subscribers to that edition, price 12s. small, or 18s. on large paper.

Printed for Lackington, Hughes, Harding, Mayor, and Jones, Finsbury Square. Where may be had, SIMON'S ESSAY ON IRISH COINS, and of the Currency of Foreign Monies in Ireland, 4to, price 18s. 6d.

In 4to. price 1l. 1s. 6d. Vol. I, Part 3. of  
**BIBLIOTHECA BRITANNICA**; or, a General Index to the Literature of Great Britain and Ireland, Ancient and Modern, with such foreign Works as have been translated into English, or printed in the British Dominions; including also the copious Selection from the Writings of the most celebrated Authors of all Ages and Nations. By ROBERT WATT, M. D. Published by Archibald Constable and Co. Edinburgh; Longman, Hurst, Kees, Orme, and Brown, London: and A. and J. M. Duncan Glasgow.

It is estimated that the whole work will extend to 11 or 12 Parts.

In 3 vols. price 18s.  
**THE HERMIT IN LONDON: Or Sketches of ENGLISH MANNERS**; forming a Companion to the *Hermite de La Chaux-de-Fonds*.

"To peep at such a world, to see the stir Of the great Babel, and not feel the crowd."

Copper, Printed for Henry Colburn and Co. Conduit Street.

In 4 vols. 24s. Dittos, in French, 3 vols. 18s.  
**JULIEN DELMOUR, or the NEW ERA**; a Novel, actually founded on Events that have occurred in France during the last 30 years, and containing many curious and original anecdotes connected with the French Revolution. By MADAME DE GENLIS.

Like the ingenious author of *Gil Blas*, Madame de Genlis has described personages of all ranks, and criticised every thing which in manners appeared to her reprehensible or ridiculous.

Printed for Henry Colburn and Co. Conduit Street.

*Madame de Staël's Works.*  
Editions in French and English.

The second Edition, in 2 vols. 12mo. price 10s. 6d.  
**AN ESSAY ON FICTIONS, — ZULMA, and other TALES**, by MADAME DE STAËL HOLSTEIN.

Printed for Henry Colburn and Co. Conduit Street, of whom may be had, by the same author, 2. LETTERS on the Character and Writings of ROUSSEAU, 8s. 6d.

3. THE INFLUENCE OF LITERATURE upon SOCIETY, with a life of the Author, 2 vols. 8vo. 1l. 1s.

4. ON THE INFLUENCE OF THE PASSIONS, 10s. 6d.

5. CORINNE, or L'ITALIE, 3 vols. 18s.

7. DELPHINE, 4 vols. 1l.

*Miss Burney's New Novel.*  
In a few days will be published,

**COUNTRY NEIGHBOURS, or the SECRET**, a Novel, by MISS BURNEY, author of *Clarendon*, *Treaty of Nature*, &c. 3 vols.

Printed for Henry Colburn and Co. Conduit Street.

The third Edition, in 2 vols. 8vo. embellished with several coloured plates, price 25s. boards.

**LETTERS** written during a TEN YEARS' RESIDENCE at the COURT of TRIPOLI, published from the Originals, in the possession of the Family of the late RICHARD TULLY, Esq. the British Consul.

London. printed for Henry Colburn and Co. Conduit Street.

Important Works to be published in January and February, by Longman, Hurst, Rees, Orme, and Brown, London.

**THE FUDGE FAMILY IN ITALY.** By the Author of the Fudge Family in Paris.

**2. A TALE OF PARAGUAY.** By ROBERT SOUTHBY, Esq.

**3. THE MONASTERY.** A Romance. By the Author of *Waverley*, &c. 1s 3d vols.

**4. AN HISTORICAL AND STATISTICAL ACCOUNT OF THE PRINCIPALITIES OF WALLACHIA AND MOLDAVIA,** including various political Observations relating to them. By WILLIAM WILKINSON, Esq. late his Britannic Majesty's Consul in the above mentioned Principalities.

**5. GERMANY AND THE REVOLUTION.** By PROFESSOR GÖRRES, late Editor of the "*Shenish Mercury*." Translated from the German, by John Black.

\* The sale of this work has been suppressed in Germany.

**6. TALES OF THE HEART.** By Mrs. OPIE. 1s 3d vols.

**7. MEMOIRS OF THE LIFE AND WRITINGS OF LOUIS DE CAMOENS.** By JOHN ADAMSON, Esq. In 2 vols. 8vo. with 8 Engravings.

**8. SPEECH OF LORD JOHN RUSSELL** in the House of Commons, on December 14th, 1849, on moving Resolutions relative to corrupt Boroughs, with Extracts from the Evidence on the Grampound Bribery Indictments.

**9. MEMOIRS OF THE PROTECTOR, OLIVER CROMWELL,** and his Sons, Richard and Henry, illustrated by original Letters, and other Family Papers. By OLIVER CROMWELL, Esq. a Descendant of the Family. With Six Portraits, from original Pictures.

**10. TRAVELS IN various COUNTRIES OF THE EAST,** being a Continuation of Memoirs relating to European and Asiatic Turkey, &c. Edited by ROBERT WALPOLE, M.A. This Volume contains, among other Papers, Observations made by the late Mr. Bruce in parts of the Turkish Empire; a Biographical Memoir of him; also, an Account of a Journey from Smyrna to Mount Sinai; of another through part of Persia to the ancient Site of the Arabic inscription discovered by Belzoni in the Pyramid of Cephrenes; Travels in Syria, Asia Minor, and Greece, and in the Islands of the Archipelago; with Remarks on the Natural History, Antiquities, Manners, and Customs, of those Countries.

**11. MEMOIRS OF THE LIFE OF JOHN WESLEY,** the Founder of the English Methodists. By ROBERT SOUTHBY, Esq. In 2 vols. 8vo. illustrated by Portraits of Wesley and Whitfield.

**12. TRANSACTIONS OF THE LITERARY SOCIETY OF BOMBAY.** Vol. II. In 4to. illustrated with Engravings.

**13. THE HISTORY OF THE CRUSADES,** for the Recovery and Possession of the HOLY LAND. By CHARLES MILLS, Esq. Author of "*A History of Muhammadanism*." In 2 vols. 8vo.

\* The object of this work is to supply the want in English literature of a full collection of the European Expeditions into Palestine. A view is also taken of the Chivalric Institutions and the Latin States in the East, during the heroic Ages of Chivalry.

**14. ITINERARIES TO TIMBUCTOO, AND KASSINA,** recently received by the Académie des Inscriptions, translated from the Arabic by M. de Sacy, investigated by M. de Wakenauer, and translated into English by T. E. BOWDICH, Esq. Conductor of the Mission to Ashantee. By whom are prefixed, an Itinerary from Dagumbe to Mecca, and a Memoir on the Traces of Egyptian Emigrations and Colonization in Ashantee.

**15. THE ANNUAL BIOGRAPHY AND OBITUARY,** with Silhouettes, Portraits. Vol. 4. Containing I. Memoirs of those celebrated Men who have died within the years 1818, 1819. II. Neglected Biography, with Biographical Notices and Anecdotes, and Original Letters. III. Analysis of recent Biographical Works. IV. A Biographical List of Persons who have died within the British Dominions, so as to form a Work for Reference, both here and elsewhere.

**16. THE HISTORY OF THE ASOLO-SAXONS,** from their first Appearance in Europe to the end of their Dynasty in England; comprising the History of England from the earliest Period to the Norman conquest. By SHARON TURNER, F.A.S. The 3d Edn. corrected and improved. In 8 vols. 8vo.

**17. THE POETICAL WORKS OF WALTER SCOTT,** Esq. now first collected, in 12 vols. foolscap 8vo. with a Portrait of the Author.

**18. BIBLICAL CRITICISM ON THE BOOKS OF THE OLD TESTAMENT,** and Translations of sacred Songs, with Notes, Critical and Explanatory. By Samuel MURRAY, L.L.D. F.R.S. F.A.S. late Lord Bishop of St. Asaph.

**19. AN ACCOUNT OF THE various MODES OF SHOOTING HORSES,** employed by different Nations. More particularly a Comparison between the English and French Methods. With observations on the diseases of the Feet, connected with Shooting. By JOSEPH GOODWIN, Veterinary Surgeon to His Royal Highness the Prince Regent. In 8vo. illustrated by Plates.

**20. THE LIVES OF BRITISH STATESMEN.** By JOHN MACDONALD, Esq. Containing the Lives of Sir Thomas More; Cecil, Lord Burleigh; Mayoworth, Earl of Starbuck; and Hyde, Earl of Clarendon. In 2 vols. 8vo. a new Edition, embellished with Portraits.

**21. SUBSTANCE OF THE SPEECHES OF SIR JAMES MACKINTOSH,** on moving for the Appointment of a Committee, to consider so much of the Criminal Law as relates to Capital Punishment, on the 24. of March, 1839; and on bringing up the Report of that Committee, on the 6th of May, 1840.

**22. DOMESTIC SCENES.** A Novel. In 3 vols. 12mo.

**23. A GENERAL HISTORY OF THE COUNTY OF YORK.** By THOMAS DUNHAM WHITAKER, L.L.D. F.R.S. F.R.A. Vicar of Whalley, and Rector of Hesham, in Lancashire.

**PARTS. RICHMONDSHIRE. 24. HISTORY OF THE HOUSE OF AUSTRIA,** from the Foundation of the Monarchy, by Rodolph of Hapsburgh, to the Death of Leopold the Second, 1218 to 1792. A new Edition. In 5 vols. 8vo.

**26. VALDI, OR THE LIBERTINE'S SON.** A Poem. In 5 Parts. By JAMES KENNEY. In 8vo.

**27. SERMONS ON the Unerring Doctrine of the Established Church,** that Christ Jesus is God and Lord; and on the Intermediate state of the Soul after Death. By the Rev. and E. J. THORNTON, A.M. formerly of St. Mary Hall, Oxford. Curate, Afternoon Preacher, and Lecturer of Hampstead, Middlesex.

**28. MEDICO-CHIRURGICAL TRANSACTIONS,** published by the Medical and Chirurgical Society of London. Vol. X. Part II. In 8vo.

**29. THE POETICAL WORKS OF JAMES MONTGOMERY.** In 3 vols. foolscap 8vo. 11. 11s 6d. 12s.

*Spencer's Anecdotes.*  
In one large Volume 8vo. with a Portrait. price 14s.

**ANECDOTES, OBSERVATIONS, AND CHARACTERS OF BOOKS AND MEN.** Collected from the Conversation of Mr. Pope, and of other eminent Persons of his Time. By the Rev. JOSEPH SPENCE. With an Appendix of unpublished Letters by Pope, Hume, Horace Walpole, &c. Now first printed from the Original Papers; with a Preface. Notes, and Life of the Author. By SAMUEL WELLES HILL.

Printed for W. H. Carpenter, Lower Brook Street; and Archibald Constable and Co. Edinburgh.

Price 6s. in boards, in an octavo volume of 1056 pages, comprising 254 0 Articles, being the largest Catalogue ever printed.

**A GENERAL CATALOGUE OF BOOKS,** in the Ancient and Modern Languages, and various Classes of literature, for the year 1849, which are now selling, at very low prices, for Ready Money, by Lockington, Hughes Harding, Maror, and Jones, Finsbury Square.

The various Classes may be had in parts separately. Price 1s. 6d. each.

\* Libraries and small Collections of Books purchased or exchanged on liberal Terms.

N.B. Foreign and Country Orders expeditiously and advantageously executed; and it is particularly requested that such orders be transmitted direct to Messrs. L. H. and Co. who cannot otherwise be responsible for the fidelity of their execution.

Handsome printed in small 8vo. with Ten Plates, price 7s. 6d. a New Edition of

**A NEW SYSTEM OF DOMESTIC COOKERY,** formed upon PRINCIPLES OF ECONOMY, and adapted to the Use of Private Families. Comprising also the ART OF CARVING. Observations on the Management of the DAIRY, and POULTRY YARD; Instructions for HOME BREWERY, WINES, &c. COOKERY for the SICK, and for the POOR; many useful MISCELLANEOUS RECEIPTS, and DIRECTIONS proper to be given to SERVANTS both in Town and Country. To which is prefixed an ESSAY ON DOMESTIC ECONOMY and HOUSEHOLD MANAGEMENT, comprising many Observations which will be found particularly useful to the Mistress of a Family. BY A LADY.

This is really one of the most practically useful books of any which we have seen on the subject. The Lady who has written it, has not studied how to form expensive articles for luxurious tables, but to combine elegance with economy, she has given her directions in a plain sensible manner, that every body can understand; and these are not confined merely to cookery, but extended to a variety of objects in use in families; by which means the utility of the book is very much increased.

Printed for John Murray, Albemarle Street; sold also by every other Bookseller in England, Scotland, and Ireland, of whom they may be had, lately published.

**THE NEW FAMILY RECEIPT BOOK,** a New Edition, greatly improved, handsomely printed in small 8vo. price 7s. 6d. in boards.

In 8vo. price 3s. 6d.

**SUBSTANCE OF THE SPEECH OF THE RIGHT HON. EARL GRENVILLE** in the House of Lords, Nov. 3d, 1819, on the Motion of the Earl of Liverpool, "That a Select Committee be appointed to inquire into the State of the Country, and more particularly into the Duties and Discontents prevalent in the Manufacturing Districts, and the Execution of the Laws with respect to the numerous Public Meetings which have taken place."

Printed for John Murray, Albemarle Street.

*Spencer's Anecdotes.*  
In one Volume 8vo. price 8s. 6d. (uniformly with Dr. King's Anecdotes).

**ANECDOTES OF BOOKS AND MEN.** By the Rev. JOSEPH SPENCE. Printed from the arranged Copy of the late EDMUND MALONE, Esq. Printed for John Murray, Albemarle Street.

A new Edition, in one Volume small 8vo. with Four Plates, and a general Chart, price 7s. 6d.

**VOYAGE OF DISCOVERY TO COREA AND LOO CHOO.** By Capt. BASIL HALL, Royal Navy. F.R.S.

In order that this elegant may appear in the most popular form, the narrative portion has been retitled; with the nautical and scientific matter, together with Sir Clifford's Vocabulary, are confined to the quarto edition.

Printed for John Murray, Albemarle Street.

In the Press, and specially will be published, in 8vo.

**LECTURES ON THE LITERATURE OF the AGE OF ELIZABETH.** Delivered at the Surrey Institution. By WILLIAM HAZLITT. Printed for Stoddart and Stuart, St. Strand; and Bell and Bradburn, Edinburgh.

\* Lately published by the same author a view of the English Navy 12s. 12s.

In royal 12mo. price 4s. 6d. 6ds. the Second Edition of **Lorenzo; OR, THE TALE OF REDEMPTION.** By J. ROBY.

"Woe all the souls that are were forfeit once; And He, that might the 'vantage best have took,' Found out the remedy!"

Messrs for Messrs. Act 2, Scene 5

Printed for G. and W. B. Whittaker, 11, Ave-Maria-lane, London.

London. Printed for the Proprietors, by W. POPE, of Gray's Lane. Published every Saturday, by W. A. SCRIPPS, at the Literary Gazette Office, 309, (Exeter Change) Strand, where Communications and orders are referred to be addressed to the Editors.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom: but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 157.

SATURDAY, JANUARY 22, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*The Annual Biography and Obituary, for the year 1820.*—Vol. IV.—London, 8vo. pp. 408.

We can so entirely appreciate the difficulties attendant upon editing this annual volume, that it affords us more than ordinary pleasure to notice how very able they have been, in general, surmounted. When the only sources of intelligence are loose rumour, or the partial report of friends, it is no easy matter to steer in the mid-channel of truth, between the barren coast on one hand, and the flowing current on the other. In the work before us there is, at least, an evident desire to do this; and, in the desire itself, lies its accomplishment to a considerable extent. The memoirs of Admiral Sir R. Calder, Almeran Combe, Sir R. Musgrave, the Irish political writer, John Palmer, Esq. the inventor of the mail-coach system, Patrick Brydson the traveller, G. W. Meadley, Mrs. Billington, Col. Tatham the Anglo-American projector, Sir P. Francis, Major Scott Waring, Dr. Wolcott, the eccentric H. C. Jennings, Professor Playfair, J. Watt, and Aaron Graham, Esq. are severally given in an agreeable, and, as far as practicable, an impartial manner. Having ourselves previously obtained biographies of some of these parties for the *Literary Gazette*, and, in so doing, consulted the best authorities to which we could have access, we are the better enabled to speak to the diligence and skill of the Editor of the *Obituary*. In some instances, Mrs. Billington, for example, he does not tell us all the truth; but, upon the whole, his views are not inaccurate, though possibly they do not go far beneath the surface. The account of Mr. Jennings being most original, we shall quote from it, as a specimen. The latter years of the life of this singular person are thus described:

From this time, but few particulars of his life are known to me, until he settled at Chelsea, where I first became known to him. This was about the year 1803, at which period he must have been near 72 years of age. On presenting myself at his door, a man serv-

vant, with but one eye, and apparently maimed in other parts of his body, announced the name of his visitor. I at first thought my conductor might be an out-pensioner of the neighbouring hospital; but I soon learned that he was a victim, not to war, but to science, having been nearly destroyed in the service of his master. On announcing a message from a common friend, I was received with open arms; and, from that moment, all his treasures were subject to my frequent inspection.

As he was sometimes shy of strangers, many applied to me for an introduction; and, among others, I had the pleasure to carry to Lindsay-Row some gentlemen belonging to the British Museum. They were chiefly desirous to see and examine the fine collection of shells; and on our retiring, we took a turn on Battersea-Bridge, where, on my demanding their value, they agreed, "that in time of peace, and under favourable circumstances, they might sell for 9000 pounds or guineas."

It was not difficult to discover Mr. Jennings was a good Latin scholar, and in his collection he possessed fine copies of all the classics; some of these, indeed, were magnificent, both as to printing and binding. He himself was generally accustomed to read those in *usum Delphini*.

Although his house commanded a fine view of the river, he never once deigned to look at the charming prospect. Indeed it would have been difficult, if not impossible, had he been inclined to regale his eye with such a noble object, for his windows were so dirty as to bid defiance to all distinct vision; and indeed they seemed to realise the poetic idea of "darkness visible." This mansion, which had been formerly the residence of the Earl of Buckinghamshire, his school-fellow at Westminster, was occupied in the following manner:—In the front parlour was an immense Arctic Bear, of a white colour, and, if I recollect aright, a winged animal, greatly decayed, which might once have been an eagle. The garden, either before or behind, bore no marks of the spade, the rake, or the pruning-knife; the very walls appeared in a state of complete ruin; the shrubs were allowed to grow wildly luxuriant; while the labours of man never seemed to have been applied to the deserted mould, which was covered with a yellowish moss, and exhibited every mark of desolation.

In the rear were the offices of all kinds, and from the kitchen sallied forth, at the approach of a stranger, his housekeeper, a married woman of about thirty years of age, accompanied by a number of ragged children, of whom, as if anxious for the character of her who sat before him, his only

servant, he was accustomed to declare on honour, "that he was not the father."

On the left-hand side of the drawing-room door was to be seen himself—a very old and decrepid man, generally clothed in a brown suit of coarse cloth, with immense large silver buttons awkwardly fastened to the breast of his coat. He constantly wore a small hat, both at home and abroad, and possessed both a white and a black beaver, the former of which was always selected for great occasions. Sitting in an immense arm-chair, lined with carpet; his body was mechanically placed in a reclining position, approaching nearly to the horizontal. This was effected by invariably reposing his legs and feet on a Roman *Trichinium*, which he valued greatly. According to him, "the ancients ought to have known something of health and comfort after a civilization of so many centuries! while, as to us, so lately barbarians, we had not been above a thousand years out of the woods."

This venerable figure, with a sharp and croaking voice, saluted the visitor, whom he recognised by means of a mirror; and to whom he scarcely deigned to turn his head. He appeared to sit enthroned in all the majesty of *Vertù*, amidst his books, his pictures, and his shells; and never willingly arose, but to gratify himself and his guest, by exhibiting some or all of these. Among his portraits he had a Mary Queen of Scots; and he boasted that no profane pencil had ever been suffered to retouch it since finished. A painter, however, showed me where it had been evidently mended; and on this, as on many other occasions, Mr. Jennings was most assuredly the dupe of the dealers. The picture of the children of Charles I. (Charles II. and James II. &c.), with a fine large mastiff in front, was much praised and valued by him, as *unique*; the original, however, is at Windsor Castle. A landscape, with a rainbow, and some good figures in the foreground, was estimated by its owner sometimes at 2000*l.*, sometimes at 3000*l.*, according to the state of his purse, on account of the shepherds, which were said to have been painted by Rubens. It was knocked down, at the sale, as well as I can recollect, for 40*l.* There was a picture by a young but celebrated Italian artist, of a Venus awaiting the arrival of Mars, surrounded by Cupids blowing conchs and playing on warlike instruments. This he once promised to a gentleman, who had undertaken to consume his body to ashes, by means of fire, and deposit the remains in a sepulchral urn.

The shells, which must be allowed to have exhibited a most superb assemblage, were chiefly arranged in mahogany cabinets, with a sliding glass-top to every separate box.

To procure some of these he had made immense sacrifices, both in respect to the mode of obtaining the money and the sum actually paid. They were placed in due series, so as to exhibit every possible size, from early youth to extreme old age, on the part of the animals inhabiting them. In one, which he highly prized, the volute happened to be inverted. To the formation of others some obstruction had been given, and a new process, and sometimes new colours were resorted to. On asking him one day what had been the *maximum* price, he placed three in my hand, for which he had given 90*l.* to the daughters of a late celebrated physician; and one alone, his many-ridged harp, cost him 120*l.*

Among his other treasures, our *virtuoso* possessed two specimens of the *Gambonica*, an indifferent one of which was disposed of for 45*l.* at the Duchess of Portland's sale.

Mr. Jennings valued himself greatly on his Venus's slipper, for which he had paid 60*l.*, and I deemed it exquisite till I beheld one in the botanic garden at Paris. It had been obtained during the expedition in search of D'Entrecasteaux, and was presented to Josephine. It is *unique* of its kind.

After admiring these, you were ushered by the happy owner into an anti-room, but not until he had carefully locked his cabinets and his door.

You were finally admitted into the *sanctum sanctorum*, through a passage, to the right of which were carelessly piled up a valuable collection of English, French, and Latin books. Their appearance and value wonderfully contrasted with the slovenly manner in which they were thrown together. Of most the leaves were gilded; others exhibited the finest specimens of binding, both British and German; while many in *milk-white vellum* covers, would have dignified the principal shelves of the *amateurs*.

The apartment to which this led was no other than his own chamber, the bed in which exhibited the most dreary and comfortless appearance; in short, it would have chilled the blood of any but a regular antiquary, who slept here, surrounded by the rarest, choicest, and most precious objects of his ambition.

Here, besides some pictures, &c. was an immense *Beryl*, which, as he frankly owned to me, in his own emphatic language, "he had often pawned for 300*l.*" was an object of considerable curiosity. Perhaps within a foot of this rare gem was deposited, what he was pleased to term his *antediluvian pig*. This was a concave segment of a stone of considerable magnitude and ponderosity, formerly appertaining to the collection of Sir Ashton Lever. It appeared *retrocurv*, and represented, as through a glass, the bowels, fat, and even the bristles of a porker, in the most natural order possible; and with a verisimilitude, that could not fail to strike, and to amuse the most careless observer. According to his theory, it was a production evidently anterior to the flood of Noah, and had taken some thousand years

to harden into, and assume its present form and appearance.

The exhibition always very properly closed with a view of its chief ornament. This was the figure, or rather the bust of a goddess in *bronze*; but as the materials were said to consist of gold, silver, tin, &c. the appellation, perhaps, of "Corinthian brass," would be rather more correct and appropriate. This ever had been, and still was with him, an object of high esteem, approaching, indeed, to adoration. He permitted none but those he termed "presentable people" to gaze on it; he, himself, approached the iron chest, in which his divinity was enshrined, with an apparent degree of awe, and after brandishing the key in a peculiar manner, applied it to the lock with a certain degree of reverence. On being questioned as to the name of the artist, "Praxiteles" was uniformly honoured with mention; and the date of between three and four thousand years, assigned as the epoch of execution, or rather of *creation*. I had almost omitted to mention, that Mr. Jennings valued himself greatly on the possession of one other article: this was the rouge box of the unfortunate Marie Antoinette, queen of France. The inside was intirely of gold, and the vermilion or *sfard* appeared to have been put on by means of a camel's-hair pencil, with a handle of the same metal. The royal arms of France were designated on the rich cover, the whole forming a square of the ordinary size of a snuff-box. Of the originality of this article, there can be no manner of doubt; and, to enhance the interest of the spectator, its delighted owner was always accustomed to conclude by observing, "that it had been taken out of her Majesty's pocket immediately after her head was cut off by the executioner."

Mr. Jennings wished always to be particularly exact as to the measurement of time, and in the course of his life had a series of *chronometers* constructed for him by the most eminent watchmakers of the day. His last was at least equal to any of the former, in point of workmanship, although perhaps inferior as to price, being inclosed in silver instead of gold cases.

But he valued himself still more on an appendage to it. This was a seal very plainly, but handsomely set, which he bought at Naples for a single *Paï* (a pontifical sixpence). It bore the consular insignia, with this singular motto:

"CÆSARI IMPERATORI  
LIBERTATE LANGVESCENTE."

He was pleased to consider this as a real *antique*, engraved in the camp, with a diamond, and without the aid of a wheel, a little before the fatal battle of Philippi.

Our *virtuoso* addicted himself at one period to chemistry, and was accustomed to make experiments in his laboratory, until he had nearly become a victim to his love of science. On one of these occasions, like Dr. Watson, Bishop of Landaff, while professor at Cambridge, he was actually blown up! His valet, who acted as an assistant, and to whose reference has been already made, lost an eye, and he himself received several

wounds in his leg. He was accustomed to boast, "that notwithstanding this mishap, with his usual punctuality, he kept an engagement to dinner that very day."

In respect to exercise, he was not only a great advocate for it, but he practised it to a degree scarcely credible for upwards of half a century. He possessed a long and ponderous wooden instrument, capped with lead at both ends, in the management of which he was such an adept, that he boasted of having disarmed the best "small-arm ordnance in Italy;" and even now, give him but fair play, he "would not be afraid of five or six English housebreakers." Every night, before bed-time, as has been already hinted, he exercised himself with this formidable weapon, until he acquired a comfortable warmth, which enabled him to retire to rest with a genial glow. In the morning, according to his own account, he got up between seven and eight o'clock; and, in his own express words, "flourished his broad-sword exactly 300 times; I then," adds he, "mounted my chaise-horse, composed of leather, and inflated with wind like a pair of bellows, on which I take exactly 1000 gallops!" He then retired to enjoy what always appeared to me to be a most miserable and uncomfortable breakfast.

After this meal, he employed himself, when no sale of curiosities was expected in town, chiefly in reading.

After a scanty dinner, which shall be described hereafter,—for our antiquary seldom walked out for exercise,—he still retained possession of his arm-chair and his tricornium, and folding the purple mantle of dyed flannel over his legs and feet, took a nap, which he termed his *ciesto*, a custom he had first been taught to indulge in during his residence in Italy. After this, either his books or his cabinets, occupied his attention until night. At all times of the day, however, he might be occasionally seen adjusting, arranging, and placing his shells in due order; but his choicest and most grateful employment was to *clean, purify, and polish* them, on their first arrival from their respective countries. He himself, in former times, has not unfrequently gone on board East and West India-men, for the purpose of buying these and other rare productions, exactly in the state in which they were torn from their native beds. Of late years, however, he was obliged to purchase at second-hand, and an enhanced value, from the dealers.

I have beheld him, with a green baize apron before and a wet towel in his hand, enjoying the most exquisite delight, after contemplating these in "the rough," applying his brushes to every part, with an unwonted display of vigour. A preparation of spirit of sea-salt having almost instantaneously produced a gentle effervescence, the outward surface began to disappear. Here all the skill of the shell-fancier was displayed; for if the *eff* happened to be too strong, the precious specimens might be damaged, perhaps ruined; and if not sufficiently powerful, the operation proved ineffectual.

Next comes the polish: and what were "his dear delights," when the colours began

to brighten ;—when the exact form, and shape, and size, were disclosed ;—and above all, when any adventitious circumstance happened to heighten the value of the acquisition ! At length, the pearl-lined *Nautilus*, the radiant *Bucciella*, or the superb *Terebra*, appeared in all its meridian splendour, and the connoisseur, who had found these ugly and hideous objects but an hour before, was now almost ready to fall down and worship them, after the sudden and brilliant change effected by the magic of his own workmanship.

Mr. Jennings had a great attachment to wax candles, which proceeded partly from foreign travel, and partly from frequenting genteel houses in the early period of his life. In 1808, he laid in a supply to the amount of 21l. ; partly because the maker, who, according to him, excelled in this manufacture, might either die or become a bankrupt ; and partly with a view to prevent trouble, " as he thought they might last long enough to burn an old man out of this world." In order to enable him to consume the last half-inch of the wick, and prevent the least particle of the wax from being wasted, he made use of a silver *save-all* : this consisted of a fine Queen Anne's half-crown piece, in excellent preservation. A Queen Anne's farthing, which is infinitely more valuable, or even an Otho, would have been used on a similar occasion, had it been deemed more convenient for the purposes of economy : this, like the rod of Aaron, swallowed up all other competitors.

After noticing many of Mr. J.'s eccentricities, the memoir says—

Death usually puts a conclusion to all singularities ; yet in his case, he determined to prove singular even then. Abhorring the idea of his corpse being consigned to the cold earth, he resolved to have recourse to the ancient rite of *cremation*. This was a circumstance so generally known, that his neighbours supposed he had an oven within his house, for the express purpose of reducing his body to ashes.

Having pitched upon a gentleman in the vicinity, he frankly opened his mind to him ; and demanded if he had courage enough, despising all vulgar prejudice, to stand by and see his body publicly consumed by fire ? " Yes," replied his neighbour, " I will burn your corpse on the centre arch of Battersea bridge, if you so desire ; and that, too, in spirit and in sight of all the proprietors." " How is that possible ?" demanded Mr. Jennings. " Nothing more easy," rejoined the other, " it is only placing your corpse in a car, dressed in a pitched shirt, and surrounded by combustibles—I myself shall apply the match soon after the body leaves the place of your present abode, and when you arrive mid-way, between the two toll-houses, I intend to pull out the linch-pins. You can then consume at leisure, and without danger, notwithstanding it is a wooden bridge."

This whimsical proposition was instantly agreed to in the presence of myself, and his views was to be the reward. But a coolness

between the parties afterwards ensued ; and the mother of love being seized in execution, was actually sold for a vile price, in the presence of the indignant legatee.

His goddess has been already mentioned, but it remains to be told, that for the first six months after obtaining possession of such a prize, she was constantly seated, during dinner, at the head of his table, with two footmen, in laced liveries, behind ; while the most costly viands were placed in succession before her, by way of oblation to her immortal charms !

He died in the rules of the King's Bench, and the narrative thus concludes—

The fate of Mr. Jennings has been eminently singular, and the flux and reflux, the ever-varying ebbs and flows of his fortune appear so strange as to be almost paradoxical. At an early period of life we behold him mingling in the crowd of wealthy pilgrims who repaired to Italy about half a century ago, to pay their devotions at the shrine of taste and *certa*. He returned at length, like old *Tradesant*, with shells, statues, minerals, gems, and the finest specimens of natural history in his train.

After keeping company with foreign princes and princesses he associates with the first nobility in his native country, and then, by a fatal reverse, spends some years of his life, partly within the walls of a provincial, and partly of a town goal. Recovering as if by magic, from his embarrassments, we next behold him emerging above the horizon of distress, and throwing away a second fortune at Newmarket, where he becomes the dupe of titled and untitled jockeys.

Sudden and inevitable ruin now seems to overtake him, and he is apparently lost for ever ; but lo ! in the course of a very short period, he once more revisits the circles of fashion, and sits enthroned in a temple, surrounded by the most rare and brilliant productions of nature, with pictures, and statues, and gems, and shells, and books, and goddesses, perpetually before his eyes ! Again the scene changes : the wand of some envious necromancer seems to be waved over his venerable head ; and the acquisitions of ages, the wreck of his estates, every thing most precious in his eyes ; his very " household goods," are all seized by the unholty hands of vile bailiffs ; and he himself, after languishing for two or three years in a prison, at length dies unheeded, unattended, and almost unknown, within the purlieus of the King's Bench.

*The Sceptic ; a Poem.* By Mrs Hemans. London, 1820. 8vo. pp. 38.

Of this lady's poetical talents the public has several proofs before it. Her " Tales and Historic Poems," " Restoration of the Works of Art to Italy," " Modern Greece," and " Wallace's Invocation to Bruce," have been more or less approved by criticism and the voice of fame. The present produc-

tion is not likely to diminish the reputation of the fair author ; for though we cannot say that it is distinguished by any of the higher and most striking attributes of poetry, it is sufficiently raised above the mass of ordinary didactic pretensions, by a sweetness of versification, a purity of thought, and a piety of sentiment, which recommend it to our warmest regard. Every work tending to promote the cause of morality and true religion, ought in these days to be welcomed with kindness ; and Mrs. Hemans's muse, even did she breathe less of *gæus*, should be cherished for her beauty and virtue. We select a few passages to illustrate the subject, which generally sets the inextinguishable value of a faith in hereafter, against the fear, misgivings, and dreadful doubts of scepticism.

But thou ! whose thoughts have no blest home  
above,  
Captive of earth ! and canst thou dare to love ?  
To nurse such feelings as delight to rest,  
Within that hollow'd shrine—a parent's breast,  
To fix each hope, concentrate every tie,  
On one frail idol,—destined but to die.  
Yet mock the faith that points to worlds of light,  
Where sever'd souls, made perfect, re-unite ?  
Then tremble ! cling to every passing joy,  
Twin'd with the life a moment may destroy !  
If here be sorrow in a parting tear,  
Still let " *for ever* " vibrate on thine ear !  
If some bright hour on rapture's wing hath flown,  
Find more than anguish in the thought—" 'tis gone !"

Go ! to a voice such magic influence give,  
Thou canst not lose its melody, and live ;  
And make an eye the lodest star of thy soul,  
And let a glance the springs of thought controul ;  
Gaze on a mortal form with fond delight,  
Till the fair vision mingles with thy sight :  
There seek thy blessings, there repose thy trust,  
Lean on the willow, idolize the dust !  
Then, when thy treasure best repays thy care,  
Think on that dread " *for ever* "—and despair !  
Oh ! what is nature's strength ? the vacant eye,  
By mind deserted, bath a deadly prey !  
The wild delirious laughter of despair,  
The mirth of frenzy—seek an answer there !  
Turn not away, tho' pity's check grow pale,  
Close not thine ear against their awful tale.  
They tell thee, reason, wandering from the ray  
Of Faith, the blazing pillar of her way,  
In the mid-darkness of the stormy wave,  
Forsook the struggling soul she could not save !  
Weep not, and moralist ! o'er desert plains,  
Strew'd with the wrecks of grandeur—mould-  
ering fæces

Arches of triumph, long with weeds o'ergrown,  
And regal cities, now the serpent's own :  
Earth has more awful ruins—one lost mind,  
Whose star is quenck'd, bath lessous for man-  
kind,

Of deeper import than each prostrate dome,  
Mingling its marble with the dust of Rome.

——He that hath beheld

The parting spirit, by its fears repell'd,  
Cling in weak terror, to its earthly chain,  
And from the dizzy brink recoil, in vain,  
He that hath seen the last comparative there  
Dissolve the union form'd and clo'd in woe,

Well knows, that hour is awful.—In the pride  
Of youth and health, by sufferings yet untried,  
We talk of Death, as something, which 'twere  
sweet

In Glory's arms exultingly to meet,  
A closing triumph, a majestic scene,  
Where gazing nations watch the hero's mien,  
As, undismay'd amidst the tears of all,  
He folds his mantle, regally to fall!  
Hush fond enthusiast!—still, obscure, and lone,  
Yet not less terrible because unknown,  
Is the last hour of thousands—they retire  
From life's throng'd path, unnoticed to expire,  
As the light leaf, whose fall to ruin bears  
Some trembling insect's little world of cares,  
Descends in silence—while around waves on  
The mighty forest, reckless what is gone!  
Such is man's doom—and, ere an hour be flown,  
—Start not, thou trifler!—such may be thine  
own.

We shall add but one more extract—  
that with which the Sceptic concludes  
after a pathetic tribute to the memory  
of our late Princess, and asserting the  
altar as the ark of our national safety.

For! in the hour when storm-pursuing skies,  
Call on the watchers of the land to rise,  
To set the sign of fire on every height,  
And o'er the mountains rear, with patriot might,  
Prepar'd, if summoned, in its cause to die,  
The banner of our faith, the cross of victory!  
By this hath England conquer'd—field and flood  
Have own'd her sovereignty—alone she stood,  
When chains o'er all the scepter'd earth were  
thrown,

In high and holy singleness, a one,  
But mighty, in her God—and shall she now  
Forget before th' Omnipotent to bow?  
From the bright fountain of her glory turn,  
Or bid strange fire upon his altars burn?  
No! sever'd land, mid rocks and billows rude,  
Thron'd in its majesty of solitude,  
Still in the deep asylum of thy breast,  
Shall the pure elements of greatness rest,  
Virtue and faith, the tutelary powers,  
'Thy hearths that hallow, and defend thy towers!  
Still, where thy hamlet-vales, O chosen isle!  
In the soft beauty of thy verdure smile,  
Where yew and elm emerald the lowly fane,  
That guard the peasant's records and remains,  
May the blest echoes of the Sabbath-bell,  
Sweet on the quiet of the woodlands swell,  
And from each cottage-dwelling of thy glades,  
When starlight glimmers through the deepening  
shades,

Devotion's voice in choral hymns arise,  
And bear the Land's warm incense to the skies.  
There may the mother, as with anxious joy,  
To Heaven her lessons consecrate her boy,  
Tench his young accents still th' immortal lays,  
Of Zion's bards, in inspiration's days,  
When Angels, whispering thro' the cedar's  
shade.

Prophetic tones to Judah's harp convey'd:  
And, as, her soul all glistening in her eyes,  
She bids the prayer of infancy arise,  
Toll of his name, who left his Throne on high,  
Earth's lowliest lot to bear and sanctify,  
His love divine, by keener anguish tried,  
And fondly say—“My child, for thee He died!”

*Germany and the Revolution.* By Pro-  
fessor Goerres, late editor of the Rhe-  
nish Mercury. Translated from the  
German, by John Black.  
1820. 8vo. pp. 336.

This is the work of one of the most able  
and distinguished of the German reformers;  
but as we do not allow much of our review  
to native political publications, it will not be  
expected from us to occupy any considerable  
space with a foreign subject of that nature.  
Indeed, we have a great distaste for German  
politics, and a great dislike of German mo-  
rality; and it is only in consideration of the  
importance attached to Mr. Goerres' writings  
on the continent that we notice this translation  
at all. Of its literary merit we shall merely say  
that it appears to be faithfully and forcibly  
rendered into English: of its peculiar tenets,  
that it is a fiery essay in favour of a reform  
in the constitution of the Empire; and of its  
general character, that it throws a good deal  
of light upon the present state of Germany,  
though transmitted through a medium of the  
strongest factions colouring. The translator's  
assertion is, that “it contains a masterly  
review of the conduct of the different  
governments, from the overthrow of Napo-  
leon down to the present time, and of the  
sentiments and opinions of the different par-  
ties, during the same period.” This, of  
course, will be denied by the other side, and  
we only quote it as an opinion given, *con amore*, by a partizan, and on the statements  
of a man who has been accused of being a  
French agent to the year 1813. As we are  
more interested in Hanover than in any other  
state visited by Mr. Goerres' pen, we shall  
give, as an example of his performance, a  
passage relating to that kingdom.

“In Hanover, the new and unruly spirit of  
the times had not yet been in action a suf-  
ficient length of time to break up, along with  
the old manners, the tracks and paths of the  
mighty aristocracy of that country, and they  
soon succeeded in taking possession of the  
whole circle of powers which they formerly  
filled. The return of the aristocracy to au-  
thority and influence was accompanied by the  
return of the old government, which pos-  
sessed a kindred spirit. This government  
was regular, equitable, and well-intentioned,  
but at the same time heavy, helpless, and  
punctilious to excess. It could not so much  
be said to resist the claims of the age, as  
(what is still a great deal worse) to be wholly  
ignorant of them, like its own university,  
which, with a high air of beggarly pride,  
affects an ignorance of the new spirit that  
has shed its refreshing influence on science,  
as if what we have not taken any notice of  
were wholly extinguished and renounced by  
the world. An assembly of estates which  
withdrew itself from publicity, in which the  
various elements were bound together in a  
species of satiety, and a *via inertia* alone  
prevailed, was little calculated to convert an  
essentially oscillatory into a progressive  
movement, and to infuse spirit into the stag-  
nant life of this people, who, accustomed in  
so many things to a slavish imitation of the  
ruling islanders, cannot, however, adopt  
their activity. Yet, impelled by that spirit  
to which no one, however refractory, can  
ever be wholly insensible, many a salutary  
and praise-worthy object was promoted; an  
economical administration of the ecclesiastical  
possessions still remaining, and a conscien-

tious application of them to the wants of  
the church and the advancement of educa-  
tion; the abolition of exemptions from tax-  
ation, a measure, no doubt, tending solely to  
benefit the public treasury, as the rate of  
taxation was not thereby, in any degree,  
lowered; an equalisation, as far as possible,  
of the various parts of the country, with  
respect to land-tax; the allowing a diet for  
the seven lordships of East Friesland, and  
the restoration of the magistrates in the prin-  
cipal towns of that province; the abolition  
of the torture and the oath of purification;  
the deliberating on a proposition for the in-  
troduction of juries; all these proceedings,  
though defective wherever practical dexte-  
rity and ability were requisite for their ex-  
ecution, and wherever extent of view and  
clearness of conception were necessary in  
their plan, are still entitled to thanks as a  
praiseworthy commencement.”

The following remarks on the atrocious  
murder of Kotzebue, will let our readers  
more into the spirit of the author.

“The deed struck the people like light-  
ning. Since the years of our rising, nothing  
had taken place which they could compre-  
hend; but what had long remained unintel-  
ligible, and struggled for meaning, now found  
a language. A bloody deed had again become  
the point in which the thoughts of all were  
collected, and opinion was soon agreed re-  
specting this event. Disapprobation of the  
act with approbation of the motives, a re-  
newed feeling of the presence of eternal jus-  
tice in all human things, a clear light thrown  
over the condition of the country, and a keen  
interest in public affairs, were the results  
of the general agitation which followed in a short  
space. Public opinion had passed a grand  
climacteric; a profound seriousness came  
over the age, which, up to that period, had  
entered into public affairs with less earnest-  
ness.

“To this blow, which agitated men's  
minds so profoundly, another speedily fol-  
lowed, fearful and alarming from the very  
rapidity with which it succeeded. A young  
man, to whom the Machiavelian system, in  
which his native province was entangled, had  
long been an abomination, possessed of a  
good-natured and composed, but moody and  
close disposition, was also instigated by the  
bitter rage which burned within his bosom,  
to adopt the determination of tearing asunder  
the net by an act of violence. He selected  
the President Ibhl, whom he considered  
as the author of that system, for a sacrifice.  
But to obtain, by an overbearing energy, a  
tyranny over the multitude, who, by legal  
ways, may defend themselves from slavery  
even though means of an unjustifiable nature  
may have been resorted to, is, by no means,  
a crime deserving of death. A people can  
only enjoy so much freedom as they know  
how to deserve; and violent actions can  
never supply the deficiency of merit. This  
was the second error of the young man, in ad-  
dition to that which he shared with Sax-  
and he atoned for both with his life. Be-  
the angel of death passed by the object

• Loehning. Trans.

his attack. It darted, however, a furious look at him; and it is to be hoped that this look was understood. May the dreadful catastrophe tend to the welfare of his soul.

"Thus then, the destiny with which they had so long amused themselves on the stage, advanced with terror into the midst of them, when the levity gave place to alarm, and a profound dread of its obscure power. Having renounced the God of Christians, the old Jehovah again descended; "a jealous God, a revenger, full of anger, and of great power, whose ways are in storms and tempests, before whom a douring fire goeth forth, while darkness is under his feet, and who thunders with his thunder, and doeth great things, and yet is not known." The hour in which the first blood is shed in civil dissensions, and in which the first sacrifices fall, is a dreadful and decisive hour. It is the hour that gives birth to a whole ominous future, which takes its shape from the influence of the good or evil stars, at that time predominant. It is still a sign, therefore, basking happiness, and a pledge that Heaven is still merciful to Germany, that the signal was not in this, as in so many other cases, given by cold and naked atrocity; but that an act of violence was executed in the error of the heart, by hands in other respects pure. The two-fold character of this act therefore leaves two ways still open for our choice, the way of light and the way of darkness."

This is to us a fearful perversion of reasoning. Heaven keep England from these German doctrines, and cause us to look still in wonder at all its naked atrocity. We will instance but one passage more as illustrating the doctrines of this new school, and leave the judgment to our country's sound sense and good feeling.

"In the mean time the religious sense will again escape from its present quality, and men will once more acknowledge universally that religion is not an old woman's tale told to the nations in their infancy, but the tie which binds minds together, the word of the creating Spirit of the world, pronounced in human language: that even nature unconsciously celebrates her mysteries; that the state is merely the ground-floor of the church; and that public life and the cultivation of the sciences are divine worship. From the moral purity which still generally characterises the Catholic clergy in Germany, the higher sense and the enthusiasm calculated to dissolve the present deadness and numbness, and to communicate to forms their forgotten contents, may with great reason be expected to flourish again in that body. They will perceive that a dull and heavy conservatism, which, in its foolish zeal, would persecute the light, the noblest gift of God, will not lead to this end. This would be an insult to wisdom, which has every where victoriously maintained its ground, which a confused knowledge only can disturb, and which a complete and thorough knowledge will always secure and preserve. It would be an insult to that freedom which God has granted to man, which, when only partially enjoyed, leads occasionally

to error, but when fully developed sets bounds and measure to itself, when accompanied only by sincerity of heart. Let the Catholic clergy then kindle the torch in the sanctuary itself, which will disperse along with darkness the frivolity in which alone infidelity has ever struck root. The Protestant clergy will aid this endeavour by making a proper use of their freedom, and by ceasing to confound the self-willed and capricious doctrine that comes and goes with men with the eternal truth, which is suitable to all ages. Guided by the Scriptures, they will, in their peculiar manner, deduce, from the relations of finite personality, the relations of the infinite. But they must first purify the scriptures from all the accessions of bigotry, selfishness, and worldly passions, that through the clear water of the precious stone the higher light may penetrate, which haughtiness and pride, by agitating the mud of human conceit, too often obscure and cloud.

"The Sciences, if not pursued as a mere mechanical trade, dragging the cultivator down to the wretchedness of the earthly existence, but withdrawn, in the manner of ancient times, to the contemplation of the highest mystery, in philosophy as well as religion, will no longer drag down the striving spirit with a heavy weight, but assist in bearing it aloft to its higher destination."

*Travels in Italy, Greece, and the Ionian Islands. In a series of Letters, descriptive of the Manners, Scenery, and the Fine Arts. By H. W. Williams, Esq. With engravings from original drawings. Edinburgh and London, 1820. 8vo. 2 vols.*

This work contains more valuable information on the subject of the fine arts, than any book of the kind which we have seen: on other points, we have seen tours superior to it, though it possesses an agreeable character throughout, and may always be taken up with pleasure—sometimes, we are sorry to say, it may be laid down with the same feeling. This is owing to several Edinburgh peculiarities; the talent of lugging in contemporaries to bepraise them, and an occasional prolixity on matters not so interesting as others which are more lightly passed over. Mr. Williams is nevertheless a very observant and a very intelligent traveller. He has trod upon beaten ground, and yet contrived to produce an acceptable publication, by describing in a novel manner what has been described before; by giving brief but sensible critiques on works of art, to which his attention seems to have been particularly directed; and by treating whatever objects struck him as worthy of remark, generally, in a lively and entertaining way. The engravings

are neat, and their subjects well chosen: among them are the Elbesc residence of Buonaparte, a fac simile of a sketch (a soldier) by the ex-emperor, sketch from the scull of Raphael, the Castle of Otranto, Greek Melodies, Costumes, &c. &c.

As we have so recently and so minutely explored the regions of Greece with several able writers, we shall limit our illustrations of the present work to its Italian and incidental relations, although it is only the extent into which its remarks on painting and sculpture would carry us, which prevents our entering, at an adequate length, into its disquisitions on these heads. Still we shall begin with an extract connected with the fine arts. At Perugia—

In the Academy Della Bella Arte are several of the first attempts in painting of Pietro Perugino, and of Raphael, his immortal scholar. They appear to be but a step beyond the works of Giotto or Cimabue: one of Guido's earliest works, too, of a Boy peering an Apple, is hung with them, and certainly does not indicate his future excellence; it is painted on a panel at least three inches thick, and primed with stucco. The innumerable instances which we have of early paintings on stucco grounds, on panels, shew, that the departure from fresco or absorbent grounds was not altogether sudden; and that the final adoption of oil grounds was the result of time and much experience."

The first attempts of the great masters are certainly encouraging, and much information may be derived from them; but they are surely a dangerous collection for young practitioners to study. It is true, they shew the first glimpses of genius and improvement, but they shew no more. Taste is ill defined, apparently accidental, and not sufficiently under rule to guide an inexperienced mind. Yet the students of this academy draw and paint from these early pictures, and from great cartoons, after the extraordinary and singular figures in the Last Judgment of Michael Angelo. The masters of these subordinate academies should be careful, lest they lead the youthful mind astray. I have seen no good productions of any of the pupils; and I am now convinced, that making enormous and elaborate finished drawings in chalk, is little better than a waste of time. The Academy have few paintings, except by Giotto, Cimabue, Albert Durer, Perugino, and Raphael's early works; all of which seem to be painted by receipt.

Respecting the petrifying spring, not far from this city, the author has collected a curious detail.

A learned gentleman, who has lately visited the celebrated baths of San Philippo, about fifty miles from this ancient city, has

• This, to a certain degree, coincides with the opinion we lately gave on the subject of painting in oil.—Ed.

shewn us several casts, which are remarkable for their sharpness and peculiar beauty.

They are produced from a petrifying spring, which is applied to the formation of cameos and various ornaments. Our friend, imagining the process might be interesting, has obligingly favoured us with an account of it, which is as follows.

The spring issues from Monte Amiato, about four miles from Radicofani, on the route between that town and Siena, and is situate about half a mile from the road side. The water is in such quantity as to form a large torrent, and so hot that it cannot be borne by the human body, at its source. Very anciently baths were established there, and are still kept up. They are called *Bagni de San Filippo*. The water is perfectly transparent, but holds in solution a considerable quantity of sulphur, and an immense portion of carbonate of lime. Soon after the escape from the mountain, the sulphur is first deposited, and then the earthy matter, in such quantity as to have formed itself into a small mountain some hundred feet high, and nearly half a mile in length. This constant deposition of fresh earth is continually changing the place of the spring, and gradually approaching it nearer its source in the mountain. Of this petrifying water, advantage has been taken to form casts, somewhat in the following manner:—An impression of the medal is first taken in sulphur, or, what is still better, on glass, and the impressed figure or mould is then placed in the course of the stream, to receive the deposited matter. As, however, it is desirable that the dissolved earth be deposited in a certain state and condition, a series of three or four pits are sunk in the earth at a short distance from each other, and communicating by means of tubes. In these pits, deposition to a certain extent is successively made, till the water at length arrives at the last stage, refined, as it were, and charged only with its desired portion of earth. It is then made to fall through a tube on two pieces of board, two or three inches broad, placed crosswise thus +, the effect of which is to break the stream, and throw off the water in all directions. Beneath this crossed piece is another similar one, and a third still lower; but all of them crossing in different directions, the more completely to break and disperse the column of water that falls on them. These crossed pieces are then surrounded by frame work of wood, of a pyramidal form, within which are arranged the impressed sulphurs or glass, previously touched with a solution of soap, to smooth the surface, and facilitate the subsequent separation of the cast. They are disposed all round the pyramidal case, and placed somewhat obliquely forward, opposite the several series of crossed sticks, and at the distance of about a foot from their extremities. In this position they receive a continual and equable dash of the water, which deposits its earthy matter on the impressed surface, and which matter takes with the greatest fineness and precision the figure of the body on which it consolidates. The cast, thus obtained, may be made of any thickness, but in small figure; it is

commonly from one-eighth to one fourth of an inch. The time employed in its formation, is ten or twelve days. The pyramidal frame is of use, not only for disposing the moulds in the manner described, but also for guarding against all currents of air which might disturb the process of deposition; it is not designed, however, to exclude the entrance of air.

This manufactory was established by the late Peter Leopold, who so magnificently patronized all the sciences and arts. It is at present under the direction of Signor Pagliari, an artist of great ingenuity, who readily explains and exhibits all the stages of his process. His charges are in proportion to the dimensions of the cast.

For a cast of 1 inch diameter, 1 Paul, or 5d. English. 2½ inches, 1 Paul and a half; 4 inches, 3 Pauls; 5 inches, 6 Pauls; 6 inches, 9 Pauls; 7 inches, 10 Pauls; 8 inches, 20 Pauls; one foot 6 inches, 30 Pauls.

By an ingenious variation of the process, he is able to form a cast of differently coloured marbles, so as to present a white figure in relief on a blue or yellow ground, and vice versa. This is done by first forming the cast white as usual, then separating from it all the parts not projecting in relief, and exposing it as before to a second process of deposition, from water previously coloured. The coloured carbonate attaches itself to the white figure, and this forms a ground on the stratum of coloured matter on which the white matter rests; but in a manner so as to form one solid and continuous substance.

I know not whether the petrifying springs in Scotland or in Derbyshire, are sufficiently strong to produce casts in so short a time as ten or twelve days, but I should think the experiment might be tried with probable success, in small and delicate cameos, which would not require any great degree of thickness.

At Rome, Mr. Williams visits the studi of Canova and Thorvaldsen; and we remark that his opinion of the latter fully corroborates the statements concerning him, which will be found in our *Biographical Sketch*. \* He declares that—

For an accurate knowledge of the beau ideal, or the perfection of nature, whichever you please to call it, united with a keen discriminating eye for the beauties of the antique, yet still preserving originality, Thorvaldsen, especially in his basso-reliefs, is superior to Canova, who sometimes appears to copy himself. In examining the works of the former, the mind is led to ancient days of greatness, and seems to catch a portion of that sacred light, which sprang from the genius of Phidias, Praxiteles, and Cleomenes; the latter, on the other hand, presents to you the choicest views of nature, with less acquired knowledge from ancient sources, and perhaps with less refinement of sentiment and delicacy.

Omitting the amusing accounts of the Anglo-introductions to the Pope, and many other attractive particulars,

\* Postponed for want of room.

we shall present our readers with the view of the Buonaparte residents at Rome.

"The members of the Buonaparte family at Rome consist of the Princess Pauline, married to Prince Borghese; Louis Buonaparte, the ex-king of Holland; Lucien, the Prince of Canino, and his family; and lastly, the mother of Napoleon Buonaparte. The first of these personages was the favourite sister of the ex-emperor, and during his residence in Elba, he was in the habit of placing her close to him when they were in company; he would sometimes turn round while at dinner, and desire one of his officers to compose some quatrain in honour of the princess's charms, and to recite it to her at the table. One of those officers, who accompanied him to Elba, shewed a friend of mine several verses that had been composed by himself in obedience to his master's injunctions.

The princess lives separate from her husband, but she is allowed to occupy the splendid building of the Borghese palace at Rome. At present the prince resides at Florence. Napoleon, during his supremacy, had endeavoured to bring him forward in some public capacity, but the attempt is said to have failed; his inattention rendering it necessary to withdraw him from the situations to which he was appointed. The Princess Pauline is fond of society; she is, indeed, said to display much of the coquetry and vanity of a French woman of fashion. Canova has executed a statue of her, the symmetry and luxurious attitude of which is much admired. One evening she issued invitations for a large rout; the form of the invitation expressed her hope, that she should have the company of such and such persons, "to see the statue by Canova lighted up."

Persons sufficiently well acquainted, by the length of their intercourse, with the Buonaparte family, to describe the characters of the different members of it, gave the reputation of superior amiableness to two other sisters of Napoleon, Madame Baciocchi and Madame Murat; the former is always mentioned with particular respect.

Lucien carefully abstains from shewing himself in public, though he admits such English society as are introduced to him. He never touches on political subjects, or can be betrayed into conversing upon them when introduced by others, who are desirous of learning his opinion. He affects an occasional air of frivolity in conversation, probably as a veil to the serious designs, with which he has been said to be occupied respecting his brother. However, that may be, it is said to be a difficult matter to draw him out into giving his opinions on any subject, whether political or not. He had commenced farming, partly after the English manner, at his country villa La Rutinella, supposed by some to stand on the site of Cicero's Tusculan villa. His passion for agriculture had, however, much cooled, and was succeeded by a passion for astronomy. He is in possession of a fine telescope, and

some other optical instruments by Dolland, but I learned that he was sickle in all these different pursuits, and soon abandoned them. His dwelling in Rome is sufficiently handsome, and he has often small parties in the evening for music, or dancing: two of his daughters play and sing prettily, and express a partiality for Scotch music, especially that published by Mr. George Thomson, of Edinburgh: one of their favourite airs is, "Scots wha ha'e wi' Wallace bled." His eldest daughter (the fruit of his first marriage) was married to a Roman nobleman. Her uncle had, at one period, designed her to become the spouse of Ferdinand, the present king of Spain, but afterwards altered his plan, thinking that something more was necessary to secure the full dependence of Spain upon his own power.

The mother of Napoleon, formerly dignified by the title of Madame Mere, resides, together with her brother Cardinal Fesch, in the Palazzo Falcone. She lived in seclusion, and was even said to have become a devotee. Only one of her former ladies of honour remains with her; she occupies, however, a full suite of apartments, very handsomely furnished, and with a greater attention to comfort than is usual in Italian houses. She affects none of the reserve of Lucien on certain subjects, but speaks with tears in her eyes of the ex-emperor, displays the feelings of a mother in her language respecting him, and laments that he has not written to any of his family since his being at St. Helena, fondly cherishing the hope, (which appears to prevail among the adherents of Buonaparte,) that the English government would finally set him at liberty; and generally concludes with some strong expressions on the character of the English nation, with the generosity of which she declares herself well acquainted. Madame Mere has evidently been a very fine woman; at her advanced period of life she still looks well, through the aid of her toilette; her manners are even dignified. She appears a queen, and refutes, as do her daughters, those notions of the vulgar manners of the ladies of the Buonaparte family, which were so easily accredited in Britain. In one of the rooms in Lucien's palace is a bust of Niccolò Buonaparte, the father, which exhibits a countenance of remarkable expression; finer, indeed, than that of Napoleon, or any of the family.

Rome, at this time, 1817, is the residence of other princely families. The abdicated king of Sardinia, the ex-queen of Etruria, and the former king of Spain, Charles. The first of these personages lives pretty closely the life of a devotee; but the king of Spain intermixes with his religious offices a very tolerable attention to the pleasures of the table.

The prince of Peace retains with Charles that influence which has been fatal to his interests and those of Spain; the minion still of Charles's queen, his presence is considered necessary to the royal happiness. "I could not support existence without that fine man," was the expression of king Charles to a Roman physician, from whom

we had the anecdote. The prince possesses a fine palace, with a collection of pictures, said to be very valuable: he has recently married his natural daughter advantageously to a Roman nobleman.

From Rome, the author pursued the usual route to Naples, and of course, Herculaneum, Pompeii, &c. were visited. After a short notice of the former, we have a very picturesque description of the latter.

Pompeii, which was entombed in a softer substance, is getting daily disencumbered, and a very considerable part of this Grecian city is unveiled. We entered by the Appian way, through a narrow street of marble tombs, beautifully executed, with the names of the deceased plain and legible. We looked into the columbari below that of Marius Arius Diomodes, and perceived jars containing the ashes of the dead, with a small lamp at the side of each. Arriving at the gate, we perceived a centry-box, in which the skeleton of a soldier was found with a lamp in his hand: proceeding up the street beyond the gate, we went into several streets, and entered what is called a coffee-house, the marks of cups being visible on the stone: we came likewise to a tavern, and found the sign (not a very decent one) near the entrance. The streets are lined with public buildings and private houses, most of which have their original painted decorations fresh and entire. The pavement of the streets is much worn by carriage wheels, and holes are cut through the side stones, for the purpose of fastening animals in the market place; and in certain situations are placed stepping stones, which give us a rather unfavourable idea of the state of the streets. We passed two beautiful little temples; went into a surgeon's house, in the operation room of which surgical instruments were found; entered an ironmonger's shop, where an anvil and hammer were discovered; a sculptor's and a baker's shop, in the latter of which may be seen an oven and grinding mills, like old Scotch-queens. We examined likewise an oilman's shop, and a wine shop lately opened, where money was found in the till; a school in which was a small pulpit with steps up to it, in the middle of the apartment; a great theatre; a temple of justice; an amphitheatre, about 220 feet in length; various temples; a barrack for soldiers, the columns of which are scribbled with their names and jests; wells, cisterns, seats, tricliniums, beautiful Mosaic; altars, inscriptions, fragments of statues, and many other curious remains of antiquity. Among the most remarkable objects was an ancient wall, with a part of a still more ancient marble frieze, built in it as a common stone; and a stream which has flowed under this once subterraneous city, long before its burial; pipes of Terra Cotta to convey the water to the different streets; stocks for prisoners, in one of which a skeleton was found. All these things incline one almost to look for the inhabitants, and wonder at the desolateness of the place.

The houses in general are very low, and

the rooms are small, I should think not above ten feet high. Every house is provided with a well and a cistern. Every thing seems to be in proportion; the principal streets do not appear to exceed 16 feet in width, with side pavements of about 3 feet; some of the subordinate streets are from 6 to 10 feet wide, with side pavements in proportion; these are occasionally high, and are reached by steps. The columns of the barracks are about 15 feet in height; they are made of tuffa with stucco: one third of the shaft is smoothly plastered, the rest fluted to the capital. The walls of the houses are often painted red, and some of them have borders and antique ornaments, masks and imitations of marble, but in general poorly executed. I have observed, on the walls of an eating room, various kinds of food and game tolerably represented; one woman's apartment was adorned with subjects relating to love; and a man's with pictures of a martial character. Considering that the whole has been under ground upwards of seventeen centuries, it is certainly surprising that they should be as fresh as at the period of their burial. The whole extent of the city, not one half of which is excavated, may be about four miles. It is said that Murat employed no less than 2000 men in clearing Pompeii, and that Madame Murat attended the excavations in person every week. The present government have not retained above 100.

We shall add but one more extract, upon a subject of infinite classical importance.

The unfolding of the Papyri discovered at Herculaneum is extremely curious and interesting. From the frailty of the material, the process is extremely slow: perhaps not more than half an inch is unfolded at a time, and is fixed upon gold-beater's leaf. In appearance, the Papyri might be mistaken for parts of calcined branches of trees, the circular folds seeming like the growth of the wood. In looking at these black and indurated masses, it requires an effort to believe them to be full of human knowledge. The number of the rolls is very great; only two volumes of them, however, have as yet been published; the last contains fragments of a work of Epicurus, and a Latin poem in hexameters, very much mutilated, apparently descriptive of the contest for empire between Anthony and Octavius. In the next volume will be published a treatise of the philosopher Chrysippus concerning Providence. I believe there was found rolled up in his works a burlesque inscription of Epicurus, which may, perhaps, form a standard for identifying the different heads of that philosopher.

These examples will speak for the volumes just published; of which we shall only further say, that their lucubrations in Greece, Ionia, &c. are of equal interest.

*Chefs-d'œuvre of French Literature, consisting of Interesting Extracts, from the Classic French Writers, in prose and*

verse; with Biographical and Critical Remarks on the Authors and their Works. Vol. I. Prose. London. 1820, 8vo. pp. 392.

Though unfit for extract, we are induced to notice this volume for its excellence. The biographical sketches are so spiritedly executed as to hold competition with Mr. T. Campbell's recent beautiful work in our own language, and the whole design is filled up in a manner to give us entire satisfaction. We do not, therefore, hesitate to recommend this publication to students of French, to families, and to teachers. It is a most interesting and instructive book, calculated equally for the school and the juvenile library; and not, from being the latter, as is too often the case, unworthy of mature and general reading. Among the principal authors quoted are, D'Alembert, Barthélemy, Bayle, Bosquet, Buffon, Crébillon, Diderot, Fénelon, Florian, Fontenelle, La Harpe, Marmontel, Montaigne, Montesquieu, Pascal, Raynal, Rollin, Rousseau, Le Sage, Sévigné, Voltaire, &c. &c. &c.

*Spence's Anecdotes &c.* By S. W. Singer.

In our last we promised an example of the epistolary matter contained in the appendix to this volume, of which promise we acquit ourselves by the insertion of the following entertaining letter from Mr. Spence to his mother when travelling.

TO MRS. SPENCE.

Turin, Dec. 2, 1739.

Dear Mother,

Soon after I came to this place, as I was walking one Evening under the Portico of the Street of the Po, I saw an Inscription over a great Gate; which, as I am a very curious Traveller, you may be sure I did not miss reading. I found by it, that the House belong'd to a set of strollers, and that the Inscription was a bill of the play that they were to act that Evening. You may imagine how surpris'd I was to find it conceiv'd in the following words: "Here under the Portico of the Charitable Hospital for such as have the Venerable Disease, will be represented this Evening, *The Damned Soul*: with proper Decorations." As this seem'd to be one of the greatest Curiosities I could possibly meet with in my Travels, I immediately paid my three-pence; was shew'd in with great civility; and took my seat among a number of people, who seem'd to expect the Tragedy of the Night with great Seriousness.

At length the Curtain drew up; and discover'd the *Damn'd Soul*, all alone, with a melancholy Aspect. She was (for what reason I don't know) dress'd like a fine Lady; in a gown of Flame-colour'd Satin. She held a white Handkerchief in her hand, which she apply'd often to her eyes; and in this attitude, with a lamentable Voice, began a prayer (to the Holy and ever Blessed Trinity) to enable her to speak her part well: afterwards she address'd herself to all the good Christians in the Room; beg'd them to attend carefully

to what she had to say; and heartily wish'd they would be the better for it: She then gave an account of her Life; and, by her own confession, appear'd to have been a very naughty woman in her time.

This was the First Scene. At the Second, a back curtain was drawn; and gave us a sight of our Saviour and the Blessed Virgin: amidst the Clouds. The poor Soul address'd herself to our Saviour first, who rattled her extremely: and was indeed all the while very severe. All she desired was to be sent to Purgatory, instead of going to Hell: and she at last beg'd very hard to be sent into the Fire of the former, for as many years as there are drops of water in the sea. As no favour was shown her on that side, she turn'd to the Virgin and beg'd her to intercede for her. The Virgin was a very decent Woman: and answer'd her gravely, but steadily; "That she could do nothing for her Son so much, that she could do nothing for her:" and on this, they both went away together.

The Third Scene consisted of three little Angels, and the Damn'd Soul. She had no better luck with them: nor with St. John the Baptist, and all the Saints in the Fourth: so, in the Fifth, she was left to two Devils; seemingly to do what they would with her. One of these Devils was very ill-natur'd and fierce to her; the other, was of the droll kind; and for a Devil, I can't say but what he was good-natur'd enough: tho' he delighted in vexing the poor Lady rather too much.

In the Sixth Scene, matters began to mend a little. St. John the Baptist (who had been with our Saviour I believe behind the Scenes) told her, if she would continue her Entreaties, there was yet some Hope for her. She on this again besought our Saviour and the Virgin to have compassion on her: The Virgin was melted with her Tears, and desir'd her Son to have pity on her; on which it was granted, that she should go into the Fire, only for sixteen or seventeen hundred Thousand years; and she was very thankful for the mildness of the Sentence.

The Seventh (and last) Scene, was a Contest between the two Infernal Devils above mentioned, and her Guardian Angel. They came in again; one grinning, and the other open-mouth'd to devour her. The Angel told them, that they should get about their business. He, with some difficulty, at last drove them off the Stage; and handed off the good Lady; in assuring her that all would be very well, after some hundreds of thousands of years, with her.

All this while, in spite of the excellence of the Actors, the greatest part of the Entertainment to me was the countenances of the people in the Pitt and Boxes. When the Devils were like to carry her off, every body was in the utmost consternation; and when St. John spoke so obligingly to her, they were ready to cry out for Joy. When the Virgin appear'd on the Stage, every body looked respectfull; and on several words spoke by the Actors, they pull'd off their Hats, and cross'd themselves. What can you think of a People, where their very faces are Religious, and where they are so

Religiously receiv'd? May you be the better for reading of it, as I was for seeing it!

There was but one thing that offended me. All the Actors, except the Devils, were women; and the person who represented the most venerable character in the whole Play, just after the Representation, came into the Pitt; and fell kissing a Barber of her Acquaintance, before she had chang'd her Dress. She did me the honour to speak to me too; but I would have nothing to say to her.

It was from such a Play as this, (call'd Adam and Eve) that Milton, when he was in Italy, is said to have taken the First Hint for his Divine Poem of Paradise Lost. What small beginnings are there sometimes to the greatest things! I am ever (with all Services to all Friends,)

Your Dutiful and Affectionate,  
J. SPENCE.

*Anastasis; or Memoirs of a Greek.*  
3 vols.

(Continued.)

Anastasis, now Selim, so specially converted to Moslemism, as we have recorded, of course required instruction in his new faith. His instructor is—

The gravest of the whole grave body of doctors of law—the very pink and quintessence of true believers; one who would not miss saying his namaz regularly four times a day, three hundred and sixty days in the year, for all the treasures of the Devas; who, to obtain the epithet of hafeez, had learnt his whole koran by heart unto the last stop; and who, not satisfied with praying to God like other people, had linked himself to a set of dancing Drwishes, for the sole purpose of addressing the Deity with more effect in a sugar-loaf, and twisting round the room like a top; a personage who, in a devout fit, would plump down upon his knees in the midst of the most crowded street, without turning his head round before he had finished the last reekath of his orison, if all Constantinople were trembling in an earthquake; who, considering all amusements as equally heinous, made no difference between a game of chess or mangala, and illicit attentions to one's own great-grand mother, and once, in his devout fury, with his enormous chaplet positively demolished Karagheuz in the midst of all his drollery; a personage who, at the end of the Ramadan, looked like a walking spectre, and the very last time of this fast absolutely doubled its length, only for having snuffed up with pleasure, before the hours of abstinence were over, the fumes of a kiebap on its passage out of a cook-shop; a personage who had an absolute horror of all representations of the human figure—those of Saint Mark on the Venetian sequin only excepted; a personage, in fine, who already was surnamed in his own district the Wely or Saint; and whom all his neighbours were dying to see dead, only that they might hang their rags round his grave, and so get cured of the ague.

When this reverend Moollah first made his appearance, his face was still bedewed

with tears of sympathy, occasioned by a most heart-rending scene of domestic woe, which his charitable hand had just assuaged. In an adjoining street he had found, stretched out on the bare pavement, a whole miserable family,—father, mother, brother, sister, together at least with a dozen children of tender age,—in a state of complete starvation. The very description of such a piteous sight harrowed up my soul. Lest however the holy man should incur a suspicion of having been betrayed into a weakness so reprehensible as that of pity for the human species—for which he felt all the contempt it deserved, and which he never presumed to solace under any of the visitations inflicted by providence,—I should add that the wretched objects of his present compassion were of that less criminal sort, the canine species! They belonged to those troops of unowned dogs whom the Turks of Constantinople allow to live in their streets on the public bounty, in order to have the pleasure of seeing them bark at the Christians whom their Frank dress betrays. To these, and other beings of the irrational genus, were entirely confined the benefactions of my tutor; and if his own species have few obligations to acknowledge from him, he was recorded as having purchased the liberty of three hundred and fifty canary birds in cages, granted pensions to the baker and butcher for the maintenance of fifty cats, and left at least a dozen dogs, whom he found on the *parc*, handsomely provided for in his will.

No sooner was my venerable instructor comfortably seated on his heels in the angle of my sofa, than looking around him with an air of complacency, as if he liked my lodgings, he told me to my infinite satisfaction, that, provided he only took his station there for two hours every day, he pledged himself before the end of the first year to instruct me thoroughly in all the diversities of the four orthodox rituals,—the Hanefy, Schafey, Hanbaly, and Maleky; together with all that belonged to the ninety-nine epithets of the Deity, represented by the ninety-nine beads of the chaplet. In the space of another twelvemonth he ventured to hope that he might go over with me the principal difference between the two hundred and eighty most canonical Muffessirs or commentators on the Koran, as well as the two hundred and thirty-five articles of the creed, on which theologians entertain a difference of opinion; and in the third year of our course, he promised to enable me completely to refute all the objections which the Alewys and other dissenters make to the Sunnee creed; and to have a general idea of the tenets of the seventy-two leading heretical sects, from that of Ata-bakem-el-Mookanna, or the one-eyed prophet with the golden mask, to Khand-Hassan, the fanatic who eat pork and drank wine in the public market place like any Christian: so as through dint of so much diligence on the fourth and last year to have nothing to do but to go over the whole again, and imprint it indelibly on my memory. By way of a little foretaste of his method of instruction, he took up one of the controversial points; first raised his own objections

against it; and then,—as he had an undoubted right to do with his undisputed property,—again completely overset them by the irresistible force of his arguments; after which—having entirely silenced his adversary, he rose, equally proud of the acuteness of his own rhetoric, and charmed with the sagacity with which I had listened.

The truth is I had fallen asleep; wherefore, when I suddenly awoke on the din of his argumentation ceasing, I shook my head with a profound air, and by way of shewing how much in earnest I meant to be, with a very wise look said I could not give my unqualified assent, until I heard both sides of the question. Thus far I had heard neither.

This determination rather surprised my doctor, who seemed to have relied on my faculty of implicit credence. "Hear both sides of the question!" exclaimed he in utter astonishment. "Why that is just the way never to come to a conclusion, and to remain in suspense all the days of one's life! Wise men first adopt an opinion, and then learn to defend it. For my part I make it a rule never to hear but one side; and so do all who wish to settle their belief."

After various adventures at Constantinople, our hero sets out to claim his mother's estate at Naxos, for his change of religion gave the right to the younger brother. On his voyage, one of his fellow passengers, he tells us, was—

A personage with whom I had made acquaintance on board the Turkish fleet, during the expedition to the Morea. Never had we met since the failure of the attempt on Mayno. The marine therefore felt great pleasure in boasting of the more successful one against the same nest of pirates, undertaken the ensuing year. The delight with which he described how the Moohasil of the Morea forced the little peninsula by land, and the Capitan-pasha blockaded it by sea; and how the inhabitants, driven by the one out of their strong holds, fell with their boats into the clutches of the other, could only be exceeded by the rapture with which he painted the males all hanged, and the women and children all drowned, in order to reconcile them to the Turkish yoke. "You" he concluded, "who are going to take possession of your estates, mean henceforth I suppose to lead a sober country life, and have done with all such frolics. May you prosper! For my part, I hate innocent amusements, and want a little vice to season my pleasures!" Tenedos now being near, my friend called for the boat, and got himself rowed ashore; while I wished him at parting a great deal of pleasure with all manner of vice.

(To be continued.)

Burckhardt's Nubian Travels, 4to.  
(Continued.)

From Taka Mr. Burckhardt was tempted to make his way southward into Abyssinia, through the land of the Arabs Omran, and the Hallengas; but he tells us—

Great animosity seems to prevail between the Hallengas and the Abyssinians, the latter never being mentioned by them without some opprobrious epithet, the mildest of which is Kafer. I had heard in Upper Egypt, and at Berber, that caravans sometimes depart from the Hallengas for Massouah; and I was afterwards told at Djidda, by some Massouah merchants, that Hallengas were sometimes seen at that place with cows for sale; but I could hear of no such intercourse during my stay at Taka. The Hallengas have a slight commercial intercourse with the Abyssinians of the province called Walkayt. Had I seen the least probability of making my way towards Massouah, I should have attempted it, for that part of the country appeared to me to be very interesting; it would have led me through the dwellings of many tribes who form the links of the chain by which the Abyssinians are connected with the Arabs, and whose manners, no doubt, present striking originalities; but after what I observed of the character of the people of Taka, I did not think that I should have the smallest chance of being able to protect my little property after quitting my companions the Souakin merchants; and from what I saw of the hospitality of these people, I was certain that if once stripped I should perish of want. To have engaged one of these savages as a guide would have been of little avail, had he even proved faithful, as he could not have ensured my safety for more than one day's journey, or as far as the limits of his own tribe. I should then have fallen among strangers, all intent upon plundering me of whatever I possessed, while I should have had nothing to offer in my defence, and could hardly have made myself understood, very few people in those parts speaking Arabic. I hope, therefore, I shall not be blamed for abandoning this project, while, on the other hand, I had reasonable hopes of reaching Souakin in safety. I heard at Taka that Souakin and Massouah were at equal distances from the Hallengas.

Obliged to relinquish this project, Mr. Burckhardt went on towards the Red Sea, between which and the Nile, he was now nearly mid-way. His remarks retain the same character as hitherto: he relates very extraordinary things with the utmost simplicity, and seems to forget that they are not the less astonishing on account of having become somewhat familiar to him. The caravan started from Taka on the 15th June, and proceeded N. E. by N; and the annexed account of pilgrim routes to Mecca is exceedingly interesting to African geography.

June 16th.—We continued in the direction of N. E. by N. We had now with us eighteen or twenty of the Tekayrre, or Negroe pilgrims. The appellation is bestowed on all Negroes who come from the west, in search of learning. They do not call themselves by this name of Tekroury, which many assured me they had never heard till they reached the

limits of Darfour. All these pilgrims can read and write a little; and they all belong to the class styled Faky (plur. Fakihah). I never found any of them quite illiterate. After making some progress in the schools of their country, (schools being met with in all the Mohammedan countries of Africa,) they proceed to Mekka for the Hadj, or in order to study the Koran and the commentaries upon it, in that place and Medina; or to Cairo, for the same purpose; but the greater part go for the Hadj; at present there are not more than twelve in the mosque El Azhar at Cairo, and I did not find above double that number in the great mosque at Mekka; where they are occupied chiefly in learning the Koran by heart, in the belief, that they can never forget a chapter which they have once learnt in the Beit ullah (house of God). The greater part of the Tekayrne who visit Mekka, come from the schools of Darfour, the principal of which are at Koudjara, in the neighbourhood of Kobbé. Those from the most western countries, who pass this road, are from Bahr el Ghazal and Bagerine. All the Black Hadjis from the countries to the west of Bagerine, from Bournou as far as Timbuctou, either travel with the Fezzan, or great Moggrehyn pilgrim caravan, or proceed by sea from the coast of Barbary.

Some of the Tekayrne of Darfour and Kordofan are possessed of considerable property, and trade during their journey. At Djidda, I met with a man from Darfour, with three or four female attendants, and half a dozen female slaves, which formed his household, besides the slaves he carried with him for sale; but the greater part of them are quite destitute, and find their way to Mekka, and back to their own country, by begging, and by what they can earn by their manual labour on the road. The equipments of all these pilgrims are exactly alike, and consist of a few rags tied round the waist, a white woollen bonnet, a leathern provision sack, carried on a long stick over the shoulder, a leathern pouch, containing a book of prayers, or a copy of a few chapters of the Koran; a wooden tablet, one foot in length, by six inches in breadth, upon which they write charms, or prayers, for themselves or others to learn by heart; an inkstand, formed of a small gourd; a bowl to drink out of, or to collect victuals in from the charitable; a small earthen pot for ablution; and a long string of beads hanging in many turns round the neck. The Tekayrne seldom travel alone, at least they never set out alone upon their journey; they generally form parties of about half a dozen, and as opportunity offers, join some caravan on the road, or proceed by themselves. Their usual route to Mekka is by Siout, by Sennar, or by Shendy. Those from the most western countries meet at Darfour; after which, such only as can afford to travel with the Darfour caravan, (which requires capital sufficient to buy camels and provisions for the journey through the desert), repair to Siout, from whence they proceed to Djidda, by the way of Kosseir. The pilgrims who go by Sennar come from Kordofan, and

pursue their journey by three different routes: viz. 1, through the interior of Abyssinia, by Gondar and Axum, to Massouah; 2, along the Nile from Sennar to Shendy; and, 3, from Sennar to Taka, by the way of Ras el Fil, and from thence to Hallenga, by which they escape the journey through the desert. Those who travel by the first route complain of being ill-treated by the Christians of Abyssinia, of never being allowed to enter any house, or even courtyard, and of being fed like dogs (as they express it) before the threshold. They, however, always obtain a copious evening meal. At Massouah they remain a few weeks, till they earn by their labour sufficient to pay their passage-money by sea either to the nearest coast of Yemen, which is one dollar, or to Djidda, which is two dollars. Their usual rendezvous is Hodeyda, the sea-port of Yemen, from whence they proceed to Mekka, by land, passing through the hospitable tribes of Bedouins in the mountains of the Hejaz. I estimate the number of Negroe pilgrims who pass by this route annually to Mekka at about one hundred and fifty, or two hundred. Many Tekayrne are settled in the sea-ports of Yemen, as well as at Djidda and Mekka. The third route is preferred by all pilgrims who are able to make a common purse in order to buy a camel for the transport of water and provisions; and they are sure of finding at Taka, after a short stay, some merchants from Souakin, in whose company they can proceed to that place.

It will readily be conceived that the danger and fatigue incident to the journey prove fatal to great numbers of the pilgrims; perhaps one-sixth fall victims to their zeal; the greater part of the diseases by which they are attacked on the road, arise from their being almost destitute of clothing; many perish in the deserts through want and fatigue, and others are murdered; but as all who die on the road are looked upon as martyrs, these contingencies have little effect in diminishing the annual numbers, or in diverting others from their purpose. Although the greater number of the pilgrims are stout young men, yet it is not rare to see women following their husbands to the Hadj; and, almost incredible as it may seem, one of the men who joined our caravan at Taka was blind.

Some of the Tekayrne are men of power and wealth in their own country, but travel as paupers, in order to escape the dangers attendant on riches, in the journey. During our encampment in the plain near Souakin, I saw a young Tekroury sleeping in a lonely spot, while another, kneeling by him, kept off the flies from his face. On enquiry, I learnt from the other negroes, that he was the son of a great chief in Dar Saley, who had been educated with the Fakys, and had set out upon this journey, with a camel, and one servant only. At Shendy he had exchanged the camel for an ass; the servant had become his friend and companion, and both mixed in the crowds of the poorest pilgrims. It is principally owing to a few examples such as these, that the generosity of

the inhabitants of the countries through which the pilgrims pass, are so uncharitable and cruel to them; they think that every Tekroury is a king of Soudan in disguise, with abundance of gold about him.

In Africa as well as in Arabia, the country people, wherever the black Fakys pass, are eager to procure amulets of their writing, which are supposed to possess greater virtue than those of any other class of pilgrims. There lives at present, in Cairo, near the Kara-Meydan, a Tekroury, who has been for many years famous for his amulets, and who makes large sums of money by writing them.

(To be continued.)

ANALYSIS OF THE JOURNAL DES SAVANS,  
FOR AUGUST AND SEPTEMBER 1819.  
(Concluded.)

#### HISTORY OF VENICE.

Art. V. Histoire de la République de Venise, par P. Daru, de l'Académie Française, 7 vol. 8vo.

The review of this work being now concluded, we proceed, according to our promise, to give an account of it.

While reading this important work (says the reviewer,) in which the author gives us a complete history of an illustrious republic from its origin to the revolution, which in our days has overthrown its ancient institutions and its government, I had constantly in my mind the fine verses of Sannazarus.

Viderat Hadriens, . . . . .

Sine lago Hydrum pretera urbem aspice utramque;

Ilam homines dicēs, hanc possidere Deos.

The Venetians, it is said, called their city 'Opus Excelsi,' the work of the Most High.

The city still exists, but the institutions, the government, the political rights which rendered the Venetians an independent people, the origin of which was coeval with the most ancient monarchy of Europe, have ceased, perhaps for ever. I employ the expressions of the historian of the Republic. "It has perished in that great revolution, which has overthrown so many states. A caprice of fortune has raised again the thrones which had been subverted. Venice, almost alone, has irrevocably disappeared; its people are erased from the list of nations."

The author has been in a situation in which it was more easy for him to describe with entire impartiality the annals of this republic, revealing, without inconvenience and without injustice, the springs of a mysterious government, which has been by turns blamed and admired, but which, at least, long excited with glory. From research into the Archives of Venice, which were formerly secret; by indefatigable zeal and patience in examining all the great libraries, this work of Count Daru's affords results, and contains disclosures, which would distinguish it, even in this respect, from all those very numerous productions, hitherto published, whether by Venetians, or by authors not belonging to the Republic.

The Veneti, a people of ancient Italy, descended, according to some, from the Veneti of Armorica, and according to others, from the Heneti of Paphlagonia, inhabited the country on the shores of the Adriatic, between the Julian Alps and the river Po. On the irruption of the Barbarians into Italy, and principally at the time of the arrival of Attila in 452, the Veneti took refuge on several little islands, formed by the mouth of that river. They chose at first a popular government; each of these islands elected annually a tribune, who was charged with the government and the administration of justice, and these magistrates were responsible to the general assembly. In 697 it was judged necessary to appoint a supreme magistrate by the name of Doge. The Doges soon became ambitious to transmit their office to their sons, or their relations; factions arose, feuds became hereditary. To secure the office in their family, the Doges generally associated a son or a brother in the power, during their own life.

The island of Rialto, surrounded by many little islands, was the most considerable; the Doge Angelo Participatio, united them by bridges, and surrounded them with a rampart in 809, and then it was that the city took the name of VENICE.

This republic had already had to defend itself against foreign attacks. Pepin and Charlemagne had turned their arms against it: its commerce had prospered; and either through ambition or necessity, it had engaged in various wars with its neighbours. As Venice had increased her power, the causes of civil dissension had increased in the same proportion. Towards the end of the 10th century the Doge Peter Ursuolo I. afflicted by these discords, secretly left the palace, and retired into a monastery near Pergipian, where he assumed the monastic habit, and died in 997.

Dominic Ursuolo having formed a faction to obtain the office of Doge, to which he thought he had a title, as a relation of the preceding Doge, a fundamental law was passed, prohibiting the nomination of a successor to a Doge, during his life time. The observance of this law was one of the principal causes of the stability of the government of Venice. Count Daru employs the whole 39th book in describing it. This part of his work is of great merit, and highly interesting besides, from its containing several details, now published for the first time.

The Crusades, which ruined other states, contributed to increase the commerce and the power of the Venetians. After the taking of Constantinople, they received their share of the spoils of the empire of the East, and the Doge added to his titles, that of "Lord of a Quarter and a Half of the Roman Empire."

One of the most honourable epochs in the history of Venice, is undoubtedly, that from 1379 to 1381. Count Daru calls it the War of Chiozza. This part of the work fills up the whole 10th book. The republic, reduced to the last extremity, struggled with equal courage and courage, against the jealous powers and nations, united against it in a

league, at the head of which were the Genoese, animated by an implacable spirit of rivalry, which aimed at nothing less than the destruction of Venice. The author has, in this part, culminated the glory and nobleness of his subject. We regret that we cannot quote some pages, which would enable our readers to appreciate the merit of the style, the art with which the author has employed dramatic forms, and the warmth with which he has painted the exalted sentiments, the generous devotedness of the Venetians during the reverses of their country, and in the presence of the imminent dangers over which they finally triumphed.

The taking of Constantinople by Mahomet II., the invasions of Italy by the French, the discovery of the New World, and of the passage to India by the Cape of Good Hope, had a very great influence on the foreign policy, and the commerce of the Venetians. Being obliged, according to circumstances, to change her friends and enemies, during the expeditions of Charles 8th, Louis 12th, and Francis 1st, Venice at length enjoyed an uninterrupted peace from 1540 to 1570, and it is remarkable that this peace was concluded by the authority of the council of ten, which had given instructions and powers more ample than those of the government itself. In the 17th and 18th centuries the Venetians took a less active part in the affairs of Europe. They remained neuter in the war of the Spanish succession; but their neutrality was more injurious than advantageous to them. In 1719, the peace of Passarowitz seemed to have fixed the destinies of Venice; for after that peace the republic suffered no loss, made no acquisition, or exchange, and avoided taking part in the wars for the succession of Parma and Tuscany, and that of the Emperor Charles VI.

The Venetians then taking less part in the affairs of other powers, were more engaged with their own government. A great competition arose between the various powers, which successively attacked each other. It was under these circumstances that the French revolution surprized the Venetians, who were rendered supine by a peace which had continued above seventy years.

Count Daru describes the various and numerous incidents which preceded and brought on the catastrophe, which terminated the political existence of Venice. This part of his work is entirely new; it contains very curious details, and very interesting circumstances, which we do not dwell upon, because every body is acquainted with the principal events, and the fatal result.

Another very interesting part of this work is the account of the differences between Venice and the Court of Rome, in which the Venetians gave numerous proofs of a spirited and enlightened opposition to the pretensions of the papal see.

If we examine the political institutions of Venice, and the spirit of its government, we admire and shudder at the terrible means which served to found and to maintain this ancient aristocracy.

One of the institutions to which Venice

was indebted for the public tranquillity, which it consolidated without ceasing at the expense of individual security, was that of the state inquisitors whose origin Mr. Daru fixes in the year 1454. Historians had hitherto been ignorant of the attributes, the means, and the forms of this formidable tribunal, or had not dared to disclose them. The part of Count Daru's book which treats of them, is a real historical conquest, which therefore merits peculiar attention. We see by the regulations which he has published, that this tribunal had in its pay, spies among all classes of the inhabitants, to keep a constant watch over the magistrates, the citizens, the ambassadors. All the machinations, all the perjuries of the civil inquisition, are laid open in this code. If, for instance, among the patricians chosen to offices, any one does not possess the entire confidence of the inquisitors, he is to be surrounded with spies, who are to tempt him by making him mysterious proposals against the government; and if he does not immediately come and give an account of these proposals, he shall be inscribed on the list of suspected persons. The ambassadors of Venice at foreign courts, held a correspondence with the inquisitors, in which they communicated certain discoveries of which they were not to speak in their dispatches to the Senate. We quote some of the articles.

Art. XVI. When the tribunal shall have judged the death of any one necessary, the execution shall never be public; the person condemned shall be privately drowned by night in the canal Orfano.

Art. XXII. Every two months the tribunal shall have the mail of the courier to Rome brought to it, and the letters shall be opened, in order to discover the correspondence which the papalists may keep up with that court.

Art. XXV. The tribunal shall authorise the generals commanding in Cyprus or in Candia, in case there should be in the country some patrician, or other person of consequence, whose conduct makes it desirable that he should not remain alive, to have him put to death secretly, if in their conscience they judge this measure indispensable, and can answer for it before God.

This mode of proceeding, barbarous as it was, had at least the pretext of the safety of the state, and the public interest. But what shall we say to

Art. XXVI. If a workman carries to a foreign country any art, to the detriment of the republic, his relations shall be thrown into prison; if he does not return, measures shall be taken to put him to death, wherever he may be; and after his death his relations shall be set at liberty.

Art. XXXV. relates to the nobles, who express their opinions in the senate. "If he proceeds to discuss the authority of the council of ten, and wishes to infringe upon it, he shall be suffered to speak without interruption, then he shall be immediately arrested and brought to trial, to be punished according to the crime; and if this means does not succeed he shall be secretly put to death."

Art. XXXIX. A discontented noble, who

shall speak ill of the government, shall be cited, and twice warned to be more circumspect; the third time he shall be forbidden to shew himself for two years in the councils and public places; if he does not obey, if he does not keep strictly in retirement, or if, after the expiration of those two years, he is guilty of new indiscretions, he shall be drowned, as incorrigible.

These quotations will give a sufficient idea of the other numerous articles drawn up in the same spirit; and which are the corollaries of the principles laid down by the tribunal.

Of the 40 books which compose the history of Venice, there are some, in which the nature of the subject has permitted the author to shew a very superior talent; such are the 4th and 5th, in which he relates the taking of Constantinople by the Crusaders, and the consequences of that great event; the 6th, which contains an excellent essay on the governments of Italy in the 14th century; the 10th, on the war of Chiozza; the 19th, on the commerce and marine of the Venetians; the 21st, on the differences of the republic with Paul V.; the 31st, on the conspiracy of 1618, in which the author, after a most luminous and convincing discussion, comes to the conclusion, that there was no conspiracy against Venice; that the Marquis of Bedemar had never formed or favoured any hostile project against the republic; and that it was the Duke of Ossuna, viceroy of Naples, who with the design of seizing on the kingdom of Naples, with the secret assent and aid of Venice, had kept up a private negotiation with the Venetian government, the subaltern actors in which were first the dupes, and then the victims, when the plan of the Duke having failed, it was found necessary to treat as conspirators, agents who were to have been the auxiliaries of the Duke of Ossuna.

To these we add the 35th book, which gives the picture of the republic towards the end of the last century; the 36th, 37th, and 38th, which include the fatal epoch from the commencement of the French revolution till the overthrow of the Venetian republic; the 39th, which describes its government; and the 40th, which gives the picture of the state of literature, of the sciences, and the arts, among the Venetians.

Five volumes contain the history, properly so called; and it will not appear diffuse if we recollect, that the history of the republic by the Abbé Laugier is in 12 vols. without notes, without justificatory documents, and that it ends in 1750; that is previous to the events which excite the most interest, and require the most development, in the work of Count Daru.

Two volumes contain the justificatory pieces, and the indication of the numerous MSS. which the author has consulted. Readers not accustomed to literary researches, will not easily form an idea of those which have been necessary for the composition of this great work, which will henceforth be the only one, in which we can completely study the history of a republic, of which

nothing remains but illustrious and terrible recollections.

Lastly, several maps and plans give an additional value to this great and excellent work, which on many accounts deserves to be ranked among the number of good histories, which do honor to our literature.

Art. VI. Count Orloff's Memoirs of the Kingdom of Naples. 2 vols. 8vo.—As we have in our 150th Number given an extract from this work, and in Number 151 a letter from Mr. Blaquiere, announcing his intention of preparing an English translation of it, we shall refrain from further notice of it, till Mr. B. shall have fulfilled his promise.

## ORIGINAL CORRESPONDENCE.

NEW BRITISH SETTLEMENTS IN AFRICA  
AND ASIA.

(From a foreign Journal.)

We learn from a correspondent in London, that since the years 1812, 1813, and 1814, Lord Valentia has been commissioned by the English government, to examine the coasts of Melinda and Abyssinia, and have surveys made by engineers, (while a draughtsman, Mr. Sein, is travelling through the interior of that country and of Nubia) in order to found new commercial establishments on the remains of the Portuguese industry. All the anchoring places and entrances are already fortified. By these means the access to the Red Sea is closed as much as that to the Gulph of Venice; and it is probable that no nation except the English will henceforward venture to visit the seas near the Island Socotora, of which they have already taken possession.

The Gulph of Persia is in the same situation as the Red Sea: it is commanded by the English batteries; establishments having been formed upon the islands lying on the north coast of that Gulph. The English ship Favourite, Captain Ashley Maudie, surveyed the coasts of these islands in July, 1816; they are eight in number, and this captain took possession of them in the name of his sovereign, on the pretext that they had never been marked in any chart engraved at London, though they were formerly visited by the Portuguese. The islands have the following names:—Aff, Yarnin, Arzenie, Ahny, Syr-hon-yass, Déluze and Cheraroon. They are situated on an immense bank of pearl oysters, which extends nearly two hundred English miles from North to South.

They were taken possession of to facilitate the pursuit of the Wechabite pirates; but they would be of importance if Persia should be obliged to give up the island of Bahrein to Russia.

## LEARNED SOCIETIES.

OXFORD, Jan. 15th.

The days appointed for congregations for the purpose of granting Graces and conferring Degrees, in the present Term:—viz. January, Friday, 14th; Thursday, 27th; Fe-

bruary, Thursday, 8th; Saturday, 12th; Tuesday, 15th; March, Thursday, 2d; Thursday, 16th; Monday, 27th.

Yesterday, the first day of Lent Term, the following degrees were conferred:—

MASTERS OF ARTS.—Rev. Charles Henry Watling, fellow of Jesus College.

BACHELORS OF ARTS.—Thomas Jeffery Bumpstead, Esq. Queen's College, grand compounder; William Day, Esq. Brasenose College, grand compounder; Edward Wuestall, Queen's College; Charles Buck, St. Edmund Hall; John Baron, Henry William Buckley, Peter Hordern, and Francis Stonehever Newhold, Brasenose College.

## ORIGINAL POETRY.

[By Correspondents.]

TO SOPHIA.

Though thou art lovely, and arrayed  
In all the graces of thy kind,  
Those charms, alas! are but displayed  
To raise a tumult in my mind.  
Thou canst not love, nor canst thou tell,  
How I adore, may dot on thee;  
Where'er I go, where'er I dwell,  
Thy form lives in my memory.  
Then fare thee well! I would not leave  
The thought of one so fair as thou,  
Until thy death should bid me weave  
A cyprus wreath to deck my brow.  
And e'en in that much dreaded hour,  
If fate should will I live so long,  
Thy gentle shade shall haunt my bower,  
Thy lovely name shall grace my song.

Leeds, Jan. 8th, 1820. H. W. T.

## RELIGION.

From the lone watch-tower by the howling deep,  
Where winds and waves their midnight revels keep,

The feeble taper gleams along the tide,  
And haptly provides the wand'ring seaman's guide.  
So o'er the turbid flood of changeable life,  
Even whose deepest calms are deadly strife,  
Religion's light reflects a cheering ray,  
To guide poor mortals on their dang'rous way.  
When reason fails, and hope is well nigh o'er,  
And close at hand impends th' eternal shore;  
She's the last refuge—she alone appears  
To calm their woes, and dissipate their fears;  
She's the sheet anchor, which at length they cast,  
And in the haven safe they ride at last.

Leeds, Jan. 8th. H. W. T.

## MALVYN.

A Fragment.

A stilly youth was Malvyn, yet he knew,  
His silliness as well as those who chid,  
Nor for that knowledge were his faults less few,  
But on he went, and neither check'd nor hid,  
Nor deign'd to think of what was false or true,  
Or right, or wrong; as impulse away'd, he did;  
He was unto himself, God, king and friend,  
Such was his whim, nor reck'd he where 'twould end.

He was a villain, so he would confess,  
Tho' no one ask'd; and strange delight he took

To expatiate with the utmost carelessness  
Upon himself; and read, as from a book,  
Vices too black, and should one strive to trace,  
Aught that might have belied such in his look,

It was a stinging glance of scorn he threw,  
To mock the eye that sought to read him  
through.

But yet so bold and openly he wore

The black distorted features of his soul,  
None would believe them real, tho' he swore,  
But deem'd them as a mask at his control,  
Which for strange pride or bluntness he drew  
o'er

His nature, as he scorn'd t'enrol  
Himself with man, but to be other strove,  
And car'd not, if below him, or above.

There was some truth in this, at least as far  
As his unwillingness to herd with man;  
For he was to them, as a self-lit star,  
That shines on all, tho' never shone upon;  
And if he ever mingled in their jar,

'Twas but to laugh at all, and laugh with none,  
Or to collect fresh food for silent scorn—  
Such was his appetite, and copious was his horn.

He was the child of humour, and she gave  
A softer tone at times, and on him then  
Camest fell, as the hail-drops on the wave,  
That splashes first, then gently melteth in,  
Giving one hope, that something yet might save—

But he would shake the dew-drops from his  
mane,

And with a bitter playfulness conceal  
The callousness he loath'd, but yet was proud  
to feel.

Seldom and sudden were those quails of feeling,  
And slight the grief that wrought upon him  
no,

Yet worlds of grief beyond all words revealing,  
When the soul weeps, but tears do never flow,  
And sudden with a mental wring concealing  
'Neath abrupt jest and mirth his inward woe,  
As the chill, icy lake, congeals the while,  
It clothes itself in Heav'n's own azure smile.

No sympathy had he, yet selfishness

In him assum'd a bearing boldly great;  
He scorn'd all, nor yet was loved the less—  
For grandeur hovers round the desolate  
Of men and things—"Alone" doth more express  
Of the sublime, than poets can create—

This, Malvyn oft has said, and in a tone  
So deep and heart-sent, doubly was it lone.

EWORC.

## THE DRAMA.

**THE BEASTS.**—The dramatic circles are big with expectation, as two new performers are announced at Drury Lane, such as, 'tis said, have not appeared since the age of Roman spectacle. His Grace of Devonshire's tame Elephant, and his Honour Mr. Kean's tame Lion, intend taking each a part in the pantomime; and no doubt is entertained, that they will by their exertions revive the languishing attractions of Jack the Giant-killer in the month of February, and enable that classic and sensible piece to run further into the season, to the great improvement of the young, and the information of the old.

**DRURY LANE. GALLANTRY.**—This theatre on Saturday, furnished an example of the meeting of extremes; a new comedy was performed, and, differing in every thing else, the author and manager on one side agreed entirely with the audience on the other, that there was nothing

comic in the evening's entertainment. The play seemed to be a compilation made with no other view than to get every man and woman belonging to the Drury Lane company of comedians, and capable of acting, upon the stage; no matter whether with or without a purpose. "They had their exits and their entrances;" and in this lay the strength of the piece. From the second title, "*Adventures in Madrid*, we had a right to expect some plot or incident; but, perhaps from not understanding *Spanish*, we could detect nothing of either kind. The majority of the visitors being in the same state of blessed ignorance, it soon became evident that all the gallantry of the drama could not save it. Indeed, it met with a decided and deserved condemnation; and the manager a little forgot his cue when in an address signifying acquiescence in the sentence, he ventured to hint that the difficulty of judging between a good comedy and a bad one was rather above the comprehension of the audience on a single representation. This is a sort of insinuation, which had better be retained in the breasts of our theatrical purveyors—for we are sure that mercy and candour, rather than severity and critical justice, are the characteristics of the public on these occasions. The plain and obvious fact is, that the failure of this play contradicted green-room opinion; because the public considers the whole, whereas in the green-room, every actor considers but his own part.

If Messrs. A, B, C, and Mistresses D, E, F, think the characters drawn for them will afford an opportunity for displaying what they deem their forte, presto! the play is pronounced admirable and got up accordingly; while infinitely better productions, which do not hit the egotistical fancies of actors and actresses, are dismissed with contempt. Of the latter the public has no means of judging; but of the former, we will venture to assert, its judgement is ninety-nine times in a hundred correct—and this piece preferred no ground for exception. It is the system to which we have alluded—the preparation of plays for particular persons rather than on the legitimate principles of dramatic composition, that is the foundation of much of the inferiority of the modern stage, and we pray Mr. Elliston to reflect on this point, rather than arraign the taste and ability of his patrons.

This gentleman has generously assigned the profits of one night's representations to the charity for relieving the wretched in the city. We trust that his house has largely afforded the means of consolation to the homeless, and that his charity on this occasion will not be forgotten when the doors are opened on his own account.

**COVENT GARDEN. MR. NATHAN.**—A person of this name, known to the musical world as a composer and teacher, attempted the part of Guy Mannering in the opera so entitled, on Saturday last. He was very unfortunate; and it soon appeared that what his namesake, perhaps an ancestor, said to the king of Israel, might be reversed in application to his acting and singing, for nothing could be more evident than that Nathan was

not the man—to succeed upon the stage. His efforts, indeed, reminded us of the old story of a candidate for histrionic honours, who because he drawled like one eminent actor, stutted like a second, limped like a third, and squinted like a fourth, &c., maintained that he who concentrated so many qualities which were seen in popular favourites, ought of course to receive in his own person the aggregate of the applause which rewarded them severally. Thus Mr. Nathan, whose person is of indifferent proportions, whose gesticulation is awkward, whose countenance is theoretically inexpressive, and whose voice is effete, seemed to calculate on imperfections and deficiencies; and, like his prototype above described from Mr. Joseph Miller, was utterly rejected. His condemnation was accelerated by the very injudicious encore of his first song by a multitude of rash friends; and in this respect another instance added of the impolicy of a practice which we have so frequently censured. The noble air "*Scots wha hae wi' Wallace bled*," was so hopelessly given, that all chance of escape vanished, and the sentence of banishment from "these boards" was loudly and unanimously pronounced. But even without being brought into comparison with the mighty powers of Braham, Mr. N. proved himself to have entirely mistaken his talent, when he sought fame as an opera performer.

## FOREIGN DRAMA.

**PARISIAN DRAMATIC REVIEW OF 1819.**—One hundred and thirty-four new pieces have been brought out during the last year: 1818 produced one hundred and forty-nine; and though 1819 has been less fertile in births than the year which preceded it, yet the deaths have been no less numerous. The Academie Royale de Musique confined its labours to the revival of Tarare, and the new opera of Olympia. The Theatre Français, on the contrary, has evinced great activity, and nine new pieces have been produced, among which are three tragedies and a comedy. Thus the first theatre of the French metropolis has this year spared no exertion; and certainly the managers of the second have not shewn themselves remiss. The most brilliant success attended their first production. All Paris thronged to see the *Vépres Siciliennes*. The company of the Odeon have been less fortunate; we merely recollect the titles of M. Daigrieux, Crispin Diogene, and a few other unsuccessful pieces produced at the Theatre Savans. Notwithstanding several decided failures, the Opera-Comique has not forfeited public favour. Several judicious revivals, and the charming little piece of *Edmond and Caroline*, have compensated for the submersion of the *Ile de Babylone*, and the loss of the *Battle of Poltowa*. During its nine years existence, the Italian Opera has produced nine pieces. The rival of the two *Barbers*, (Pacsiello's and Rossini's) did not produce the expected success; one was too antiquated for the *delectanti*, and the other too modern for the less impassioned spectators. However, the divine *Agnese* has proved universally attractive, and fashion has in this instance been in unison with taste.

The Vaudeville, which was wont to produce a new piece every week, brought out but twenty-three during last year. Among those that have been crowned with success are *Un Dimanche à Passy*, *Caroline*, and the charming *Sonnambule*, whose laurels prevent all the Vaudevillistes from sleeping.

The Theatre des Variétés has endeavoured to compensate for the loss of Potier; by the production of twenty-seven novelties. *Donnera et Calais*, *Angeline*, and *les Bolivars*, are among the best. The Gaieté has certainly drawn fewer tears than usual from its visitors; and the brilliant success of *la Fille de l'Esprit*, and *Bouton de Rose*, may be attributed in a great measure to the taste of the decorator.

The Ambigu-Comique enjoys the happy privilege of attracting all susceptible minds, to weep for the misfortunes of *Talas*. The extraordinary success of this piece banishes all recollection of the light failures that have taken place during the year. There have been but few misfortunes among the melo-dramas of the Port Saint-Martin. *Prociade*, and *le Tailleur de Jean Jacques*, furnished characters for Potier; and the *Petites Danaïdes* bids fair to parody the success of the originals.

The Cirque-Olympique has produced only six pieces this year. The *Death of Kleber*, and *Pontiatouche*, have been particular favourites.

Upon the whole, 1819 cannot be styled a barren year for dramatic literature, since it has produced three such tragedies as *Jeanne d'Arc*, *Louis IX.*, and the *Vépres Siciliennes*.

## VARIETIES.

A brilliant collection of the productions of Sévres, Beauvais, the Gobelins, and the Savonnerie, were lately exhibited at the Musée in Paris. The King, who went to view the collection, purchased a number of articles for Christmas presents to the various members of the royal family.

Madame Murat has sold to the Austrian government, her fine collection of Medals, among which are many scarce Greek, for, it is said, 100,000 florins.

Baron Paykull has given his collection of Natural History to the King of Sweden. It contains 1,300 species of birds; and now forms part of the Museum of the Academy of Sciences, at Stockholm.

Prince Leopold has presented the family of the late Mr. Bird, R. A. with a purse of one hundred guineas, and also given the artist's picture of the 'Surrender of Calais,' in his Royal Highness's possession, to be disposed of for the benefit of the family. This picture was presented to the lamented Princess Charlotte of Wales, when Mr. Bird had the honour of being appointed Historical Painter to her Royal Highness.

(Daily Papers.)

A show-caravan is at present traversing the London streets, with the following cu-

rious example of orthography:—"Triumph & Palace." q. Triumphant Palace—for such is the exhibition.

A gentleman, rather sharp in his character, who had lost one of a pair of beautiful carriage horses, experienced much difficulty in replacing him. One day that his coachman returned from a long hunt, he cried, "Well, John, have you succeeded?" "Aye," quoth John, joyfully, "but it was a d—d hard thing to meet with your watch."

A worm of a very curious nature has been found by the cook of the King's Arms, Plymouth, on opening a cod-fish, destined for an entertainment. It is about four inches long, and shaped like a seal; with a mouth apparently intended to act as a sucker. But what renders it more remarkable is, a cloathing of the most dazzling green feathers, equal in brilliancy to those of the peacock, on the back, which gives it a very singular aspect. Between the feathers are sharp quills, resembling those on the porcupine, but comparatively smaller. The animal would seem too large to feed on the cod, but might rather be considered as a parasite, which is a frequent attendant on the fish species. Those who have seen it, many of whom are nautical persons, cannot call to their recollection any creature of a similar kind.—*Packet.*

Report says that a copy of the pretended St. Helena MS. has been found among the papers of Madame de Staël; but the fact seems improbable.

An officer, with a glass eye, on undressing at an inn, gave it to the servant, who was assisting him, to put upon the table—the lad continued to wait—"What the devil are you stopping for?" cried the officer: "for the other eye," said the simpleton.

M. Bosio, the French Sculptor, has received a commission from the Minister of the Interior, to execute a statue of Henry IV. as a child, with the marble of the Pyrenees, now introduced with considerable expectations, into the Parisian arts.

LITERARY SUICIDE.—Mr. Fridrick, known by many works which he has published, and particularly by his Satires, has disappeared from Hamburg, leaving behind him a letter in which he declares his purpose to terminate his existence. It is thought that he has thrown himself into the Elbe, and that his corps is covered by the ice.

MALESHERBES' MONUMENT.—The Emperor Alexander has subscribed 2000 franks towards the monument of Malesherbes at Paris.

The cold at Hamburg in the night preceding the 11th of January, was at 21° Reaumur, 47½° Fahrenheit, below the freezing point. 15½ below 0.

## LITERARY NOTICES.

Some portion of Buonaparte's Memoirs, whether genuine or not we cannot tell, have appeared in Germany. The writer affects the style of Cæsar.

A Newspaper is now published at Rio Janeiro: it is called "Gazeta de Janeiro."

RUSSIAN LITERATURE.—In Russia, Mr. Guedilich, under-librarian at Peterburgh, is engaged in a translation of Homer into Russian hexameters. Since 1814, six volumes of Plutarch's Lives, of fourteen, of which the work is to consist, have appeared. The *Noctes Atticæ* Aulus Gellius, and *Cornelius Nepos*, have also been translated into Russian. Mr. Alexander de Stourdza last year published a manual of the Greek language for the use of his young compatriots.

Mr. de Becker, Extraordinary Professor of History at Abo, has begun with the new year a national newspaper in the Finnish language, under the title of "Turun Wikkö Sanomat."

## METEOROLOGICAL JOURNAL.

JANUARY, 1820.

Thursday, 13—Thermometer from 9 to 29.

Barometer from 30, 29 to 30, 36.

Wind N.E. 4.—Cloudy till the evening, when it became clear; a little snow about noon.

Friday, 14—Thermometer from 17 to 29.

Barometer from 30, 39 to 30, 29.

Wind N.E. 4.—Cloudy; a little snow about noon; a steady northerly light in the N.W. about 11 in the evening.

Saturday, 15—Thermometer from 1 to 26.

Barometer, from 30, 04 to 29, 87.

Wind S.W. 4.—Morning and noon clear, the rest of the day cloudy.

Sunday, 16—Thermometer from 17 to 32.

Barometer from 29, 87 to 29, 94.

Wind N. 4.—Generally clear till the evening, when it became hazy.

Monday, 17—Thermometer from 17 to 37.

Barometer from 29, 86, to 29, 74.

Wind S.W. 4.—Cloudy.

Tuesday, 18—Thermometer from 26 to 35.

Barometer 29, 61 to 29, 36.

Wind N.E. 4.—Morning sunny, afternoon and evening raining, particularly hard in the evening.

Wednesday, 19—Thermometer from 26 to 48.

Barometer from 29, 03 to 29, 17.

Wind S.W. 4 and 5.—Cloudy; the sudden thaw of yesterday, accompanied with rain, caused the waters to be much out.

Rain fallen, 9/25 of an inch.

Lat. 51. 37. 32. N.

Lon. 0. 3. 51. W.

Edmonton, Middlesex. JOHN ADAMS

Error.—In Number 154, line 1 of the Meteorological Journal, for "45 to 52" read "52 to 36."

## TO CORRESPONDENTS.

R. B. L.'s Song needs correction.—We thank J. H. for his favour, but are sorry to observe that it also requires revision, which, not having the original by us, we cannot give it.

A "Friend and Subscriber," will oblige us by retaining the latter character alone; for we really cannot preserve the former at the price of forwarding his productions.

From the favours of X Q we desire to be X Q 2 and as for the answer he requires, there are three letters for his two.

### Miscellaneous Advertisements, (Connected with Literature and the Arts.)

#### Books and Stationery.

By Mr. BULLOCK, at his Egyptian Hall, Piccadilly, on Tuesday next, punctually at One.

A SMALL LIBRARY of valuable BOOKS, among which are *Satyrs* in India, colored plates; *Wild Sports of the East*; *Pyrrh's Mineralogy*; *Lycan's Gloucester*; *Histoire Naturelle des Rivières*; *Barleyn's Wharfedale*, 12mo.; and many interesting and valuable works in modern English literature. Also *short Easy Receipts* chiefly of thick and thin Post, Foolscap, Blotting, and Cartridge paper.

To be viewed.

#### Pictures.

By Mr. BULLOCK, at his Egyptian Hall, Piccadilly, on Wednesday next, punctually at One.

A Few pleasing CABINET PICTURES of the Italian, French, and Spanish Schools. The property of *Chas. Westmacott, Esq.*

To be viewed, and Catalogues had, two days preceding.

### BOOKS PUBLISHED THIS DAY.

Randomly printed in 4to, with Maps, &c. uniformly with Parley's and Barrow's Travels, price 21s.

TRAVELS IN NUBIA and in the INTERIOR of NORTH EASTERN AFRICA. By J. L. BURCKHARDT. With a Life and Portrait of the Author.

Printed for John Murray, Albemarle Street.

Randomly printed in small 8vo, similar to Domestic Cookery, price 7s. 6d. in boards, a New Edition, greatly improved, of

THE NEW FAMILY RECEIPT-BOOK: a Collection of more than Eight Hundred truly valuable Receipts (omitting those in Medicine and Cookery) in various Branches of Domestic Economy, selected from the Works of British and Foreign Writers of unquestionable experience and authority, and from the attested Communications of Scientific Friends. Dedicated, by permission, to Dr. CHARLES TAYLOR, Secretary to the Society of Arts, Manufacturers, and Commerce; to give superintendence the work has been submitted, and to whom the Editor has been indebted for many valuable Communications.

\* This book is a proper and almost indispensable companion for the 'New System of Domestic Cookery.' It contains a larger quantity of truly valuable Receipts than any book of the same kind ever contained. There are few things which the reader can seek for Domestic Use, on which he will not find some useful information.

\* Printed for John Murray, Albemarle Street; sold also by every other Bookseller in England, Scotland, and Ireland, and whom may be had, lately published.

A NEW SYSTEM OF DOMESTIC COOKERY; a New Edition, small 8vo, 7s. 6d. boards.

#### Ninth Edition of Lalla Rookh.

In 8vo, price 1s.

LALLA ROOKH, an ORIENTAL ROMANCE. By THOMAS MOORE, Esq. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

Also, in 8vo, price 12s.

ILLUSTRATIONS of the POEM, engraved by Charles Heath, from Paintings by R. Westall, R.A.

A few of each may be had in Quarto.

In 8vo, price 1s. 6d.

THE ANNUAL BIOGRAPHY AND OBITUARY, for 1820. With Silhouette Portraits. Comprehending Memoirs of Professor Playfair; Mr. Watt, Engineer; the Bishop of Peterborough; Sir Philip Francis, Bart.; Dr. Wolcott (Piercy Fendler); John Wilson Croker; Mr. Alderman Combe; Major Scott; Admiral Sir Robert Calder; Sir Philip Musgrave, Bt.; Sir Byrdene, Esq.; Lord Walsingham; Mr. James Brindley; A. Graham, Esq.; Geo. Wilson Medley, Esq.; Col. Tatham; H. C. Jennings, the celebrated antiquary; Mrs. Bingham, &c. &c. The whole is interspersed with a variety of original documents, together with an account of recent Biographical works, and a list of persons lately deceased. Printed for Longman, Hurst, Rees, Orme, and Brown, London, or whom may be had, Vols. I. II. and III. for 1817, 1818, and 1819, price 1s. 6d.

#### To Emigrants.

In 8vo, price 10s. 6d. boards.

### AMERICA and the BRITISH COLONIES.—

An Abstract of all the most useful information relative to the United States of America and the British Colonies of Canada, the Cape of Good Hope, New South Wales, and Van Diemen's Island; exhibiting, at one view, the comparative Advantages and Disadvantages each Country offers for Emigration. Collected from the most valuable and recent Publications. The whole collated with Documents in his Majesty's Colonial Office. To which are added, a few Notes and Observations. By WILLIAM KINGDOM, Jun.

\* Qui et non sicut boni court a dire! mais avant que de le dire, il faut penser longtemps... *Recherches.*

Printed for G. and W. B. Whittaker, 15, Ave-Maria-lane.

\* The Public are respectfully informed, that the Injection against this Work has been withdrawn, by consent of the parties who obtained it.

#### Sentley's Practical Works.

In 14 Vols. 8vo, price 50s. 6d. Boards.

THE POETICAL WORKS OF ROBERT SOUTHEY, Esq. Poet Laureate, Member of the Royal Spanish Academy, and of the Royal Institute of the Netherlands. PRICE 8d.

## REVIEW OF NEW BOOKS.

### BONAPARTE.

*Mémoires pour servir à l'Histoire de la Vie privée, du Retour, et du Règne de Napoléon, en 1815.* Par M. Fleury de Chaboulon, ex-Secrétaire de l'Empereur, et de son Cabinet, &c. &c. Tomes II. 8vo. London, 1819.

[From this remarkable work, the translation of which has not yet appeared, and the French edition of which has just issued from the press, we can only at present extract details ascribed to a deceased Colonel Z. the person whose visit to Elba induced Buonaparte to take, perhaps, the most important step in his life. It places this momentous transaction in a new light; and the dialogue is so singularly characteristic, that we have transgressed our usual bounds to place it entire before our Readers. We have no room now for discussion: the author, after relating his previous arrangements with the Buonapartes in Paris, and the difficulties of his journey to Elba, thus describes his interviews with the Monarch of that Isle:—]

Half an hour afterwards the Marshal desired me to proceed as quickly as possible to the Emperor's garden-gate; the Emperor, would come there, and speak to me without appearing to know me. I went accordingly: the Emperor, according to his custom, was walking with his hands behind his back. He passed several times before me without lifting up his eyes; at last he looked at me: he stopped, and asked me in Italian what countryman I was. I answered in French that I was a Parisian; that business had called me to Italy; and that I could not resist the desire of seeing my old sovereign.—"Well, Sir, talk to me about Paris and France,"—and as he finished these words he began to walk again. I accompanied him; and after he had put several indifferent questions to me aloud, he desired me to enter his apartments: he then ordered Bertrand and Drouot to retire, and forced me to sit down by his side. Napoleon began in a reserved and silent manner: "The grand Marshal tells me that you have just arrived from France."—"Yes, Sir."—"What do you want here?"—"Sir, I wish to offer my services to you; my conduct in 1814—" Napoleon interrupting me,—"Sir, I do not question but that you are a very good officer, however I have so many officers with me already, that it will be very difficult for me to assist you; yet we will see: it appears that you know M. X. . . ."—[A fictitious

letter, to designate a partizan of much power.]—"Yes, Sir."—"Has he sent a letter for me by you?"—"No, Sir."—"Napoleon, interrupting me, "I see he forgets me just like the rest; since I have been here, I have not heard a word of him or of any body."—"I interrupted the Emperor in my turn, "Sir, he has never ceased to entertain those sentiments of devotion and attachment towards your Majesty which are still cherished by all true Frenchmen; and—" Napoleon, with disdain;—"What, do they still think of me in France?"—"Never will they forget you."—"Never! that is a wrong expression; the French have another Sovereign, and they are commanded both by their duty and their tranquillity to think on him alone." This answer did not please me: "The Emperor, thought I to myself, is out of humour because I have not brought him any letters; he mistrusts me: it was not worth while to come so far for the sake of an ungracious reception. Napoleon, continuing,—"What do they think about me in France?"—"There, your Majesty is universally deplored and regretted."—"Yes, and there, also, they manufacture all sorts of lies concerning me. Sometimes they say that I am mad, sometimes that I am ill, and you may see (here the Emperor looked at his *embonpoint*), if I look like an ailing man. It is also given out that they intend to transport me either to St. Helena or to Malta. I would not advise them to try. I have provisions for six months, and brave followers to defend me: but I cannot think that Europe will be so dishonourable as to rise in arms against a single man, who has neither the power nor the inclination of hurting others. The Emperor Alexander has too much love for posterity to lend himself to such a crime. They have guaranteed the sovereignty of the isle of Elba to me by a solemn treaty. Here I am in my own home; and as long as I do not go out to pick a quarrel with my neighbours, they have no right to come and disturb me. . . . have you served in the grand army?"—"Yes, Sir, I had the felicity of distinguishing myself under your Majesty's eyes in the plains of Champagne; your Majesty appeared to take such particular notice of me, that I had dared to hope that your Majesty would recollect me."—"Why, yes; I thought, somehow, that I knew your face when I saw you, but I have only a confused recollection of you."—"Poor mortals! thought I to myself, go and expose your lives for the sake of kings, go and sacrifice your youth, your repose, your happiness for their sake!"—"In what affairs have you distinguished yourself?"—"Sir, at . . . , and at . . . . Marshal Ney there presented me to your Majesty, saying, 'Sir, here is the intrepid S. . . . P. . . . of whom I have spoken to your

Majesty.' . . . Ah! ah! I really do recollect—yes, I was very well pleased indeed, with your behaviour at . . . and at . . . ; you showed much resolution, much strength of character. Did I not 'decorate' you on the field of battle?"—"Yes, Sir."—"Napoleon, with greater warmth and confidence, "Eh bien! how are they all treated in France by the Bourbons?"—"Sir, the Bourbons have not realized the expectations of the French, and the number of malcontents increases every day."—"Napoleon, sharply;—"So much the worse, so much the worse: but how, has not X. sent me any letters?"—"No, Sir; he was afraid lest they might be taken from me; and as he thought that your Majesty, being now compelled to be vigilant, and to distrust all the world, might distrust me also, he has revealed several circumstances to me, which are only known to your Majesty and to himself; thus enabling me to give a proof that I am worthy of your Majesty's confidence."—"Let us hear them," I began my detail, but he exclaimed, without allowing me to finish, "That's enough; why did you not begin by telling me all that? there is half an hour that we have lost." This storm disconcerted me. He perceived my confusion, and resumed his discourse with mildness.—"Come, make yourself easy, and repeat to me, with the greatest minuteness, all that has passed between you and X. . . . I then related the circumstances which had induced me to have an interview with Monsieur X. . . . I repeated our conversation word for word. I gave him a complete account of all the faults and excesses of the royal government; and I was going to draw the inferences which had occurred to Monsieur X. . . . and me. But the Emperor, who, when he was affected, was incapable of listening to any recital without interrupting it, and making his comments at every moment, stopped my mouth. "I thought so, too," said he, "when I indicated, that the Bourbons, instructed and disciplined by adversity, would not fall again into the errors which ruined them in 1793. I thought that the king would govern you

\* Napoleon usually liked to intimidate and disconcert those who approached him. Sometimes he feigned that he could not hear you, and then he would make you repeat in a very loud tone what he had heard perfectly well before. However, he was really deaf in a slight degree. At other times he would interrogate you with such rapid and abrupt interrogatories, that you had not time to understand him, and were compelled to give your answers in confusion. He then then to laugh at your embarrassment; and when he had drawn you out of your present state of mind and confusion, he amused himself at your expense. . . . Note of the course of the work.

*en bon homme.* This was the only way by which he could obtain a pardon from you, for having been put upon you by foreigners. But since they have stepped into France, they have done nothing but acts of madness. Their treaty of the 23d of April, (raising his voice,) has made me deeply indignant: with one stroke of the pen they have robbed France of Belgium, and of all the territory acquired since the revolution. They have deprived the nation of its docks, its arsenals, its fleets, its artillery, and the immense *matériel* which I had collected in the fortresses and the ports which they have ceded. Talleyrand has led them into this infamous business: he must have been bribed. Peace is easy upon such terms. If, like them, I had consented to the ruin of France, they would not now be on my throne: (with energy.) I would sooner have cut off my right hand. I preferred renouncing my throne rather than to retain it by staining my glory, and the honour of the French nation. . . . A degraded crown is an intolerable burthen. My enemies have published every where, that I obstinately refused to make peace. They have represented me as a wretched madman, eager only for blood and carnage: this language answered their turn. When you wish to hang your dog, you give out that he is mad: *Quand on veut tuer son chien, il faut bien faire accroire qu'il est enragé.* But Europe shall know the truth: I will let the world know all that was said and done at Châtillon. I will unmask the Austrians, the Russians, and the English, with a powerful hand. Europe shall judge: Europe shall say who was the rogue, and who was wishing to shed human blood. If I had been roused for war, I might have retired with my army beyond the Loire, and I might have enjoyed mountain warfare to my heart's content. I would not; I was tired of carnage. . . . my name, and the brave fellows who remained faithful to me, yet made the allies tremble, even out of the capital. They offered Italy to me as the price of my abdication: I refused it. After once reigning over France, one ought not to reign anywhere else. I chose the Isle of Elba. They were too happy to give Elba to me. This position suited me. I can watch France and the Bourbons. All that I have done has been only for France. It is for her sake and not for mine that I wished to render her the first nation in the universe. My glory is made for myself. . . . If I had only thought of myself, I would have returned to a private station, but it was my duty to retain the imperial title for my family and my son. . . . Next to France, my son is the dearest object in the world to me."

During the whole of this discourse, the Emperor continued striding up and down, and appeared violently agitated. He paused a little while, and then he began again. They (i. e. the emigrants) know too well that I am here, and they would like to assassinate me. I discover new plots, new snares

every day. They have sent to Corsica one of the assassins of Georges, a wretch whom the English journals themselves have pointed out to Europe as a blood-thirsty assassin; but let us be on the alert. If he misses me, I won't miss him. I shall send my grenadiers after him, and he shall be shot as an example to others.

After a few moments of silence, he said, "Do my generals go to court? they must cut a sad figure there." I waited for the end of this digression, in order to resume the thread of my discourse. As I was convinced that I could not possibly lead the conversation, I resolved to let the Emperor have it according to his own way, and I answered, "Yes, Sir, and they are furious to see themselves superseded in favour by emigrants who have never heard the sound of a cannon."—"The emigrants will never alter. As long as they were only required to dance attendance in my anti-chamber, I had more than enough of them. When it was necessary to shew any heart, they slunk away like . . . I committed a great error, when I recalled that anti-national race into France. If it had not been for me, they would have died of starvation abroad; but then I had great motives. I wanted to reconcile Europe to us, and to close the revolution. . . . What do my soldiers say about me?"—"The soldiers, Sir, talk constantly about your immortal victories. They never pronounce your name but with respect, admiration, and grief. When the Princes give money to the soldiers, they drink it out to your health, and when they are forced to cry *Vive le Roi!* they add in a whisper, *de Rome.*"—"And so they still love me?" (smiling).—"Yes, Sir, and I may even venture to say, more than ever."—"What do they say about our misfortunes?"—"They consider them as the effect of treachery; and they constantly repeat, that they never would have been conquered, if they had not been sold to their enemies. They are particularly indignant with respect to the capitulation of Paris."—"They are right: had it not been for the infamous defection of the Duke of Ragusa, the allies would have been lost. I was master of their rear, and of all their resources; not a man would have escaped. They too would have had their twentieth bulletin. Marmont is a wretch; he has ruined his country, and delivered up his sovereign. His convention with Schwartzburg would alone suffice to dishonour him. If he had not known when he surrendered, that he compromised my person and my army, he would not have found it necessary to make stipulations in favour of my liberty and life. This piece of treachery is not the only one. He has intrigued with Talleyrand to take the regency from the Emperor, and the crown from my son. Caulincourt, Macdonald, and the rest of the marshals, have been cheated and gulled by him in the most shameful manner. All his blood would not be sufficient to expiate the harm which he has done to France. . . . I will devote his name to the execration of posterity. I am glad to learn that my soldiers retain the feeling of their superiority, and that they

attribute our great misfortunes to the right authors. I collect with great pleasure, from the intelligence which you have brought, that the opinion which I had formed respecting the situation of France, is correct. The family of the Bourbons is not fit to reign. Their government may be good for priests, nobles, and old-fashioned countesses: it is good for nothing for the present generation. The revolution has taught the people to know their rank in the state. They will never consent to fall back into their former nullity, and to be tied up by the nobility and the clergy. The army can never belong to the Bourbons. Our victories and our misfortunes have established an indissoluble tie between the army and myself. It is only through me that the soldiers can earn vengeance, power, and glory. From the Bourbons they can get nothing but insults and blows. Kings can only retain their power by the love of their subjects or by fear. The Bourbons are neither loved nor feared. At last they will throw themselves off their throne: but they may yet retain their position for a long time. Frenchmen do not know how to conspire."

In pronouncing these words, the Emperor continued walking hastily, and using many gestures. He rather appeared to be soliloquizing than addressing any one else; he then continued, looking at me aside, "Does M. X. . . . think that these people can stand much longer?"—"His opinion on this point is exactly conformable to the general opinion that is to say, it is now the general impression and conviction, that the government is hastening to its fall. The priests and the emigrants are its only partisans; every man of patriotism or soul is its enemy."—"Napoleon (with energy). Yes, all men in whose veins any national blood is flowing must be its enemies; but how will all this end? I thought that there will be a new revolution!"—"Sir, discontent and irritation prevail to such an extent, that the slightest partial enforcement would inevitably cause a general insurrection, and nobody would be surprised if it were to take place to-morrow."—"But what would you do were you to expel the Bourbons: would you re-establish the republic?"—"The republic, Sir! nobody thinks about it; perhaps they would create a regency."—"Napoleon (with vehemence and surprise). A regency! And wherefore? I lead?"—"But your absence. . . ."—"My absence makes no difference. In a couple of days I would be back again in France, if I had time to be so."—"The Emperor turned away his eyes, and I could easily remark, that in this question he attached more importance than he cared to manifest, and that he expected my answer with anxiety. "Sir, I dare not personally tempt to answer such a question, out. . . . Napoleon (abruptly). That's not what am asking you: answer yes or no."—"Well, Sir, yes."—"Napoleon (with tenderness). You really think so?"—"Yes, Sir, I am convinced, and so is M. X. . . . the people and the army would receive you as their deliverer, and that your cause would

\* *Ma gloire est faite a moi mon nom vitra autant que celui de Dieu.*

be embraced with enthusiasm."—Napoleon (appearing agitated and impatient). "Then X... advises me to return?"—"We had foreseen that your Majesty would make inquiries on this point, and the following is literally his answer. You will tell his majesty that I would not dare to decide so important a question, but that you may consider it as a positive and incontrovertible fact, that our present government has wholly lost the confidence of the people and of the army; that discontent has increased to the highest pitch, and that it is impossible to believe that the government can stand much longer against the universal dislike. You will add, that the Emperor is the only object of the regret and hope of the nation. He, in his wisdom, will decide what he ought to do."

The Emperor became silent and pensive; and, after a long meditation he said, "I will reflect upon it; I will keep you with me. Come here to-morrow at eleven o'clock."

At eleven o'clock I attended, to present myself to the Emperor. They made me wait in his saloon on the ground floor. The striped silk hangings were half worn out and faded; the carpet was threadbare, and patched in several places; a few shabby arm chairs completed the furniture of the apartment. I thought upon the splendour of the imperial palaces, and I drew a deep and melancholy sigh. The Emperor arrived: he had assumed a degree of calmness in his manner, which was belied by his eyes. It was easy to see that he had been violently agitated. "Sir," said he, "I declared to you yesterday, that I retained you in my service. I repeat the same to you to-day. From this instant you belong to me, and I hope you will fulfil your duties towards me like a good and faithful subject: you swear that you will—is it not so?"—"Yes, Sir, I swear."—"That's right." After a pause, "I had foreseen the crisis to which France would come, but I did not think that things were so ripe. It was my intention not to interfere any longer in political affairs. The intelligence which you have brought to me has changed my resolutions. I have caused the misfortunes of France; therefore I must remove them: but before I commit myself, I wish to have a thorough knowledge of the state of our affairs. Sit down: repeat to me all that you told me yesterday; I like to hear you."

Re-assured by these words, and by a look full of kindness and benignity, I abandoned myself without reserve to all the inspirations of my heart and soul. The picture which I drew of the sufferings and hopes of the nation, which I presented to the Emperor, was so touching and so animated, that he was astonished. "You are a noble young fellow," said he, "are you truly the son of a Frenchman; but are you not carried away by your imagination?"—"No, Sir; the recital which I have made to your Majesty is quite faithful. I may have expressed myself with warmth, because I cannot express my feelings otherwise; but all that I have told you is exact and true. Under such important circumstances, I should have

thought it a crime to substitute the inspirations of my imagination in the place of truth."—"You therefore think that France awaits her redemption from me; that I shall be received as a deliverer."—"Yes, Sir; I will even say more: the royal government is so exceedingly hateful and disgusting to the French, the government weighs so very heavily on the nation and the army, that not only your Majesty, but any body else who would endeavour to liberate the French would find them disposed to second him."—Napoleon (with dignity). "Repeat that to me again."—"Yes, Sir, I do repeat it. The French are so wearied, and degraded, and incensed, by the anti-national yoke of the emigrants and the priests, that they are ready to join any one who will promise to deliver them."—"But if I were to disembark in France, is there not reason to fear that the patriots may be massacred by the emigrants and the chouans?"—"No, Sir, I do not think so; we are the most numerous and the bravest party."—"Yes, but they may heap you in the prisons, and cut your throats."—"Sir, the people will not let them do that."—"I hope you may not be deceived; to be sure, I shall get to Paris so speedily, that they won't have time to consider where they are to hide their heads. I shall be there as soon as the news of my disembarkation.... Yes," the Emperor continued, after taking a few steps, "I have resolved.... It was I who gave the Bourbons to France, and it is I who must rid France of them.... I will set off.... The enterprise is vast, it is difficult, it is dangerous, but it is not beyond me. On great occasions fortune has never abandoned me.... I shall set off, but not alone; I won't run the risk of allowing myself to be collared by the gens-darmes. I will depart with my sword, my Polanders, my grenadiers.... all France is on my side. I belong to France; and for her I will sacrifice my repose, my blood, my life, with the greatest joy." After this speech, the Emperor stopped; his eyes sparkled with hope and genius: his attitude announced energy, confidence, victory; he was grand, he was beautiful, he was adorable!—he resumed his discourse, and said, "Do you think that they will dare to wait for me?"—"No, Sir."—"I don't think so, either: they will quake when they hear the thunder of my name; and they will know that they can only escape me by a speedy flight. But what will be the conduct of the national guards? Do you think they will fight for them?"—"I think, Sir, that the national guards will remain neutral."—"Even that's a great deal; as to their 'gardes du corps,' and their red regiments, I am not afraid of them: they are either old men or boys: they will be frightened by the mustachios of my grenadiers. I will make my grenadiers hoist the national flag; lifting up his voice and his hand: "I will appeal to my old soldiers; I will speak to them. None of them will refuse to hear the voice of their old general.... It is certain that the soldiers cannot hesitate to choose between the white flag and the tricoloured flag: between me, by whom they have been covered with rewards and

glory, and the Bourbons, who wish to dishonour them.... And the Marshals, what will they do?"—"The Marshals, who are full of money and titles, have nothing to wish for but repose. They would fear to compromise their existence by embracing a doubtful party; and perhaps they will continue merely spectators of the crisis. Perhaps even the fear lest your Majesty may possibly punish them for their delinquency or treason in 1814 may induce them to adhere to the king."—"I will punish no one. Do you take me rightly? Tell me.... clearly, that I will forget every thing. We have all reason to reproach each other."—"Sir, I will tell him so with the greatest joy. This assurance will completely gain all opinions over to your side; because even amongst your partisans there are men who dread your return; lest you should revenge yourself."—"Yes, I know that it is thought that I am revengeful, and even sanguinary; that I am considered as a kind of ogre, as a tyrant. They are mistaken: I will make every one do his duty, and I will be obeyed; and that's all. A weak sovereign is a calamity to his subjects. If he allows criminals and traitors to fancy that he does not know how to punish, there is no longer any security either for the state or for individuals. More crimes are prevented than repressed by severity. A sovereign must govern by his head, and not by his heart. Yet, tell X... that I except Talleyrand, Angereau, and the Duke of Ragusa, out of the general pardon. They caused all our misfortunes. The country must be revenged."—"But why exclude them, Sir? Is there not reason to fear that this exclusion may deprive you of the fruits of your clemency, and may even raise doubts as to your sincerity in future?"—"It would be much more exposed to doubt were I to pardon them."—"But, Sir...."—"Don't you trouble your head about it.... what is the strength of the army?"—"Sir, I do not know; I only know that it has been much weakened by desertion and by discharges, and that few of the regiments consist of more than three hundred men."—"So much the better; those who are good for nothing have probably left the army; the good soldiers will have remained. Do you know the names of the officers who command the maritime districts, and the eighth division?"—"No, Sir."—"Napoleon (out of temper). "Why did not X... give you that information?"—"Sir, both M. X... and myself were far from supposing that your Majesty would immediately embrace the glorious resolution of re-appearing in France; besides which, he might believe, according to the common report, that your agents did not allow you to remain in ignorance of any circumstance, which might interest you."—"I do know that the newspapers gave out that I had agents.... It is an idle story. It is true that I sent some of my people to France, in order to learn what was going on; but they stole my money, and only treated me with the gabble of the emalle. C... has been to see me, but he knew nothing. You are the first person from whom I have as-

certained the situation of France and the Bourbons under all its extensive bearings. Had it not been for you, I should never have known that the hour of my return had struck. Had it not been for you, they would have left me here to dig in my garden. I have received—I do not exactly know from what quarter—the description of certain assassins, hired against me; and one or two anonymous letters besides—all from the same hand, in which I was told to remain quiet, that the embroideries were coming into fashion, and other nonsense in the same style; but that's all. It is not upon such data that one is induced to attempt a crash. But how do you think foreigners will like my return: there is the great question?" "Foreign nations, Sir, have been compelled to confederate against us, in order to protect themselves; allow me to say it...." "Speak out, speak out." "In order to protect themselves against the effects of your ambition, and the abuse of your strength. Now that Europe has recovered her independence, and that France has ceased to be dangerous, foreign powers will probably be unwilling to run the risk of a new war, which may end by restoring to us that ascendancy which we have lost." "If the allied sovereigns were at home in their capitals they would certainly consider the matter twice before they would take the field again; but they are yet face to face; and it is to be feared that you may become an affair of vanity. Do you think it is true that they are on ill terms with each other?" "Yes, Sir, it appears that discord reigns in the congress; that each of the great powers wishes to seize the largest share of the booty." "It appears, also, that their subjects are discontented: is it not so?" "Yes, Sir; kings and people, every thing seems to unite in our favour. The Saxons, the Genoese, the Belgians, the inhabitants of the banks of the Rhine, the Polanders, all refuse the new sovereigns to whom they are to be given. Italy, tired of the avarice and the grossness of the Austrians, pants for the moment of withdrawing from their sovereignty. Experience has taught the King of Naples that you are his surest protector, and he will assist the rising of the Italians whenever you wish it. The princes of the confederation of the Rhine, warned by the example of Saxony, will become the allies of your majesty after the first victory. Prussia and Russia will sit quiet, if you will only allow them to retain their new acquisitions. The Emperor of Austria, who has every thing to fear from Russia and Prussia, and nothing to hope for from the King of France, will easily consent, if you only guarantee Italy to him, to allow you to do what you think best with the Bourbons. In short, all the powers of Europe, England only excepted, are more or less interested in not declaring themselves against you; and before England can have corrupted, or raised the continent, your Majesty will be so firmly fixed on the throne, that your Majesty's enemies may try in vain to shake you totter."

Napoleon (shaking his head) "All this

is very fine;...however, I consider it as certain, that the Kings who have fought against me are no longer guided by the same unity, the same views, the same interests. The Emperor Alexander must esteem me: he must be able to estimate the difference which exists between Louis XVIII. and myself. If he were to understand his policy rightly, he would rather see the French sceptre in the hands of a powerful sovereign, the relentless enemy of England, than in the hands of a weak sovereign, the friend and vassal of the Prince Regent. I would give him Poland, and a great deal more, if he wished it; he knows that I have been always more inclined to tolerate his ambition than to restrain it. If he had continued my friend and my ally, I would have made him greater than he ever will be now. Prussia, and the petty Kings of the Rhenish confederation, will follow the lot cast by Russia. If I had Russia on my side, she would secure me all the second-rate powers. As to the Austrians, I do not know what they would do: they have never treated me candidly. I suppose I could keep Austria in order by threatening to deprive her of Italy. Italy is yet very grateful to me, and much attached to me: if I were to ask that country for an hundred thousand men, and an hundred millions, I should have the men and the money. If they were to force me to make war, I could easily revolutionize the Italians; I would grant them whatever they might wish, independence or Eugene. Mejean and some others have done him harm, but, in spite of that, he is warmly loved, and highly esteemed: he deserves to be so; he has shown that he possesses a noble mind. Murat is ours. I have had great reason to complain of him. Since I have been here he has wept for his errors, and has done his utmost to repair the injuries which he has inflicted upon me. He has regained my friendship and my confidence: his assistance, if I were engaged in war, would be very useful to me. He has little brains; he has nothing but hand and heart; but his wife would direct him. The Neapolitans like him tolerably well; and I have yet some good officers amongst them who would keep them in the right way. As to England, we should have shaken hands from Dover to Calais, if Mr. Fox had lived; but as long as that country continues to be governed by the principles and passions of Mr. Pitt, we must always be as hostile as fire and water....From England, I expect no quarter, no truce....England knows that the instant I place my foot in France, her influence will be driven back across the seas....as long as I live I will wage a war of extermination against her maritime despotism. If the continental powers had seconded me; if they had not been afraid of me; if they had understood my ambition, their flags would have floated from the mast-head throughout the universe, and the world would have enjoyed peace. All things considered, foreign powers have great reasons to declare war against me; whilst there are also great reasons to induce them to remain at peace with me. It is to be

feared, as I have already said to you, that they may turn the war into an affair of vanity, or that they make it a point of honour. On the other hand, it is possible that they may renounce their coalition, which has now no longer any object, in order to watch their subjects; preserving at the same time an armed neutrality, until I shall have given them sufficient guarantees.

"Their determinations, whatever they may be, will not influence mine. France speaks, and that is sufficient for me. In 1814 I had to deal with all the powers in Europe, but they should not have laid down the law to me if France had not left me to wrestle alone, against the entire world. Now the French know my value; and, as they have regained their courage and their patriotism, they will triumph over the enemies who may attack them, just as they triumphed in the good days of the revolution. Experience has shown that armies cannot always save a nation; but a nation defended by the people is always invincible.

"I have not settled the day of my departure: by deferring it I should have the advantage of allowing the congress to run out; but then, on the other hand, I should run the risk of being kept here as a close prisoner by the vessels of the Bourbons and of the English, if, as every thing appears to indicate, there should be a rupture amongst foreign powers. Murat would lend me his navy if I wanted it; but if we do not succeed he would be compromised. We must not be anxious about all these matters: we must allow some room for destiny to come into play.

"I think we have considered all the points upon which it was important that I should be settled, and that we should understand each other. France is tired of the Bourbons; she demands her former sovereign. The people and the army are for us: foreign powers will be silent. If they speak, we shall be able to reply: this, in short, is the state of the present time and of the future.

"Depart. Tell X... that you have seen me, and that I have determined to expose myself to every danger for the purpose of yielding to the prayers of France, and of ridding the nation of the Bourbons....Say also that I shall leave this place with my guard, on the first of April—perhaps sooner. I pardon every thing. I will give to France and to Europe all the guarantees which can be expected or demanded of me. I have renounced all my plans of aggrandizement, and I wish to repair the evils which war has caused to us, by a permanent peace.

"You will also tell X... and the rest of my friends to nourish and strengthen the good disposition of the people and the army by all possible means. Explain to X... that if the excesses of the Bourbons should hasten their fall, if the French should drive them out before my disembarkation, then will not allow of a regency, or any thing of the shape of it; but let them establish provisional government, composed of... of.... of.... and of.... Go, Sir, hope that we shall soon meet again." "Sir, where shall I land?" "—"

must proceed to Naples; here is a passport of the island, and a letter for \*\*\*. Pretend to place great trust in him, but do not trust him with anything. You will give him a loose account of the French news; and you may tell him that I send you there to explore the soundings, and settle some concerns of moment. I have directed \*\*\* to furnish you with a passport, in order that you may be able to return to Paris without meeting with any obstacle or danger."—"Your Majesty has then determined to send me back to France?"—"It must absolutely be so."—"Your Majesty knows my attachment, and that I am ready to prove it in any way which may be required. But, Sir, deign to consider, both for your interest and for that of France, that my departure has been remarked, and that my return will excite still more notice, and that it may give rise to suspicion, and perhaps induce the Bourbons to put themselves on their guard, and cause them to watch the coasts and the Island of Elba."—"Bah! do you suppose that fellows of the police know every thing, and can foresee every thing? More is invented than is discovered by the police. The agents of our police were decidedly as good as those of the present people, and yet they frequently knew nothing of what was going on but at the end of a week or a fortnight; and then they found it out only by chance, or incaution, or treason. I don't fear that any disclosures will be obtained from you by any of these means. You are clever and decided, and, if they were to work upon you, you would easily get clear. Besides, when you once arrive at Paris don't show yourself; creep into a corner, and nobody will think of ferreting you out. I could certainly confide this mission to some of the people who are about me; but I do not wish to make any additional confidant; you are trusted by X\*\*"; I trust you; and, in one word, you are exactly the man whom I want. Your return is certainly exposed to objections, but they are as nothing when compared to its advantages. All that we have said about the Bourbons, and about France, and about myself, is mere talk, and talk won't overturn a throne. In order that my enterprise may not be rendered abortive, it must be seconded, and the patriots must prepare to attack the Bourbons on one side, whilst I shall occupy them on the other. And, above all, it is necessary that they should know that they may depend upon me; that they may know my sentiments, my views, and the resolution which I have made of submitting to every sacrifice, and exposing myself to every danger, for the purpose of saving the country." The Emperor stopped to look at me. He certainly thought that I was one of those men who only appear reluctant to obey, in order to enhance the price of their services; so he said, "Money is always wanted in travelling; I will order them to pay you a thousand Louis, and then you may set off."—"A thousand Louis!" I exclaimed, with indignation. "Sir, I must answer your Majesty in the words with which the sol-

dier answered his general. 'These actions are not performed for pay.'—"That's very right; I like to see pride."—"Sir, I am not proud, but I have a soul; and if I thought that your Majesty could believe that I embraced your Majesty's cause for the sake of filthy lucre, I should request your Majesty to cease to rely on my services."—"If I had believed that to be the case, I should not have trusted you. No person ever received a more honourable and splendid proof of my confidence, than that which I am now bestowing upon you, in deciding, merely on the strength of your word, to quit the isle of Elba, and in directing you, as my precursor, to announce my speedy arrival in France. But do not let us talk any more on that head; and tell me if you recollect fully all that I have told you."—"I have not lost one of your Majesty's expressions. They are all engraven on my memory."—"Then I have only to wish you a pleasant journey. I have directed that every thing should be got ready for your departure.

"This evening, at nine o'clock, you will find a guide and horses at the gate of the town: you will be taken to Porto Longone. The commandant has been authorized to furnish you with the necessary quarantine documents. He knows nothing; say nothing to him. At midnight a felucca will leave the port, by which you will reach Naples. I am sorry to have hurt your feelings by offering money to you, but I thought you might be in want of it. Adieu, Monsieur; be cautious. I hope we shall soon meet again, and I shall acknowledge, in a manner worthy of your merits, your exertions in favour of the country and of myself."

Hardly had I gone down to the town, when he sent for me again. "I have considered," said he, "that it is desirable that I should know what regiments are stationed in the eighth and tenth military divisions, and the names of the commanding officers. You will undertake to procure this information during your journey, and transmit it to me without the slightest delay. Write triplicates of your letters. Send one by way of Genoa, the second by Leghorn, and the third by Civita Vecchia. You will take care to write this name legibly (here he gave me a memorandum containing the name of an inhabitant of the island). Fold your letters in a business-like way. In order that the secret of your correspondence may not be discovered, should any accident happen, you will put your intelligence in the shape of commercial transactions, and you will imitate the usual style of bankers. I will suppose, for example, that between Chambéry and Lyon, going by the way of Grenoble, there are five regiments. You will write to me... in my way I have seen the five merchants whom you mentioned; their views continue the same: your credit is increasing daily. The concern will turn out well... do you understand me?" "Yes, Sir; but how am I to send the names of the colonels and the generals in command?"—"Transpose the letters of their names, and nothing will be more easy. There is not a single colonel or general whom I do not know, and I shall soon be able to

recompose their names."—"But, Sir, the anagrams which I shall make will perhaps be so uncouth, that it will be seen at the post-office, that the names are disguised on purpose."—"Do you think, then, that they amuse themselves at the post-office by opening and reading all the letters of business which pass through? They could not get through them. I have attempted to unravel the correspondence carried on under the disguise of banking transactions, but I could never succeed. The post-office is like the police, only fools are caught; yet think of any other method: I shall have no objection."

After I had considered a little while, I said to the Emperor, "Sir, there is a method which perhaps will do. Your Majesty has the imperial calendar."—"Yes, sure."—"Well, Sir, the calendar contains the lists of the general officers and colonels of the army. Now, I will suppose, for example, that the regiment quartered at Chambéry is commanded by Colonel Paul. I look into the calendar, and I find that Paul stands forty-seven in the list of colonels. I will also suppose that, between ourselves, 'bill of exchange' means 'colonel' or 'general.' Then I shall write to your Majesty, I have seen your correspondent at Chambéry; he has paid me the amount of your bill of exchange, No. 47. Your Majesty will turn to your Majesty's calendar, and then your Majesty will see, that the 47th colonel who commands the regiment of Chambéry, is called 'Paul.' And, lastly, in order that your Majesty may be able to tell when I speak of a colonel, a general, or a marshal, I shall take care to indicate the rank of the officer by one, two, or three dots, placed after the 'No.' The colonel will have one dot. No.; the general two. No. . . .; &c."—"Very good, very good. Here is a calendar for you. Bertrand has one which I will take."

The calendar given to me by the Emperor was richly bound, and stamped with the imperial arms. I tore off the binding. The Emperor kept walking up and down, and saying, as he laughed, "It is really excellent; they will never be able to see through it." When I had finished, he said, "One thought brings on another. I have asked myself how you would manage to write to me, if you should have any thing of unexpected importance to communicate. For instance, suppose any extraordinary event should make you think that my disembarkation ought to be accelerated or retarded; if the Bonapartes were to be on their guard; in short, I know not what." He remained silent, and then began again. "I only know one way to provide for it: the confidence which I place in you ought to be unbounded. I will give you the key to a cipher which was composed for my use, in order that I might employ it in corresponding with my family under the most important circumstances. I need not tell you that you must keep it with care: always carry it about you, lest it should be lost; and if the smallest danger arises, I turn it to test it at the slightest suspicion. With this cipher you may write any thing to me which you like. I would rather that you should use it, than be under the necessity of

coming back, or of sending any messenger to me. If they intercept a letter written in my cipher, it will take them three months to read it; whilst the capture of an agent might ruin all in an instant." He then went and looked out his cipher; he made me employ it under his eyes, and delivered it to me, exhorting me not to use it unless all other modes of communication should become insufficient."

The Emperor continued, "I do not suppose that you will have occasion to return here before my departure, unless the sudden overthrow of our projects should force you to seek an asylum here. In such a case, apprise me of your intended return, and I will send for you to any place which you may name. But we must hope that victory will declare for us. She loves France.... You have not spoken to me about the affair of Exechmans; if such a thing had happened in my time, I should have thought myself lost: when the authority of the master is not recognised, all is over. The more I think upon the matter (here he displayed a sudden emotion), the more I am convinced that France is mine, and that the patriots and the army will receive me with open arms."—"Yes, Sire, I swear to you, upon my soul, the people and the army will declare for you as soon as they hear your name, as soon as they see the caps of your grenadiers."—"Provided the people do seek to do themselves justice before my arrival, a popular revolution would alarm foreign powers: they would dread the contagion of example. They know that royalty only hangs by a thread, that it does not agree with the ideas of the age; they would sooner see me seize the throne, than allow the people to give it to me. They have re-established the Bourbons in order to convince the people that the rights of sovereigns are sacred and inviolable. They have blundered. They would have done more for the cause of legitimacy by leaving my son there, than by re-establishing Louis XVIII. My dynasty had been recognised by France and by Europe; it had been consecrated by the Pope. They ought to have respected it. By abusing the rights of victory, it was in their power to deprive me of the throne; but it was unjust, odious, impolitic, to punish the son on account of the wrongs of his father, and to deprive him of his inheritance. I was not an usurper; they may say so as long as they like; nobody will believe them. The English, the Italians, the Germans, are now too enlightened to allow themselves to be crammed with old ideas, with antiquated notions. In the eyes of nations, the sovereign who is chosen by the entirety of the nation, will always be the legitimate sovereign.... The sovereigns who sent their ambassadors to me with servile solemnity; who placed in my bed a girl of their breed; who called me their brother, and who, after doing all this, have stigmatized me as an usurper, they have spit in their own faces by trying to spit at me. They have degraded the majesty of kings. They have covered majesty with mud. What is the name of an Emperor? A word

like any other. If I had no better title than that, when I shall present myself to future ages they would scorn me. My institutions, my benefactions, my victories—these are the true titles of my glory. Let them call me a Corsican, a corporal, an usurper... I don't care... I shall not be less the object of wonder, perhaps of veneration, in all future time. My name, new as it is, will live from age to age, whilst the names of all these kings, and their royal progeny, will be forgotten before the worms will have had time to consume their carcases." The Emperor stopped, and then continued; "I forget that time is precious; I will not detain you any longer. Adieu, Monsieur; embrace me, and depart; my thoughts and good wishes follow you."—Two hours afterwards I was at sea.

*Miscellanies*: by the Rev. Richard Warner, Rector of Great Chalfield, Wilts, &c. &c. Bath and London, 1819. 12mo. 2 vols.

As the principal papers of this *Miscellany* have been published in various periodical works, of considerable or limited circulation, and are now only presented in a collected form, we shall do little more than notice the contents, and transcribe a specimen.

The first volume consists of *Essays on the Decay of Intellect*; the *Admiration of Learning and Talent*; *Reason and Insanity*; the *Sceptic Reclaimed*; an account of Mr. Hamard, a French Emigrant; and an *Historical Sketch of the Book of Common Prayer*: the second comprises—*The Story Teller*, with *Anecdotes*; the *Jokes of Hierocles*; and a *Biographical Memoir of the Rev. Wm. Gilpin*. From these truly miscellaneous pieces, we shall select examples of the grave and of the gay; and first from the *History of the Compilation of the Book of Common Prayer*. After a judicious exposition of the conduct of our Eighth Henry, on his rupture with the Pope, respecting his divorce, the author says—

Happily for the interests of true religion, Henry was at the time of this quarrel, surrounded by wise and good men, who had long ardently wished for a reformation of the national faith. Of these, the venerable Cranmer, and the active Cromwell, were the leading characters; who wisely availed themselves of Henry's indignation, and of the influence they at that time possessed in his esteem and opinion, to confirm his resolution of throwing off the Papal yoke, and to render this freedom from superstitious thralldom the means of diffusing a purer religion over their own country. With the King's sanction, therefore, (and it should seem) assentance also, these able friends of the Reformation compiled without delay, both in

English and Latin, published and circulated, a small volume of devotional tracts, entitled *the King's Primer*; calculated to do away many of the erroneous notions, and to soften many of the superstitious prejudices, with which Popery had filled the minds of the people; as well as to infuse into them a knowledge of the simple truths and spiritual doctrines of the gospel, and of the duties and obligations necessarily resulting therefrom. So ardent and general was the desire for religious information, that the first impression of *the King's Primer* was speedily disposed of; and in the year 1535 another edition, on a larger size, and enriched with many valuable additions, was put forth to gratify the public impatience for this popular manual. Of this second edition the contents are as follows:—a godly preface; an exposition of the commandments, and of the creed; a confession; directions concerning prayer; an exposition of the Lord's prayer; a prayer to our Creator; prayers for various states of men; an office for all states; a dissertation on good works; an exhortation to expect the cross, and to bear it patiently; matins or morning service; lauds, or acts of praise; evensong; the seven penitential psalms; the litany; a contemplation on psalm li.; a prayer to our Saviour; the history of Christ's passion; a practical discourse on the passion; instructions for children; a catechetical dialogue; prayers against blindness and hardness of heart; various prayers and thanksgivings; the *Dirige*, or office for the souls of the dead; commendations; and the collects, epistles, and gospels, throughout the year, with expositions of them. This volume may be considered as the parent of our present *Book of Common Prayer*; for although, during the times of Popery in this country, the forms of the Liturgy had always been in the hands of the laity, under the names of *breviaries*, *missals*, and *rituals*; yet these being written in Latin, (an unknown tongue to the bulk of the community) and being full of idolatrous prayers, and superstitious services, were neither intelligible to the laity, nor could have furnished them with sound doctrine, nor led them to right practice, had they been generally understood. The royal authority enjoined either the public or private use of the volume of services called "*the King's Primer*." But this sanction was perhaps unnecessary for ensuring its free and general circulation; as the people themselves were sufficiently prepared for its favourable reception; a fact that was clearly evinced by its rapid sale; very many

\* *Breviaries* contained *matins*, or morning service; *lauds*, or acts of praise; and *evensong*. *Missals*, or mass-books, contained the communion service, with the collects, epistles, and gospels, to be used throughout the year. The *Rituals* contained the occasional services; baptism, matrimony, visitation of the sick, form of burial, &c. These books of liturgical services differed frequently from each other in the forms and arrangement of their contents, in different places. Those chiefly in use in this kingdom were the *Breviaries*, *Missals*, and *Rituals* of Sarum, York, Lincoln, Hereford, and Bangor.

ditions being called for in the course of a few years.

In 1535 the Bible, translated into English, was first given to the public: and in the year ensuing the original of the thirty-nine Articles, which were finally settled in 1662.

The year 1537 was marked by fresh endeavours of the reformers to accomplish their great and salutary work. Cranmer, Latimer, and other prelates (nominated as a committee for that and other purposes, by the convocation held in 1536,) drew up and published a compendium of religious instruction called, "*The Institution of a Christian Man, containing the Expoyation or Interpretation of the Commune Crede, of the Seven Sacraments, of the Ten Commandments, and of the Pater Noster, and the Ave Maria, Justification, and Purgatory.*" This treatise, consisting of rules of faith and practice, (having been revised and corrected by the king, and again reviewed by Cranmer, in 1540,) continued to be in general request and use till the year 1543; when it was superseded by an enlarged and improved edition of the same work, altered, however, in matter and arrangement, and bearing the new title of "*A necessary Doctrine and Erudition for any Christian Man, set forth by the King's Majesty of England, &c.*" It was called the "*King's Book*," and designed for a standard of Christian belief, and contained the following articles or treatises:—"*The Declaration of faith. The articles of our belief, called the Creed. The seven Sacraments. The Ten Commandments of Almighty God. Our Lord's Prayer, called the Pater Noster. The salutation of the angel, called the Ave Maria. An article of free-will. An article of justification. An article of good works. Of prayer for souls departed.*" In the year following the publication of this book, another step was made in the progress of reformation, as well as a small advance in the introduction of a *new liturgy*; namely, the printing and circulating of a *form of procession*, drawn up in the English tongue, entitled, "*An exhortation to prayer, thought meet by his Majesty and his clergy, to be read to the people; also a litany with suffrages, to be said or sung in time of the processions.*"

We have seen above, that some steps had already been taken for providing the people with intelligible religious services, by the publication of the *King's Primer*, the *Form of Procession*, and the *Necessary Doctrine and Erudition for any Christian Man*; but these did not amount to the establishment of a general and uniform liturgy, nor were they attended with any compulsory injunction to ensure their exclusive use. Much had hitherto been left to the discretion of the officiating clergy, who, in the performance of public worship, seem either to have continued the use of the popish services, without making any alteration in them, or to have adopted only partially the new ones proposed by the reformers. A committee,

therefore, was appointed to draw up in English a book of services for the general use of the church; which consisted of Archbishop Cranmer; Thomas Goodrich, bishop of Ely; Henry Hollache, alias Rades, bishop of Lincoln; George Day, bishop of Chichester; John Skip, bishop of Hereford; Thomas Thirlby, bishop of Westminster; Nicholas Ridley, bishop of Rochester; Dr. William May, dean of St. Paul's, London; Dr. John Taylor, dean (afterwards bishop) of Lincoln; Dr. Simon Heynes, dean of Exeter; Dr. John Reithmay, master of Trinity College in Cambridge; Dr. Richard Cox, dean of Christchurch in Oxford; and Mr. Thomas Robertson, archdeacon of Leicester. These divines entered with such ardour upon this business, and continued it with such perseverance, that in a few months they had prepared for public use all the offices for morning and evening prayer, for Sundays and holidays; as well as the forms for baptism, confirmation, matrimony, burial of the dead, &c. &c. The book being completed, it was by Cranmer presented to the young king, (Edw. VI.) who received it with every mark of delight. Parliament immediately (viz. at the close of the year 1548) confirmed its authority, and enjoined its general use, under the title of "*The Book of Common Prayer, and Administration of the Sacraments, and other Rites and Ceremonies of the Church; after the Use of the Church of England.*"

A new and corrected edition, under the name of the *New Service*, was published in April 1552.

The alterations of most importance adopted in this new edition were as follow. The appointment of the *sentences, exhortation, confession, and absolution*, to be read at the beginning of the morning and evening services, which in the first Common Prayer Book began with the Lord's Prayer; the rejection of *prayers for souls departed*, both in the communion office, and in that for the burial of the dead; of the *invocation of the Holy Ghost*, in the consecration of the Eucharist; of the *prayer of oblation*, that fol-

• The commissioners assembled in the month of May, 1548, and came immediately to the unanimous resolution, that, setting aside all prejudice, they would reject nothing of what was already done by their hand, merely through love of change; but only endeavour to restore the primitive to the simplicity of the service of the primitive church, by abolishing the superstitious errors and ceremonies with which Popery had encumbered the worship of God. The commissioners, therefore, entered upon an examination of the Breviaries, Missals, and Rituals, in general use, as well as the book of offices; and scrupulously comparing them with ancient liturgies, and the ritual compositions of the early fathers, they adopted whatever had the authority of scripture, and the sanction of pure ecclesiastical antiquity on its side; and rejected whatever was contrary thereto, or which was in itself trifling, idle, or superstitious. Dr. Benner has made a curious calculation of that proportion of our present offices which has been borrowed from Popish liturgies, and states it as not exceeding one fourteenth part.

lowed it; of the *rubrick* that ordered water to be mixed with the sacramental wine; of the use of *oil in baptism*; and of the *unction* of the sick. Certain hymns also were introduced after the lessons; and some occasional prayers at the end of the litany were added, and different rubrics were inserted. The ten commandments were appointed to be read after the collect, in the beginning of the communion service, and the short petition which follows each commandment was inserted. The *habits* of the officiating minister prescribed by the former book were, by the present one, ordered to be laid aside; and a rubric was added at the end of the communion service to explain the reason of *knelling* at the sacrament.

In 1553 Cranmer drew up "*A Short Catechism*," which was adopted; but in the reign of Mary the labours of reform were buried in the graves of Martyrs. On the accession of Elizabeth—

Mary's act of repeal was reversed; and measures were taken, and commissioners appointed, for another review of Edward's Book of Common Prayer. The commissioners were, Dr. Parker, afterwards Archbishop of Canterbury; Dr. Guest, Dean of Canterbury; Dr. Cox and Dr. May, (commissioners for a similar purpose in Edward's time; Dr. Grindal, bishop of London; Dr. Sandys, afterwards bishop of Worcester; Dr. Whitehead; Dr. Bill; and Dr. Pilkington, afterwards bishop of Durham. These learned and pious men commenced their task in December, 1558, and completed it in the ensuing April, when Parliament ratified the review, with one amendment only, that of enjoining the communicants to *knell*, instead of standing, when they received the elements of bread and wine. With this amendment the new book was commanded to be received into public use on the festival of St. John the Baptist, 1559. Amongst some other alterations of a trifling or verbal nature, the following were suggested by the commissioners, and adopted in the Book of Common Prayer now under consideration. The place in which the morning and evening service should be read (which hitherto had been the chancel) was left to the appointment of the ordinary. *Proper first lessons* were now appointed for Sundays; for hitherto those for the day of the month had been regularly used on the Lord's day. The very harsh and objectionable deprecation in the litany was omitted: "*From the tyranny of the Bishop of Rome, and all his detestable enormities, good Lord deliver us.*" The intercessions for the Queen were incorporated into the same service; and towards the conclusion of it, "*A Prayer for the Queen's Majesty*" was introduced; together with that for "*the Clergy and people*;" and the beautiful collect which commences with these words, "*O God, whose nature and property is ever to have mercy and forgive.*" The *habits* of the officiating ministers, enjoined by the first book of King Edward, and prohibited by the second, were ordered again to be adopted. The rubric, which was added at the conclusion of the communion service,

in the second hook of King Edward VI. denying Christ's *corporeal* and *real* presence in the holy sacrament, was now left out; and in order still further to conciliate the Roman Catholics, and unite the nation in one faith and mode of worship, the royal injunctions expressly commanded, that the sacramental bread, which the rubric only enjoined to be of the finest wheaten flour, should be made of a *round form*, similar in shape to the *vaffer* used in the Romish mass.

Under the house of Stuart the Puritans and Presbyterians endeavoured to introduce other changes; but the Church Commissioners, on a review, adopted only a few slight typographical and verbal alterations; by which our Book of Common Prayer, as it now exists, was definitively settled, as we have above stated, in 1692.

We have thought that these historical particulars, in a condensed shape, might be agreeably quoted, especially as, though well known to Divines and Scholars, they are scattered over so many large works, as to be far from familiar to the general reader. We shall now close with a few examples of the Story Teller, and Jokes of Hierocles, from the second volume.

Smuggling, it appears, is not an exclusive characteristic of the English nation. Our neighbours the French are *up to all the tricks and artifices* of the system, and play off upon John Bull a variety of impositions in the line of contraband trade. A short time after the restoration of intercourse between France and England, a countryman of ours who was travelling through the Netherlands and Flanders, on his Paris, made a purchase at Brussels of 100*l.* worth of lace, which he intended to convey home, free of duty, as a present to his wife. According to the present regulations on the continent, a heavy impost is paid, at the frontier towns, on all articles of Flemish manufacture, which are brought from thence into France. Of this the gentleman was not aware; and of course when he reached the frontier town, his lace was seized by the officer of the customs. He tried every means to regain the packet from the harpy, but without success. He was given to understand that no compromise could be made; and that the duty, which was a heavy one, must be paid. Unwilling to lose what he had already advanced, and at the same time exceedingly disinclined to pay a considerable additional sum for an article, which, after all, was of no essential importance, he was balancing in his mind whether he should relinquish or redeem it; when he received a packet from the custom-house containing the object of his anxiety; and a note, informing him, that the officer begged to return his lace, with an apology for having seized it: "for that, on a close inspection, it was discovered that the article was of *English* and not Brussels manufacture; and therefore not liable to the duty."

When Sir John Sinclair moved in the

House of Commons, in the year 1795, for a reward of 1000*l.* to be granted to Mr. Elington, whom he stated to be *the best artist for draining the country*; Mr. Jekyll, who sat next to him, whispered in his ear, "you forget the King of Prussia, and the Emperor of Germany; who have shewn themselves infinitely more successful artists for draining the country, and have already been much better paid for it."

Few persons are more remarkable for those sprightly coquets in conversation, which, by a strange misnomer, are called *good things*, than the Rev. S—y Sm—th. An acquaintance of his some time since expressing his doubts, whether he would find a residence upon his country living altogether accordant to his taste, or rural pursuits suited to a man of London habits; the witty clerk replied, "You are entirely mistaken, Sir, the situation is precisely what *I* could wish. I have always had a little *green spot* in my heart, and ever looked forward with pleasure to the *future in Rus*."

David, the painter, was a monster of cruelty. He was intimately acquainted with Robespierre, whom he much resembled in character; and was accustomed to say, "If I love blood, it is because nature has given me that disposition." He attended the execution of his friends Danton and Camille Desmoulins, as a spectacle connected with his improvement in the art of painting; and at the time of the massacre of the prisoners at La Force, in September 1792, he was compositely making sketches from the dying and the dead. Rebonl asked him what he was doing? "I am catching," said he, "the last convulsions of nature, in these scoundrels."

The old Grecian has furnished many a modern wit with matter.—*ex. gr.*

A \* Pedant, meeting his friend, thus addressed him, "In a dream the other night, I spoke to you." "I crave your pardon," returned the other, "for *not attending to you*."

A Pedant visiting a sick man, asked how he was? The patient being too far gone to answer, the other cursed him, and exclaimed, "I wish I were *ill myself*; that I might treat you with the *same incivility*, when you inquired after my health."

A Pedant having dreamt one night that a nail had run into his foot, and given him great pain, put a bandage round the part. A friend accidentally met him, and learning the cause of his limb being swathed, inquired how he could think of sleeping without shoes?

A Pedant had carefully sealed the head of a cask of excellent wine which belonged

\* The original word is Σχολαστικὸν a word to which we have no corresponding single term in the English language. It does not so much convey the idea of a pedant, or dull, learned coxcomb, as that of a man whose mind has been completely absorbed, and time entirely engrossed, by books, or rather, by the trifling disputes of the schools, to the exclusion of all observation of the world's manners, and all experience of the common affairs of life.

to him, in order to secure its contents from being purloined. One of his slaves, however, perforated the vessel at the bottom, and drew off part of the wine. The pedant, expressing his surprise at the decrease of the liquor, a friend recommended him to examine the lower part of the cask. "Block-head," replied the pedant, "it is not the *bottom* but the *top* of my wine which I have lost."

One Pedant meeting another said to him, "Why I heard that you were dead." His friend replied, "you see, however, that I am alive." "So you say," returned he, "but the man who gave me the account was more worthy of credit than yourself."

A Pedant, wishing to cross a ferry, entered the boat on horseback. On being asked his reason for so doing; "That I may make haste," said he.

These may suffice for the illustration of the Rev. author's production; and we have only to add, that the seeming incongruity of subject is not so observable when divided into separate volumes, as when thus brought together in our review.

*The History and Antiquities of the Metropolitan Church of York; illustrated by a series of Engravings, of Views, Elevations, Plans, and Details of the Architecture of that Edifice; with Biographical Anecdotes of the Archbishops.* By John Britton, F. S. A. London, 1819, 4to. pp. 96.

In our Volume for the year 1818, will be found (at page 503,) an account of Mr. Britton's immediately preceding volume, the History of Winchester Cathedral. The praises bestowed on that beautiful performance, are equally merited by the present, which possesses the same antiquarian research dwelling on the instructive rather than on the controversial; the same admirable illustrations of the subject by snubber engravings; and the same means of pleasing the mind and eye by its composition and ornaments. The public is, indeed, much the author's debtor for this elegant and useful work; and it is with regret we observe it stated in the preface, that a pursuit of such national concernment is persevered in, to the detriment of its able and zealous follower. Besides Winchester, Salisbury and Norwich have already been described and delineated; and we see it announced that the histories of other Cathedrals are in the forward state of preparation:

+ This puts us in mind of an anecdote told of our good King George the 11d.; who, being overtaken by a violent tempest on his passage to Holland, exclaimed, with great agitation, "Dis-*ble my guard*."

we trust that encouragement and reward will accelerate their appearance in the literary horizon.

The See of York was founded by Edwin the Saxon king of Northumberland, early in the seventh century; and the first Church, or more temporary structure, erected about the year 627, after his majesty's baptism there by Paulinus. This Paulinus was at no great distance of time, consecrated by Honorius, and became the first Archbishop of York. The minster, now standing, was built after the year 1171, all those before it, having been destroyed by various accidents; and the author thus characterizes it—

That York Cathedral is a noble, a magnificent, and even a sublime structure, will be readily allowed by the impartial and discriminating antiquary:—that it is peculiarly imposing and impressive as a whole must also be admitted, and that it presents many beautiful features and details, few persons will have the temerity to deny. The Cathedral of Lincoln has, however, many local and individual beauties, which command admiration; and which, on comparative examination, may appear to excel the corresponding parts of York. It would be bordering on superciliousness and fully to pronounce in general terms on the preeminence of either. Each has its own and its exclusive beauty; each is entitled to the careful study of the architect and antiquary; and each has its peculiar monuments, architectural details, and history.

As a distant object, this edifice assumes a lofty and imposing aspect. Its three towers are seen preëminent above the city houses, and the parochial churches; whilst the numerous crocketed pinnacles, at the west end and gables, display at once intricacy, variety, and picturesque beauty. Though this church has not the advantage of a lofty, or scarcely so elevated acite, yet it appears very high by comparison with its neighbouring buildings; and is seen like a noble forest tree amidst a shrubbery from every approach to the city. It is difficult to point out any single spot that commands it to the greatest advantage, yet from the rampart between Micklegate and the water tower, it may be regarded as peculiarly magnificent and fine. Hence the three towers, with their pinnacles, open parapets, and bold sculpture, are seen to rise sublimely above the houses. Indeed, it may be compared to a mountain starting out of a plain: and thus attracting all the attention and admiration of a spectator. The petty, humble dwellings of men appear to crouch at its feet; whilst its own vastness and beauty impress the observer with awe and sublimity. It aspires heavenwards, and thus denotes its pristine appropriation. From the station now alluded to (see Plate XII.) is seen a congregated mass of houses, with the parish hall, and two or three towers, to the right of the cathedral; whilst in the middle distance is presented the busy traffic of the navigable Ouse; to the left the eye is pleasantly relieved and soothed by an open lawn, with the picturesque ruins of St. Mary's Abbey, beyond which is a peep into a distant

tract of country. The foreground is both curious and picturesque. On the brow of a high bank, with a deep scarp and counter-scarp, is an embattled wall, with a terrace walk of communication on the inside: at irregular intervals are projecting bastions, for the purpose of enfilading the wall\*. This fortification extended round the whole city, excepting at the places where the river intersected it. On the opposite banks, at these points, there were fortified towers, from which chains formerly extended across the river.

The approaches to the Cathedral are all unfavourable.

There is nothing remarkable among the monuments in this cathedral; and of its relics we notice none worthy of particular remark, save one.

The most important, as well as the most curious ancient relic, is a large *iron horn*, which was formerly handsomely adorned with gold, and suspended by a chain of the same metal; an inscription on it states that the horn was given to the Cathedral by Ulphus, Prince of West Deira, with all his lands and revenues. Being lost, Henry Lord Fairfax at length restored it. The Dean and Chapter ornamented it anew, A. D. 1675.

Camden mentions this horn, and cites an ancient author, who thus describes the donation of which it served as a token. "Ulphus governed in the western part of Deira, and on account of an altercation between his elder and younger sons, about the succession to his domains after his death, he presently made them both fairly equal. For he repaired immediately to York, and filling the horn, from which he usually drank, with wine, and kneeling before the altar, he gave all his lands and rents to God and Saint Peter, prince of the apostles." By this horn the church holds several lands of great value, not far from York on the east, and which are still called "de Terra Ulphi."

Before we dismiss the literary portion of this publication, we must take the liberty of advising greater terseness and precision to the writer, in his future productions. The second period in his book is a proof of bad taste, in these respects; and the same meaning would

have been infinitely better expressed had he left out several of the words which are tautological, and rather confusing than strengthening to the sense. The italics in our quotation will designate the blemish.

Our more immediate purpose is the Cathedral or Minster; the history of which is so blended and combined with other collateral and coincident subjects, of a provincial and ecclesiastical nature, that we occasionally advert to them.

Of the plates we can hardly say too much. Accurate details, imposing general views, excellent selection, and infinite skill in execution, are their distinguishing features. The Crypt under the Altar, by J. Scott, is solemn and sublime: the South Transept by J. Le Keux, exquisitely touched, and full of sweet effect; the centre doorway to the west front, by the same, similarly beautiful; the Minster from the Ramparts, S. Rawle, eminently fine; the View from N. to S. transept, one of the prettiest interiors we ever saw; and the Capitals, plate XXXI. forcible and rich. There is a strange apparent want of proportion from the obliquity of several of the views; but we presume that this is consistent with the rules of perspective: otherwise the change of shape, and departure from relative position, which it introduces, might be advantageously avoided.

We shall merely add, that there were 83 Archbishops of York, from 625, to the present day, and 63 deans from the time of Wm. II. The Crypt under the Choir is the most ancient part, viz. 1171; then the S. Transept 1227; the North a few years later; the Chapter House 1291 to 1330; the Nave and Ailes of the same date; the Choir 1361 to 1405; the Central Tower 1370; and the Western Tower 1402.

There are in all 36 engravings, and every one finished in a masterly style.

#### Burckhardt's Nubian Travels, &c. (Concluded.)

From the geographical details respecting the routes of African pilgrims, in our last, we again turn with pleasure to the personal travels of our interesting author.

June 17th.—In riding along a gravelly plain, thickly covered with thorny trees, we started several female ostriches, which are known from the males by the darker colour of their plumage; they at first ran off, without appearing to be much frightened; but followed the caravan for upwards of an hour, at the distance of about two gun shots.

The author mentions in a former part, that black ostrich feathers were

\* As the fortified Walls of York constitute not only a peculiar, but a highly interesting historical feature to the city, it is truly lamentable to witness the wanton and vulgar dilapidation to which they are daily subjected. Instead of being cautiously protected and preserved by those persons whose duty it is to guard and uphold them, and who are invested with an annual income for that purpose, they are suffered gradually to moulder away. Indeed they are sometimes battered down for the materials to be appropriated to a hog-stye, or for some other equally trivial purpose. The four ancient fortified gates, or bars, are also fast approaching to ruin. One of these, Monk-Bar, is probably the most curious and perfect specimen of this sort of architecture in the kingdom: and therefore is very interesting to the antiquary and architect.

articles of traffic; the white being sold privately to Souakin merchants. They now began to ascend the mountains. On the 10th, he continues—

After a march of nine hours, (the general direction N. N. E.) four of which had been occupied in ascending, we came to a spot where the valley, having reached the summit, becomes level for about five hundred yards; here we encamped. We had met with several Hadendoa families near the pools of water; and, as they are reputed to be great thieves, we determined to continue our march thus far, as we thought they would follow us no farther in the woods. One of the men asserted, that in coming up the valley he had seen a monkey among the trees, and I was informed that these animals are not unfrequently met with in this place, and that they are very common on the western road to Souakin, which leads over the same chain of mountains. We saw many gazelles, and several hares. The heat of the day, which had become particularly oppressive in the lower plain, between the high mountains, was here succeeded by a chilling cold. We lighted many fires, and the fear of robbers kept us awake the greater part of the night. I killed a scorpion just by my fire.

The climate here is delicious and invigorating.

Notwithstanding the steepness of the mountain, there are trees to its very summit, exhibiting an interesting and novel sight to me, who had seen nothing like it since I quitted Syria. There are numberless ravines, through which the torrents are precipitated into the plain during the rains, when they must form so many cascades boiling over the rocks, and presenting altogether a grand spectacle. Many Sedar trees grow in the plain. Here again the slaves caught locusts, which they roasted over the fire, after taking out the entrails. From Wady Moez we continued over even but rocky ground, four hours farther, when we halted.

June 23d.—The country before us presented a valley (called Wady Osyr) of at least four hours in breadth, bordered on the east side by low hills. We continued our route close to the high western chain; the whole plain is full of trees and shrubs, and in every low ground was herbage, now parched up. We passed another encampment of Hadendoa, with large herds of camels; they appear to live here in perfect security from any surprise by their enemies. We also met a travelling party of Hadendoa, with their women and tents; the women were seated upon the camels, on high saddles, fantastically decorated, with three or four poles sticking out in front, beyond the animal's head, having the extremities ornamented with large bunches of black ostrich feathers. The African, like the Arabian Bedouins, seem to display elegance of equipment in the decorations of their women only: leathern tassels of different sizes, small bells, and whites bells, from the Red Sea, contributed to the ornament of the harness and saddles of the camels. None of the women

passed me without uttering a loud shriek, and then laughing. After marching two hours and a half, we halted under a thick cover of acacia trees, in low ground, called Wady Shenkera. The slaves had to bring water from an hour's distance in the mountain.

We now close this journey with the arrival at Souakin.

June 25th.—We set out soon after midnight, and travelled over a rocky plain. When the sun rose, we saw the sea about five hours distant. The soil now began to be strongly impregnated with salt; a bitter saline crust covering its surface in many places to the depth of several inches. The atmosphere arising from this soil, rendered still more saline by the sea breezes, had made the branches of all the trees as black as if they had been charred; and it was with difficulty that the herds of camels of forty or fifty together, could find out a few green leaves. I had never seen the camel so nearly approaching to a wild state. Whole herds are here left to pasture without the care of either men or dogs; the Hadendoa keep them almost entirely for their milk and flesh, very few being employed as beasts of burthen; they appeared to be frightened at the approach of men and of loaded camels, a circumstance I had never witnessed before. In the Arabian and Syrian deserts, the camels when grazing, come running and frisking towards any strange camel which they perceive at a distance, and they easily obey even the call of strangers, provided they are Bedouins, like their own masters. The herds of camels which we saw this day were, like those of Nubia, in general of a white colour. The acacia trees in this plain are stunted, owing to the violent winds to which they are exposed. I observed a parasitic species of cactus growing upon all of them, and completely covering some of them like a net.

After marching four hours, we took the direction of N. by E. and approached a mountain branching into the plain, from the main chain of Dyanb. It is called the mountain of Gangerab, and is inhabited by families of Hadendoa, who supply Souakin with butter and milk during the summer, when no cattle is to be found near that place. We encamped during the mid-day hours at some distance from the mountain, and were much distressed for water, having taken a very small supply on the 23d. The Souakin merchants, who knew the country well, hired, without our knowledge, an Arab, who brought them several camel loads of water from the mountain, which we in vain treated them to share with ourselves and slaves. No idea can be formed by Europeans of the quantity of water necessary for drinking, cooking, and washing during a journey through these countries, but more particularly to allay the thirst of the traveller, whose palate is continually parched by the effects of the fiery ground and air, who has been confined perhaps for several days to a short allowance of water; and who lives upon food which, consisting of farinaceous pre-

parations and butter, is calculated to excite thirst in the greatest degree. It is a general custom in the caravans in these parts, as well as in the Arabian deserts, never to drink, except when the whole caravan halts for a few minutes for that purpose; the time of doing this is, in the slave caravans, about nine o'clock in the morning, and twice during the afternoon's march, namely, about four and six o'clock. In the forenoon also, every one drinks at the halting of the caravan, and again after the meal; and the same rule is observed in the evening. To drink while others do not, exposes a man to be considered effeminate, and to the opprobrious saying, that "his mouth is tied to that of the water-skin."—(Fomoh marabout alâ khoshin el gerbé), and it is otherwise imprudent, as the opening of the water-skin at an unusual time subjects the traveller to importunities which it is not always prudent to reject; but none thinks of asking such a favour when the whole caravan halts to drink. Those who have many slaves fill the large wooden bowl in which dinner is served up, and place it on the ground, when the slaves kneel down and drink out of it half a dozen times, as cattle do out of a trough; this is done to prevent the waste of water that would be occasioned by each having a separate allowance. Travellers in these journeys drink a great quantity of water when it is plentiful; I do not exaggerate when I say that I have often drank in the afternoon, at one draught, as much as would fill two common water-bottles. To drink three or four times a day is considered short allowance; few Blacks and Arabs, when water is abundant, drink less than six or seven times daily; but when the S. E. wind blows no quantity is sufficient to keep the mouth moist, and one wishes to drink every quarter of an hour.

The number of houses in Souakin is about six hundred, of which two thirds are in ruins, for the madrepore with which they are built soon decays, unless constantly kept in repair. The only public buildings in the town are three mosques. In the suburb El Geyf, are a few houses of stone, built rather in the Soudan than Arabian style, having large court-yards; the other dwellings are formed of mats, like those of the Nubian Bedouins.

There are many other parts of this work which deserve extract and eulogy: but the variety of the demands upon our attention precludes us from conveniently adding further to this review without encroaching on other duties.

#### ANALYSIS OF THE JOURNAL DES SAVANS FOR OCTOBER, 1819.

##### PERSIA.

Art. I. Sir William Ouseley's Travels in Persia, vol. I. (2d Article).

In a preceding article we took a survey of the contents of this interesting volume, which has we hope given our readers a general idea of its value. Mr. de Sacy, in this second part of his review, goes far more into

detail than we can afford room to do; and we must content ourselves with a few extracts from it.

"We have observed (says he) in our notice of the second Journey of Mr. Morier, that according to that traveller, some of the sculptures at Schapour, represent the triumph of Sapor over the Emperor Valerian. The author is also of this opinion, and shews that the taking of Valerian, and his shameful captivity, were not unknown to the oriental historians. The carved monuments of Schapour and of its environs cover vast areas, and have a great number of figures. Several of these pictures, if I may be allowed the expression, form parallelograms forty feet in length by twenty in height. The number of these monuments, their size, and the multitude of figures, cause the pencil to fall from the hand of the traveller, who can scarcely give a few hours to the superficial inspection of so many curious objects, and perhaps, many a European will still visit them, as Sir W. Ouseley has done, before one will be found to have the courage, or the time, to do for these antiquities, what Comte de Bruyn and Niebuhr have done for those of Persepolis.

Our traveller does not think that any of the monuments which adorn the ruins of Schapour are of a more remote period than that of the Sassanide Prince whose name the city bears; yet if we may believe the oriental historians, Schapour has taken the place of a much more ancient city, named *Dindia*, or *Dindader*, the origin of which belongs to the reign of Talmouiras, surnamed *Diaberd* ('Conqueror of the *Dires* or evil geni'), that is to say, the fabulous ages of the ancient empire of the Persians. The destruction of *Dindader* is ascribed to Alexander.

Sir W. Ouseley, speaking of the different superstitions prevalent in Persia, mentions one in particular, which consists in a peculiar kind of worship paid to certain trees, which are called *dirakhi-i-fazel*, that is, excellent tree, and to which fragments of stuffs, of every kind and every colour, are suspended by way of vow or offering. Sir W. Ouseley has convinced himself that this sort of conversation is quite independent of the species, the age, the shape, or the beauty of the trees, and is very frequently owing to some purely accidental, and even trivial circumstance. This kind of superstition, traces of which are to be found in all countries, among all nations, and at all periods of history, he has made the subject of special investigation. Not to interrupt his narrative, he has placed the result of his researches in the Appendix, Number 9: it will certainly be read with much interest, though the facts collected by the learned traveller have not always very much connection with the excellent trees of the Persians. Chardin speaks of this superstition in several parts of his travels, and thought that it always respected trees remarkable for their size or their age. Sir W. Ouseley proves, that these two conditions are not necessary to raise a tree to the rank of *dirakhi-i-fazel*, and he thinks that this title may very well signify *Tree of the Genius*, or *Tree inhabited by a Genius*.

He relates some anecdotes on this subject, and the whole may be considered as a dissertation equally instructive and curious.

At a short distance from the city of Schiraz, the embassy had to pass over a piece of ground, which served but a short time ago for the exercise of the game called *tchougan* or tennis on horseback. This is the subject of another dissertation, which Sir W. Ouseley has likewise placed in the appendix, Number 6. This game, which has been described by many travellers, and is continually alluded to by the Persian writers and poets, was formerly the most usual amusement of the princes and great men. Sir W. Ouseley, profiting by the researches of Du Cange, who had noticed the striking resemblance of the French word *chicane*, (game of tennis on horseback) with the barbarous Greek, *τσανγκισ* and *τσανκανισ* . . . . recognises the origin of both the French and the Greek words, in the Persian *tchougan*, which properly signifies the instrument or crooked stick, with which the ball is thrown. Sir W. Ouseley has engraved several of these instruments, of divers forms, taken from paintings which adorn ancient MSS.: he has also had engraved from a MS. of the poems of Hafiz, the representation of two horsemen playing at this game; lastly, he has quoted several Persian authors, who enumerate among the talents of distinguished princes their dexterity in managing the *tchougan*. I have dwelt a little on this subject, to have an opportunity to state, that M. Etienne Quatremere, in a memoir read to the Royal Academy of Inscriptions and Belles Lettres, above a year before the publication of Sir W. Ouseley's Travels, had entered into the same comparisons, and had drawn the same inferences from them. He intends to publish this memoir in the *Mémoires* of the East.

### ORIGINAL CORRESPONDENCE.

#### CICERO'S LOST BOOKS DE REPUBLICA.

We have frequently had the pleasure of being the first to make our readers acquainted with the important discoveries of ancient MSS. made by the learned Mr. Mai, in the Ambrosian Library. He has been appointed by the Pope Librarian of the Vatican, where, besides the discoveries of which we shall have occasion to speak hereafter, he has found a most splendid MS. on vellum, in magnificent capitals, of the best age, and quite legible, though covered with later writing, containing the *Lost Books of CICERO DE REPUBLICA*, on three hundred folio leaves, in double columns. The name of Cicero is at the head of the MS. and the titles of the chapters in the margin. Mr. Mai is preparing for the immediate publication of this most important MS. from which politics, ethics, history, jurispru-

dence, philosophy, archaeology, and philology, may expect to derive numerous advantages.

### ARTS AND SCIENCES.

#### CURIOUS ANTIQUITIES.

Wiesbaden, Jan.

There are at present in our city two very remarkable objects, of the highest antiquity, namely, a cylinder of red jasper, with winged human figures, birds, and an inscription cut on it, apparently of exquisite workmanship. Learned antiquarians, who have seen it, are of opinion that it is of the time of the ancient Persian Kings, from about 5 to 600 years before the birth of Christ. The cylinder which is hollow, measures 1 inch  $10\frac{1}{2}$  lines in height, and 10 lines in diameter. The characters of the writing are said to be what are called simple Babylonian cuneiform.

The second is a Tibetan MS. on a dark blue coloured silk paper, 2 feet in length. The characters are inscribed in gold, and the paper written upon on both sides. Though this MS. bears the traces of high antiquity in many places, it may be considered as in an excellent state of preservation. The characters seem to have much similarity with the Sanscrit, and may probably authorise us to infer a common origin.

The possessor of the stone and the MS. the Counsellor Dorow, has given permission to have them printed, with additions, by Professors Heeren, Grotefend, and others.

### FINE ARTS.

#### BRITISH GALLERY.

We have been favoured with a view of the exhibition about to be opened in Pall Mall; and rejoice to say, that it is not only meritorious, but brilliant. Besides several pictures by Mr. West, mostly in his best manner, and others which we have seen before, including Gandy's Temple of Jupiter Pluvius, Jones's View of Abbeville, Stewardson's Aladdin, the whimsical pelling of the supposed invisible Italian poet, &c. there are three fine Wilkies, a Highland Still at work, an Old Soldier, and a Bacchanalian scene, in quite a new manner, combining the styles of Poussin and Rubens; a grandly conceived Macbeth and Witches, by Martin; Dogs of St. Bernard rescuing a frozen traveller, Ed. Landseer; the Battle of Waterloo, painted for the Institution, by Jones, (noticed, when in progress, in a former Literary Gazette); the Day before the Wedding, Mr. W. Sharpe, and in his happiest mood; a charming lady portrait, with a curious black cap, and other heads, by Jackson; fine portraits, &c. by Shee; a Venetian Curiosity Shop, and a Drowning Female, Mrs. Ansley; delightful views, Edinburgh, and Greenwich, by G. Vincent; Edinburgh and others, by Hoffman; a Grave, by Starke; landscapes, by Samuel Wilson, and Fielding; a Moonlight, by Leslie; various and clever pieces by Chalon, Burnett, Cooper, Davison, Craig, Crome, Childs,

Stephanoff, Strutt, G. Watson, Deese, &c. &c. &c.

The whole, together, have an admirable effect; and we are of opinion, that examined in detail, they will be found to do honour to the British school.

#### THE BATTLE OF HASTINGS,

*Painted by Mr. F. Wilkins, and now exhibited at Spring Gardens.*

We remember some very beautiful drawings from the old masters by this artist, for Buchanan's work, to illustrate them by engravings; and were not unprepared to see him come before the public, though we confess that we did not anticipate his appearance in so imposing a form as that of the painter of a historical picture, worthy, singly, of being made the subject of an exhibition. On the pretensions of this picture, it would be harsh to speak severely, as its author has certainly put it forward with a modest preface: still, however, he ought to recollect the high ground which he has attempted to take; how; and by whom previously occupied; and how vast a measure of talent it requires to fill it with any degree of success. It is a *first* production in the class to which it belongs; and without yielding too much to the critical softening of this claim upon indulgence, we may say that there are some parts of good execution and much promise. We are not sure that the proportions of Harold are strictly natural, but the limbs are well disposed, and the whole figure, were it anywhere else, deserving of much praise. The horses are well painted, but they attract more attention than the human characters. The pencilling is too smooth, and the whole too clean for a battle piece. There is also a great want of repose, principally in the colouring and the *claro oscuro*; thus all relief is denied, and the whole glitter in the foreground, with a dull monotony in what there is of distance. We do not admire the expression of the Conqueror; nor can we speak in very flattering terms of the general conception. But, as we have said, the eye of the amateur will descry partial merits in this extensive canvas, which, though not brought together very happily, are sufficient to warrant an expectation that Mr. Wilkins may hereafter be able to present something more worthy of public attention.

#### ORIGINAL POETRY.

##### ANACREONTIC.

1.

Fill the wine high, and quaff it down:  
Think not on what may chance to-morrow:  
Wisdom ordains that man should drown,  
No matter how, each thought of sorrow.

2.

Fill the wine high: a sparkling glass  
Not one amidst this band refuses:  
Let every toast proclaim a lass,  
And each man toast the lass he chuses.

3.

And—since in wine bright joys are found,  
'Tho' woman yields the purer pleasure;  
Let's press each blushing lip around,  
And drink another sparkling measure.

[By Correspondents.]

#### IMITATION OF BURNS.

I'm like a wean without a light,  
Takin each glimmer o' the night,  
For girnin o' some eldritch sight  
Or awfu' kelpie;  
Wi sic it is na dounce to fight,  
An' nae to help ye.

I ba' na heart to raise a whistle,  
An' I ha' a rough sough and rustle,  
Deel a hair but 'gins to bristle,  
As aye we awine.  
My pow's just like a gude Scotch thistle,  
Or porcupine.

Leeze me on him, O! were he aigh me,  
I ken a crony wad stan by me,  
Nor let thae bogles terrify me  
In sic a way;  
Whiskey! thou'rt the lad wad gie me  
The spunk o' twa.

De'el is in me, an I leave the ingle,  
While I ha' a bawbie to jingle,  
Or the gude wife a drap to mangle—  
I'll hae my mell—  
And then defy on cliff or dingle  
Auld Nick himsel'!

EVAN.

#### THE POET AND HIS MUSE.

My Muse is such a wayward thing,  
'I know not what to do, sir;  
For when my thoughts wish to take wing,  
Why she don't wish it too, sir;  
And so betwixt us both, you see,  
The Poet and his Mistress  
Are just as Poets like to be—  
Inspir'd, and yet in distress.

Now what the D—— shall I do—  
Which course shall I pursue, sir?  
I've tried her both with threat and sue,  
And neither way will do, sir.  
She swears that all her maudlin airs  
She'll keep up—I don't doubt her:  
And so you see, 'twixt you and me,  
I'll try and do without her.

R.

#### THE DRAMA.

##### DRURY LANE.

KEAN: CORIOLANUS.—This play has been got up in a paradoxical sort of style at Drury Lane. They have restored the old reading and arrangements, and they have assigned the principal part to an actor who makes it quite a *new* character. Neither change is an improvement; for though the former is advantageous in several instances, it is not effective upon the whole; and the latter is, in our judgment, founded on an utter misconception of the original, or the result of an entire want of dramatic requisites for its copy. Mr. Kean's general manner is so distinct from what the attributes of Coriolanus demand, that we preconceived it would be very difficult for him to divest himself of the dissonant peculiarities, so as to convey any accurate idea of the illustrious Roman; but we did expect that he would have dismissed the causticity of Richard, and the snarl of Bajazet, from a cast to which they are so ill adapted, and have endeavoured

ed to substitute dignity for furious brawling in his passion; the spurning of a haughty spirit for cynical sneering, in his rebukes of inferior men; high impatience for tetchiness in his anger; and a stooping as it were to nature from his superhuman elation, for the mere stage tricks, denoting the common workings of feeling in those scenes where his heart is moved by what he almost deems the frailties of his species. Mr. Kean, if he thought these deviations from his usual acting necessary, failed to render them obvious. There was no dignity in his scolding, no superiority in his reproofs, no mind in his rage, and no conflict with pride in his humanity. His Coriolanus was a successful rather than an exalted general, and neither the hero of his party, nor the demigod of his own fancy. No one sank before the lightening of his eye and the majesty of his demeanour: he was on a level with the herd, except in being more fiercely and loudly vehement; and even the Tribune of the people, Holland, that "Triton of the Minnows," had as good of the day as he had (if not the better from his coolness), when they rated each other before the multitude. We make no remark on the personal deficiencies which disqualify Mr. Kean for this character. Had his talents lain the way which could have surmounted them, the imagination of the audience might have clothed him with all the grandeur of mien and commanding port befitting the most distinguished warrior of an athletic race, in whose single arm was the strength of battle—who, *alone*, flustered the Volscians within their own walls; who, in a desert, would be a match for forty. All these ascriptions were ridiculous towards the new Coriolanus,—and though he gave several half lines with fire and energy, displaying great powers, they were yet, either misplaced if viewed with reference to the supposable genius of the part (whether from reading the play or seeing it performed), or lost amidst the heavy gloom of that pervading error which denuded Shakspeare's model of sublime pride and Roman severity of all its finest touches, to make it the very example of waywardness, vulgar rage, and fretful affection by all the petty troubles of mortal life. Mr. Kean has, therefore, as we think, done most unwisely in attempting Coriolanus, in which the brilliant hits of some of his other personations, are only blemishes; and his whole performance such, as never for an instant to confirm the scenic illusion of its being the terrible victor whom we see before us. We add, with regret, because it is got up with considerable magnificence, that the other persons of the drama were so badly represented as to complete the dullness of the play. Mrs. Glover was quite at odds with Volumnia, and so addicted to whining and tears, which the part does not need, and which if it did it is out of her line to give it, that the high-souled matron was converted into the blubbering woman. As a proof we may notice, that when she goes off the stage, telling Virgilia to cease her sorrow, and mourn with her in *anger* like Juno, she bursts into a passion of grief, and *sings* crying—"like Juno"! Mrs. Robinson's Virgilia was pretty, and she did as much as the insig-

ulcance of the part allowed. Mr. Penley's Audius was endued with the most pragmatic sternness; and this rough warlike soldier was so coxcombical that we could only wonder how, with such a hero at their head, the Volcians had stomach to fight at all, or could resist any attack. Gattie was hardly respectable in Menenius; and the rest—hears rest them!

The applause, on the second night, was extremely partial; but at the end, when Penley came forward to announce the next performance, some dozen "voices" raised the shout for Kean, who had just been carried off the stage in a very painful position, with his head hanging down. It is strange, that this senseless cry should ever be listened to;—if the imagination has been affected by the performance, it destroys the vision; and the best that can be done with regard to these injudicious friends of a tragic actor, who do him real injury by their favour, when they insist on such a call, is for the public to treat them with the obloquy and contempt bestowed upon other resurrection men.

COVENT GARDEN. On Saturday, a Mrs. de Jersey Beaumont, originally an actress of some celebrity in the North and West of Scotland, but recently from Philadelphia, attempted to sustain a leading tragic character on the London boards, and performed Isabella in the Mourning Bride. We have heard that the deserts and misfortunes of this lady in private life, obtained for her the trial of her powers in the metropolis, and are therefore grieved to say that they do not seem to be adequate to the situation. There was a want of pathos in her whole performance; and notwithstanding a marked strain—ing after effect, she produced no sensation in the audience. Apathy, more fatal than censure, attended her exertions; and as she has not youth to encourage any hopes of improvement, we fear the effort must be set down as a failure.

#### THE ANTIQUARY.

Our limits prevent us from going into any detail respecting this new musical drama, which was produced with complete success on Tuesday, and repeated every night this week. It is taken, with some alterations so as to bring on the denouement earlier, from the celebrated novel of the same name. Mr. Pocock, who has shown so much taste and judgment in productions of this stamp, is the author; and we believe that the skill and experience of Mr. Terry have been employed to give the finish in adapting the piece for the stage. The music, chiefly Scotch, is very pretty; and what is new, including a melody to words taken from *The Literary Gazette* (without an acknowledgement), not incongruous to the beauty and spirit of what has been selected. The performers do justice to the characters, and shall be mentioned more particularly hereafter. The scenery surpasses all precedent for correctness and beauty: one scene, representing the fearful rising of the tide upon the stage, is inconceivable to those who have not seen it, and baffles description. The house also overflows, and the Antiquary bids fair to run some time before it is thought antiquated.

The first night of this drama was for the Charity in the city; and we ought, perhaps, to record, that both here and at Drury Lane an address was spoken, said to be poetry and suited to the occasion, but seemingly sad trash, and suited to no good purpose.

#### FOREIGN DRAMA.

THEATRE DE LA GAITE.—First representation of *Bouton de Rose* a melodrama in three acts.

Deille de Sales, the author of the *Philosophy of Nature*, left behind him a fairy tale, but little known, entitled *Sige de Myrte et Bouton de Rose*, from which the author of the new melodrama has borrowed one half of his title, and some ideas. *Bouton de Rose* is a sprite endowed with wonderful power. The King of the Genil has commissioned him to visit the palace of Ormus, to defeat the wicked designs of the enchanter Kalib, the grand vizir, who is constantly inspired by the genius of evil. The mischievous enchanter is bent on the death of the princess Ellamira, daughter of the late king, because she had refused to marry him. His eyes being as penetrating as those of the lynx, he perceives *Bouton de Rose* concealed in a basket of flowers, listening to the disclosure of his designs. He utters only one word, makes only one sign, and the basket of flowers is metamorphosed into an iron cage, which he directs the fisherman Azem to throw into the river. However Azem, who is the son of an old minister disgraced by the intrigues of Kalib, is too good and too nobly born to perpetrate such cruelty; he delivers the amiable captive, and *Bouton de Rose* promises to reward him with the hand of Ellamira and the throne. Diamantine, the best of fairies, and mother-in-law to the Princess, consents to realize the promise, on condition that Azem shall previously undergo certain trials to prove that he possesses the virtues necessary in a husband and a king. Azem acquires himself triumphantly; he proves himself to be brave, just, and merciful; and, what is still better, that he possesses the most inviolable constancy towards his mistress. After a contest of enchantments between *Bouton de Rose*, *Diamantine*, and *Kalib*, by which the Princess is exposed to the greatest peril, the whole concludes with the coronation of Azem, and his marriage with Ellamira.

The melodrama was completely successful. *Bouton de Rose* was applauded to the skies. The scenery and decorations may rival the most splendid ballets of the Opera. The music, by Alexandre, is also deserving of commendation. The dialogue is by M. M. Gullbert and Pixericot.

THEATRE DES VARIETES.—First representation of *Les Vêpres Odonniennes*, a parody on *Les Vêpres Siciliennes*.

The tragedy of the Sicilian Vespers has given rise to numerous parodies. The first appeared at the Vaudeville, not much to the entertainment of the public. The *Variétés* come next in order. This parody is formed nearly on the same plan as that of the Vaudeville. Calling in as auxiliaries, dismissed *debutants*, young amateurs, and

authors disowned by Minerva, forming altogether a tolerably numerous battalion, M. Odeon, the manager of the second Theatre Français, conspires against M. Crifort, the manager of the first. His son l'Accident, and Mademoiselle Omelie, his intended daughter-in-law, promise to second his plan, though Mademoiselle Omelie is secretly attached to Crifort; l'Accident is charged to keep a watchful eye on Crifort. But he soon relents, on reflecting that he is about to dethrone him to whom he is indebted for the *first class he ever received*. Gratitude triumphs over every other sentiment, and so far from preventing his benefactor from quitting his own theatre, he gives him a ticket to see the *Vêpres*. Crifort being unbribed, and shewing an inclination to hiss the *Vêpres*, l'Accident determines to call him to account. However he ultimately forgives him, and the piece concludes with Odeon recommending his friends to hold themselves in readiness to appear at the second representation of the *Vêpres* to-morrow, at the rising of the curtain.

#### VARIETIES.

Plymouth, Jan. 20.—It was high water here this morning at about nine o'clock, and a very high tide. The tide then fell 15 inches, and rose and fell again full 15 inches, seven or eight times in the space of half an hour. It excited the attention of every person in the dock-yard and on the river. A similar rise and fall were noticed here at the time of the great earthquake at Lisbon, and about seven years ago, when there were an earthquake and volcano in one of the Western Islands.

M. de Dreux, a distinguished French Architect, who has been studying at Rome for the last five years, has lately set out on a visit to Greece, with the view of transmitting some of the valuable remains of antiquity to the Museums of France. He intends to proceed immediately to Athens, where he will meet the learned Vice-Consul M. Fauvel, who will no doubt afford him that powerful assistance in his investigations, which he has already lent to M. M. Chateaubriand and Fortin.

#### ANECDOTES.

DR. LASSENIS, CHAPLAIN TO THE DANISH COURT.

John Lassenius, who died at Copenhagen, in 1692, was a celebrated divine, and a prolific author of this time. It is related of him, that he used always to stop in the middle of his sermon to take a cordial in a glass of wine, in the presence of the congregation, and then proceed with his discourse.—Another anecdote of this man is so singular, that we are inclined to doubt its truth. It is as follows.—Lassenius, who had for a long time perceived to his vexation, that during his sermon the greatest part of the congregation were asleep, suddenly stopped, pulled a shuttlecock from his pocket, and began to play with it in the pulpit. This extraordinary circumstance naturally attracted the attention of that part of the congregation who were still awake. They jogged those who

were sleeping, and in a short time every body was lively, and stared up to the pulpit with the greatest wonder. This was just what Lassenius desired: for he immediately began a most severe castigatory discourse, saying, "When I announce to you sacred and important truths, you are not ashamed to go to sleep, but when I play the fool you are all eye and all ear!"

**Norway.**—On the 7th of December last, the barometer rose at Christiania to 29 inches 16 lines, a height which it has not attained for many years. On the same day the sea was eight feet lower than it has been for the last twenty years; and the magnetic needle was so agitated, that Professor Gaussteen could not come to any exact conclusion. This phenomenon seems to indicate a convulsion in some part of the globe.

We extract the following from the Journal of the Department of the Meuse. It affords a fresh instance of *spontaneous combustion*, to which all, but particularly women, are liable, who indulge in the excessive use of spirituous liquors:

"The widow Godard, aged 55, who lodged in the house of the Sieur Schelaide, at Saint Mihel, in this department, and who was addicted to intemperate drinking, was burnt in her apartment on the night of the 1st of January. About three o'clock in the morning, the Sieur Schelaide discovering a fetid smell of burning through the partition which separated his apartment from that of the widow Godard, proceeded to force open her door. He found her lying on her left side, with her knees bent in the attitude of a person sitting; light flames were flitting above the body, which he easily extinguished with water, as the hydrogen gas was nearly exhausted. The clothes were entirely burnt, except a portion round the waist, the fragments of the stockings, and one of the shoes. A wicker chair, which was standing near the body, and a handkerchief which the deceased had worn on her head, were but little damaged. The head was only partially scorched, and the rest of the body was generally but unequally burnt. The stomach was entirely carbonized. An earthen chafing-dish, containing charcoal, was found near the body.

#### IMPROVEMENTS IN MODERN GREECE.

S. Kondos, a native of Greece, has begun to publish a Greek Journal, under the title of "The Bee (Melissa) or Greek Ephemerides." The first number, 120 pages, contains articles on Bees, Agriculture, Education, English Literature, Thucydides, &c. &c. The same author is going to publish a "General History, Ancient and Modern," of which the first volume, dedicated to Count Capo d'Istria, contains *Prolegomena*, and a *Sketch of the History of Egypt*. Bobée, the Parisian bookseller, is publisher of both these works. Mr. Bombas, one of the first Professors in the great College at Chios, has published "Elements of Moral Philosophy," in 1 vol. 8vo. and dedicated to the Greek Patriarch at Constantinople, which has been received with the greatest approbation in all the Greek schools. The last number of this Greek Journal, "Hermès ho

Logios," of the 1st of September, 1819, contains, besides many other interesting articles, a treatise in the form of Letters, on the many and important services which the brothers Zosimas have done to Greece within these 20 years. The Messrs. Zosimas may be numbered amongst the first benefactors of that unhappy country. They established at Janina, in Epirus, their native country, a school of the first class, enriched it with an excellent library, endowed it with considerable funds for the salaries of the Professors, appointed pensions for poor Students, and upon the whole have spared no expence to raise their country from its degraded state. To their liberality we owe the appearance of the Greek Library, which is edited by Mr. Coray. The eldest of the brothers Zosimas has lived since his youth in the city of Moscow, where he has formed a valuable cabinet of antiquities, which is intended to be one day sent to Greece.

Two caverns were discovered last week at Gravesend by the sinking of the earth. These excavations are most probably ancient chalk-pits of Roman origin. On the south side of one of them are the remains of a flint arch, about two feet wide, leading into the other.

#### LITERARY NOTICES.

The forthcoming novel, entitled "Mystery, or Forty Years Ago," is not wholly a work of fiction. It contains a correct picture of the state of London during those awful riots which convulsed and threatened this vast metropolis with destruction in 1780. It also comprehends curious particulars of a real journey and residence in some of the least explored parts of Africa "Forty years ago," and the great Saharra, on which no hero of romance (of avowed romance we mean), that we happen to be acquainted with, has ever ventured to set a foot. The celebrated Joseph Wall, and Major Houghton, are among the characters; and the persecutions sustained by the interesting and unfortunate traveller, from the tyranny of the murderous governor, is given on the authority of a correspondence which took place between them, from which two original letters are extracted, together with the substances of the charges preferred by Major Houghton against Governor Wall before he commenced that arduous and important enterprise which cost him his life.

M. Nibby, the antiquary, has just published at Rome a work entitled, *Del foro Romano, della via sacra, dell' anfiteatro Flavio, e dei luoghi adiacenti*. If the opinions of this antiquary should be confirmed, many ancient ruins will change their names, and several points of the topography of ancient Rome will be displaced. The Temple of *Jupiter Stator*, (which has for some years been called the Temple of Castor and Pollux) is in M. Nibby's work called the *Greco-stasis*; the Temple of Concord (afterwards called the Temple of *Juno-Montana*) is now styled the Temple of *Fortuna*. The Temple of *Vesta* is no longer to be looked for beneath the Farnese Gardens; M. Nibby

transports it either to the Temple of *Romulus* or the Church of *St. Theodore*. The Temple of *Saturn*, (or rather the *Acrarium*) is no longer the Church of *St. Adrian*; it is situated at the corner of the *Consolazione*, where Nardi placed it; and the *Basilica Julia*, and the Temple of *Divus Caesar*, are in its vicinity. The Temple of *Peare* remains in ashes, and in its place, according to M. Nibby, are the ruins of a Basilic of *Constantinus*; the arcades, which were supposed to be so beautiful, are in bad taste, and the walls belong to the period when architecture was on the decline. The author informs us, that the Temple of *Faustina* was dedicated to *Faustina the Younger*, and not to the Elder: the words *Divo Antonino* were added at a more recent period. No satisfactory information can be collected respecting the *Velatura* of the Coliseum, which was to protect the spectators from the heat of the sun.

#### METEOROLOGICAL JOURNAL.

JANUARY, 1820.

**Thursday, 20**—Thermometer from 27 to 35.  
Barometer from 29.72 to 29.73.  
Wind N.W. and N.E. 4.—Snow in the evening.  
**Friday, 21**—Thermometer from 30 to 36.  
Barometer from 29.31 to 29.32.  
Wind S. N. 1 and N. 2.—Cloudy till the evening, when it became clear.  
**Saturday, 22**—Thermometer from 14 to 22.  
Barometer, from 30.15 to 30.32.  
Wind N. E. 4.—Generally clear.  
**Sunday, 23**—Thermometer from 10 to 37.  
Barometer from 30.29 to 30.26.  
Wind S. E. 4 and S. 3.—Generally hazy, sunshine at times.  
**Monday, 24**—Thermometer from 35 to 43.  
Barometer from 30.05 to 29.77.  
Wind S. 4 and 3.—Generally cloudy, rain at times.  
**Tuesday, 25**—Thermometer from 36 to 44.  
Barometer from 30.07 to 29.52.  
Wind S. E. 13.—Generally cloudy. A fine halo formed in the evening about 9.  
Rain fallen, 4.25 of an inch.  
**Wednesday, 26**—Thermometer from 38 to 47.  
Barometer from 29.62 to 29.62.  
Wind S. W. 3 and 1.—Cloudy.  
Rain fallen, 1.75 of an inch.  
Edmonton, Middlesex. JOHN ADAMS

#### TO CORRESPONDENTS.

*The subject of Amicus' Letter has often received our best consideration. We feel gratified at having in Review closed with the Edinburgh and Quarterly but the writer most readily sees that it is impossible for us to do justice to, and discuss so important work as is their practice, in a single publication. They give a quarterly volume; we, a weekly sheet; as we are under the necessity of continuing some subjects through several Numbers, in order to afford competent idea of their nature. We are careful to render the separation as little injurious to the interest of the narration as possible, and seldom, if we break off where any absolute conclusion exists. We do not adopt this plan, the whole charm of variety, and the merit of noticing a greater number of books than any contemporary periodical, will be banished from the Literary Gazette.*

### Miscellaneous Advertisements, (Connected with Literature and the Arts.)

British Gallery, Pall Mall.

THIS GALLERY, for the Exhibition and Sale of the Works of Modern Artists, will be opened on Monday next, the 31st inst.

By order,

GEORGE YOUNG, Keeper.  
Admission 1s.— catalogue 1s.

### BOOKS PUBLISHED THIS DAY.

2 toms. 8vo. 24s.

MEMOIRES pour servir à L'HISTOIRE de LA VIE PRIVEE, du RETOUR, & du REGNE de NAPOLEON en 1812. Par M. Fleury de Chaboulon, Lieutenant du Empereur Napoléon et son Cabinet, à la Légion d'Honneur, Chevalier de l'Ordre de la Légion. Printed for John Murray, Albemarle Street. A translation of this Work, 2 vols. 8vo. will be published on Thursday.

Handsome paper in 4to, with Maps, &c. uniformly with Part's and Barron's Travels, price 21. 8s.

TRAVELS IN NUBIA and in the INTERIOR of NORTH EASTERN AFRICA. By J. L. BURKHARDT. With a Life and Portrait of the Author.

Printed for John Murray, Albemarle Street.

Handsome paper in small 8vo, with Ten Plates, price 7s. 6d. A New Edition of

A NEW SYSTEM OF DOMESTIC COOKERY, based upon PRINCIPLES of ECONOMY, and adapted to the Use of Private Families. Comprising also the ART of CARVING. Observations on the Management of the DAIRY, and POULTRY YARD Instructions for HOME BREWERY, WINES, & CIGARETTES for the SICK, and for the TOOR; many very useful MISCELLANEOUS RECEIPTS, and DIRECTIONS proper to be given to SERVANTS both in Town and Country. To which is prefixed an ESSAY on DOMESTIC ECONOMY and HOUSEHOLD MANAGEMENT, comprising many Observations which will be found particularly useful to the Mistress of a Family. BY A LADY.

"This really one of the most practically useful books of any which has seen on the subject. The body who has seen it, has not studied how to form expensive efforts for luxurious tables, but to combine elegance with economy, she has given her directions in a plain simple manner, that every body can understand; and then not confined merely to cookery, but are extended to a variety of objects in use in families; by which means the utility of the book is very much increased."

Printed for John Murray, Albemarle Street; sold also in every other Book-keeper in England, Scotland, and Ireland, of whom may be had, lately published, THE NEW FAMILY RECEIPT BOOK, a New Edition, greatly improved, handsomely printed in small 8vo. price 1s. 6d. in boards.

Architects, Solicitors, Surveyors, Builders, &c. Price 4s.

A PRACTICAL TREATISE on the LAW of Disputations, Restitutions, Wastes, &c. in Appendix, containing Precedents of Notices to Quit, &c. and Examples for making Valuations, Estimations, &c. ### Goerres's Suppressed Work.

In 8vo. price 10s. 6d. boards.

GERMANY and the REVOLUTION. By PROFESSOR GOERRES, late Editor of the "Rheinisch Mercury." Translated from the German by JOHN BLACK. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

"Germany is a world within itself, to which the South of Europe, and even this country, are in a great measure strangers. The Work, of which I here submit a Translation to the public, is calculated to afford that information respecting Germany which is most wanted at the present moment. It contains a masterly review of the conduct of the different governments from the overthrow of Napoleon down to the present time, and of the sentiments and opinions of the different parties, during the same period." *Transl. Preface.*

### Venezuela, &c.

In one thick Volume 8vo. with a large Map, price 13s.

A STATISTICAL, COMMERCIAL, and POLITICAL DESCRIPTION of VENEZUELA, TRINIDAD, MARGARITA, and TOBAGO; containing various Anecdotes and Observations, illustrative of the past and present State of those interesting Countries, from the French of M. de LAVAYESSE; with an Introduction and Notes, by the Editor.

Hic patet ingenuis campus: certamine merenti

Stat favor: ornatus propriis industria domus. "It appears that M. Lavaysse is one of the few inhabitants of the West Indies, who has endeavoured to survey that quarter of the world with the eye of a philosopher." *Monthly Review for December, 1813.*

Printed for G. and W. B. Whittaker, 13, Ave-Maria-Lane.

### Established School Books.

Published by G. and W. B. WHITTAKER, 13, Ave-Maria-Lane.

1. THE ACCIDENCE; or, First Rudiments of English Grammar. By ELLIN DEVIS.—

Sixteenth Edition, price 1s. 6d. sheep.

2. ORTHOGRAPHICAL EXERCISES; in a Series of Moral Letters. To which is added, a Selection of Essays, &c. taken from the best English Writers. By the late James Alderson. Carefully revised and corrected by the Rev. Thomas Smith. Fifteenth Edition, price 1s. 6d. sheep.

### Elocution.

1. THE SCHOOL ORATOR; or Exercises in Elocution, theoretically arranged; from which, aided by short practical Rules to be committed to memory, and repeated after the manner of reciting the Rules in the Latin Syntax, students may learn to articulate every word with propriety; to be taught to modulate the voice, and speak with accuracy of inflection, from the easiest to the most difficult specimens of English Oratorical Composition. By James Wright, Author of the "Philosophy of Elocution," "Reading of the Liturgy," &c. Second Edition, price 4s. 6d. bd.

2. THE SCHOOL SPEAKER; consisting of Poetical and Prose Pieces, Oration, Dialogues, &c. introductory, appropriate, and interesting; selected from the best Writers. By Thomas Carpenter, Author of "The Scholar's Spelling Assistant," &c. 12mo. price 2s. 6d. sheep.

### Arithmetic, &c.

1. THE TUTOR'S and SCHOLAR'S ASSISTANT. By the late Joseph Saul. Being a new Treatise of Vulgar and Decimal Arithmetic; containing a greater Variety, and a more extensive Collection of original Questions than are to be found in any other Work on the subject; with Notes to illustrate the Rules. Revised and improved by J. Huthersall. Sixth Edition, 12mo. price 2s. 6d. bound.

A KEY to the above Arithmetic, price 1s. sewed.

2. THE COMPLETE PRACTICAL ARITHMETICIAN; containing several new and useful Improvements. Adapted to the use of Schools and Private Tuition. By Thomas Keith. Seventh Edition, price 4s. 6d. bound.

A KEY to the same, price 5s. 6d. bound.

3. AN INTRODUCTION to BOOK-KEEPING; comprising Inland and Foreign Trade, arranged by Single Entry; Italian Methods of Double Entry; and the present Practice of the Counting-house; with a Comparison of these three Methods. To which are subjoined, Queries and Answers on Merchants' Accounts, Book-keeping, and Bills. With engraved Forms, &c. designed for Schools and Counting-houses. By C. Morrison, Accountant, Glasgow. Second Edition, 8vo. price 8s. half-bound calf.

4. ARITHMETIC MADE EASY; or, A Practical Treatise on Arithmetic in three Parts; adapted to the capacities of Children. By John Thomson. Third Edition, enlarged and improved; price 2s. 6d. bound.

A KEY to the above, price 2s.

Also a New and Complete School Catalogue, for 1820 may be had gratis.

*New and Established Works.*  
Published by G. and W. B. WHITTAKER, 13, Ave-  
Maria-lane.

### History.

1. **THE HISTORY OF SPAIN** from the ear-  
liest Ages of which we have any authentic Re-  
cords, to the return of Ferdinand VII. in 1814, ac-  
companied with Chronological and Genealogical Tables,  
of the Visigoths and Spanish Princes and Caliphs, and a  
List of the contemporary Sovereigns at the end of each  
Reign; also of the Political Arrangements of Europe, as  
settled at the Treaty of Paris, with Notes. By F.  
Thurle, Author of a "History of France," &c. price  
7s. 6d. boards.

2. **THE HISTORY OF MODERN EUROPE** with an  
Account of the Decline and Fall of the Roman Empire,  
and a View of the Progress of Society from the Rise of  
the Modern Kingdoms to the Peace of Paris, in 1763;  
in a Series of Letters from a Nobleman to his Son. A  
New Edition, with a Continuation, terminating at the  
Peace of Paris, in 1815. By Charles Coote, LL.D.  
In 7 vols. 8vo. price 3s. 12s. 6d. boards.

\*A The Sixth and Seventh Volumes may be had sepa-  
rately, price 12s. each Volume.

3. **THE HISTORY OF ANCIENT EUROPE**, from the  
earliest Times to the Subversion of the Western Empire;  
with a Survey of the most important Revolutions in  
Asia and Africa; in a Series of Letters from a Gentle-  
man to his Son. In 5 vols. 8vo. price 2l. 2s. boards.

No. 159.

SATURDAY, FEBRUARY 5, 1820.

PRICE 8d.

## Death of the King.

At thirty-five minutes after 8 o'clock on Saturday night, the 20th ult., our venerated King, George III, breathed his last : his Majesty had added seven months and twenty-six days to eighty-one years of life, and ninety-six days to fifty-nine years of sovereignty ; and had consequently reigned longer than any monarch that ever sat upon the English throne. The exhaustion of nature led to this melancholy and memorable event, and no pain or suffering vexed the passage of this virtuous prince from time into eternity. The body and the mind were alike, in Heaven's mercy, spared the pang of the dread change ; and he whose life had made for him nothing to fear in death, graciously departed, as free from corporeal anguish, as his purity of soul would under any circumstances have exempted him from the terrors of conscience. God blessed him with the latter end of righteousness—he was a good man and—he died in peace.

It is not for a work like this to enter upon the wide field over which a retrospect of sixty years would travel. It is not for us to speak of those great political agitations which have convulsed and overthrown, and reconstructed the nations of the earth during that period : or of the personal and kingly course of conduct by which our late Ruler rendered this country so conspicuous in the awful struggles. Suffice it to say, that the brightest pattern to which a people could look for every sound principle in theory, and for every moral duty in practice, existed for more than half a century in the head encircled with the British diadem, and in the heart and hand which beat beneath the external splendours of royalty and wielded the sceptre of almost unlimited power ! But ere yet " Goodness and He fill up one monument," it behoves us to pay a tribute to that softer and more refined feature of the Monarch's character which connects his reign with the literature, the arts, and the sciences of the age. In this respect an epocha has indeed been created ; and when the

more perishable trophies of war, the controversies and the contests all-engrossing in their day, the objects after which every heart panted, the things which were called of eternal consequence, shall have passed away and been utterly forgotten, there will remain another and a nobler study for mankind, in the literature which enlightened the world, in the arts which adorned the country, and in the science which advanced with gigantic strides under the auspicious sway of George the Third.

These will be the themes of generations yet unborn ; and among the most glorious human memorials of our King, it will be handed down to future times, that the energies of this land of freedom, cherished by his paternal government, produced not merely the brightest heroes, but the wisest philosophers, the greatest poets, the finest painters, the most extraordinary discoveries, and the most beneficial inventions, that ever distinguished the annals of mankind.

When a nation is thus elevated, when the state of society is thus improved, when the well-being of millions is thus augmented, and when, as it were, the sphere of creation is exalted and enlarged by the successful cultivation of all that is elegant in the fine, solid in the useful, and ennobling in the higher pursuits of intellect, it needs not to say how much is due to him in whom the supreme authority is vested : how much is due to our lamented King, may be read in the many and prosperous Institutions of which he was the founder or munificent patron, for the promotion of learning, the acquisition of scientific knowledge, the diffusion of general instruction, the perfection of the ornamental arts, and the completion of every purpose calculated to further the interests of humanity here, or secure its happiness hereafter.

Acknowledging that our loss was attended with many alleviations ; bowing in all humility to that Divine Providence which, in inflicting the stroke deprived it of its sting ;—yet, grateful for the measures to which our beloved sovereign devoted his life, and deeply and sincerely lamenting for his death, we close

this inadequate tribute to virtues which, if they have but a fleeting memory on earth, have their certain and everlasting reward where there is neither care nor sorrow.

## REVIEW OF NEW BOOKS.

*Travels in the North of Germany, describing the present state of the Social and Political Institutions ; the Agriculture, Manufactures, Commerce, Education, Arts, and Manners, in that Country, particularly in the Kingdom of Hannover.* By Thomas Hodgskin, Esq. Edinburgh and London, 1820, 8vo. 2 vols.

In bringing our readers acquainted with this publication, we are introducing to them one of the least assuming, while it is one of the most sensible, useful, and intelligent books of travels which have recently issued from the press ; excellent as many of the productions of that kind have been, during the last twenty years. The fruit of three years' residence, and of pedestrian excursions over all the northern German Provinces, Mr. Hodgskin has given us information on most subjects, which has heretofore escaped the more rapid and stylish traveller : he has mixed with society, and sifted opinions not generally found among the labours of tourists ; he has rapidly sketched or passed over topics familiar to the public, and dwelt upon such as presented novelty in themselves, or the appearance of novelty from the relative situation of the writer. By these means he has furnished us with a book, copious without being tedious, and replete with solid instruction, without wanting the charm of amusement. His own feelings and thoughts bespeak an observant, acute, and candid mind ; and, if we differ from him in some cases, it is always as with a person of masculine understanding and good sense, whom we consider to be wrong, but acknowledge to be impartial and well-meaning. Perhaps there is a little too much display of generalizing reflections : but the nature of the task supplies a better excuse for this than can usually be urged in behalf

of posting travellers, who visit precisely the cities, landscapes, museums, pictures, &c. which have attracted the notice of all their precursors. The account of the Kingdom of Hannover is peculiarly deserving of commendation: it is by far the most ample and judicious that we have ever seen. Before, however, abridging it for the *Literary Gazette*, we shall devote two papers to the other division of the work, which embraces the author's journeys in the dominions of Prussia, Saxony, and other states. Our first extract refers to Leipsick, on Christmas day, 1817. Mr. H. says—

From reading the work of Mad. de Staël on Germany, I expected to see there strange old towns, but nothing had hitherto realized the expectation. The market-place at Leipsic did it fully. Goethe described the houses of this city well when he called them "extraordinary shining buildings, with a front to two streets, inclosing courts, and containing every class of citizens, within heaven-high buildings, that resemble large castles, and are equal to half a city." Roofs, which alone contained six stories of windows, with small steeples on their tops; circular houses, finishing at every story, resembling the pictures of the tower of Babel; two or three towers, placed by the sides of houses, as if a stair-case separate from the building had been provided for it; some fronts which had been modernised, and disfigured by a multitude of pillars and pilasters above pillars and pilasters; and the ancient gaol-like, but fantastical town-house,—made the market-place of Leipsic one of the most grotesque-looking spots I ever saw.

As it was Christmas-day, every place, even the bankers, was shut; the churches were crowded; and nothing was to be sold but spirits and medicines. At church, the music and singing seemed the most attractive part of the performance, and so soon as these were done, many of the congregation went away. The men generally stood, and the women sat. Amongst the uncovered heads of the former some emblems of German genius might be traced. The hair of the old men was smoothed down on the fronts and sides, as if it were ironed, while that of the young ones, combed up with their fingers à la François, was standing out in a circle, like a well-trimmed mop. The former resembled the old plodding German; the latter was the type of the present German, flying off from the restraints of reason, and of common sense.

Pictures are still allowed in the Lutheran churches, though no longer worshipped or prayed to, and one that I observed here, in St. Paul's church, deserves to be mentioned, as having one feature of common sense more than is usually seen in religious pictures. Many of their absurdities are truly ridiculous, and among them may be enumerated that the mother of the Saviour is always painted young. When she looks

on her son on the cross, and when Jesus tells her, "Woman, behold thy son," she is even then often represented as a blooming young woman. In this picture, and it was the only time I ever noticed the circumstance, she was represented as an elderly matron. The painter had not worked a second miracle, and bestowed with his pencil perpetual youth.

The manner in which the sacrament was administered was different from the manner of administering it in the Church of England. A clergyman stood at each side of the altar; the persons intending to communicate were placed in a row on one side, and when the previous prayers had been recited, they walked, one after another, first to one clergyman, who had the consecrated wafers, and who repeated some words while he gave a wafer to the communicant. He received it standing, but bowing, and then passing behind the altar, came in front of the other clergyman, from whom he received the cup, and he then retired. The organ played and the chorists sung during the whole of the ceremony.

The university of Leipsic is at present chiefly famous for its medical studies.

Leaving Leipsic on the route towards Berlin, the author makes the following sensible observations on the indolence of the German people, and its cause.

In the course of the day I met a great many carriages and waggons going to Leipsic, and all the travellers, wrapped up in two or three great-coats, with their faces buried in caps and handkerchiefs, remaining sitting in a sort of stupid indifference, just preserving animation enough to keep their tobacco burning, and their pipes from falling out of their mouths. Not one of them attempted to walk, though they might all have walked faster than their carriages, and might have kept themselves comfortably warm; but bodily exertion of all kinds is certainly avoided by the richer classes of the Germans. This indolence may be partly accounted for thus: Their sleeping-rooms are generally heated, and the feather-beds, which are used as covers, always kept me—though, whenever it was practicable, I stripped myself to my shirt—in a constant state of profuse perspiration. The Germans, in addition to covering themselves with these beds, very generally sleep in night-dresses of flannel. In fact, they take nothing off but their upper garments, which are not unfrequently exchanged for some sort of jacket or gown. The beds and the rooms together make a sort of sweating bath, and more enfeebling, probably, than a frequent use of warm bathing. The effects on myself were always refreshing, but weakening; they did away stiffness and fatigue, but sleep did not give me strength; and it is probable that the effects are the same on the Germans, and even much more powerful. The body is kept in a state of languid health, but all that freshness and vigour of limb which belongs to youth and a hardy people are destroyed. The Germans have no need of exertions which we find so ne-

cessary to promote perspiration, and therefore they have no wish for it, and do not take it. The character of men is the result of all they feel; and this state of the bodies of the Germans is undoubtedly a cause for some part of their character—for the placidness, stillness, and want of energy, which distinguish them from the other nations of Europe. It does not hinder them from thinking, writing, and compiling, day after day, week after week; in fact, it permits them to do all these more than any other people can, for they can do them constantly, and with little fear of injury to their health; but it deprives them of the need and of the wish for exertion.

At Berlin the most remarkable matter alluded to appears in the following paragraph.

Museums, galleries of pictures, learned societies, and various collections of things that are not useful, abound in Berlin. They cannot be called peculiarities, for they are found in every city of Germany, and it requires a most practised eye to ascertain the superiority of one to another. One which deserves to be mentioned, from the evidence it affords of what learned triflers can employ themselves with, is a collection in high preservation, of those worms which are sometimes found in the bowels of the human body, (Engelweide Würmer), and whose existence there constitute a particular disease. The cure of this disease cannot be promoted by such a collection, neither can it explain either the nature or the source of the disease. A Professor Rudolphi is the collector. A similar collection exists in Vienna, whose collector is not only thought to be a man of industry, but of talent. These gentlemen must very much need a decent occupation. To bestow professorships on them, and to honour them, seems to me like the vain worship of an idol. There is but one step lower in which learned uselessness can go in its filthy researches. I should be sorry, by the selection of this peculiarity, to teach the reader to infer that the Germans were particularly fond of such pursuits, and that this fondness was a feature of the national character. A love for trifles and absurdities may probably be more common among the learned of Germany than among the learned of other countries, but trifles and absurdities are the occupations merely of a few, and intelligent Germans lament the fondness for them as a peculiarity of individuals, and not as forming the national character.

We nevertheless find an opposite sentiment, when the author, near the end of his second volume, comes to treat of Hesse Cassel.

On several occasions, says he, I have mentioned the taste for trifles and absurdities which yet so much distinguishes scientific Germans, that their country is sometimes called a mad-house of natural philosophers. This unhappy propensity has undoubtedly been invigorated by the hours bestowed on such pursuits: by the m-

he was not much wanted; and then an account of the arrival of Blucher with 31,000 men, and opening a communication between Buſlow, who was in full retreat, and the left of the English, whose commander was reduced to despair, at 6 o'clock. Some of the French regiments began to retire, but Buonaparte put himself at the head of the guard, and at the same time told them a lie to sustain them, namely that Grouchy had arrived. The English are again defeated, and are to be entirely broken by the next charge, when Blucher reaches La Haye and overthrows the French who defend it. From this village, though Blucher had not light to have taken it, the horrid cry of "*Sauve qui peut*" is heard, and universal consternation and rout ensue. It was dark, or the troops would have been able to see the Emperor, and that would have rallied them: nothing could be done, and *pêle-mêle* is the order or rather, disorder, of the night. Never was a French army worse beaten.

Such is the sum total of this farcical history of the battle of Waterloo. Hours stand for nothing in time, and figures for nothing in calculation. 69,000 to 120,000 is said to be as 1 to 2; Blucher is asserted to be reduced from 90,000 to 40,000 men by the battle of Ligny, where 30,000 were destroyed and 20,000 dispersed on the Meuse, yet he comes up with above 60,000 men, besides leaving a strong corps to divert Grouchy; finally, the French were as 2 men to 5, and carried all before them till past 8 o'clock, when, contrary to all the rules of war and evidence, they took to their heels and continued flying from the enemy they had beaten till they were nearly all cut to pieces!

And so ends this "sad eventful history" of disaster in spite of victory on the one side, and triumph in spite of blundering on the other; of the happiest results of ignorance, and the most generous disappointment of superior intelligence; of every thing succeeding with those who did every thing wrong; and nothing succeeding with those who did every thing right. So blind is fate!

Were any further proof wanted to show that this rhodomontade was a weak invention of the O'Meara school, and one of a set of misrepresentations to confound the facts of Waterloo; or if possible for any portion of it to be derived from Buonaparte, that his Worship ought to have been a native of Gascony rather than of Corsica; it is to be found

in Count Fleury's Memoirs (see our last Number) pour servir à l'Histoire de la Vie privée, &c. Count Fleury, from the official returns, states the French army which entered the Netherlands at 117,850 men; yet he too allows only sixty-seven thousand to be present at this battle, and only 50,000 engaged. Nobody knows where, except the corps of Grouchy, the other 50,000 were. The allies had, according to Fleury, 140,000 men in action, which is only 11,000 short by Mr. O'Meara's account. Count Fleury, though he gives every advantage to his countrymen, and allows them to throw their opponents into disorder, does not completely defeat the English during the whole day; Mr. O'Meara has them routed and annihilated four times! Count Fleury only falls into the common French mistake, that when an army is passive, when not charging with huzzas and cries, when displaying bottom rather than gallantry, it has the worst of the field—he is unacquainted with the sturdy British quality, and cannot appreciate a species of bravery unknown to his countrymen:—but O'Meara has no such excuse for his false colouring and fabrications; an officer once in our service, and one of a valiant people, he ought to have known, that to endure is as much the characteristic of our warriors as to inflict; and to bear (in the pugilistic phrase) punishment, as sure a sign of courage, and as certain a presage of victory, as the most spirited offensive hostility. Far be it from us to deny the valour and conduct of the enemy. Never did French soldiers display more devotion and heroism than at Waterloo—but they were fairly vanquished, and the day has yet to come in the annals of war, when there will be any ground for the silly boast, that man to man, they are superior to Britons; and still less, that as one to two they have any chance of victory.

[This seems the era for reviving the name of Buonaparte in books, if not in battles:—A MS. said to be of undoubted authenticity, has reached this country, and is already in the hands of a translator, so as to be very shortly published, both in English and in the original French. It is entitled "*Documents Historiques et Reflexions sur le Gouvernement de la Hollande, par Louis Buonaparte, Ex-Roi de Hollande.*"

This work, we are informed by the publishers, (a house of the highest respectability) contains every event relating to the political or financial situation of Holland, from the commencement of the reign of Louis until the close of his government. Sketches of the invasion of Italy, and Expedition in Egypt—in both of which the author was present. Relations of most of the important events

in Spain, and his refusal of the crown of that kingdom, on the renunciation of Charles IV. Copies of the Letters of Charles and Ferdinand, relating to the conspiracy of the latter against his father. The hitherto secret motives of the marriage of the author with the daughter of the Empress Josephine, and their subsequent mutual agreement to a separation. The events which occurred on the separation of the Emperor Napoleon and the Empress Josephine.

Early genealogy of the Buonapartes.—An important letter from the Duc de Cadore, explaining the intentions of the Emperor with regard to Holland; the various united propositions of France and Russia, to accommodate with England; and a variety of anecdotes of the Author, of Napoleon, and of his family, &c. &c.

The relative situation of the Author, and his acknowledged candour and probity, must render this a very interesting book; and we readily believe the assurance of the parties, that its announcement has already excited a strong sensation, both at home and abroad.]

#### THE PERCY ANECDOTES.

Two neat little half-crown volumes, under this title, have appeared, and monthly numbers in succession are announced. The anecdotes are judiciously selected, and the compilation is handsomely got up. Each number is devoted to illustrate a particular quality or virtue: thus, for example, Eloquence and Humanity are the subjects of the first two, and Heroism, Generosity, Enterprize, &c. of those which are promised. As a specimen of the work we select a few extracts.

*George I.*—During the siege of fort St. Philip, a young lieutenant of marines was so unfortunate as to lose both his legs by a chain shot. In this miserable and helpless condition he was conveyed to England, and a memorial of his case presented to an honourable board; but nothing more than half-pay could be obtained. Major Mansou had the poor lieutenant conducted to court, on a public day, in his uniform; where, posted in the anti-room, and supported by two of his brother officers, he cried out as the king was passing to the drawing room, "Behold, great sire, a man who refuses to bend his knee to you, he has lost both in your service." The king, struck not less by the singularity of his address, than by the mechanically object before him, stopped, and hastily demanded what had been done for him. "Half-pay," replied the lieutenant, "and please your majesty." "Pve, fye, on't," said the king, shaking his head; "but let me see you again next levee day." The lieutenant did not fail to appear, when he received from the immediate hands of royalty, a present of five hundred pounds, and an annuity of two hundred pounds a year for life.

*Friendless Candidates.*—The Prince de Montbary presented a list of the young gentlemen who were candidates for the vacant places in the military school of Louis XVI. of France. In this list were a great number

who were strongly recommended by persons of the highest rank, along with some who were wholly destitute of such recommendation. The king observing this, gave an instance of that goodness of heart which he exhibited on so many occasions. Pointing to the latter, he said, "Since these have no protectors, I will be their friend;" and instantly gave the preference to them.

*Origin of the Slave Trade.*—It will to some appear singular that the Slave Trade should have originated in an act of humanity; yet such was the fact, and it exhibits an instance of one of the best and most humane men being guilty of cruelty, when his mind was under the influence of prejudice. Bartholomew de las Casas, the Bishop of Chiapa, in Peru, witnessing the dreadful cruelty of the Spaniards to the Indians, exerted all his eloquence to prevent it. He returned to Spain, and pleading the cause of the Indians before the Emperor Charles V. in person, suggested that their place as labourers might be supplied by negroes from Africa, who were then considered as beings under the proscription of their Maker, and fit only for beasts of burden. The emperor, overcome by his forcible representations, made several regulations in favour of the Indians; but it was not until the slavery of the African Negroes was substituted, that the American Indians were freed from the cruelty of the Spaniards.

*The Mimic Reclaimed.*—A generous act, or an act of humanity, will sometimes operate most forcibly on the minds of those who might not be expected to feel its influence. In the beginning of the last century, a comedian of the name of Griffin, celebrated for his talents as a mimic, was employed by a comic author to imitate the personal peculiarities of the celebrated Dr. Woodward, whom he intended to be introduced on the stage as Dr. Fossile, in *Three Hours after Marriage*. The mimic, dressed as a countryman, waited on the doctor with a long catalogue of complaints with which he said his wife was afflicted. The physician heard with amazement diseases and pains of the most opposite nature, repeated and redoubled on the wretched patient. The actor having thus detained the doctor until he thought himself completely master of his errand, presented him with a guinea as his fee. "Put up your money, poor fellow," cried the doctor, "thou hast need of all thy cash, and all thy patience too, with such a bundle of diseases tied to thy back." The mimic returned to his employer, who was in raptures at his success, until he told him that he would sooner die, than prostitute his talents to render such genuine humanity food for the diversion of the public.

*Beccaria.*—This philosopher of humanity having in one of the later editions of his admirable work on Crimes and Punishments, in that part which relates to fraudulent bankruptcy, qualified some sentiments which he had originally expressed, but which on reflection appeared to himself too severe, he adds in a note, "I am ashamed of what I formerly wrote on this subject. I have been accused of irreligion without deserving it;

I have been accused of disaffection to the government, and deserved it as little; I was guilty of a real attack upon the rights of humanity, and I have been reproached by nobody."

His present majesty observed one day to a gentleman of high literary character, and of a distinguished political reputation, that oratory in this country was carried to a height far beyond its real use; and that the desire of excelling in this accomplishment, made many young men of genius neglect the more solid branches of knowledge. "I am sure," said his majesty, "that the rage for public speaking, and the extravagant length to which some of our most popular orators carry their harangues in parliament, is very detrimental to the national business, and I wish that in the end it may not prove injurious to the public peace." It is remarkable, that the opinion of the king agrees exactly with that of Aristotle, who says, "Nothing so effectually contributes to the ruin of popular governments, as the petulance of their orators." (Polit. lib. v.)

*Patrick Henry.*—When Patrick Henry, who gave the first impulse to the ball of the American Revolution, introduced his celebrated resolution on the stamp act into the house of Burgesses of Virginia (May, 1765), he exclaimed, when discounting on the tyranny of the obnoxious act, "Caesar had his Brutus; Charles the First his Cromwell; and George the Third—" "Treason," cried the speaker; "treason, treason," echoed from every part of the house.) It was one of those trying moments which are decisive of character. Henry faltered not for an instant; but rising to a loftier attitude, and fixing on the speaker an eye flashing with fire, continued, "may profit by their example. If this be treason, make the most of it."

*Physiognomy.*—A witness was one day called to the bar of the House of Commons, when some one took notice, and pointedly remarked, upon his ill looks. Mr. Fox (afterwards Lord Holland), whose gloomy countenance strongly marked his character, observed, "That it was unjust, ungenerous, and unmanly, to censure a man for that signature which God had impressed upon his countenance, and which therefore he could not by any means remedy or avoid." Mr. Pitt rose hastily, and said, "I agree from my heart with the observation of my fellow member; it is forcible, it is judicious, and true. But there are some (throwing his eyes full on Fox) upon whose face the hand of heaven has so stamped the mark of wickedness, that it were impiety not to give it credit."

*Naval Oratory.*—Admiral Blake, when a captain, was sent with a small squadron to the West Indies, on a secret expedition against the Spanish settlements. It happened in an engagement, that one of his ships blew up, which damped the spirits of his crew; but Blake, who was not to be subdued by one unsuccessful occurrence, called out to his men, "Well, my lads, you have seen an English ship blown up; and now let's see what figure a Spanish one will make

in the same situation." This well-timed harangue raised their spirits immediately, and in less than an hour he set his antagonist on fire. "There, my lads," said he, "I knew we should have our revenge soon."

*Way to Promotion.*—Speed relates, that Guymond, chaplain to King Henry the First, observing that for the most part ignorant men were advanced to the best dignities in the church, as he celebrated divine service before the king, and was about to read those words out of St. James, "It rained not upon the earth three years and six months," he read it thus: "It rained not upon the earth one—one—one years and five—one months." Henry noticed the singularity, and afterwards took occasion to blame the chaplain for it. "Sir," answered Guymond, "I did it on purpose; for such readers I find are sooner preferred by your majesty." The king smiled, and in a short time afterwards presented Guymond to the benefice of Saint Frideswid's in Oxford.

*Sleepers Repent ed.*—A methodist preacher once observing, that several of his congregation had fallen asleep, suddenly exclaimed, with a loud voice, "A fire! a fire!" "Where! where!" cried his auditor, whom he had roused from their slumbers. "In hell!" added the preacher: "for those who sleep under the ministry of the holy gospel."

Another preacher, of a different persuasion, more remarkable for drowsy preachers, finding himself in the same unpleasant situation with his auditory, or more literally speaking, *dormitory*, suddenly stopped in his discourse, and addressing himself in a whispering tone to a number of noisy children in the gallery, "Silence, silence, children," said he; "if you keep up such a noise, you will awake all the old folks below."

Upon the whole, these are entertaining books for the grown up lovers of anecdote, and excellent presents for children.

*Thoughts and Feelings.* By Arthur Brooke. London, 1820. 12mo. pp 120.

We presume that Arthur Brooke is fictitious name; for, however blind me are to their own demerits, it is hard possible that any person wishing to live well in society should avow himself author of such immoral sentiments and detestable principles as kindle the ven of this author. In the true cant of writers in the profligate class to which he belongs, he sets out with expressing a hope, that his "tenderer tone," as "wilder songs," may be relished by the "gentle few," though he anticipates the "Worldling's frown" and "Cynic sneer;" or in other words, forces that there are a majority of readers still in this country, who will rebuke indelicacy, and view with indignation t

merous sovereigns of Germany. At Cassel I was informed of a physician at Heidelberg, who, in the madness of scientific, or rather witchcraft experiments, prescribed human brains to be taken inwardly as a cure for violent fevers, and he had worked something like a wonder on his patients, probably by affecting their imagination. Another celebrated man had lately adopted the entrails of cats as a specific for all disorders. And a public newspaper, while it announced the death of the child of a celebrated physician, also announced his intention of preserving it in his anatomical museum, along with some more of the issue of his lunas who had before died.

Surely these anecdotes refute, to a considerable extent, the opinion in our preceding quotation, and show that the sciences in Germany are so often oddly pursued as to stamp upon them a national characteristic, if not a character, of absurdity. But we proceed to some other illustrations of manners and customs. The traveller is on his way from Berlin, 3d Jan. 1818, and tells us,

The difficulty I had had during the day to find the road, prevented me reaching Brandenburg, and made me think it prudent to stop at the commencement of night, when I was by no means tired, and where there was no sort of decent accommodation to be had. I had then walked near forty miles, and had never passed, since I left Spandau, any thing like a decent public-house or village, and I had been unable to procure any thing for dinner but bread and beer. The house where I stopped for the night promised nothing comfortable, but as the woman said I could sleep there, I resolved to make myself contented. She gave me, on entering, some very bad coffee, and when, at a later hour, I requested something more substantial for supper, I was informed there was nothing but brown bread, bad butter, and new brandy. I was still more disappointed, when, on asking to go to bed, I was informed I could have no other bed than some straw strewed in the room where I was then sitting, which was filled with a great many people who evinced no disposition to depart. There was, at that time of night, nothing better to be got, and I patiently submitted.

A travelling merchant, who sold earthen ware, had taken up his abode in the house, and had carefully informed all the inhabitants of the village that he meant, on that evening, to make a lottery of his merchandise, and he had invited them to come and spend their money with him. Towards eight o'clock they had accordingly, young and old, men, women and children, assembled, and completely filled the room. He arranged his wares in the most tempting manner, on a large table. They consisted of cups and saucers, glasses, plates, and pipes, which were neither coarse nor inelegant. Every one of these articles was put up at the same price, and at its full value, or at rather more than its full value. The price was eight

grosschen, or about one shilling, and he had eight tickets, each of which he sold for a grosschen. When they were all sold the purchasers threw dice amongst themselves who should have the piece of china. The pedlar risked nothing himself, but, by promoting the gambling of the peasantry, he sold his pipes and his cups, and some of them acquired things of which they had no need. Married women, middle-aged men, and some young people, were the principal gamblers. As they were gambling, the ladies and the lasses were roughly playing with each other, and the more elderly people were sitting quietly down to their pipes, their drums, and a little conversation.

The next day, the narrative states, ...

I stopped for the night at a village called Perglen, where no other bed than one of straw could be procured. Genthin would have been too short a stage, and Burg was too far. At the entrance of the village there was a toll-bar and house, with a coat of arms, not royal, painted on that sort of shield, fixed to a post, which generally, in this country, tells the traveller where he has money to pay. The date of this painting was 1602, and the name of the owner, with the word noble, *adeltich*, prefixed, was also painted on the shield. It was one of those tolls levied by noblemen on all carriages and horses passing through their estates, so many of which formerly existed, and some of which still exist in various parts of Germany. The people of this noblemen, as the inhabitants of the village styled themselves,—for all belonged to him,—were exempted from any toll when they employed their own waggons, but were obliged to pay if waggons belonging to other people brought any thing to them. The government wished to destroy this toll, but the landlord said, with a grin of satisfaction, "Our noblemen was too strong for it." Mr. Adeltiche Beerhern, for such was his title and name, seemed a sturdy sort of fellow, who lived on his own property, without going much to court, and, while he maintains this sort of independence, the monarch of Prussia can hardly be called an absolute monarch. The new road to Magdeburg, if it were made straight, would pass through the estate of this noblemen, but he seemed to like no such novelties as good roads, and had compelled the engineer to make a considerable circuit to avoid his grounds.

Of two public-houses, one of which was filled by noisy drinking peasants, and the other was quiet,—but at neither of which a bed could be got,—I chose the quiet one, and found the people willing to get me any thing the house or the village afforded for my supper, which consisted, however, of potatoes and a small piece of veal. The room was a large barn sort of place, excessively black from smoke. Two long tables were placed on two sides of the room, near the walls, against which oaken benches, as seats, were fixed. A large oven and the entrance occupied one of the other sides, and at the fourth side was the door to go into the kitchen, with a bed-place at each side of

it. The bed-places were sorts of reposes, which are closed during the day by sliding doors.

There was a man here who said he was travelling about the country seeking employment, but who seemed to live more by his wits than by work. He paid for his potatoes and straw like the ancient bards, by reciting songs, poems, and stories. The principal subjects of his themes were the triumphs, real and imaginary, of the Prussian armies, the fatherly cure of old Blucher, and the crimes of Buonaparte. He seemed to have collected all that had been written on these subjects, and quite charmed the landlady and the two maids with his recitals. They were doubly pleased when he sang any thing which they knew, and when they could join with him. They also had learnt to sing of the heroic deeds of the Prussians, and nothing else seemed to give them any pleasure. He had bought two books, one was called the Triumphs of German Freedom, and the other was extracts from the bulletins of the war. He had read them so often he knew them both by heart, and could repeat any portions of them. They had been his great teachers, and he delighted the people of the house with many true accounts of Prussian achievements. He was completely in rags, and appeared to have nothing but what was given him, yet, for that very reason, because he knew that the supply of his wants depended on his giving pleasure to others, he had acquired the talent of giving it, and kept his hearers not merely amused, but delighted, all the evening. He made them happy, and in spite of his nakedness, and the cold weather, he was happy himself. While a reciprocity of services is the source of one of the highest enjoyments of men, nobody seems to be so much injured as those classes of society, who, having all their wants provided for, never feel any necessity to exert the talents to give and receive pleasure, with which nature has endowed them. When the females were gone to bed, this miserable-looking being entertained the man-servant with the history of his amours and his gallantry, and no dashing guards' officer, glittering in scarlet and gold, ever boasted of more success. This was strange society, if that can be called society, of which an individual is but the silent spectator; but a lonely pedestrian has often no choice; it is a matter of chance with whom he sits down.

My day's walk was about thirty miles, and the soil, I observed, was very generally light and sandy. Some forests were passed, but no inclosures. Where the country was cultivated, there was no separation between the fields but water courses, and the furrow extended farther than the eye could follow it. Notwithstanding it was Sunday, many persons were working, and the girls of the public-house continued spinning all the evening, as they listened to the stories or joined in the songs of the ragged man.

What I experienced for these two nights, and on my road, where I could not procure a bed, and scarcely any thing to eat, may serve as a specimen of the wealth, or rather poverty, in which his majesty of Prussia's

subjects live. The reader will remember, that I was not more than seventy miles from Berlin, that I was on a high road, and that houses of public entertainment had neither beds nor any thing to eat. Such is the state of the dominions of the Great Frederick.

The rights of noble Prussians are also exemplified at Exleben, near Magdeburgh, where—

Two noblemen resided, which was a great source of vexation to the inhabitants, who, when the noblemen do not reside among them, are generally free from all services except a certain rent, either in money or corn; but when they reside the peasantry must supply them with horses, carry their harvest in, plough their ground, and must give them the third goose and the tenth lamb. The people seemed to feel these services as a hard-ship.

The annexed inscription, on a cottage near Hildesheim, is another trait worth preserving:

On one of the cottages near the road side was an inscription admirably appropriate to the building, "I built not from pride, nor from hope, nor from lust, nor from a desire of ornament, but necessity compelled me thereto."

From this part, walking on towards Hannover, the author says,

At various places on the road, as I approached Hannover, I saw new buildings, and something like decent farm-houses, which are marks of prosperity very rarely seen in any part of the Continent. The road from Hildesheim was good, and some hedges, and nice gardens, and, above all, the G. R.s which glittered on the toll-houses, and on the road-menders' caps, reminded me strongly of England. This was much augmented on entering the town. The soldiers were dressed like our own, and I heard the military music playing for the officers' dinner "The Road-Boat of Old England."

The town of Hannover is situated in a flat plain, at the very farthest extremity of the hills and fertile country I had just passed through, and at the very commencement of those sandy districts which extend, without interruption, from it to the Elbe, the Weser, and the sea. On the north-west side lies a hill called the Lindenberg, and in its neighbourhood the soil is fertile, and the country pleasant; on the other side the soil is generally sandy, and the country flat. A little river, called the Leine, divided into two streams, runs through it, but is in general so completely built over, that it is not seen till the bridge over it is reached. In the vicinity of the *Marstall*, or royal stable, and by the palace, it is exposed to view, and there gives a little beauty to the whole. The town contains 20,000 inhabitants, and is increasing and improving. The Leine divides the old from the new town; and the former has as an appendage the Egyptian new town, which is the best built and most agreeable part of the whole. There is not one good street, and but few good-looking houses, and, on the whole, the capital of his Majesty's

German dominions may, in point of buildings, be compared to some old fashioned third rate provincial town of Great Britain.

The only building which has the least claim to the character of elegance, is the palace of the Duke of Cambridge. It was built by a nobleman in the year 1752, and afterwards purchased by the government. Even this, however, is nothing but a plain and elegant, though rather a large house. The royal palace, which has once been large, is partly in ruins. The chapel, the theatre, and some other of the old parts remain, and some new corners are built and building; the other parts have been burnt or pulled down, and present only a mixture of confusion and ruin. The house in which the ministerial business is conducted, *die Regierung*; the Parliament House, *das landtagliche House*, at present repairing, the library, the *Fürstenhof*, which is the residence of the Duke of Clarence, may be mentioned as decent-looking places. The manner in which the other houses are built, even when they are large, with a frame of oak, filled in with bricks, the timber being still seen, gives them a mean and old fashioned appearance.

The town-house is one of those old Gothic, or, according to Goethe, German buildings, which have so many different corners and shapes, that no one particular shape belongs to it. In lightness and ornament it is far inferior to many of the old houses, similar to those of Helmsbüttel, which abound in Hannover, as well as in all the towns of this part of Germany. The fronts of many of them are entirely composed of little towers, extending all the way to the top, and being sometimes smartly painted and ornamented with a variety of figures and weathercocks, they look like gay summer-houses, or small antique castles. A similar mode of building may be traced in all the old farm-houses, whose gable ends, and ornaments of wood, which, in that situation, look natural enough, often reminded me of small Gothic chapels. The general prevalence in this country of what is called Gothic architecture, together with its prevalence and excellence in Britain; to which country it was carried by the early invaders from this part of Germany, make it probable that it had its origin here, and leave no room to doubt that this fantastical style, with its multiplicity of ornaments, was once the common style of building the farm-houses of this part of Germany.

Pictures of Manners will be traced in the subjoined extracts.

Uelzen, where I dined and slept, is a nice little town. Most of the inhabitants were enjoying themselves in their summer-houses, of which there was one in every garden, and the town is surrounded with gardens. At the entrance to most of the houses were two stone benches, on some of which people were seated smoking, who exchanged the afternoon salutation with every passing neighbour. The upright stones at the end of these benches were shaped in an ornamented manner, like common tombstones, which they otherwise greatly resembled; and they disposed me at first to think that

every family was buried under its own door sill.

*Lüneburg.* At ten o'clock, when the people should all have gone to bed, I was rather surprised to see a dozen young men and women, and amongst them the servants of the house, collected at the door and playing *main chance*.\* It was a beautiful night, and this amusement lasted, with much laughter, and some very hearty slaps, till midnight. The last time I had played at this game was with the family of the public-house, at the village of Simpton. I should have joined in it here with great pleasure, but I was not sure that my patience was equal to the pain inflicted by the hard hands of the peasantry. People who, after a day's labour can thus amuse themselves, and be happy, assuredly find a compensation in their own minds for the sterility of the land, and the disadvantages of their situation.

Stade is of some importance to the sovereign, from being in the neighbourhood of that part of the Elbe where he makes people purchase a permission to sail on its waters. A vessel, which was formerly an English gun-brig, and which is the whole naval force of his majesty's German dominions, is stationed here to levy the toll, or see the certificate that it has been paid in Hamburg. Ships belonging to Altona and Hamburg, the inhabitants on the left bank of the Elbe, and some of those on the right bank, with their own productions, pass toll free, every body else must pay. This is, undoubtedly, the most important toll on water belonging to Hannover, and it is said to produce, when the expenses of collecting it are paid, about 50000*l.* per year. But this is a sealed part of the management of government, and all which is known concerning it is mere conjecture.

(To be continued.)

#### GAY'S CHAIR.

Poems never before printed, written by John Gay, author of the *Beggar's Opera*, Fables, &c. with a Sketch of his Life, from the M.S. of the Rev. J. Joseph Butler, his nephew. Edited by Henry Lee, author of Poetic Impressions, &c. Two which are added Two New Tales, by the Editor. London. 1820. 12mo. pp. 147.

The history of Gay's Chair is given in a preface, and circumstantial pro-

\* Perhaps the reader may not be acquainted with this game, and it may therefore be proper to describe it. A female sits down, one of company kneels down, and lays his head in her lap, so that he can for the moment see nothing. He lays one of his hands behind him, flat on the back, and all those who choose to play give smart strokes on this hand, till he guesses his turn, when the person who is discovered takes his turn on his knees. In this instance however, they neither sat nor kneeled, but one person stooped down and hid his face upon one of the maidens. If I recollect right, there is a good description of this game with many of its agreeable et ceteras, as played in decent circles in France, in the *unif de la Chasse d'Antin*.

advised that the article of furniture in question was undoubtedly the poet's favourite easy seat: we should have imagined that the strongest evidence was the discovery in a secret drawer of the Poems now published. But as the story is curious, we extract its substance.

About twelve years since, it was sold amongst some of the effects of the late Mrs. Williams, niece of the Rev. Joseph Baller, and who by a previous marriage, had been the wife of the Rev. Hugh Fortescue, of Filleigh, near Barnstaple. Both families (the Fortescues and the Ballers) were by marriage nearly related to Gay, whose property was, at his decease (as will afterwards be shown), equally divided betwixt his sisters, Katherine Baller and Joanna Fortescue.

Since the period of Mrs. Williams's death, the chair came into the hands of the late Mr. Clarke, of High-street, Barnstaple, and it was sold, with the rest of his household furniture, by public auction. The editor happening to be then in Devonshire, heard of the above circumstance, and anxious to ascertain the particulars, applied to the auctioneer, who informed him that the chair had been sold to a person of the name of Symonds, to whom the editor immediately went, saw the chair, and afterwards purchased it: orders were given that it should be sent to the house of Mr. Crook, a cabinet-maker in the same street, to be repaired; who, on removing the drawers, discovered the manuscripts from which the principal articles of this publication are taken.

The following extract from Mr. Crook's letter to a gentleman who made enquiries on the subject, will, it is presumed, be satisfactory.—“The chair was bought at an auction by Mr. Symonds of this town, from whose house it came to mine. I was desired to repair it, and on taking out the drawer in front, which was somewhat broken, I found at the back part of the chair, a concealed drawer, ingeniously fastened with a small wooden bolt. Those who have lately had possession of the chair never knew of this concealed drawer: it was full of manuscript papers, some of which appeared to have slipped over, as I found them stuck in the bottom or seat of the chair. A respectable tradesman of this town was present when I made the discovery. The owner of the chair was immediately sent for, and the whole of the papers safely delivered into his hands.—I am, &c.”

There is also a fac simile of Gay's hand writing; and the editor assures us that the longest poem, “The Ladies' Petition,” is printed nearly verbatim from a MS. in this character, which is decidedly that of the bard. He says he is not aware of its having been before published; but we are inclined to doubt whether any of the pieces in this volume have not been either entirely or partially communicated to the world.

The Petition is addressed to the House of Commons, and commences

SIRS!

We, the maids of Exon city,  
The maids! good lack, the more's the pity!  
Do humbly offer this petition,  
To represent our sad condition;  
Which once made known, our hope and trust is  
Your honoured House will do us justice;

and goes on to complain of the widows being more successful than the petitioners in securing husbands.

First you shall hear—But can't you guess  
The reason of our sad distress!—  
(Plague on the widows that compel us  
Thus to petition 'bout young fellows!)  
But we were saying—you must know,  
Tho' blushing we declare our woe,  
A maiden was designed by nature  
A weakly and imperfect creature,  
So liable to err or stray,  
Her wants require a guide, a stay;  
And then so timorous of spirits,  
She dreads to be alone at nights!  
Say what she will, do what she can,  
Her heart still gravitates to man;  
From whence 'tis evident as light  
That marriage is a woman's right;  
And therefore 'tis prodigious hard  
To be of such a right debarred:  
Yet we, poor souls, can't have the freedom  
To get good husbands, tho' we need 'em!  
The widows, Sirs!—their art denotes  
Them *Meanchiefs* in petticoats!

The relief prayed for is a troop of beaux, or the personal devotion of the Members for the good of their country. Of the shorter poems, some may be original and unknown to the public (at least we have no recollection of them), but there are others which are familiar to us, and probably to many of our readers. Dame Doleful's Dobbin eating the grinding-stone, is in this predicament; and the following verses, entitled “Comparisons,” we have heard sung, nearly verbatim, as a song.

A lamb and a lion—a fox and an ass,  
Remember mankind, as it were in a glass;  
Males are harmless as lambs 'till they're fourteen years old,  
And 'till they are forty, as lions are bold;  
As foxes they're cunning 'till three-score and ten,  
Then, silly as asses, no longer are men.

A dove and a sparrow—a parrot and crow,  
The life of a woman most aptly will show;  
Girls innocent doves are 'till fourteen years old,  
And chirrup like sparrows, till forty are told;  
Like parrots they'll prate 'till they're three-score and ten,  
And as crows often croak, so do most old women!

We add the version we have mentioned, as a proof that if this *jeu d'esprit* be really Gay's, it is not a novelty.

An ape and a lion—a fox and an ass,  
May show how the lives of mankind do pass;  
They are all of them apes till the age of fourteen,  
Then bold as lions till forty they're seen;  
Then cunning as foxes till three-score and ten,  
And then they are asses and no more men.

A dove and a sparrow—a parrot and crow,  
The life of a woman most aptly may show;

Girls are innocent doves till they're fourteen years old,  
Then sprightly as sparrows till forty are told;  
Like parrots they chatter until they're four-score,  
Then they're birds of ill-omen, and women no more.”

There are only eight or ten other little pieces ascribed to Gay in this publication, from which we copy two as specimens.

LETTER TO A YOUNG LADY.

Dear Madam,  
I your mercy crave,  
For my poor namesake John, your slave,  
Behold him abject at your feet;  
Now is your triumph most complete:  
A helpless victim see he lies,  
Half slain by your all-conquering eyes:  
Those eyes which like the mid-day sun,  
None can with safety look upon.

To you (oh! take it in good part)  
He gave the maid-hood of his heart,  
Untouch'd by any former love;  
Sure some compassion this might move;  
His heart, which ne'er before was sway'd,  
You like a cullender have made,  
And 'less your power and mercy's equal,  
Indeed, dare call ma'am, I tread the sequel;  
For love, beyond all other ills,  
Despises juleps, drops, and pills.

If wedlock may be deemed a pleasure,  
You can't too soon possess the treasure!  
Consider then the loss of time,  
And snatch the roses in their prime;  
Toss not the man who'll grace your house,  
As a young cat torments a mouse:  
Seeing regardless of the prize,  
Puss stilly turns aside her eyes;  
But should he run—'tis all in vain,  
For, snap! she brings him back again!  
Again the panting wretch she numbles,  
Again she tosses him, and tumbles!

But have you, madam, never seen,  
When in the wall a hole hath been,  
The priester seize a lucky minute,  
And in a trice hath slipp'd within it,  
Leaving behind the tyrant puss,  
To purr and claw and make a fuss?

Pardon, I pray, the facts I state,  
Nor think I meant to insinuate  
Your captive mouse will run away,  
And you the part of puss must play!  
O, no such thing! what I fear most,  
Is, that the mouse, thus plagued and tost,  
Should by such usage be quite wasted,  
Before one morsel has been tasted;  
For what are all such tricks at last,  
But schemes to heighten the repast?  
Or what avails it this to trust,  
And take him when there's nought to eat?  
Rather than hazard such mishap,  
Entice him kindly to the trap:  
You won't, I trust, the thought disparage,  
I mean, dare ma'am, the trap of marriage!  
A trap, I'm sure, he can't withstand,  
If you but lay the bait—your hand!

As I've his welfare much at heart,  
Don't blame me that I take his part;  
He my companion was, and cheerful,  
And not of any female fearful,  
He joked at love, or seem'd to doubt it,  
And laughed at those who talk'd about it;  
But hear him as a child now mutter,  
Like one that's lost its bread and butter!  
Since thoughts of you first fill'd his head,  
His heart as heavy is as lead.

And if, dear ma'am, you don't befriend him,  
Love's fatal power will surely end him.

"But fearing this may be intrusion,  
I'll bring my subject to conclusion,  
Begging you will not mock his sighing,  
And keep him thus whole years a dying!

"Whole years?"—Excuse my freely speaking,  
Such torture, why a month—a week in;  
Care, or kill him quite in one day,  
Obliging thus your servant,

JOHN GAY.

#### TO MY CHAIR.

Thou faithful vassal to my wayward will!  
Thou patient midwife to my labouring skill!  
My pen and ink's choice cell! my paper's pillow!  
Thou steady friend, 't'wixt me and my master mellow!  
My seat!—I visit not the proud St. Stephen;  
St. Stephen knows not me—so we are even.  
A seat, obtained not by a threat or bribe;  
But free, uninfluenced by an influenced tribe:  
Thou'rt my inheritance—I boast no other;  
My throne *unique*! for thou hast not a brother.

Surrounded by my friends, secure from foes,  
By thee upheld, I calmly seek repose.  
Scotched by thy comfort, my ideas spread—  
Aerial forms assemble round my head!  
Titles and honours court me—in the air!  
A proof that I've been building castles there!

Days, months, and years I've musing sat in  
thee,

And when grown pettish, thou'rt answered 'st  
me;

A quality this is, so rarely seen,  
'T would be a jewel might adorn a queen.

My study thou!—my favourite resting place,  
My tabernacle where I pray for grace!  
My spouse! for in thy arms I oft recline,  
And hope, tho' pleas'd with progeny of thine,  
That no base offspring ever may be mine.

Of the two tales added by the editor,  
in order to make out a book of tolerable  
proportions, we shall merely say, that  
the morals are good and the style  
agreeable.

*Mémoires pour servir à l'Histoire de  
France en 1815. Avec le Plan de la  
Bataille de Mont-Saint-Jean. A Paris.  
1820. 8vo. pp. 336.*

Writing this notice at an early period  
of the week, we presume that before it  
appears on the day of our publication,  
an English version of these *Mémoires*  
will have come forth, as a work of that  
kind has been advertised for the 3d  
instant. The usual puffs have preceded,  
and among others a paragraph stat-  
ing that the Duke of Wellington has  
declared that no one but Buonaparte  
could have given this account of the  
Battle of Waterloo; upon which we  
have simply to remark, that if the Duke  
of Wellington said so, he contradicted  
in the most direct manner every syllable  
of his own official dispatches detail-  
ing the battle!! We may also ob-  
serve, that other persons might have  
made out a similar story, since in fact  
it is neither more nor less than a repe-

tition of Gen. Gorgaud's narrative of  
the campaign of 1800, written at  
St. Helena, and published in London  
in 1818. (See *Literary Gazette* for  
1818, p. 740.)

This then is the nature of a book  
pretended to be directly derived from  
the ex-emperor, and intended to serve  
for a very memorable part of the his-  
tory of France. Knowing, as we hap-  
pened to know, that Madame Montholon  
did, about nine months ago, send over  
for O'Meara, a MS. of some kind, we  
imagined it not improbable that this  
should be the same in print; but after  
reading it, it seems impossible to enter-  
tain for an instant the idea that Na-  
poleon had any hand in so ludicrous  
and contemptible an imposition, or  
that it is any thing but an impudent  
compilation, founded on, or rather re-  
composing, Gorgaud's volume, and got  
up for pultry purposes, by some of the  
literary understrappers of the exile, or  
of his friends in Europe.

This being our opinion of the work,  
we shall content ourselves with refer-  
ring to our review of Gorgaud, every  
word in which applies to his copyist;  
and very shortly treating our readers  
with a few of the strong points in the  
new Editor.

Chapter VI. sets out by informing us  
that during the night of the 17th, the  
*Empereur* issued every necessary order  
for the morrow's battle, though every  
thing indicated that it would not take  
place. Had it not been for the left  
wing's being retarded three hours, the  
campaign would have been crowned by  
the annihilation of the Anglo-Dutch  
army the day before. But as this had  
not happened, that Wellington and  
Blücher should have taken advan-  
tage of the night to traverse the forest  
of Soignes, and united their forces in  
front of Brussels, which they might  
have accomplished by 9 o'clock in the  
morning, and thus rendered the situation  
of the French army *very delicate*. Bu-  
onaparte, it seems, was at 1 o'clock  
strongly engaged on these grand  
thoughts (*fort préoccupé de ces grandes  
pensées*), and so determined to believe  
nothing but what he had anticipated  
ought to be done, that it was long  
before scouts, prisoners, and deserters  
could force him to alter his opinion,  
and believe that the English were *ac-  
tuellement*, not running away. When  
he could no longer doubt the fact, that  
Wellington had committed a blunder so  
monstrous, "contrary to the interests  
of his party and country, to the general

spirit of the campaign, and even to the  
most simple rules of war, as to remain  
in a position which the defiles of the  
forest of Soignes in his rear, rendering  
retreat (if he was bent) impossible,"  
he returned from wandering about like  
a troubled spirit, and entered his tent,  
"full of satisfaction at the great error  
which the opposite leader had commit-  
ted, and very much chagrined that the  
bad weather hindered him from pro-  
fiting by it." The morning, however,  
began to clear up, and the elated Na-  
poleon perceived some "faint rays  
from that sun which before its setting  
was to witness the destruction of the  
English army; the British oligarchy  
would then be overthrown; France  
would rise from this day more glorious,  
more powerful, and more grand than  
ever." Of course, it was necessary to  
beat the English first, and this, accord-  
ing to these accounts, was most effec-  
tually done, notwithstanding Bulow  
arrived with 30,000 men in the forenoon.  
The Prussian corps was opposed by  
10,000 men under Loban, and the rest  
of the French, some 50,000 strong, were  
quite enough to thrash 90,000 British. Well,  
the British were completely defeated,  
and fled in crowds (*en foule*), and what  
is more astonishing, "all the fugitives,  
English, Belgian, German, who had  
been sabred by the cavalry, ran towards  
Brussels!" At four o'clock, the victory  
would have been speedily decided, but  
for Bulow's powerful diversion, which it  
took till 5 o'clock to repulse. The  
victory was now complete; the English  
had abandoned the entire field of battle  
between La Haye-Sainte and Mont-  
Saint-Jean; and the French cavalry  
charged amid shouts of triumph, and cut  
down all opposition. Buonaparte ob-  
served that their movement was never-  
theless an hour too early, but that  
which was done must be supported.  
They kill officers who were slain before,  
and do such wonders as never were  
heard of in former battles—yet it is un-  
lucky that the reserve should have thus  
engaged, even to finish the contest; for  
at 7 o'clock—"the victory was gained,  
60,000 Frenchmen had conquered  
120,000 men. Joy was in every ges-  
ture, hope in every heart!" [*La victoire  
était gagnée; soixante-neuf mille  
Français avaient battu cent vingt mille  
hommes. La joie était sur toutes les  
figures, et l'espoir dans tous les cœurs*].

Follows a tirade against Grouchy for  
remaining at Genbloux and Wavre,  
instead of hastening to Waterloo, where,  
if what we have quoted had been true,

vested of much of their Mohammedan asperity, and Aly, himself half a Greek, was not entitled to any great prejudice against me for being only half a Turk. In the refinement of his toilet, however, Aly Tehawoosh might be considered as a finished Osmanlee. Nothing could exceed the exquisite taste of his apparel. His turban attracted the eye less even by its costliness of texture than by its elegance of form. A band of green and gold tissue, diagonally crossing the forehead, was made with studious ease, by its oblique position, completely to overshadow one eye, and as completely to display the other. From its fringed extremity always hung suspended like a tassel, a rose or carnation, which, while it kept crossing the wearer's brow and unocular throat, sent up its fragrance to his disdained nostril. An hour every day was the shortest time allotted to the culture of his adored mustachios, and to the various rites which these idols of his vain-glorious heart demanded; such as changing their hue from a bright flaxen to a jetty black, perfuming them with rose and amber, smoothing their straggling hairs, and giving their taper ends a smart and graceful curve. Another hour was spent in refreshing the scarlet dye of his lips, and tinting the dark shade of his eye-lids, as well as in practising the most fascinating smile and the archest leer which the Terzhan could display. His dress of the finest broadcloth and velvet, made after the most dashing Barbary cut, was covered all over with gold embroidery, so thickly embossed as to appear almost massive. His chest, uncovered down to the girdle, and his arms, bare up to the shoulder, displayed all the bright polish of his skin. His capote was draped so as with infinite grace to break the too formal symmetry of his costume. In short, his handjar with its gilt handle, his watch with its concealed miniature, his tobacco pouch of knitted gold, his pipe mounted in opaque amber, and his pistols with diamond-cut hilt, were all in the style of the most consummate *petit maître*; and if, spite of all his pains, my friend Aly was not without exception the handsomest man in the Ottoman empire, none could deny his being one of the best dressed. His air and manner harmonized with his attire. A confident look, no insolent and sneering tone, and an indolent yet swaggering gait, bespoke him to be, what indeed it was his utmost ambition to appear, a thorough rake. Noddy, drunken, quarrelsome, and expert alike in the exercise of the bow (the weapon of his country), and in that of the handjar, he possessed every one of the accomplishments of those heroes, chiefly met with on the quays of Constantinople and the other principal seaports in the Ottoman empire, whom a modest woman avoids, and to whom a respectable man always gives way.

From Rhodes Anastasias proceeds to Egypt to turn Mamluk, and his passage up the Nile concludes the first volume. His account of Alexandria is almost a parody on Voltaire's satire of a visit to England.

To me the contrast between the liveliness of the Alexandrians and the solemn stupidity of the Turks, seemed quite enchanting. As I went to secure my night's lodging at an okkal I was every instant arrested by their wit and repartee. "How pleasant it must be to reside here," said I to myself; "gay people are always so good natured!"

The words were scarce out of my mouth, when I heard at some distance a loud and increasing clamour, which I supposed to be that of some rejoicing or festival. Presently appeared an immense crowd of people of every age and description,—men, women, and children,—rending the air with their shouts. In the midst of the motley assemblage advanced in a separate cluster a chosen band, trailing after them in procession, with louder howlings than the rest, the city weights and scales.

"What means this ceremony?" said I, addressing one of the actors in this novel scene. "For what purpose are these instruments travelling?"—"For the purpose of gibbeting the chief of the customs, a Syrian Christian, on the instrument of his mal-practices;" hastily answered the fellow, impatient at the detention.

"And has the law weighed and found him wanting?"—"How could it help doing so?" was the reply, "when we all demanded his punishment? We insisted on the *Shur-allah*,—the justice of God; and the Cadree himself thought us too many not to be in the right. So we are going to execute the sentence."

Having now carried his contest to the utmost stretch, the man bade me adieu, for fear of further questions, and ran after his companions, who already were out of sight. For my part I contented myself with inwardly praying to Allah that I might be preserved from his justice; and particularly at Alexandria.

The description of the djerm in which the Nile was ascended, and of its freight, is very humorous; but it is full time to close our long extracts even from a volume so entertaining as we have felt this to be. We shall also be compelled to be very brief in our notice of the second and third.

(To be concluded in our next.)

#### ANALYSIS OF THE JOURNAL DES SAVANS FOR OCTOBER, 1819.

The Appendix to this first volume contains 12 other articles, some being short, others more or less extensive, but almost always interesting, especially to Orientalists. Mr. de Sacy takes occasion to make some critical remarks on several of them.

#### TROUBADOURS.

Art. II. *Choix des Poesies Originales des Troubadours*, par Mr. Raynouard. 3 vols. 8vo.

These three volumes, which were published separately in the years 1816, 1817, 1818, are particularly interesting to the lovers of the Provençal language and literature, and we

shall therefore give a succinct account of them.

Vol. I. contains historical proofs of the antiquity of the Romance language, researches into the origin and formations of that language, with the elements of its grammar before the year 1000: lastly, a *grammaire raisonnée* of the language of the Troubadours. Thus it contains the historical and grammatical notions which are to serve as an introduction to the reading of the poems collected in the succeeding volumes. There remains nothing more to be wished for, but a dictionary of the words peculiar to the language of these ancient poets, or which it is difficult now to recognise in ours: and Mr. Raynouard in fact intends to terminate his collection with a glossary particularly adapted to the poems which it contains.

Vol. II. contains dissertations on the Troubadours and on the *Conr d'amour &c.*; the monuments of the Romance language down to these poets, and inquiries into the various kinds of their works. The selection of their poetry, therefore, begins in fact with the third volume; but the second contains many extracts arranged in classes, and preceded both by general views of their ideas and manners, as of more ancient monuments of the language in which they wrote. These are indeed additional preliminaries, but in which a great number of pieces in prose, and still more in verse, are presented to the reader mixed with the researches and observations which illustrate them.

The dissertation entitled *Des Troubadours*, determines the character of their literature. Most of their productions are erotic, though some censure or celebrate events or persons of their times, paint the manners of the princes, the clergy, and the nobility, encourage the zeal or deplore the misfortunes of the Crusaders. The specimens of these various descriptions of poems are here translated into prose, which, notwithstanding its great elegance and harmony, puts the performance of the Troubadours to a trial, which is more or less severe to all poetry.

The dissertation of Mr. Raynouard in the *Conr d'amour* tends to prove that it exercised a great power founded on opinion, in the south and the north of France, from the middle of the 12th century till after the 14th.

Vol. III. contains erotic pieces selected from the works of 60 Troubadours, from the year 1090 till towards 1260. There is only the text, without translation, and without notes. But some, and in general the most remarkable of these pieces, are translated in the second volume; and Mr. Raynouard, besides, might suppose his readers sufficiently prepared to understand them, by the grammar, the literal versions, and the dissertations in the preceding volumes. He intends also, as we have said, to publish a dictionary of the language of these poets. Some persons would perhaps desire that he would point out the MSS. from which he has taken each piece in this third volume, and give some

short historical notices, to acquaint us as far as possible with the place and time in which each of the Troubadours lived. We may refer, it is true, to Millot's History of the Troubadours, and to the literary History of France; but not to mention that there are errors in those works, it would be convenient to find in Mr. Raynouard's work all the information relative to the authors of the poems which he publishes.

These additions, if he thinks them useful, will form part of the volumes which he is preparing; and we may be assured that he will omit nothing of what should make his work a complete course of the Romance literature. This third volume has the double merit of publishing many hitherto unedited pieces, and of giving a pure and correct edition of them.

Art. III. Leçons de Philosophie, par M. Laromiguière.

This work has been already noticed in our Analysis of the Journal des Savans. The subject, though of considerable importance, and as it appears from the character of the work given by the review, very ably treated, has not sufficient general interest to induce us to go at length into it; especially as the review is not even now concluded, but is to be continued in some succeeding number of the Journal.

## ORIGINAL CORRESPONDENCE.

### CICERO'S LOST BOOKS DE REPUBLICA.

In addition to what we have stated respecting the discovery of Cicero De Republica we may add, that another MS. includes the second part of some ancient works, the first part of which was discovered by M. Mai at Milan, some time ago. These manuscripts originally belonged to a monastery at Bobbio, whence they were removed at the commencement of the seventeenth century, and conveyed partly to Rome and partly to Milan. The second manuscript also contains some correspondence between Fronto and Marcus Aurelius, and the conclusion of the valuable commentary on Cicero, the commencement of which has already been published at Milan.

## LEARNED SOCIETIES.

### OXFORD, Jan 29.

On Thursday last the following Degrees were conferred:—

**MASTERS OF ARTS.**—Rev. John Bartholomew, Corpus Christi College. Rev. Charles William Stocker, Fellow of St. John's College. **BACHELORS OF ARTS.**—William Peel, Esq. Brasenose College, grand compounder. William Henry Deverell, Wadham College. William Wood, Exeter College. Charles Henry Cox, Student of Christ Church. John Adams, Christ Church. Henry Hutton, Scholar of Balliol College. William Pole Balliol College.

### CAMBRIDGE, Jan. 21.

Joseph Deve, Esq. and Joshua King, Esq. Bachelors of Arts, of Queen's College, were on Friday last elected Foundation Fellows of that society.

The Rev. John Hulse, of Elworth-hall, in the county of Chester, formerly a member of St. John's College in this university, among other bequests for the promotion of religion and learning, instituted a Lecture-ship in Divinity, to which he annexed a considerable salary, arising out of estates in Middlewich, Sandluch, and Clive. The duty of the Lecturer is to preach and publish twenty sermons, chiefly on the truth and excellence of revelation.—The Rev. Christopher Benson, of Trinity College, has been chosen Lecturer for the present year.—This is the first appointment under Mr. Hulse's will.

**PERSON PRIZE.**—The passage fixed upon for the present year is,

SHAKESPEARE, MACBETH, Act I. Scene the last.—The Dialogue between Macbeth and Lady Macbeth. Beginning with  
"We'll proceed no further."

And ending with  
"What the false heart doth know."

JAN. 28.—Saturday last, being Bachelors of Arts' Commencement, 134 gentlemen were admitted to that degree:—

**TRINITY COLLEGE.**—Messrs. Austin, Bain, Baines, Barlow, Barron, Bird, Coddington, Crakelt, Cowell, Dudsword, Eggington, Goode, Hall, Haworth, Higgins, Humfrey, Huntington, Knox, Lyon, Murray, Overton, Paynter, Platt, Richards, Ross, Schofield, Sheepshanks, Swann, Taylor, Vickers, Waddington, Wain, Wigram, Williams, Worsley.....35

**ST. JOHN'S COLLEGE.**—Messrs. Alington, Andrews, Bray, Brooshoof, Buckstone, Butler, Chapman, Close, Daniel, Dixon, Edmonds, Godfrey, Harrison, Heberden, Inge, Jennys, Law, Leeder, Locking, Loxdale, Maddy, Parham, Parkinson, Parry, Pitt, Plucknett, Spencer, Steward, Thresher, Tremlett, Trotter, Williams.....32

**ST. PETER'S COLLEGE.**—Messrs. Carr, Packman.....2

**CLARE HALL.**—Messrs. Burdakin, Burroughs, Codd, Farington, Frost, Le Grice, Walker.....7

**PENROSE HALL.**—Messrs. Allen, Deane, Fallowfield, Ion, Kirby, Lubbock, Maltby, Unipelly.....8

**CAIUS COLLEGE.**—Messrs. Clayton, Cobbold, Kelly, Pearce, Ward, Wenn, Wilder.....7

**BENE'T COLLEGE.**—Messrs. Brough, Edwards, Francis, Otter, Rigg, Robinson, Wilkinson, Winder.....8

**QUEEN'S COLLEGE.**—Messrs. Butts, Green, Hartley, Wilton.....4

**CATHARINE HALL.**—Messrs. Darby, Dewe, Durham, Eastwick, Graham, Milner, Wilkinson.....7

**JESUS COLLEGE.**—Messrs. Crowther, Gedge, Lockwood, Powell, Stevens, Wilson.....6

**CHRIST COLLEGE.**—Messrs. Blackburn, Dod, Horsley, Isaacson, May, Musson, Pickering, Pooley, Sevier, Worsley.....10

**MAGDALENE COLLEGE.**—Mr. Lane.....1  
**EMMANUEL COLLEGE.**—Messrs. Agner, Fielding, Freer, Hickman, Savage, Sheldford, Wharton.....7

## FINE ARTS.

### PORTRAIT OF THE KING.

Mr. Ackermann has published an affecting portrait of his late Majesty. It is from the able pencil of Count Munster, the constant attendant on his Majesty during the latter years of his public life, to whom the King granted the honour of a sitting shortly before he was seized by his last melancholy malady. It is stated, that this is acknowledged by the Royal family to be a most accurate resemblance; and to eyes less familiar with the royal countenance, it certainly appears to be at once an interesting and a faithful portrait.

### BUST OF THE DUKE OF KENT.

We looked the other day at a bust of His Royal Highness the Duke of Kent, for which he gave the last sitting only the day before he left town for Sidmouth. His Royal Highness's head was favourable to the sculptor; the cranium being of no common form and the countenance marked and regular, with a strong family likeness. The artist, Mr. Turnerelli, appears to have made a good use of these circumstances, for we never saw a resemblance more striking than that which his portrait bears to the deceased Prince. The contemplation of this model afforded a melancholy reflection:—but a few days before, it was the initiation of a living being endowed with energy, function, thought—how inanimate, how inferior, how worthless, in comparison!—but a few days had elapsed; and that exalted mould was annihilated by death, and this ordinary clay, for attraction, for consideration, for worth, was all, and its original was nothing. Permanent, excellent, it bade fair to last and be admired for years of time, gazed at by generations of Britons, when, perhaps, in its marble features they were tracing those of the progenitor of a line of monarchs, under whose sway many vicissitudes of good and evil, of defeat and victory, of difficulty and triumph had been experienced.

The costume of the bust is a field marshal's uniform, with orders of knighthood; and we consider it to be one of the finest specimens of the artist.

## ORIGINAL POETRY.

[By Correspondents.]

### OSBERON TO HIS FAIRY QUEEN

Breathe, oh! breathe  
On this flowery wreath,  
And its brightness shall live;  
And its beauty will thrive;  
For the sigh thou can't give,  
Will preserve it alive  
For ever!

For thy breath  
Bears a charm against death;  
And the pious of day  
Exclaim'd by thy sweetness,  
At thy bidding will stay,  
And give up their fleetness,  
For thee, love!

Oh! what bliss!  
Thus to hang on thy kiss,  
And to mingle with thine,  
With those breathings of thine,  
And to bask in those eyes  
As they gaze upon mine,  
So fondly!

Jan. 26, 1820.

I. L. S.

## THE SHADE OF ANACREON.

Thou spirit of the Teian Bard,  
Leave for awhile thy drear domain;  
Such gentle strains as erst were heard  
On Græia's shores, oh! sound again.

O haste, and bring thee bright lyre,  
Which oft hath sung airy beauty's smile;  
Haste, and with sweetest notes aspire  
To wing the fair of Albion's isle.

Britannia's dearest treasure sing;  
Crown thee, obey the sweet command;  
Why thus bewildered sounds thy string?  
Why falter thus thy feeble hand?

Thou calling on Anacreon's shade,  
Invoking thus his lyric art;  
Methought this sweet excuse it made—  
With joy I grav'd it on my heart.

"The beauties of Æschia's shore,  
"I deem'd thee Venus' choicest care;  
"But never was I call'd before  
"To sing of virgins half so fair.

"This, this alone, enchains my hand,  
"This renders faint my harp's full string;  
"The lovely fair of Albion's land  
"I must not—dare not—cannot sing."

Jan. 31, 1820.

ALPHEUS.

## SCOTCH SONG.

You ken fu' weel, I am your ain,  
That I loe ye mair than ony,  
An' yet be speer at me again,  
If I loe ye still my Johnny.

Yude faith, lad, ye should doubt yoursel  
Gin ye doubted ony, . . .  
But speer again, for I loe to tell  
How much I loe my Johnny.

EVAN.

## BIOGRAPHY.

## REMOIR OF THORVALDSEN, THE SCULPTOR

Albert Thorvaldsen was born at Copenhagen in 1771, or 1772. His parents were in very narrow circumstances. His father, a native of Iceland, was a stone-mason; and supported himself and his family very scantily by this occupation. Albert, from his earliest childhood, delighted in assisting his father at work; and, with much ingenuity, imitated the ornaments which he made of wood. The father, who soon saw that his son would become something more than a mere stone-mason, made him attend the

lessons in drawing which are given gratis in the Academy of Arts.

The young artist now began to design with the other pupils, and attracted the notice of his masters, though never remarkable for diligence. But his fondness for modeling soon distinguished him more particularly; and in a short period he was rewarded by the Academy with several small premiums.

Albert grew up without any systematic education. In his seventeenth year he made his first attempt to gain one of the smaller prize medals, given for the modelling of a bas-relief. The practice is to lock the pupils up in a particular room, where they are left entirely to their own genius. Thorvaldsen went to obtain this his first triumph with the terrors of a criminal sentenced to death; and even now, at the zenith of his fame, he cannot reflect without a kind of comic terror on what he then felt, and how he was obliged to screw his courage to the sticking-place by a good draught from the northern hippocrène, which for the poor lad consisted only of brandy. In the course of four hours he happily completed his work. The subject proposed was:—Heliodorus, or the Robbery of the Temple. He succeeded so completely in this task, that he astonished his judges, and obtained, not only the prize for which he had laboured, but also the great gold medal, to which is attached an allowance for travelling to Italy to study for a certain number of years. The enjoyment of the latter was withheld from him for a time, as the professors did not deem it advisable to send so inexperienced a youth into the world, abandoned to his own discretion. He therefore received for the present the prizes, and his masters beheld with delight how he improved more and more every day. The celebrated Danish historical painter, Abilgaard, conceived a marked affection for him; and among the nobility, his excellency the Privy Counsellor Christian Reventlow especially noticed him, and encouraged his rising talent.

After Thorvaldsen had completed several successful works of art in his native country, he at last departed about the twenty-fourth year of his age (1797), for Italy, in a royal frigate, which was bound for Naples. On the voyage he was in great danger, but at last happily reached Naples. The young artist, however, quite unacquainted with the world, and ignorant of every other but his native tongue, felt himself quite forlorn in this paradise of nature and of art. The longing after home, which seizes almost every young Danish traveller, rendered him insensible to every charm which this country presented; and he was so near to despair, that had not shame restrained him, he would have returned with the same frigate to his beloved country, without having seen Rome, the Apollo Belvidere, the Laocoon, and the Tragic Muse. He was therefore obliged to depart for Rome. Here he wandered for a year and a half, as if in a dream, among the statues of gods and heroes; and in the contemplation of so many masterpieces of art, was unable to produce anything of importance.

But soon the mist which seemed to envelope his mental faculties, was dispelled. The Roman ladies began to notice and to encourage the characteristically handsome northern visionary. Towards the end of his second year's stay in Rome, he began to model, to cast, and to destroy again. His celebrated and learned countryman, George Zoega, who perceived his great genius, paid much attention to him; and though he was his most intimate friend, he was at the same time his most rigorous judge. The young northern Phidias found in him an impartial critic, who never gave way when he had reason to blame. Sometimes he would say to him, "the ancients would not have done this;" and once he said, "No woman of character in ancient times, much less a goddess, ever dressed in this manner," on seeing a Pallas by our artist, where a fold in the drapery appeared less decorous; and the artist struggling to reach the ideal, he knocked off the heads of his statues, and destroyed works which would even then have conferred celebrity.

Still the eyes of the connoisseurs had not yet been attracted to him; and even when he had finished that master-piece of art the *Leader of the Argonauts*, Jason, it happened that Thorvaldsen being in the company of about thirty or forty artists, with whom he usually dined, was asked "whether he knew the young Danish artist who had made this noble statue?" In this manner did our artist labour in modest retirement; so that it was not even known who was the author of this work.

Mr. Hope of Amsterdam, so well known as a liberal patron of the arts, was at that time in Rome. He visited Thorvaldsen, saw his Jason (which was then only cast in plaster) and bespoke it in marble. Immediately after this work Thorvaldsen modeled a great bass relief, the subject of which was chosen from the First Book of the *Iliad*, where Agamemnon causes the heralds Talthybius and Eurybates to lead Briseis out of the tent of Achilles. This work likewise attracted the attention of the most competent judges. With rapid steps he now advanced towards perfection in his art, while his reputation daily extended.

But his spirited progress was checked in the years 1804 and 5, when he was attacked by a very serious and tedious illness. The physicians despaired of his recovery; his friends feared that he would be snatched from them, and without doubt he would have been lost to the arts, had not the noblest friendship rescued him. Thorvaldsen hurried to Tuscany and found in the house of the Danish Ambassador, Chamberlain Von Schubart, that care and rest of which he stood so much in need.

In the year 1808 he produced two works, which established his fame on a permanent basis. His Colossal Mars and his Adonis will form an epoch in the history of modern art. The connoisseurs, on seeing his Adonis, were transported with delight, and said: "*questo da vero è un uomo divino.*" Among these was also the celebrated Antonio Canova, who declared this work to be

the most beautiful and successful of Thorvaldsen's: "Finalment questa statua (said he) è lavorata in uno stile nobile e pure grazioso, e pieno di sentimento."

In the winter of 1803, Thorvaldsen again received orders from home, for he had before sent many of his works to Copenhagen. His Majesty the King of Denmark wished to have the entrance of the newly-built palace of Christiansburg ornamented with four bas-reliefs of his work, and those he completed to universal satisfaction.

Among the numerous works of this great artist, whom many esteem equal to Canova, may be mentioned his Three Graces, which exceed in delicacy every thing of the kind before seen or conceived. His Allegory on Day and Night, and his Mercury, are the delight of the lovers of art. The Duke Augustenburgh has bought his Graces and Mercury. His Entrance of Alexander the Great into Babylon, which was ordered by Napoleon, to be executed in bas-relief, for a public edifice in Milan, has been purchased on the recommendation of the Hereditary Prince Christian, as it is said, for Four Thousand Guinea, by the King of Denmark, for the palace of Christiansburg.

Foreign nations, the Poles, the Swiss, have chosen Thorvaldsen to decide on the erection of their national monuments. A medal has been struck at Rome, in his honour, on which his head is extremely like. Fifteen men are employed in his Atelier, but he is engaged to execute works which will fully employ all his life. He is afflicted with a pain in the chest, and his life is now chiefly dedicated to his king and his country, to adorn the palace of the Danish kings with works of art. Among these are the Candelabras, which stood in the Temple of Jupiter at Athens, and which he has executed after the description of Pausanias.

He left Rome a few months ago, to pay a visit to his own country, after an absence of so many years. On his journey through Switzerland and Germany he was every where received with the greatest esteem. Apartments were prepared for him in the Academy of Arts at Copenhagen. He has brought with him from the Duchess of Devonshire, as a present to her son Mr. Foster, the English Ambassador in Copenhagen, one of the finest specimens of Typography, which the Duchess has published in Italy at her expense. It is a splendid edition of the Journey of Horace, in which views of all the places through which Horace travelled, are engraved by the best artists of Italy.

Thorvaldsen is not married. His head resembles that of a statue; but his features beauteous with intelligence, and his frank and open manners gain the affection of all who know him. He possesses a real genius for music, and plays the guitar with peculiar expression and skill. His society is extremely agreeable, for his feelings and sense of propriety are so very refined, that he might fancy he had constantly frequented the most polished circles, instead of having been confined for almost three and twenty years to his Atelier at Rome; his wit is striking and keen; his judgment upon works

of art is severe, as becomes an artist who has the highest perfection in view.

Thorvaldsen hopes to return to Rome in the spring; engravings of his principal works are publishing at Frankfurt. We have seen some of the plates representing his Entry of Alexander into Babylon, and some epical carvings, which give a high idea of the originals, and do great credit to the engravers.

## THE DRAMA.

The Theatres have been closed since our last.

## VARIETIES.

*Absence of Mind.*—The Memoirs of Count Tessin, lately published at Stockholm, contain among many curious anecdotes, the following:—"Of all the absent people I ever knew in Sweden, the most remarkable was the late Chancellor, Baron Nörlin. Two instances deserve to be related:—Once when he had to read to his Royal Highness Prince Adolphus Frederick (now King) a report of the privy council, he very gravely took out of his pocket the lease of his house, which he read nearly to the end, till the remarks of the Prince at last made him sensible of his mistake. Another time he came into his Royal Highness's antichamber, where I was with several others, and asked for Count Tessin. I answered him myself; but he went out in a very great hurry, and came back and said, the officer in waiting informs that he is in the room. I answered, your lordship will believe me, I hope, for I have myself seen the count go out of the room. Nörlin went out a second time, and came back again with a new assurance of the officer in waiting; on which a general laugh ensued and waked him out of his dream.

A new steam-boat has been launched at Potsdam, larger than any yet built in Europe. It is 200 feet long and 44 feet wide. It is impelled by two engines of twenty horse power each: it was named "The Blücher," with grand ceremony.

The Police at Leipzig has prohibited the circulation of a work entitled the *Anti-Stonard-German*; and in Russia, a work called *Biblical proof that Jesus Christ lived on earth twenty-seven years after his resurrection*, has been seized.

*Light and Shade.*—A citizen whose very industrious habits had advanced him to a country-house, walking one hot day in his garden, caught the gardener asleep under a tree. He scolded him soundly for his laziness, and ended by telling him, that such a sluggard was not worthy to enjoy the light of the sun: "It was for that reason, exactly," said the gardener, "that I crept into the shade."

A melancholy instance of the danger of precipitate interment lately took place in the city of Pau. A man who had been deaf and dumb from his birth, and who followed the trade of a furrier, went out to sup with a party of friends. Having drunk a great quantity of brandy, he became alarmingly ill

on his return home; a physician was sent for, who administered some poisons, which however produced no effect. In a short time all signs of life ceased, the unfortunate man was supposed to be dead, and his funeral took place on the following afternoon. The funeral service was chanted in the church, and the body was about to be conveyed to the burial ground, when a noise was heard within the coffin, accompanied by groans. The terrified mourners immediately stopped; the coffin lid was opened, and with horror they beheld the supposed corpse rise up. Medical aid was immediately procured, but it was too late: the cold and privation of air which the unfortunate man had endured while shut up in the coffin, together with the horrible sensations he experienced on his recovery,—all combined to deprive him finally of the life to which he had thus been restored. He survived only a few hours.

The house of a poor shoe-maker of Venice having lately been burnt down, Lord Byron, who is at present residing in that city, had the house rebuilt at his own expense, and presented the shoe-maker with a sum of money equivalent to the loss of his tools and furniture, &c.

For some weeks past, the cold has been excessive in the mountains of Anvergne. At Clermont the thermometer fell to seventeen degrees below zero.

On the road to Mont d'or, a troop of hungry wolves attacked three carriage drivers, one of whom was torn to pieces;—the other two escaped. The wolves devoured the horses belonging to the carriages.

## METEOROLOGICAL JOURNAL.

JANUARY, 1820.

Thursday, 27.—Thermometer from 43 to 52. Barometer from 29.78 to 29.96.

Wind S.W. 3.—Clouds generally passing; a times clear; rain in the evening.

Rain fallen .1 of an inch.

Friday, 28.—Thermometer from 35 to 45. Barometer from 29.72 to 30.10.

Wind N. 3 and 1.—Generally cloudy.

Rain fallen .05 of an inch.

Saturday, 29.—Thermometer from 34 to 44. Barometer from 30.32 to 30.35.

Wind S.W. 1, and N.W. 1.—Morning at noon generally clear, and very fine; the rest of the day clouds passing.

Sunday, 30.—Thermometer from 36 to 47. Barometer stationary at 30.23.

Wind S.W. 2 and 1.—Generally cloudy.

Monday, 31.—Thermometer from 37 to 49. Barometer from 30.21 to 30.11.

Wind S. 3 and 1.—Generally fair; clouds passing at times.

FEBRUARY.

Tuesday, 1.—Thermometer from 31 to 45. Barometer from 30.19 to 30.9.

Wind S. 1, E. 2, and 2.—Clear; a white fro in the morning.

Wednesday, 2.—Thermometer from 24 to 39. Barometer from 30.02 to 30.0.

Wind S. 1, E. 1.—Morning clear and rimy the rest of the day generally cloudy.

Venus is a beautiful object in the S.W. eve evening.

Edmonton, Middlesex.

JOHN ADAM

bold attempts to inculcate doctrines subversive of the very foundations of human happiness. Of all the errors which taint the mind of man, there is not one more falsely groundless, or more fatal in its consequences, than that abominable selfishness which assumes the form of free liberality; and while it works havoc and desolation around, prides itself on its superior beauty and perfection: which consults its own gratification at the expence of others' dearest enjoyments; and deems that licentiousness is virtue, and a disregard of every divine and moral institution, wisdom. Into this wretched blindness Mr. Brooke has unhappily fallen. He whines about loveliness and love, and nature and fine feelings; and aims to fancy that genius is synonymous with a perverted imagination; that wild reveries are poetry; and that seduction, adultery, blasphemy, and suicide, are amiable and admirable. The stupidity of such opinions is perhaps the best security for their not doing the mischief which their propagation might otherwise effect; and the folly and nonsense in which they abound, are good antidotes to the jingling depravity of this class of rhymesters.

We shall proceed to justify the censure we have found it our painful duty to bestow on this volume; a duty, the performance of which could less possibly be avoided, as the author asserts that his effusions are not ideal, but "transcripts of personal feelings and experience;" which, if true, is the heaviest sentence upon him, that could be passed by the sound and honourable portion of his species.

"A young girl's address to her mother" justifies, in the sentimental jargon of this pernicious school, infidelity, immodesty, and harlotry. She asks why a parent should frown on her since she only visits a bard, who—

—Said he wandered.  
And so in his belief did other men,  
Though they perceived it not, through the sad waste

Of life in error or uncertainty,  
From birth to death without a hope or guide.  
And of the inexplicable mystery  
Which wraps our being, mournfully he spake.  
Of Interest, Pride, and Prejudice, and of  
The odious track in which men blindly plod,  
And their fierce folly in defending wrong,  
And of the dreams and lies which solemn fools  
And wilful tyrants forge to lead along  
The simple crowd, he told; and, somewhat moved,—

Of Faith, that many-headed monster, which  
With blasphemous perversion has been fed  
From age to age with human blood and tears:  
And then he told me that the Law of Love

Alone should govern this uneasy world.—  
Then as in eager converse oft we drew  
Nearer together, he would gently bend  
My form to his, and with a smile and sigh  
Sink on my lips,—and oh! the subtle fire  
Which from that touch shot through my thrilling veins!

Oh, Mother, you are old, you do not know,  
Or have forgotten, haply never felt  
The transports which two mingling spirits feel,  
Who having long explored on painful wing  
The unimaginable depths of Thought,  
Find nothing to repose upon, but turn  
And realize one blessing e'en on earth.

At times in this tumultuous tenderness  
My senses were o'erwhelmed—

And this precious trash is not forsooth  
to alarm a mother's fears! Perhaps not  
—the period for fear was past, and a  
despairing conviction of irreclaimable  
perversion and guilt, the juster feeling  
for the occasion. Here follows an example of the songs with which this fit  
companion for a virtuous girl entertains  
her.

Then damp not my joys by that sigh self-reproving;

The Virtue we serve shall be Nature and Truth;  
And the misjudging world may condemn us for loving.

Who deem but of Love as the folly of Youth.  
They know not that those in whose breasts it  
beats strongest,

Have hearts to which wisdom its best lore  
hath given;

And that souls where its fervors divine have  
burned longest

Are those best prepared for the raptures of  
Heaven!

This impious profanation is not accidental; it is the undefeated result of deep corruption, and equalled (at page 87) in what is styled an "Actual dream," where some mistress is invited to seek

One little, bright, sequestered spot,

Where we, with undivided lot,

Tranquilly might dwell and die,

Far from Man's malignity;

Who here would work us many a woe,

Because we from our souls would throw

Custom's cold and cramping chain:—

And long we searched—but searched in vain!

And then we turned in hopelessness

To take in one long wild career

Our last farewell; one long, one last

Embrace;—Oh God! e'en that was past—

And thou wert gone!—

We have not patience to go through with these odious and daring lessons, even for the purpose of pointing out their wickedness, and exposing their absurdity. No wonder that to one so morally blind, a self-murderer is a theme of veneration, and that he should imprecate a curse on his country for appointing an unhallowed grave to the suicide.

—Should he thus rest

Whose gallant spirit nobly sought in death  
A refuge from disgrace, and whose free breath  
Scorned the vile clay which Shame's dark bonds  
irect:

Oh Thou that mockest at misfortune! Thou  
That warrest with the dead! Oh may the  
blight

Of lasting infamy upon thy brow,

England! for this all blistering light!

And when thou fall'st, as soon thou must, then be  
Such mercy as thou shewest, shewn to thee.

No wonder that a being with every sense thus incapable of distinguishing between right and wrong, should draw the following picture of his own wretchedness.

I care not when this scene shall close,

No torments hath the grave for me,

This wearied frame may there repose,

And leave the encumbered spirit free;

Or should it rot in apathy,

And moulder with its mortal clay,—

Oh God! 'twere still a happy day

Which ends this fearful agony!

Hopeless on Earth, I turned to Heaven,

'Till lost in Glory's boundless light,

All blind and blinded, downward driven,

I sunk in clouds of tenfold night;

And in the soul's perpetual blight

I drag about this hateful chain;—

But soon I shall not ask in vain

From thee, O Death, the wretched's right.

This picture of agony and despair; of hopelessness on earth and of blasting horror at the look towards heaven; is the best comment upon the author's principles. It is but just that depravity, which would make earth hell, should have no pleasure on earth;...it is but just that infidelity, which would rob us of the expectations of hereafter, should have no joy in the contemplation of Heaven. Doubt and disappointment, remorse and dread, are the sure fruits of such doctrines, and of the practices founded upon them, if unfortunately for the individual and for society, they are ever realized beyond the heated visions of a perturbed fancy.

The two following little poems are specimens of the writer's better parts.

#### TWILIGHT.

How sweet hath been this darkling pause:—

But, lo, the emerging moon I see,

Whose curious light the veil withdraws

Which screened awhile my love and me;

Beneath the shade we wandered free

And mocked at man's obtrusive gaze,—

Then fair as Dian's orb may be,

Love now might well excuse her rays!

You trembling star, whose radiance dim

Burns faintly in the distant skies,

Is light, and light enough for him

Who looks but in his lady's eyes;

The glow-worm's lamp a torch supplies

To guide our steps through Haila's grove:—

Then why should worlds of brightness rise

On those whose brighter world is Love!

#### STANZAS.

My harp was as that airy shell

Beneath the breeze's fugal play,

Whose tones with every tempest swell,

And with each dying gale decay;

Now murmuring sorrow's softer sighs,

Now echoing loud its agonies.

Those sounds are hushed: despair has taught  
My soul its fruitless plaint to cease,  
Silent to hear the strife of thought,  
But feel that patience is not peace;  
My heart and harp their last have spoken—  
The strings of both, at once were broken!

Our last quotation will show, that in merry mood, as in sad, Mr. Brooke places his sense of what is desirable for human enjoyment on the worst possible basis. His *love* and *mirth* cannot co-exist with *truth* and *reason*... the true and rational epicure knows that these give the former their finest zest.

To-night, to-night we twine, boys,  
A chain of the brightest hours;  
Then bring, then bring me wine, boys,  
And scatter these rose flowers!  
Not often hath such a madness  
My bounding bosom thrilled,  
Up to-night must the cup of gladness  
But to the brim be filled!  
Then away with Truth and Reason—  
To-night let Love and Mirth  
Make for a bright brief season  
A Heaven on this dull Earth!  
We think not of to-morrow,  
But be it storm or shine,  
'Twill take whole showers of sorrow  
To cool this tide of wine;  
Then bring, then bring me wine, boys,  
And scatter these rose flowers,  
For to-night, to-night we'll twine, boys,  
A chain of the brightest hours!

*Anastasijs; or Memoirs of a Greek.*  
3 vols.  
(Continued.)

Continuing his voyage from Constantinople to Greece, we cannot resist quoting the ensuing description as eminently beautiful and characteristic.

The current had faithfully escorted us out of the straits; but having fairly seen our ship into the open sea, it here made a deep obeisance, bid our party farewell, and dived away, leaving us for the remainder of the voyage to the care of the winds. These apparently were busy elsewhere. At least none attended our anxieties; and for several days we were left to confront nothing but a dead calm. Should any one be so fortunate as to have had no acquaintance thus far with the monster ennui, the most favorable situation without doubt for acquiring a thorough knowledge of its powers, is on board a vessel so small as to leave no room for exercise, in the midst of a sea so boundless as to offer no object for contemplation, where motionless in one's motionless vehicle, one lies for hours watching a cloudless sky for a breeze which stays away, and a waveless sea for a ripple which comes not! In this situation, while all else stands completely still, time itself seems to roll on so heavily, that though every hour of one's short life runs wholly to waste, one yet regrets that it does not waste faster. I, who could only breathe in a bustle and thrive in a whirlwind, absolutely gasped in this unrelenting stillness of the elements

as for breath; and it seemed to deaden in my mind even the sense of pain, which would have been a welcome relief to my listlessness. Fifty times an hour I looked alternately at the sun and at my watch: I stretched myself; I yawned; I walked the deck long-ways and cross ways: I listened to the dull jokes of the sailors, and even took part in their lifeless conversation, until I became convinced that tedium levels the various conditions of life far more than love, or even gambling. All my impatience was not of the least use! The sun rose, and the sun set; and in the day time the heavenly vault displayed its uninterrupted azure, and at night the vast firmament twinkled with its innumerable stars, and still we remained in the same spot, with the same headlands ever in sight, and the same uniform sluggish sounds of flapping sails, flauting ropes, creaking timbers and growling mast ever dinning in our wearied ears. "The worst storm," cried I sighing, "would be a thousand times preferable to the nuisance of a calm like this!"

The storm (which happened to lurk within hearing,) took me at my word. Scarce had I uttered the wish, than it hastened with all possible alacrity to attend the invitation. A white fleece arose in the distant sky: a dark streak shut across the wave beneath it; a breeze in short was felt. This breeze became a gale, and this gale grew to a hurricane. Angry clouds, gathering on all sides, began to travel in every direction through the sky. They met, they crossed, and stopped each other as if to parley, until the whole heavenly vault became a continuous mass of darkness. It would have been difficult to decide which howled the most dismally—the frightened sailors, lowering the yards, closing the hatchways, and clearing the deck—or the frightful blast, mocking their petty endeavours, and tearing and tumbling every thing about our ears. It kept lashing the roaring waves, until they alternately heaved us up on their foaming backs to the sky, or shot us down their dark sides to the very bottom of the sea.

When the tempest became so furious that each sailor would have found employment for a dozen hands, they all wisely left off their work, to fall upon their knees, and say their prayers. Had Saint Spiridon, the protector general of ships in distress, been ears all over, he scarce could have heard or heeded all the vows addressed to him on this occasion. But the more we prayed the more the storm continued blustering, until our ship must inevitably have sunk, had not the sailors providentially hit upon an infallible expedient for appeasing the tempest.

The Jew, (one taken on board for charity) who, during the whole of the fine weather had made sport for us very handsomely on deck, at the very first lowering of the sky had taken care to dive into the hold among the ballast. Entirely forgotten for a while, he just happened to be remembered at this critical period. All now saw as plain as daylight the whole cause of the hurricane, as well as the remedy; and agreed that nothing could save the ship, but dooming the He-

brew to destruction. Fairly tossed into the sea, his life, it was thought, would without fail appease the angry waves.

The poor wretch heard from his hiding place the appalling sentence. He strove to creep under the loose stones, where he was almost suffocated; but had he nestled in their very heart, like a toad, he could not have escaped. Dragged upon the deck, no entreaty could save him from his impending doom. When however, with one leg already overboard, he saw himself on the brink of eternity, he begged to ransom his life for money, and the before penniless creature offered, first, one piastre, then two, then five, then a dozen! in order not to be thus turned adrift. But existence was at stake with the sailors as well as with him; and gold had lost its power. They let the Hebrew drop.

Anastasijs' rejection by his family, in whom hatred overpowers prudence, is ably painted; and his repentant visit to the tomb of his first love, and her infant, is most pathetic.

Ever since the sight of home had revived ancient recollections, and with them the remorse for ancient misdeeds, I had panted for a journey to Samos, there to perform on the lonely grave of my Helena the sad rites of contrition and of penance. On the morning of my own birthday I proceeded to the not far island, whose privileged earth held the sacred deposit; landed on its rocky shore early in the afternoon, and ere the evening cast its lengthening shadows around, reached the hallowed spot, sole object of my visit.

The sun's departing rays were just gilding from the moss-grown tomb. I approached it with awe: strewn upon it the wild flowers which had grown in its shade; bedewed its silent stones with tears of grief and remorse, and over the ill-fated treasure underneath, poured out my heart's bitter anguish in alternate groans and prayers. The whole night Helena's grave-stone was my pillow and early the next morning, ere yet the orb of day rose out of the sparkling wave—making my dagger my pen—I traced on that dusky slab as on the recording roll, my Christian, my Grecian, my old name Anastasijs filled in the deep sunk characters with that hot stream from my own bosom; and exclaiming: "with the purple of my own blood I sign the marriage contract! I make thee mine in death, and make thee mine in life hereafter!" for the last time imprinted a quivering lip on the cold marble, and rush away from death's receptacle, which I had made my nuptial couch.

From another chapter, detailing voyage to Rhodes, we draw the portion of a Turkish dandy.

I speedily formed an acquaintance with one of the Tehawushes of the Caput Pasha, who like myself was only a passerger. Aly was his name, and Crete his country. This latter circumstance added much in my eyes, to the merit of his society. I Turks of Candia, by their constant internigues with Greek women, to whom it permit every latitude of worship, become

## BOOKS PUBLISHED THIS DAY.

Indiscreetly printed in 4to, with Maps, &c. uniformly with Park's and Barrow's Travels, price 21. 6s.  
**TRAVELS IN NUBIA and in the INTERIOR of NORTH EASTERN AFRICA.** By J. L. REICHHARDT. With a Life and Portrait of the Author.  
 Printed for John Murray, Albemarle Street.

Indiscreetly printed in small 8vo, similar to Domestic Cookery, price 7s. 6d. in boards, a New Edition, greatly improved.

**THE NEW FAMILY RECIPE-BOOK: A Collection of more than Eight Hundred truly valuable Receipts (emitting those in Medicine and Cookery) in various Branches of Domestic Economy, selected from the Works of British and Foreign Writers of unquestionable reputation and authority, and from the attested Communications of Scientific Friends.** Dedicated, by permission, to Dr. CHARLES TAYLOR, Secretary to the Society of Arts, Manufacturers, and Commerce; to whose superintendence the work has been submitted, and to whom the Editor has been indebted for many valuable Communications.

"This book is a proper and almost indispensable companion for the 'New System of Domestic Cookery': it contains a larger quantity of truly valuable Receipts than any book of the same kind ever contained. There is no thing which the reader can seek for Domestic Economy which he will not find some useful information."

Printed for John Murray, Albemarle Street; sold also by every Bookseller in England, Scotland, and Ireland, of whom may be had, lately published, **A NEW SYSTEM OF DOMESTIC COOKERY; a New Edition, small 8vo, 7s. 6d. boards.**

Price 2s. 6d.

**THE NATURE and EXTENT of CHRISTIANITY** duly stated and enforced, with a more immediate Reference to the present Times; in a Sermon preached in the Parish Church of St. Mary, Guildford. By the Rev. JOHN STEDMAN, M. A. Head Master of the Royal Grammar School. With Notes and Additions. Printed by A. J. Valpy; and sold by Mr. Williams, 10, Red Lion Court, Fleet-street, London; Parker, Oxford; Russell, Guildford.

In a Course of Publication, in Monthly Numbers, price 10s. 6d. each.

**A PICTURESQUE VOYAGE round GREAT BRITAIN;** containing a Series of Views illustrative of the Character and prominent Features of the Coast. By WILLIAM DANIEL, A. R. A.

The First Voyage, which was performed in the Summer of 1818, containing 28 Plates illustrative of the Coast, from the Land's-End, Cornwall, to Holyhead, with descriptive Letter-press, 71. 10s. half-bound.  
 The Second Voyage (of 1816) comprehends Holyhead and Porthcarr, with the intermediate Parts, illustrated in 28 Plates, and detailed Narrative, 71. 10s. half-bound.

The Third Voyage (in 1817), comprises 42 Plates, with Descriptions of the South-west Coast and part of the Western Isles of Scotland, 72. 10s. half-bound.

The Fourth Voyage (of which Ten Numbers are already published), performed in the Summer of 1818, comprehending the Isles of Skye, Harris, and Lewis; the North-west and Northern Coast of Scotland; the Orkney; and the East Coast from Duncansby Head to Dundee.

For the Convenience of Persons loosely interested, any Paper or single Number may be had separately.

In acknowledgement of the liberal patronage with which this Work has been honoured, the Public are respectfully informed, that the most arduous part of the undertaking has been accomplished, by the circumnavigation of the whole range of coast from the Land's End to Dundee; and it were almost needless to add, that the exerting power of its successful accomplishment will be a powerful stimulus to future exertion. The change of plan at the commencement of the third volume, which, by a condensation of the narrative, admitted three Volumes instead of two, in each number, having been universally approved by the Subscribers, will be persevered in, until the work is completed. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

In 8vo, price 14s. 6d. with a Portrait of the Author.  
**SERMONS, Preached in the Cathedral Church of Worcester.** By the late Rev. JAMES STURLING-LEE, A. M. Prebendary of Worcester, and formerly of Merton College, Oxford. Printed for Longman, Hurst, Rees, Orme, and Brown, London; and W. H. L. Walcott, Worcester.

#### United States of America.

In three large volumes, octavo, price 3s. 2s. boards. **A STATISTICAL, POLITICAL, and HISTORICAL ACCOUNT of the UNITED STATES of AMERICA**, from the period of their first Colonization to the present day. By D. R. WARREN, Esq. late Consul for the United States at Paris. Printed for Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. 30, Cheapside, London.

\* \* \* This work affords the only complete account of the United States to a recent period, at present before the public. Besides presenting the results of the author's own personal knowledge, and of communications from persons in different parts of the country, it embodies the substance of all the information to be found in books of travels, and statistical works of every description relating to the United States down to the beginning of 1818. It includes, also, a sketch of the history of the country, with copious tables of the population, value of lands, revenue, exports and imports for a series of years, and a great variety of matter not introduced into any previous work of the kind. The subjects of climate, population, agriculture, commerce, government, revenue, religion, education, and others of similar importance, are discussed in separate chapters; every fact of consequence is supported by authorities, and the whole arranged on a new plan, peculiarly calculated to facilitate reference.

#### Antidote to Infidelity.

Price 6s. nearly bound.

**THE BIBLE CLASS BOOK.** Readings for every Day in the Year; being a selection of the most edifying and impressive Parts of the Sacred Scriptures, in Three Hundred and Sixty-five Lessons. Adapted to the Use of Schools and Families.

No. 160. SATURDAY, FEBRUARY 12, 1820. PRICE 8d.

## REVIEW OF NEW BOOKS.

### *The Mystery, or Forty Years Ago.*

This novel, in three volumes, of which we took some notice in No. 158, issues from the press on Monday; and, treated with an early *Presentation copy*, we lose no time in setting a new, and clever essayist in this species of composition (a first attempt, we understand) before the public. He has produced a work which will not fail, we think, to excite a considerable sensation, even at a period when-novel writing is on the pinnacle of its fame. Compassing an agreeable admixture of genteel and low life; now delineating such events as the riots in 1780 with historical force and fidelity; now traversing African deserts, with all the particular knowledge and interest of a genuine traveller; and now painting fictitious scenes, with a shrewd observance of character and the lively touches of reality, the author proves himself fully competent to the task of affording a full share of entertainment to his readers, and raising the alternate feelings of curiosity and mirth, anxiety and sorrow. To present we can do no more than say one of the humorous descriptions is a Smollett-like picture of the solemn ceremonies of a party of mourners at a funeral. ... Harley

According to his him one afternoon, after a ramble, noticed a hearse at the door, and did not suffer it to occupy much of his attention before he passed into his sitting-room. Here he experienced no small surprise at finding it occupied by four persons dressed in black, who evidently had some connection with the vehicle that he had just seen. These persons were employed in putting by the fire, which had lately waved in pompous solemnity over the hearse; and besides this they were busy, and deeply engaged in conversation on their own concerns; they seemed to feel themselves personages of such importance, to bestow one word on a humble individual, as the person in the apartment they had invaded.

"You know we sleep here," said one, "I've taken care of supper before the ladies come. I've ordered two pair of heels to be roasted. You know if I had known this when they come, ten to one I should get a bit of bellow for love or money." "Well, but do you think they'll

stand it?" enquired another of these grave gentlemen.

"Stand it! Why, to be sure they will. A black job like this, that takes us away from our wives and families, wouldn't be worth having else. We must always live well on these journeys; and if we don't take care of ourselves, who the devil will take care of us, hey? Can you get over that?" "No; only ducks is dear."

"What signifies! We don't come here to starve. Who do you think will make my bones about it. Old Snatchall died rich enough to admit of his being buried decently, and his relations get too much money, in consequence of his kicking the bucket, to think much of this last expense."

"Why, it's no more than's perfectly proper, that's certain," said a third, "that men like us, who have borne so much, should live well." "O certainly!" said the second, "and if you think they'll stand it—"

"Stand it!" interrupted the person who had opened the debate, "what do you keep bothering about standing for? What's this to stand! You should have been with me and Sam Solder, when we went down to bury Allerman Longtwist at Exeter. Then you might have talked about standing. Why, we'd game and venison every day. When we wanted a hare, we used to tell the landlord he must find us a lion. He was down to it, and took care to get the right thing."

"Aye," said one who had not before spoken, "but that, you know, was a very busy time. We were then, all hands at work, hard and fast, *boozing* 'em up, night and day, and could not rid 'em fast enough. Then we could do just as we pleased; but we mustn't come it so strong now, while business is so dead."

"O! don't tell me. The season's coming on. We are getting fast towards November, and then the fogs, and winds, and rain, you knows, will make business brisk again. It won't do for 'em to kick up on breezes, because we enjoys ourselves a bit. Suppose we were to leave, just as the work comes in, where the deuce would they get men to fill our places. They might get men to be sure, who know nothing about the business; and a pretty higgledy piggledy concern they'd make of a decent black job like this. I should like to see a set of these new ones lifting a coffin, like Snatchall's, out of the hearse."

"How even and steady they'd lug it into the church!" said another, with an air of lordly contempt for the supposed awkwardness of the sable recruits that might be enlisted in the regiment of Death, if the present company were to retire from the service.

"They would hardly stand still enough to let Shoreless throw the pall over it," added a third.

"And, perhaps, they'd carry the head of the corpse first," continued the fourth.

This rally was too exquisite to be endured with composure, and a hearty laugh, at the extremely ludicrous effect which the appearance of a coffin so carried must produce, convulsed the quartetto, each declaring that he should not wonder if such a blunder were actually to be committed.

The undertaker was a brisk, short man, about forty-six years of age. His nose, and that part of his countenance in its immediate vicinity, bore evidence to the goodness of the wine—in colour at least, which, for some years he had been in the habit of drinking at the funerals he had performed. [He addresses Harley.]

"Servant, Sir,—hope no offence. My name's Shoreless: been in the undertaking line some years. Happy to see you in Fleet-Street, or at my country house in Goswell-Street Road—Yes, Sir, as my friend Bung was saying, I gave his house the preference over one that would have done better; but, people in business ought to give one another a turn. He gave me one when his wife died. A very pretty funeral that, hey! Mr. Bung." "No fault to find, Mr. Shoreless."

"No; that's my way of doing business. So, Sir, as I was going to say, as my men have almost filled your apartment, have the goodness to step up stairs. We remain here to-night, and shall be very glad of your company." "I thank you, Sir; but I can retire to my chamber."

"Pray don't do that. You will be very welcome up stairs. We are all friends together, and a very pleasant party, I assure you."

"The presence of a stranger, on so unlaughably an occasion, must be improper."

"O, not at all. I'll introduce you as a friend of mine—that is, as my friend's friend; and as we are all friendly together, I'm sure you will be very welcome." "But the distress of the relations of the deceased, would make it unpleasant to me."

"Why, Sir, my neighbour Mr. Snatchall has left a good deal of money behind him, and so it is not like a case where there is nothing to console the survivors. To be sure, Mrs. Snatchall is very much affected; but, between ourselves, I don't know that she has so much reason, as she used to quarrel with him every hour in the day, till within a week of the finish, and sometimes he treated her with a good thrashing, though he generally got as good as she sent." "Was Mr. Snatchall carried off suddenly?"

"He was, rather. He was always a litigious, close-fisted old ras—gentleman. To be sure, I have no right to speak against him, for he always paid for what he had, and I buried his two sons, the last of whom

plied, some said for want, in the Fleet. But, however that was, the old gentleman gave them very good funerals, which, you know, proved himself an affectionate father, *after all*. A month ago, he arrested a man who had failed in business; and, somehow or other—"I don't know how it was, the bailiff made a bit of a mistake, and poor Mr. Snatchall was saddled with all expenses, and obliged to give up the caption." It went to his heart, Sir; he never held up his head any more; in fact it threw him into a fever; and after the loss he had sustained, he could not think of calling in a physician, till he had the rattles in his throat. He then threw away his guinea; but it was too late. I was the only person that could be of service to him." [Harley consents to become a visitor, the undertaker retires, and his men return to their conversation.]

"The best joke, however, I was going to tell, just as Shovelem came in. You'll excuse us, Sir—we are all friends." "O, certainly." "It was at Highgate, Dick Dead-flesh and Jack Mattocks got drunk at Islington; so that we were obliged to leave them behind when we got to the Cock, at Holloway. So, as I was saying, two other fellows were obliged to be got from the parish work-house. Bill Windingsheet was then quite green; so I was the only man that could shoulder a corpse in a workmanlike manner. When we entered the yard, and came to the grave, one of the parish bearers went blundering on one end of the outer plank,—and, say eyes! up it went, and sent a spade of the mould smack in the parson's face, over his book, and all; and the coffin came bang on the other board; and if I hadn't held devilish tight by one of the handles, would have gone in end-ways. However, it might as well as it turned out; for, when we had got it in the ropes, the parish fellows did not let down fast enough. 'Lower the foot,' says Bill; but they, poor devils! did not know the foot from the head, and let the head still lower, so that it fairly slipped out of the ropes, and bump went the coffin to the bottom of the grave, face downwards. I never saw any thing like it in my life. I thought I should have split my sides laughing, while the parson was saying 'ashes to ashes,' for it had taken Bill half an hour's scrambling to get matters to rights again."

Either the droll scene which he described was better to see than to hear as a tale, or the presence of Harley put some restraint on the merriment of the men of Death; for they did not laugh at the story, and the speaker was under the necessity of performing that ceremony over the joke for himself, which he accomplished apparently with but little difficulty. All, however, owned that the thing was odd enough, but it was no more than was to be expected from men who entered upon a profession for which they were not duly qualified.

Mr. Shovelem now returned with news that the mourners were in sight, and would arrive at the inn in a few minutes. He requested Charles to accompany him up stairs, and this he had no objection to do, as he had had quite enough of the society of the under-

ushers into the large room, he found a profusion of wine and cake prepared for the sorrowing train who were expected. It was the latter end of September, the afternoon turned out rather damp, and, in consequence, the undertaker had caused a rousing fire to be made to cheer their spirits. He had few opportunities of making observations on the excellence of Mr. Shovelem's arrangements, when the coaches stopped at the door of the inn, and the noise of their falling steps announced the mourners to be about to enter.

The widow of the deceased was the first to make her appearance. She came forward with a languishing air, carefully holding her handkerchief before the upper part of her face, to hide the culpable disobedience of her eyes, which refused even on this occasion, the moderate supply of tears, that the tender Mrs. Snatchall was extremely anxious to shed, in honour of her dear departed lord. As she advanced, she drew in her breath, and retained it as long as she conveniently could, to give a stronger aspiration to the word "Ah!" which she at last threw out in a sighing whisper that might have been heard all over the house.

The undertaker introduced Charles, in few words, to the widow; and with an economical glance of his eye, and inclination of the body to all who followed, as a very particular friend of his, who, happening to be detained a few days at that inn, had most obligingly given up his apartment for their accommodation. The widow curtsied, and obliged him with a pathetic repetition of her former aspiration.

Young Mr. Rattler was the next, whose sorrow, though fully equal to that of his aunt Mrs. Snatchall, was not quite so conspicuous in his deportment.

Mr. Cadaverous, a short, pale-looking attorney, and Miss Blobber, an oilman's daughter, to whom he paid his addresses, and who had been invited in compliment to him, to be of this party of pleasure, followed. To them succeeded Lieutenant Bobstay, who had known Mr. Snatchall from the time of his first going into the spirits line. This hero had lost his leg, as he said in battle, but as others whispered, in consequence of a fracture which he had the misfortune to receive through a fall from the window of a house he once lodged at in Wapping, which he judged it prudent to evacuate, in his hurry to attend to his duty, without wasting time by stopping to settle his reckoning. From the peculiarity of his gait, the judicious Mr. Shovelem had assorted him with Mr. Waddle, a retired sugar-broker, who from the possession of an irritated corn, was enabled to supply a hop that very well corresponded with that of the Lieutenant; and by this fortunate coincidence, the march from the hearse to the centre aisle, had been made perfectly regular. Mr. Lapstone, a hoot-maker, from Gutter-lane Chenside, who from a cancer in his face, had had the misfortune to lose more than half his nose; and a tall skeleton, then the property of a stationer in the Minories called Mr. Wafer, closed the procession.

The discerning Mr. Shovelem having placed the widow next the fire, deposited the fat carcase of Mr. Waddle in the chair on her left hand. He manifested a disposition to yield the post of honour to the Lieutenant; but the man of war politely desired him to keep his seat, and to rise, was too serious an exertion for Mr. Waddle to think of making it on any trivial occasion. Mr. Bobstay took his seat by him, and Mr. Lapstone became his left-hand supporter. On the other side, care had been taken to place Miss Blobber in opposition to Mrs. Snatchall; and Mr. Cadaverous, as a matter of course, took the next seat. Mr. Wafer pressed on Harley that by the side of an attorney, but it was declined; and the stationer had the happiness of sitting next the lovers, whose good opinion it was his interest to cultivate: as it might be the means of helping him off with a valentine or two in the coming February. Between the hoot-maker and the stationer, Harley found his resting-place.

The sable corps of Mr. Shovelem applied themselves to relieve the party from their hoods and cloaks, while the master, after giving all requisite directions for tea and coffee, which he did with an air of dignity and importance, that the present Emperor of Russia and the Duke of Wellington would find it difficult to assume at a review, or on the eve of battle, proceeded to pour out wine to cheer the afflicted mourners, and sustain them under the affecting solemnities of the day. One glass he filled with brandy for Lieutenant Bobstay, who was a little afraid of taking cold, from standing on the damp ground without his hat, while the service was being read over the grave.

Mr. Shovelem, in person, politely handed the waiter on which several glasses were placed, to the widow. Absorbed in sorrow, she did not, at first, perceive, nor comprehend the meaning of the gentle tap, which her right arm received from the Epping sausage-like fingers of Mr. Waddle. At length, however, her attention returned to mortal affairs; she made an effort, and, by accident selected towards her consolation, the glass which had been filled with brandy for Lieutenant Bobstay. In a low tone, she wished her friends good health; and had, unfortunately, swallowed more than half of its contents, before she discovered the fatal mistake. She, however, then made ample amends, by her cries and groans, for any negligence previously observable in her deportment; and though a glass of wine to neutralize the ardent spirit was prudently administered with the least possible delay, she would certainly have fainted, but for a pin in her hood, which Mr. Shovelem had left for a moment on the rail of the chair, and which insinuating itself through one of the lace-holes in her stays, as she was sinking back for that purpose, spared the company this additional calamity, and caused the relief of the late Mr. Snatchall to spring up again, with an agility that would have astonished Mr. Parsloe, or Madame Saqui, in order to resume her former attitude of graceful despondency.

More brandy was brought for the lieutenant, as also a small glass for Miss Blobber, at the suggestion of Mr. Cadaverous, who was of opinion, that she might take cold as well as the lieutenant. The young lady insisted upon his tasting it first, and this affectionate request having been amorously complied with, Miss Blobber soon disposed of the rest, in doing which however, she entertained the company with a very respectable imitation of the emotion which the brandy had called forth in Mrs. Snatchall. The rest of the party now took their glasses, hoving in silence to each other, and to the widow with an air of distress, which inflicted real pain on Charles, who never having acted a part in such a scene before, found it so intolerably farical, that he hardly dared venture to breathe, lest he should be carried away by a burst of laughter; which, at that early period of the day, would have shocked the mourners exceedingly.

Tea and coffee were next introduced, and disposed of as silently as the wine had been. There was something very touching in their taciturnity, and in the intelligent looks and expressive pantomimic gestures, by which some of the number intimated occasionally, that it would be expedient to ring for more mufins, toast, or tea. One circumstance was very consoling. Grief had not injured the appetite of any person present. With the exception of Harley, each made a hearty meal. He, from the strong provocatives to which before him, felt that he risked being choked by every mouthful he ventured upon, and in consequence was little disposed to eat.

When the cups and saucers had been removed by order of the Commander-in-chief, that provident personage came to Mrs. Snatchall, and desired to know, what she would like to have procured for supper. The widow was still so much overpowered, that she could give but faint answers to all his questions. The conference proceeded in the following manner:

"Can you say, ma'am, what you would like? We can get any thing." "It's all the same to me." "Would you like a quarter of lamb?" "No matter what." "Or a sir-loin of roast beef?" "What you please." "I shall not be able to eat any thing." "O, my dear ma'am, you must not give way to grief.—Would you like a fillet of veal and lamb?" "I've no choice." "Or tallow, smothered in onions?" "Any thing." "Or a boiled chicken?" "Oh!" "Or some roasted ducks?" "Ah!" And here the aspiration before mentioned, was repeated in Mrs. Snatchall's very best style.

Mr. Shorelem perceived that she wished to be considered as completely exhausted, and looked upon her failing to answer the two last questions, as she had done those she preceded them, to be sufficient to indicate a preference for what he had then proposed. He accordingly at once desisted, as the lamed dog, after going round and round within the circle appropriated to his exhibition, when his master's voice drops, at once halts, perceives close to his nose the lady who will be married first, and prescribes himself no further trouble.

Having issued the necessary directions for preparing a repast befitting the occasion, and, with most commendable forecast, taken especial care, that nothing would be wanting to make that part of the ceremony completely satisfactory, Mr. Shorelem seemed more at his ease than he had previously been, and socially took his seat among his neighbours. A pause of about three minutes' duration succeeded, in which the whole of the *dramatis personæ* actively employed themselves in endeavouring to think of something to say. Mr. Cadaverous was very near succeeding, and a preliminary hem! caused all eyes to be fixed on him. He was about to begin, when Mr. Shorelem gave his hem! and the attorney, with all the modest diffidence which belongs to his profession, at once gave way. The undertaker could brook no further delay, and forthwith made a beginning.

"Well, Mrs. Snatchall, you must not let your loss prey upon your spirits too much. The will of Heaven, you know, ma'am, must be done. You have nothing to reproach yourself with." "Ah! Mr. Shorelem, you're very good;" and the white handkerchief went up to her eyes. "You know we must all go when our time comes. There is no help for it."

This philosophical reflection at once set the tongues of the whole company in motion. Mr. Cadaverous remarked, that "those who were youngest, and in the bloom of life, did not know how soon they might be cut off."

Mrs. Cadaverous, as was to be, assented to this, and contributed her mite of consolation, by adding that, "neither wealth nor beauty afforded any protection against the grim destroyer, Death."

The widow, who was travelling post towards fifty, and who had virago written in legible characters on a clay-coloured countenance, seemed to consider the last speech to apply particularly to her case, and admitted the correctness of the observation, by stating for the benefit and edification of all present, that "it was but too true, and for her own part, she did not think she should be long after her dear Mr. Snatchall." Here she again displayed strong symptoms of sensibility, by concealing her face in the usual way.

Mr. Shorelem, now, partly from a wish (very common to most men) to hear his own praise, and partly with a view to give the relief of the deceased a little additional consolation, led the conversation to the manner in which the funeral had been performed.

"I hope, ma'am, my little arrangements were to your mind." "Quite so." "Nice deep grave!" "I could not see its depth. To look at it was too much for me." "It was very deep indeed," said Mr. Waddle. "And quite dry." "O! quite dry," said Mr. Rattler. "In every respect it was perfectly proper." "I am glad you like it. Mr. Snatchall was an old and particular friend of mine. I should have been sorry to have found any thing had been neglected." Mr. Shorelem put in.

He waited for a compliment, but no one speaking, he proceeded, addressing himself to Mr. Rattler.

"I hope you have not seen any thing neglected by my people, Sir." "O nothing, nothing." "Nothing, nothing," was repeated by every mourner in succession, and Miss Blobber condescended to add, "every thing she was sure, was very comfortable; and this, she thought, must be very grateful to the feelings of Mrs. Snatchall." "Certainly; I wished all that could be done should be done. For now he is no more, I know I shall never see his fellow,—poor dear Lamb!" "Well, ma'am, don't fret. No doubt he is happy."

This speech at once turned the conversation into the ordinary funeral channel, and brought forward the present happiness and past virtues of the deceased in the regular way. The remark, that Mr. Snatchall was happy, was instantly taken up.

"Much happier than we are," said Miss Blobber. "No doubt," said Mr. Lapstone. "He's where he'll be tossed about by no more storms," said the Lieutenant.

The stationer tried to repeat this fine sentiment, but not recollecting the whole of it, he stopped short as a man at a public festival sometimes does, when he cannot manage the words of a long toast that he is required to drink. Instead of bawling "the afore-said," Mr. Wafer got out of the scrape, with "You've taken the words out of my mouth." Mr. Cadaverous "had no doubt but that Mr. Snatchall was to be envied." Mr. Waddle continued, "And very much, too, in my opinion." And the nephew, Mr. Rattler, who, by the bye, came in for a legacy of a thousand pounds, piously remarked: "*His loss is our gain*."—Pool! I mean our loss is his eternal gain."

Having thus made an approach towards the honest expression of their real sentiments, by unanimously agreeing that the late Mr. Snatchall was better out of the world than in it, the conversation became more untrained, Mr. Shorelem still taking the lead.

"Ah! Mr. Snatchall, poor man! was none of your fly-away, flash-in-the-pan gentry. Always paid his bills when they came due. He'd stand out for discount, but I don't blame him for that." "Better do that than put people off," Mr. Lapstone remarked. "As Mr. Flourish did, and at last fail."

"Aye, who would have thought of that!" said Mr. Cadaverous. "But I always expected his pride would come to something."

"That was what Mr. Snatchall always said," observed the widow, who appeared a little relieved by this relish of small talk. "Why, it is but t'other day," the attorney went on, "that he called in his one-horse chaise, to drive me to Hampstead, and when I proposed to take Miss Blobber with us, he objected, and said his character would suffer, if three were seen in his chaise." "He was always a brute," said the Mrs. Cadaverous elect. "And then see how he went on at home. His wife and daughters dressed like the first ladies in the land, with their bracelets and rings." "And always having new clothes," Mrs. Snatchall added. "O always! Why, they had three new saraset dresses each, within four months, which cost the Lord knows how much, if they were

paid for." "And then, when they went to the play, they must always go to the boxes." "O, bless you! to be sure. The two shilling gallery and the pit, were not good enough for people of their quality." "Well, we shall see where they'll go now. Perhaps they'll be glad to stay at home more frequently." "If they have a home to stay at," Miss Blobber sneeringly continued, with a satirical leer, that produced a smile even from the afflicted Mrs. Snatchall. "And," said the latter, "what a deal of company they used to keep." "And how extravagant in their preparations! The table was always covered with plate and cut glass, and they made nothing of having turbot and turtle-soup. Mr. Flourish once said, he could not do without them. His constitution required high living." "I'm thinking, where will he find his high living now?" "Mr. Cadaverous significantly remarked, "Why in a garret to be sure," replied Miss Blobber, and a general laugh among the friends of Mr. Flourish who were present, followed. "But," said Mr. Waddle, "they tell me that he has some hopes of assistance from his cousin Sobersides." "O no," Mr. Cadaverous answered, "I believe that is not the case." Miss Blobber added, "he is too close-fisted to do any thing of the kind. I dined there once, and what do you think he gave us for dinner? A sirloin of beef roasted, with potatoes and horse-radish!" "There was meanness!" said Mr. Cadaverous. "And he gave us nothing after dinner but home-made wine." "I could not have done such a thing," said the widow of the dealer in foreign wines and spirituous liquors. "But, I think," Mr. Shorelem here remarked, "if we were to have something to drink, it would not be amiss. I'm sure if the late Mr. Snatchall could know what we are doing, he would not feel it any disrespect to him to take some refreshment."

The reasonableness of this proposition struck every one, and wine and negus were soon produced. Just as it came into the room, the Lieutenant returning from a stump round the table, to offer a pinch of his rappee to Miss Blobber, was about to resume his seat, when he had the misfortune to plant most firmly his timber-toe on the soft corn of Mr. Waddle, while politely presenting his box to Mr. Lapstone, who possessed but the moiety of a nose. The indignation with which he was repulsed on the one side, and the horrible roar that burst forth on the other, appalled the naval hero, so that he could neither stir nor speak; and his embarrassment was but very little diminished, when he found that the start of the tortured sugar broker had emptied a bowl of negus (which was being handed over by Mr. Shorelem) into the lap of the widow, to the great discomfiture of her person, and to the serious injury of her new mourning. Apologies were of course tendered, and, at the instance of Mr. Shorelem, accepted, after a few admonitory growls from Mr. Waddle. The assistance of the landlady, and of Miss Blobber, removed, as far as might be, the annoyance, to which the unfortunate Mrs. Snatchall had been subjected, and harmony was

restored. Another dish of reviving scandal was then served up, and the extravagance and economy of their mutual friends, were criticised with equal candour. Supper came next on the table; and with the exception of a complaint from Mr. Wafer, that some of the gravy intended for one of the ducks had been improperly administered to his Sunday coat, every thing was perfectly satisfactory. The cloth removed, the praises of the deceased were resumed, and the nephew considering excessive grief for those who were happy to be ridiculous, if not wicked, thought it no disrespect to the memory of his "dear uncle" to attempt to raise the spirits of the afflicted widow with a song. He accordingly roared out a ditty, the burden of which was

"He's gone like a hearty good fellow."

Most of the mourners joined in the chorus. Several other displays of vocal talent, each having the solace of the widow for its object, followed in rapid succession, and happily at the close of an evening of more than common jollity, those by whom these benevolent efforts were made had the satisfaction of seeing Mrs. Snatchall retire, to use the phrase always current on such occasions, "Quite as well as could be expected."

*The two first (quasi the first two.) Cantos of Richardetto freely translated from the original Burlesque Poem of Niccolò Fortiguerra, otherwise Cartoromaco. London, 1820, 8vo. pp. 54.*

*Ecce iterum Crispinus*, another Whistcraft. Mr. Rose, in his free translation of the Parliament of Benets, from the Italian of Casti (see Literary Gazette for last year, p. 337) has set the example of this particular genus, and succeeded, perhaps, as far as could well be expected, in affording a tolerable idea, in English, of a style and school greatly prized among our neighbours in Italy. We doubt much that our language is capable of rendering those niceties which are so felicitous in the Italian burlesque, or of substituting *jeux de mots* of another kind equivalent to the original: at any rate, we infinitely prefer its humours on a purely native foundation, to the grafted imitation of an exotic and incongenial stock.

Richardetto, which followed the poems of Bernardo and Berni, written about 100 years ago, and the last of the serio-comic poems, is a sally in derision of knight-errantry; and treats of the adventures of some of the famous Paladins of France when Charlemagne was threatened by a coalition of African Princes. The son of king Scricca, it seems, has been slain by the hero; and his sister Despina, the Helen of Africa, engages all her lovers to undertake an expedition into France to revenge his

death. Of this crusade we hear no more; but the two cantos give a sort of disjointed account of the exploits of the knights who are absent at a period when their Emperor stood so much in need of assistance. It is altogether a fragment, and appears to have little aim beyond beguiling a tedious hour to the author, and, perchance, to his readers. We shall quote a few passages to show whether it is likely to have this merit allowed by the public: for our own parts, we consider it inferior both in design and execution to its celebrated precursors in the Whistcraft and Rip-roline.

The opening stanzas "To the Public" possess considerable whim; and will remind every one of Peter Pindar's address to the same many-headed critic

Mysterious Patron! to whose bright brow  
The destinies of autocrats and artists;  
Supreme alike o'er Keat and Ki-en-long;  
Sole judge of Jacobins and Bonapartists;  
Who, from thy viewless throne, canst bid de  
fiance

At once to country club and grand alliance!

I never said thou'rt dull of apprehension—  
I ne'er presumed to tax thee with caprice—  
But wonder at thy wisdom's vast extension,  
And think thy judgments always of a piece  
Whipping small rogues, and knightening whole  
sail robbers,  
Dischartering boroughs, and upholding jobbers  
Yet there's a float a vague and idle rumour,  
(Which painfully I've sometimes contrived  
dicted),

That you won't understand dry harmless humour,  
And see no joke but when a wound's in  
flicted:

And that's the cause (they say) you never laugh  
Sufficiently with good friend Whistcraft;

Nor, when you fail'd to 'explore his hidden  
satire,

Allow'd him to shew cause upon the merits—  
As if none e'er was gay from mere good nature  
Nor danc'd o'er carroll'd from abundant spirit  
Howe'er it be, I write this Dedication,  
Chiefly to save me from that imputation:

And, once for all, illustrious Sir, to hint,  
If e'er you doubt the meaning of my strain  
It's not because there is no meaning in't;  
And therefore I beg you'll think again:  
But, just by way of clue, instead of what  
Is hidden there, I'll tell you what is not.

Paris is not the Treasury, nor the Court  
Of Chancery, nor the Church, nor House  
Commons.

Those base beleaguering Blacks, of ev'ry sort  
Are neither roving Whigs, nor Irish Roman  
King Scricca is not T—er—y—tho' he hectors  
The Paladins are not the Bank Directors.

Ferrau is not the C—er of the Exchequer—  
Dame Stella, tho' she sings in strains  
glowing,

Is not the much lamented Child of Necker,  
Nor is she Lady Morgan, late Miss Owe  
And good Orlando, (tho' in want of brain),  
Is not a Manager of Drury-Lane\*.

\* The reader is requested to observe, if this Introduction was written before the close of the last theatrical season.

A description of the poet's muse, occupying four or five introductory pages, does not offer us any striking extract; but the initiation of the story is better.

I'm going a fearful story to recite—  
I don't know if it's true and still less care—  
I know but this—it filled me with affright,  
And bristled upwards each particular hair,  
Barely to hear the pitiable plight  
Of the poor souls who coop'd and famish'd  
were.

In Paris walls by such a formidable,  
From east-to-west-collected, Pagan rabble.  
The author who this history first consign'd  
To paper, was one Master Garbolino;  
He saw it all, and kept it in his mind,  
Then wrote it in *Toscano*, and in *Latino*.

My sire, to Bibliomania who inclined,  
Once gave a peasant of the Casentino,  
Who came to speak to him about a goat,  
For this same book a pair of shoes and coat.

How Africa and Asia, in defiance  
Of Charlemagne, vow'd Paris to beleague,  
And how the king of Caffres in alliance  
With the rude Lap, and most inhuman  
Neger,

And all their numberless and nameless clients,  
To crush the Christian seed were sworn and  
cager,

And set up in our temples (barbarous wretches!)  
Their lying pagods, and most hideous fetiches—

The invading forces and their leaders  
are thus pourtrayed :

Belasso, of the Negros lord most horrid,  
(Himself a marvellously tall Nigritian),  
Forced all the people of his realm so torrid  
To join the Caffres; to which expedition,  
Besides the weight of his capacious forehead,  
He brought a very excellent Physician—  
I mean his Club—a rich bandishing in air,  
He cried, "Here's phylx, Princess, for your  
care,"

With him of Chiefs and Dooties not a few  
From Niger's banks—(a scaly race and  
funny—)

From Wangara's hidden lakes, and Tom-  
buctoo,

Bambarra, Haoussa, Fooladoo, and Jimé;  
Besides the tribes whom Bowdich brings to  
view,

Inhabiting the interior parts of Guinea;  
And, first of all, the King of the Ashantes,  
Accompanied by a whole host of Fantees.

There too, to bright Desplian's charms a  
martyr,

The son of Egypt's Sultan might be seen,  
Who took from Cairo an abrupt departure,  
To aid the father of his beauteous queen;  
With Sons of Mahound, brought from every  
quarter :

And there Sgraffigna, hairy, squat, and lean,  
The Lapland King, who, tho' so small and  
meagre,

Thought he might go a courting like the Neger.  
Of fortune-hunting younger Sons and Brothers  
Were full three thousand, boasting they'd  
be at it;

Some scow'ring saddles, helms, and shields,  
while others

Grew sick, sham'd Abra'm, made their  
bows, and rattled.

Scarcely at the view her joy Desplina smothered,  
While such a goodly troop she contemplated,  
Imagining already in her clutches  
him who her Brother stowed beneath the  
butches.

From the subsequent adventures of  
the wandering Palladins we shall copy  
but one specimen, which, with the  
above, will convey a sufficient notion of  
the poem. Rinaldo encounters harpies,  
which contest the translator passes  
over;

"Incredulus odi quod mihi sic ostendis."  
and before advancing to his peroration,  
he says—

Yet let me first the doleful fate recount  
Of Velliantin, the most renowned steed,  
That ever tempted valiant knight to mount,  
And try his mettle, or exercise his speed.

Whether Bayardo were of like account,  
Or Rabican (that horse of tempest breed),  
Or Brillador, I need not make comparison;  
But only say, both courser and caparison

Were torn to pieces in that harpy squabble;  
The which, no sooner was it fairly over,  
Than the sad knight, as well as he was able,  
Gather'd the members scatter'd 'mid the  
clover,

And laid in ditch, and over them a table,  
Or block of stone, for monumental cover:  
Not till he'd kiss'd a thousand times at least,  
The eyes, cheeks, nostrils, of that "bonny  
beast."

And, lest thro' lapse of ages might be lost  
The memory of an animal so clever,  
The knight resolv'd, at his own proper cost,  
To put on mourning, and (besides that  
never

By him should horse or mare again be cross'd,  
But he would fight on foot thenceforth for  
ever.

And, lest thro' lapse of ages might be lost  
The memory of an animal so clever,  
The knight resolv'd, at his own proper cost,  
To put on mourning, and (besides that  
never

By him should horse or mare again be cross'd,  
But he would fight on foot thenceforth for  
ever.

And, lest thro' lapse of ages might be lost  
The memory of an animal so clever,  
The knight resolv'd, at his own proper cost,  
To put on mourning, and (besides that  
never

By him should horse or mare again be cross'd,  
But he would fight on foot thenceforth for  
ever.

And, lest thro' lapse of ages might be lost  
The memory of an animal so clever,  
The knight resolv'd, at his own proper cost,  
To put on mourning, and (besides that  
never

By him should horse or mare again be cross'd,  
But he would fight on foot thenceforth for  
ever.

And, lest thro' lapse of ages might be lost  
The memory of an animal so clever,  
The knight resolv'd, at his own proper cost,  
To put on mourning, and (besides that  
never

By him should horse or mare again be cross'd,  
But he would fight on foot thenceforth for  
ever.

And, lest thro' lapse of ages might be lost

The knight resolv'd, at his own proper cost,  
To put on mourning, and (besides that  
never

By him should horse or mare again be cross'd,  
But he would fight on foot thenceforth for  
ever.

And, lest thro' lapse of ages might be lost  
The memory of an animal so clever,  
The knight resolv'd, at his own proper cost,  
To put on mourning, and (besides that  
never

By him should horse or mare again be cross'd,  
But he would fight on foot thenceforth for  
ever.

And, lest thro' lapse of ages might be lost  
The memory of an animal so clever,  
The knight resolv'd, at his own proper cost,  
To put on mourning, and (besides that  
never

By him should horse or mare again be cross'd,  
But he would fight on foot thenceforth for  
ever.

And, lest thro' lapse of ages might be lost  
The memory of an animal so clever,  
The knight resolv'd, at his own proper cost,  
To put on mourning, and (besides that  
never

By him should horse or mare again be cross'd,  
But he would fight on foot thenceforth for  
ever.

And, lest thro' lapse of ages might be lost  
The memory of an animal so clever,  
The knight resolv'd, at his own proper cost,  
To put on mourning, and (besides that  
never

By him should horse or mare again be cross'd,  
But he would fight on foot thenceforth for  
ever.

And, lest thro' lapse of ages might be lost  
The memory of an animal so clever,  
The knight resolv'd, at his own proper cost,  
To put on mourning, and (besides that  
never

By him should horse or mare again be cross'd,  
But he would fight on foot thenceforth for  
ever.

Therewith the Hermit freely had him enter  
His cell, harl by:—the knight with joy  
complied.

And pleas'd, recounted all his late adventure,  
While he his armour doff'd, and purified  
From battle stains,—whereat that ancient  
Mentor

Could scarce contain; and, e're 'twas ended,  
cry'd

(While down his furrow'd cheeks the big tears  
roll),

"You kill'd them all! That's grand, upon my  
soul."

—And suddenly struck up a fine "Te Deum,"  
Rinaldo join'd— and both in such a sort  
Perform'd their parts, that or to hear, or  
see 'em,

'Twould make you die with laughing at the  
sport.

Tis said, the noise that reach'd the masoleum,  
Made Velliantino rise, and give a snort,  
As if he'd said, indignant at the scandal,  
"The birds ne'er maul'd me as those brutes  
maul Handel."

Such is the poem of Richardetto; and  
if we are accused of bringing our Re-  
view to no conclusion, we can only  
plead that, in this respect, we resemble  
our author.

*Travels in the North of Germany, &c. &c.  
particularly in the Kingdom of Hanno-  
ver.* By Thomas Hodgskin, Esq.  
Edinburgh and London, 1820, 8vo.  
2 vols.

(Continued.)

Of the farm houses in Friesland we  
have a curious description.

The same extraordinary manner of building  
farmhouses, which I have mentioned,  
when speaking of Hadeln, also prevails in  
Friesland, and, from the wealth of the farm-  
ers, is very conspicuous in the vicinity of  
Emblen. That a common Germanbauer,  
whose corn is thrashed so soon as it is  
housed, who has perhaps only a pair of  
horses and cows, should find it convenient  
to cover all his worldly possessions with one  
roof, is not surprising; nor did I observe  
that their houses were enormously large.  
But, when I saw the same mode practised  
in Friesland by the largest farmers, I was  
astonished at the strangeness and the mag-  
nitude of the buildings. The rich farmers of  
Friesland, who have some of them fifty  
cows and sixteen horses, and whose dwellings  
are spacious, cover the whole with one roof.  
I have counted fifty windows in the dwelling  
part of the house, and attached to this, and  
under the same roof, were the stalls for fifty  
cows and twelve horses. The dwelling is at  
one end, at the other end is the stable; on  
the sides between the two ends are the stalls  
for the cows, the middle is the thrashing-  
floor, the barn, and the place where the  
carts and the farming instruments are kept.  
At the outside of the end farthest from the  
dwelling is the dunghill. In short, the  
whole farm-yard, and the dwelling of the  
family, with the exception of the dung-  
hill, are brought under the same covering.  
The inhabitants say this is a cheaper and

better plan of building than any other, that all their conveniences are at hand; and that, when built of bricks, and covered with tiles, when the stalls are nicely paved, as they are in Friesland, it is a better mode than ours of having separate buildings for stables, barns, and cow-houses. The danger, however, to which the property is exposed in case of fire, seems a strong reason against it. From the specimens I saw of farm-houses in Friesland and Hadeln, there is no objection to it on account of cleanliness. The dwelling is far removed from the animals, it has always a separate entrance, and no people are more conspicuous for cleanliness than the Frieslanders. I have since seen, that the same plan is followed in some of the provinces of Holland, particularly in West Friesland, and there the houses are equally large.

Westphalia presents a contrast. Lingen is a clean town.

The houses were rather built after the Dutch manner than the German. The farm-houses and windmills, which resemble a huge box, placed on its end, made me thoroughly sensible how much the Frieslanders had surpassed the scattered inhabitants of Westphalia. Notwithstanding the remarks of the Germans, the satirical description of Voltaire is still tolerably correct. He says, "Dans des grandes huttes qu'on appelle maisons, on voit des animaux qu'on appelle hommes, qui vivent le plus cordialement du monde, pêle mêle avec d'autres animaux domestiques. Une certaine pierre dure, noire et gluante, composée à ce qu'on dit d'une espèce de seigle, est la nourriture des maîtres de la maison." This "pierre dure et noire" is the celebrated pumpernickel, a black bread made of rye, with nothing separated from it but the husks of the grain. Each loaf is made of a bushel of meal; it requires twenty-four hours to bake, and it keeps good a month or six weeks. The houses are somewhat as Voltaire describes them, and of the people I have already spoken. In the neighbourhood of the town of Osnabrück the soil is a good clay, the land rises into hills, and is diversified with wood and water; but a great part of Westphalia is sand or moor. The houses are thinly scattered over it, and the inhabitants, yet devoted to the Catholic religion, are some of the least cultivated of the Germans. Their general food after black bread, is pancakes made of the grits of buck wheat, and meats, particularly pork and sausages of all kinds, dried amidst the smoke that hovers in the upper part of the house. The pancakes are generally eaten for supper. The customs of Holland, are, however, advancing. Tea or weak coffee is very often used twice a day. One or other is the usual breakfast.

Many of the poorer inhabitants of Westphalia make a summer excursion into Holland, where they find employment as labourers. They return to their homes in winter, and then chiefly employ themselves in knitting or weaving. Though they are absolutely poor, yet they are probably content.

Our limits warn us to close these examples, and we shall do so with quoting only two other passages; the first relating to ceremony, very much resembling the shooting at the Popinjay, so admirably described in *Old Mortality*; and the last a picturesque description of the view from the Brocken Mountain, we believe the most extensive prospect in Europe.

Few persons can have travelled in the north of Germany without having sometimes seen targets nailed up over the doors of farm-houses.

I frequently saw them, and on asking what they were, I was told they were like the fox's brush or outstretched buzzard, which sometimes ornaments the barn-doors in England, memorials of the skill, the victory, and pride of the owners.

The Germans have a national amusement called Scheiben schiessen, shooting at a mark, or Frey schiessen, free shooting, which most generally takes place about the month of June or July, and is attended with so much carousing as to deserve mentioning here. The people collect in bodies, and march in a military and triumphant manner to some particular spot, at a distance from the town or village; and every man who chooses to buy the privilege with a flurin, lays his rifle on a rest, fixed for that purpose, and shoots at a mark. The mark is sometimes a fixed target, but it is sometimes made to move quickly past a small opening. The marksman is placed at a convenient distance, his rifle is loaded for him, at a signal given, the Scheibe, as it is called, is put in motion, and he hits it if he can. Sometimes the mark is a stag chased by dogs; indeed, an instance was mentioned to me of the valour of the Germans being called on to shoot at a wooden representation of Buonaparte, followed by a Cossack. He who misses the stag or Buonaparte has a proportionate fine to pay, and woe to him if he hit the faithful dog, or the valiant Cossack. He who hits the mark has a due share of honour, and he who is so skilful as to drive his ball through the centre, receives the wooden image itself as the reward of his skill. This is then nailed up over his door, or placed at some conspicuous part of his mansion, and is very often its brightest and only ornament. It remains year after year, more similar trophies are sometimes added, and the front of the house then becomes covered with the memorials of village war.

Frey Schiessen was introduced in the year 1450, soon after gunpowder came into general use, in order to learn how to shoot steadily at men. It was first practised in the north of Germany, by the citizens of Brunswick, who, in all matters of discipline, and in the formation of troops, are said to have set the princes of that period a good example. Before then, similar practices with other arms appear to have been common, but then, for the first time, shooting with muskets was introduced amongst the people. It has now, however, degenerated into a mere amusement, which,

though very national, is permitted only once a year. The Germans display in it, as in other things, their great characteristic of shunning bodily exertion. When we compare it with cricket, or golf, or boxing, or any of the manly pastimes of our country youth, we laugh at that revelry which accompanies it, which was originally intended to congratulate the victor, or soothe him after his toils. It is now a sort of saturnalia, when those who have been sober and sparing all the year indulge in licentiousness. It is to the Germans what Greenwich fair is to the citizens of London, or the fête of St. Cloud to the Parisians. Every body must partake of its festivities. Those who never go abroad through the rest of the year go to this feast. The pennies which poverty can save are hoarded for a debauch, and those whose prodigality has spared nothing, pawn their furniture, their clothes, or their ornaments, that they may say, like their neighbours, "I too was at the feast; I swilled in the same room with the herron—and I destroyed a certain portion of viands better than ordinary, and I was filled both with joy and with meat."

Every village has its own Schiessen. I had seen several, and heard of more in my route; but it would have occasioned repetition to have mentioned them, and I deferred it till my return to Hannover, where I knew I should see one in its greatest perfection. It was the 19th of July, in the morning, that the citizens of the new town of Hannover, in an appropriate costume, with music and flags, marched in gay procession from the town to Herrenhausen, a palace of the sovereign about one mile and a half distant; booths were erected, and a proper place made for the shooting. The orangery was cleared out, one end of it was fitted up as a ball-room, and the other as a tavern; the fountains of the royal gardens were made to play; and great importance was given to the whole by one of the cabinet ministers, who is the chief of all that relates to the royal domains, taking the direction on himself. For this attention, however, the citizens with their music go at the end of the three days, which the shooting lasts, in solemn procession, to return him their thanks, and "bring him a vivat." Even this amusement is under the direction of the government.

I visited Herrenhausen on each day the shooting lasted, and partook of the feasting and revelry. The gay ball-room in the orangery house was for the dancers of a better condition; and sundry other places were fitted up for the poorer citizens and peasants to hop and whirl in at a cheaper rate. Refreshments of all kinds were abundant, and there was a great deal of guzzling. People of all distinctions go, and carry their families with them. I saw a judge smoking his cigar, and swallowing the wing of a fowl,—the master of the horse drinking punch,—the secretary to the consistorium enjoying a party with his wife,—nobles, gentlemen, tradesmen, musicians, were all mixed together, and there were no distinctions recognized or preserved.

I witnessed neither riot nor disturbance,

either quarrelling nor abusive language. There was much licentiousness, but there were neither disputes nor fighting. No fair in England, in which the people had a full rising for their gluttony, could have lasted three days without many hard knocks and broken heads. I am far, however, from attributing this in the one case, as is usually done, to the care of the police, and in the other to the want of a police. It is more to be ascribed to the natural character of the two people, which is visible in children as well as in men,—to the gentleness and general quietness of the Germans, and to the boisterous, perhaps turbulent, energies of our countrymen. In fact, we have a police whose character has been written in the blood of innocent men, for it sold them to death and the labour of the gallows. Nor do I believe any extension of its powers would prevent one crime, or hinder one disturbance. It is certain that every policeman must be paid from the produce of the labourer; and, because his occupation is disgraceful, he must be well paid; and in proportion as a police is numerous, so is the labourer reduced to poverty; the inequality of his condition is further augmented, and this causes more crimes than the best organized police can suppress.

About this period the general election was going on in England, and I was rather surprised at the opinions I heard expressed on the subject. The Hanoverians were quite shocked at reading of our riots; they spoke of them as disgraceful to a Christian country. "What did the government do nothing to stop such barbarities? Where was our power?" "Such scenes were a shame to civilized man." Nothing excited severer remarks than the practice of spitting on candidates. It was so odious in their estimation, that they were "surprised every vagabond who did it was not apprehended, and most severely punished." It is good to hear and to record the opinions of foreigners on such things, and we perhaps regard them with too little attention when they thus sink us, in the estimation of other people, to a level with barbarians. Some of the practices of that time were the insults of the meanest and most dastardly souls, of a poor spirit that was fretted and vexed, that was more like a passionate spoiled child than like a man. They were odious, and excited abhorrence in the minds of all the quiet, orderly, well disposed Germans. They and other people attribute, wrongly perhaps, all such outrages to our political liberty; it would still be worth having, though it did cause them; but, calm and contented as they are, they do not think so; and they would rather continue to support a system of political degradation, than run the possibility of being exposed to similar outrages.

This is a good specimen of the author's mode of mingling the dulce et utile. We conclude with the mountain prospect in the county of Wernigerode.

We reached the Brocken, from where nothing higher but the heavens can be seen, about noon. Fortunately the weather was

clear, and the view extensive and grand. There is nothing pretty, no beautiful little scene in the immediate neighbourhood of the Brocken, it is far too high above all the surrounding country, but there is nothing on any side to impede a most extensive view. The sight rather fails to distinguish objects, than is stopped. The horizon is every where lost in a light blue obscurity. The Brocken is said to be 3480 or 3500 Paris feet above the level of the sea. From its top a circle of the earth is seen, the diameter of which is 140 geographical miles. This circle contains the 200th part of Europe, and is inhabited by 5,000,000 people. More than 300 towns and villages, and the territories of eleven different princes, lie within it. It may be doubted if there be such another view in Europe, or indeed in the world. When higher mountains are accessible, some still higher ones in their neighbourhood generally limit the view. Such prospects are, however, more astonishing than beautiful; they make a much more powerful impression when the enumerations of the geographical arithmetician are read, than when they are beheld. A white cottage at the foot of a steep crag, with meadows and corn-fields, and a rivulet running past it, is much more beautiful than the eye-straining view from the summit of the earth. We toil, however, to the top, from the ambition of being equal or superior to our neighbours, and if shame would allow us, we should confess when we had descended, that there was more enjoyment in remaining below. It is the ambition of seeing what has been pronounced beautiful by others, that often excites a degree of toil of which the object itself is utterly unworthy.

There is a single public-house on the top of the Brocken, the inhabitants of which are cut off from all communication from the rest of the world during winter. Here accommodations of all kinds, and tolerably good ones, may be procured.

*A Monody on the lamented Demise of his late Majesty, and His Royal Highness the Duke of Kent, &c.* By Mrs. M'Mullan. London, 1820. pp. 11.

As the earliest tribute of the muse which we have seen, we copy a few lines from this well-meant effusion of a female pen:

Cold is that heart, to patriot love unknown,  
Who feels not woe when grief assails the throne.  
Who mourns not now when Death's dark hand appears,

Arm'd with unerring, with unspitting spears;  
Subdues the many, points the destined dart,  
And, still insatiate, strikes the Monarch's heart.

'Tis thine, Calliope, to sound the lyre,  
And to the cadence lead that sacred fire  
Which Ilion's minstrel so divinely breath'd.

Ere round his brows immortal chaplets wreath'd.  
And, Clio, thine to trace with golden pen  
The best of Sovereigns and the best of men.

O Bard of Mantua! had the Brunswick been,  
When thy Augustus graced the mortal scene,  
Thy harp-strings, touch'd by subject so divine,  
Had turn'd from Caesar to the Brunswick line.

Enshrined in memory, George the Third will live,

And holiest records simple annals give:  
His date protracted to the longest reign,  
Mark'd by no act to give his subjects pain;  
But mild and gentle as the zephyrus gale,  
Along the bosom of the summer tide.  
Foster'd green Erin with Britannia's smile,  
And made one people of the triple isle.  
His country's rights determined to maintain,  
The British lion never rear'd in vain,  
The wreaths of conquest and the trump of fame,  
At once adorn'd and spoke the Monarch's fame.  
To the wide limits of the utmost zone,  
The fleets and armies of our state were known:  
Where'er the red-cross tinged the ocean wave,  
'Twas Freedom's signal to the bleeding slave;  
Whilst peace at home rewarded deeds of arms,  
And Windsor's turrets glow'd with Virtue's charms.

*Anastasis; or Memoirs of a Greek.*  
(Concluded.)

Having through many successive Numbers continued our extracts from this original and interesting book, which the more it is read will be the more admired, we must now draw to a close, though far from having exhausted the subject. Perhaps we ought, nevertheless, to state as the reason for our having devoted so many papers to this publication, that we were seduced by its variety, by the picturesque and desultory character of its scenes, which made each a pleasing and a distinct picture. Hardly linking them together by the fabulous narrative, the author has traced a number of separate pieces, representing with fidelity worthy of the most observant traveller, and fancy equal to the highest range of fiction, the manners of countries very imperfectly known to British readers. From these we have made the selections which we now reluctantly conclude.

Anastasis, in the second volume, becomes a Kiachef in Egypt, and engaged in all the contests of the Mamluks. He leaves that country previous to the famine which completed its calamities; and in describing the prayers of the people, he spreads before us a striking panorama of the curse.

"I had left a storm gathering in Egypt, of which I since have thanked God I witnessed not the bursting. Already previous to my departure the consequence of the scarcity had begun to appear in many places: but it was only after I left the country that the famine attained its full force; and such was, in spite of every expostion of human wisdom, or appeal to Divine mercy, the progressive fury of the scourge, that at last the Sultans and other regular ministers of worship,—supposing the Deity to have become deaf to their entreaties, or incensed at their presumption,—no longer themselves ventured to implore offended Heaven, and henceforth only addressed the Almighty through the interceding voices of tender infants; in hopes that,

though; callous to the sufferings of corrupt man, Providence still might listen to the supplications of untainted childhood, and grant to the innocent prayers of babes, what it denied to the agonizing cry of beings hardened in sin. Led by the humans to the tops of the highest minarets, little creatures from five to ten years of age there raised to Heaven their pure hands and feeble voices; and while all the countless myriads of Cairo, collected round the foot of these lofty structures, observed a profound and mournful silence, they alone were heard to lip from their slender summits entreaties for Divine mercy. Nor did even they continue to implore a fertility, which no longer could save the thousands of starving wretches already in the pangs of death. They only begged that a general pestilence might speedily deliver them from their lingering and painful agony; and when, from the gilded spires, throughout every district of the immense Masr, thousands of infantine voices went forth the same instant to implore the same sad boon, the whole vast population below with half extinguished voices jointly answered, "so be it!"

"The humble request God in his mercy granted. The plague followed the scarcity, and the contagion completed what the famine had begun. The human form was swept away from the surface of the land, like the scudnows of darkness which the dawn puts to flight. Towns, and villages, and hamlets immemorial were bereft of their tenants to a man. The living became too few to bury the dead. Their own houses remained their cemeteries. Where long strings of coffins at first had issued forth, not a solitary funeral any longer appeared. Hundreds of families, who had fled from famine to Syria, were overtaken by the plague in the midst of their journey, and with their dead bodies marked their route through the desert. Egypt, smitten by the two fold visitation, almost ceased to appear inhabited; and both plagues at last disappeared, for want of further victims to slay."

In Arabia the hero of the tale performs pilgrimages to Mecca and Medina, and his views of these and other arabian customs are of the most attractive kind. Thence to Constantinople, Chio, (where his father dies before he can see his son), and again to Egypt, we with great delight follow the adventurer and a friend named Spiridon. At Cairo, the account of a miser's death forms a fit sequel to our preceding extract.

"The reader may remember the dreadful famine which I had left hanging over Egypt. Emin, on this occasion, was one of the provident. During the years of plenty he had laid by for those of want. But, like the ant, he laboured for himself, and cared not to share his savings with the idle. Though his granaries groaned under their loads of corn, he saw unmoved the thousands of wretches who every day perished with hunger under their very walls. When the bodies of the sufferers choked up the entrances of his store houses, he still refused to unbar their surly gates, until the corn had reached the exorbitant price fixed by his avarice.

This it at last attained;—and now, exulting at the thoughts of the millions he should make in a few hours, Emin took his keys, and opened his vaults. But O horror, O dismay! Instead of the mountains of golden wheat he had accumulated, he only beheld heaps of nauseous rottenness. An avenging worm had penetrated into the abodes fortified against famished man! A grub had fattened on the food withheld from the starving wretch! While the clamour of despair resounded without, a loathsome insect had in silence achieved within the work of justice. It had wrought Emin's punishment in darkness, while his crimes shone in the light of heaven! The miser's wealth was destroyed, the monster's hopes were all blasted! At the dire spectacle he uttered not a word. He only a few minutes contemplated the infected mass with the fixed eye of despair; then fell,—fell flat on his face upon the putrid heap. God had smitten him! On raising his prostrate body, life had fled. Like his corn, his frame was become a mass of corruption!

Again returning to Constantinople, the narration embraces the wars of the Porte in Wallachia; but we must pass these over, and, as our penultimate extract, copy the description of parts of Europe from the mouth of Isaac Bey, a fashionable Turk, who travelled into Franquistan.

The genteel Turk became the fashion in Christendom, and every body wanted to see a Frenchified Moslem, who eat an *oulette au lard*, drank champagne, and wore a portrait of his Circassian mistress.

It was entertaining enough to hear Isaac give an account of his journey. "I unaccustomed," said he, "as I was, to the shocking sight of men and women mixing in public, or posture-making exhibited otherwise than for hire, how did I stare, when, on my arrival in Christendom, I was taken to a ball at the house of a Bey. I thought little of the dancing. None of the females knew how to shake their hips; but their faces I liked, spite of their plastered heads. I went up to the one that led off, and watching my opportunity, slipped a purse into her hand. I thought she would have boxed my ears, and every body turned up their eyes in astonishment, the lady being wife to the first Vizier. In my own mind the impropriety rested with herself: but the adventure made me cautious how I spoke. Before the unsuccessful overture, I had secretly destined three or four of the damsels present an apartment in my harem on the channel; unfortunately, one was the daughter of the Reis-Effendi, the other the wife of the Cazi-Asker, and the third the Spanish ambassador's: so I only offered them a pinch of snuff.

"At Rome I went to see the grand Mufi of the Christians, who bears the same title with our Greek papases. He appeared a very modest, well behaved, quiet gentleman. His suite made more fuss about him than he did about himself. They dressed and undressed him a dozen times in the middle of the church, changed his caps, fed him, and sang to him. As I stood a good way from the table, which was richly decked

out with gold cups and candlesticks, I took his cardinals, with their sleek faces, their beared petticoats, and their long trains, for his wives; but was told he could not marry though he had his troop of Hoosers and Medjhoobs, like our own Sultan: these how ever he keeps, not to guard his harem, but to sing in his chapel; and so dismally do they squall with their shrill pipes, that it is called a *misserre*. Finding Rome a very ruinous place, I was glad to leave it."

"From Italy," continued the Bey "where I saw nothing but priests and *core ller-acerentes*, I went to France, where I was pestered by *petit-maitres* and philosophers but they so often exchanged characters, that I could never tell which was which.

Strangely was my poor Turkish brain puzzled on discovering the favorite pastime of a nation, reckoned the merriest in the world. It consisted in a thing called tragedies, whose only purpose is to rend the heart with grief. Should the performers raise a single smile, the author is undone. Much however as I was hidden to cry, I could not help roaring out with laughter, when saw a princess in a hoop three yards wide stick a huge pasteboard sword in her whale bone stays, for love of a prince with his cheeks painted all over: but my bad taste excited great contempt. One day they took me to a representation of Turks; as if I had not seen real ones enough. Luckily I did not find them out: for the fellow in the feathered night cap I certainly would have knocked down, for daring to travestie so holy Prophet. The place called the Opera with its fine shew of dancing girls, pleased me the most of any. The first time indeed of my going there, on seeing a superb palace crumble to pieces, I thought there was an earthquake, and ran out as fast as possible expecting the whole house to come down about my ears: but by degrees I got used to those things, no longer minded even the whole stage being on fire, and, though could never think the shew before the scene otherwise than very tiresome, often thought that behind them exceedingly pleasant."

"The French are all prodigious talkers, but those who never ceased were a second economists. They were for making the country produce nothing but what might be eaten: forgetting that men have eyes as well as palates, and that if the former fed nothing to feed upon, the latter will consume double quantities,—were it only to kill time,—and thus turn economy into waste. This I ventured to observe: but they shrugged up their shoulders, and said I was a Turk."

"Being so near England I had a mind to visit London. My French friends—I mean of the female sex—all opposed the idea of visiting those savage people, for no purpose but to lose all my newly acquired good breeding. "Life is not long enough," said Madame de Mirian, "to thaw the icy coldness of their first reception. They will indeed tell you, as they did me, that if you lungs can but stand their smoke a dozen years, you may be admitted to the honor of stirring their fire,—that is to say,—of smothering them."

ing yourself at home in their chimney corner; but, in the mean time, if you dress like themselves, you will be left to your own meditations, and if you vary from them, were it only in the width of your shoe-straps, you will be stifled with impertinent curiosity: to say nothing of their churlishness in not admitting strangers otherwise than by sea, and prohibiting all French articles!"

"These last instances of ill breeding persuaded me: and as I had a French article of which I was very fond, I stayed at Paris till the accession of my Imperial master made me return home, and console myself for the pleasures I quitted by the honors which awaited me."

The third volume ranges through Egypt, Arabin, (among the Bedoweens, and Waihab tribes,) Malta, Sicily, Italy, &c.; but we have no room for the particulars. Enough to say, that Anastasius has a son named Alexis, whom he recovers in Egypt after many dangers, and bears off in gladness and triumph to Europe. The loss of this child cannot be perused with a dry eye—we never read any thing more powerfully affecting; and with this pathetic stroke we take our leave of an author who has delighted us much, as his fancied hero does of all earthly enjoyment.

My cousin's letter had promised me a brilliant lot, and—what was better—my own pockets ensured me a decent competence. The refinements of an European education should add every external elegance to my boy's innate excellence, and, having myself moderately enjoyed the good things of this world, while striving to deserve the better promised in the next, I should, ere my friends became tired of my dotage, resign my last breath in the arms of my child.

The blue sky seemed to smile upon my cheerful thoughts, and the green wave to murmur approbation of my plan. Almighty God! What was there in it so heinous, to deserve that an inexorable fate should cast it to the winds.

In the midst of my dream of happiness my eye fell upon the darling object in which centered all its sweets. Insensibly my child's prattle had diminished, and had at last subsided in an unusual silence. I thought he looked pale;—his eyes seemed heavy, and his lips felt parched. The rose, that every morning still so fresh, so erect on its stalk, at mid-day hung its heavy head, discoloured, wan, and fading;—but so frequently had the billows, during the fury of the storm, drenched my boy's little crib, that I could not wonder he should have felt their effects in a severe cold. I put him to bed, and tried to lull him to sleep. Soon however his face grew flushed, and his pulse became feverish. I failed alike in my endeavours to procure him repose and to afford him amusement:—but though play things were repulsed, and tales no longer attended to, still he could not bear me an instant out of his sight; nor would he take any thing

except at my hands. Even when—as too soon it did—his reason began to wander, his filial affection retained its pristine hold of his heart. It had grown into an adoration of his equally doating father; and the mere consciousness of my presence seemed to relieve his uneasiness.

Had not my feelings, a few moments only before, been those of such exceeding happiness, I should not so soon perhaps have conceived great alarm: but I had throughout life found every extraordinary burst of joy followed by some unforeseen calamity; and my exultation had just risen to so unusual a pitch, that a deep dismay now at once struck me to the heart. I felt convinced that I had only been carried to so high a pinnacle of joy, in order to be hurled with greater ruin into an abyss of woe. Such became my anxiety to reach Trieste, and to obtain the best medical assistance, that even while the ship continued to cleave the waves like an arrow, I fancied it lay like a log upon the main. How then did my pangs increase when, as if in resentment of my unjust complaints, the breeze, dying away, really left our keel motionless on the waters. My anguish baffled all expression.

In truth I do not know how I preserved my senses, except from the need I stood in of their aid:—for while we lay cursed with absolute immobility, and the sun ever found us on rising in the same place where it had left us at setting, my child—my darling child—was every instant growing worse, and sinking apace under the pressure of illness. To the deep and flushing glow of a complexion far exceeding in its transient brilliancy even the brightest hues of health, had succeeded a settled, unchanging, deadly paleness. His eye, whose round full orb was wont to beam upon me with mild but fervent radiance, now dim and wandering, for the most part remained half closed; and, when—roused by my address—the idol of my heart strove to raise his languid look, and to meet the fearful enquiries of mine, he only shewed all the former fire of his countenance extinct. In the more violent bursts indeed of his unceasing delirium, his wasting features sometimes acquired a fresh but sad expression. He would then start up, and with his feeble hands clasped together, and big tears rolling down his faded cheeks, beg in the most moving terms to be restored to his home: but mostly he seemed absorbed in inward musings, and—no longer taking note of the passing hour—he frequently during the course of the day moved his pallid lips, as if repeating to himself the little prayer which he had been wont to say at bed time and at rising, and the blessings I had taught him to add, addressed to his mother in behalf of his father. If,—wretched to see him thus, and doubly agonised to think that I alone had been the cause—I burst out into tears which I strove to hide, his perception of outward objects seemed all at once for a moment to return. He asked me whether I was hurt, and would lament that, young and feeble as he was, he could not yet nurse me as he wished;—but promised me better care when he should grow stronger.

In this way hour after hour and day after day rolled on, without any progress in our voyage, while all I had left to do was to sit doubled over my child's couch, watching all his wants, and studying all his looks,—trying, but in vain, to discover some amendment. "O for those days!"—I now thought,—"when a calm at sea appeared an intolerable evil, only because it stopped some tide of folly, or delayed some scheme of vice!"

At last one afternoon, when, totally exhausted with want of sleep, I sat down by my child in all the composure of torpid despair, the sailors rushed in one and all:—for even they had felt my agony, and doubted on my boy. They came to cheer me with better tidings. A breeze had just sprung up. The waves had again begun to ripple, and the lazy keel to stir. As minute pressed on minute the motion of the ship became swifter: and presently,—as if nothing had been wanting but a first impulse,—we again dashed through the waves with all our former speed.

Every hour now brought us visibly nearer the inmost recess of the deep Adriatic, and the end of our journey. Pola seemed to glide by like a vision: presently we passed Fiume: we saw Capo d'Istria but a few minutes:—at last we descried Trieste itself! Another half hour, and every separate house became visible; and not long after we ran full sail into the harbour. The sails were taken in, the anchor was dropped, and a boat instantly came along side.

All the necessary preparations had been made for immediately conveying my patient on shore. Wrapped up in a shawl, he was lifted out of his crib, laid on a pillow, and lowered into the boat, where I held him in my lap, protected to the best of my power from the roughness of the blast and the dashing of the spray, until we reached the quay.

In my distress I had totally forgotten the taint contracted at Melada, and had purposed, the instant we stepped on shore, to carry my child straight to a physician. New anguish pierced my soul when two boyacets crossed upon my breast forced me, in spite of my alternate supplication and rage, to remain on the jetty, there to wait his coming and his previous scrutiny of all our healthy crew. All I could obtain as a special favour was a messenger to hurry his approach, while, panting for his arrival, I sat down with my Alexis in my arms under a low shed which kept off a pelting shower. I scarce know how long this situation lasted. My mind was so wrapped up in the danger of my boy as to remain wholly unconscious of the bustle around, except when the removal of some cask or barrel forced me to shift my station. Yet, while wholly deaf to the unceasing din of the place, I could discern the faintest rumour that seemed to announce the approaching physician. O how I cursed his unfeeling delay: how I would have paved his way with gold, to have hastened his coming!—and yet a something whispered continually in my ear that the utmost speed of man no longer could avail.

Ah! that at least, confirmed in this sad persuasion, I might have tasted the heart-ren-

ding pleasure of bestowing upon my departing child the last cordly endearments.—but, tranquil, composed and softly slumbering as he looked, I feared to disturb a repose, on which I founded my only remaining hopes. All at once, in the midst of my despair, I saw a sort of smile light up my darling's features, and, hard as I strove to guard against all vain illusions, I could not at this sight stop a ray of gladness from gliding unchecked into my trembling heart. Short however was the joy: soon vanished the deceitful symptom! On a closer view it only appeared to have been a slight convulsion which had hurried over my child's now tranquil countenance, as will sometimes take over the smooth mirror of a dormant lake the image of a bird in the air. It looked like the response of a departing angel, to those already on high, that hailed his speedy coming. The soul of my Alexis was fast preparing for its flight.

Least he might feel ill at ease in my lap, I laid him down upon my cloak, and knelt by his side to watch the growing change in his features. The present now was all to me: the future I knew I no longer should rock. Feeling my breath close to his cheek, he half opened his eye, looked as if after a long absence again suddenly recognizing his father, and—putting on his little mouth—seemed to crave one last token of love. The temptation was too powerful: I gently pressed my lip upon that of my babe, and gathered from it the professed kiss. Life's last faint spark was just going forth, and I caught it on the threshold. Scarce had I drawn back my face, when all respiration ceased. His eye-strings broke, his features fell, and his limbs stiffened for ever. All was over: Alexis was no more.

BUONAPARTE.

[From the French.]

On perusing the *Maximes et Pensées du Prisonnier de Sainte-Hélène*, we were not a little surprised at the very unequivocal marks of contempt with which Napoleon treats some of the principal leaders of the liberal party. "The present heads of the factions in France," he says, "are dwarfs mounted on stilts: they are for the most part mere prattlers. The Abbé de Pradt has produced homilies, plans of campaigns, and histories: he is an excellent romantic writer, and a pleasant archbishop. I made a Tribune of Benjamin Constant, and I removed him when he began to declaim. His mind is like that of a geometrician—it proceeds everlastingly by theorems and corollaries." Assuredly the faith of these men must be very robust, their principles of liberalism must be very firmly rooted, when they can thus suffer themselves to be styled romance-writers, geometrical orators, prattlers, and dwarfs mounted on stilts. Formerly all this might have been borne with the resignation inspired by the presence of the Genius of Victory; formerly these trifles were current coin, but now they are gross

insults: the ultras could not say any thing worse.

But the magnanimity of the *liberals* is above this insignificant abuse. Not satisfied with praising the man, the soldier, and the hero, they must render homage to the legislator and the founder of liberty. This is not an easy task; Buonaparte's manners were not liberal; he was full of action, spoke little, and seldom listened. But no matter, the Buonaparte of the Hundred Days compensates for the other. At that period he opened his eyes to the lights of the age; he listened, permitted us to write as much as we pleased, and on his return from Waterloo, promised us a pretty little constitutional Prince. But what were his thoughts on this subject, and how did he profit by the lessons he had received? "The secure lever of power is a military force, which the law grants and genius directs. What signifies all the reasoning of sophists, when authority is in full vigour? In the long run, those who obey become accustomed to the yoke; the sword is drawn, and the factions are hurled to the dust. Reason is convention. Hubbes was the Newton of politics; his gospel is the best of all. The grand point of policy is to attain its end; the means are of small consequence."

These maxims accord so ill with certain liberal lectures, that several journals have denied the authenticity of the publication. They are right: for this is certainly the shortest mode of refutation. The prisoner treats the journalists in a very cavalier-like style. "The conductors of the *Censeur*," he says, "are visionaries who ought to be sent to Charenton, for they are sowing the seeds of discord and hatred. Such declaimers should be restricted and repressed. There never can be a republic in France; the sincere republicans are idiots, and the rest are intriguers."

Finally, though rude apothegms be directed against our regenerators and pretended constitutionalists, the latter may find some consolation in the pamphlet, for men no less profound are treated with equal irreverence. Machiavel is styled an ignorant fool, Locke a poor logician, Montesquieu a mere *bel esprit*, and Tacitus a declaimer and dotard. After this, it is not surprising that *Jupiter-Scapin* should be so severe on the Abbé de Pradt.

#### LANDSCAPE PAINTING.

[From the *Journal des Savans*.]

Theorie du Paysage, &c. par I. B. Desperthes. 8vo. pp. 300.

Landscape, treated separately as a distinct branch of painting, does not seem to have occupied a place in the practice of the arts, among the ancients, before the reign of Augustus, at which time Lullius, according to Pliny, introduced at Rome the custom of decorating interiors, with views of rural scenes. The descriptions which Pliny gives of the paintings of Lullius, leave no doubt respecting the branch which he cultivated, and which included also marine views: *maritima urbes pingere instituit: ne must*

not however infer from the words *prim instituit*, that Lullius was the first who conceived the idea of painting landscape. According to the evident meaning of it whole passage, Lullius was only the first who introduced the use of landscape. Rome, for the purposes of decoration on its walls, porticos, vestibules, and even its external parts of buildings.

Many ancient paintings, which are called *arabesques*, prove that landscape was employed in the compartments of this species of ornament; and the style of the compositions of Lullius, as Pliny describes them, seems to have been here copied in miniature.

But did the Greeks, in the flourishing age of their painting, practice landscape as a separate branch? This is a question which cannot be answered but by conjecture. They practised in detail, and particularly imitated all the objects of which landscape is composed, cannot be doubted, since these objects were necessary parts in the background of their pictures, and equally indispensable accessories in their compositions. Yet the pretty extensive list which Pliny gives of the great painters of Greece and their work he says nothing which can lead to a suspicion of the existence of the department in question; and there are more reasons than one to induce the belief, that in the most flourishing periods of the art, especially, this branch was unknown or neglected.

We meet also with the same negligence in the first two centuries of the revival of the art among the moderns; and even at the period when they were at their height, that is, in the 16th century, we do not find the landscape was treated separately.

It was in the Venetian school, that it began to share with historical subjects, the attention of painters, and space in their picture. The success of landscape depends on the knowledge of the two kinds of perspective especially of that called aerial; and this latter owes its development to the schools of the colourists alone: in fact, we find the most beautiful studies of landscape in the historical pictures of Titian, Bassano, and Tintoret.

It is perhaps in the Netherlands that we must look for the first painters, who made landscape a distinct branch, and applied the talents to it exclusively: at the head of these painters we must place Matthew and Pieter Brill. The latter died at Rome in 1626. It was really the 17th century which established this branch, and in which it flourished with the greatest splendour. Claude Lorraine the two Poussins, and Salvator Rosa, who lived in that century, attained the limits of perfection in the various characters which nature presents to the landscape painter.

Yet though many other parts of imitation in the arts of design have exercised the pen of different writers, and obtained from several artists theories or treatises, landscape, a fruitful in delicate observations, and in precepts, such as the art of writing can invest with poetic forms, had not been the subject of any work calculated to develop its rules, and to explain its beauties, either in nature

\* Published as from the papers of Las Cases.

in the application inside of them, in the masterpieces of great artists.

Mr. Deperthes has conceived this project, and has executed it with equal taste and skill. He has not aimed at composing an elementary treatise: a work of this kind, however methodical, can never supply the want of the lessons of a master. In all the arts of design, there is a practical instruction, of which books cannot transmit the object, or even communicate the spirit. Whoever pretends to give lessons, and lay down rules to the artist, in writing, must suppose him already advanced in his art, and arrived at that degree of practical skill, which will enable him to receive that superior instruction which is to direct his mind and his taste more than his hand. This is the point which Mr. Deperthes requires the scholar for whom he devises his theory to have attained.

He has divided it into two parts, and each is subdivided into two subjects of observation.

In the first part the author lets his pupil go through two courses of landscape study. The first relates particularly to the study of the sky, which fills so important a place, and now, as it were, the first part in this kind of instruction; since in the picture, as in nature, it is from the sky that the light comes; and this light, which is the soul of the picture, is subject, and renders objects and their effects subject to numberless varieties and modifications.

But these varieties are reduced to four principal ones, pointed out by the four parts of the day. It is at sunrise that the author gives his first lesson. The difficulties which at this moment of the day presents to the imitator, bear their foundation in that species of mysterious veil which nature then assumes—a veil, says the author, sufficiently transparent to let us see all her charms, but not to permit us easily to distinguish the lineaments of all her features. This moment of the day is that which is peculiarly adapted to the study of aerial perspective.

The middle of the day is the time when the study of nature has the fewest real difficulties; the artist must profit by it, to catch objects as they are: if in effect, each object is then visible, without any alteration, it is then also, that it is the most easy to remark, first the innumerable varieties of forms and tints spread over all her productions, and then that harmony which blends together all her parts, even those which are the most dissimilar. This magical union is effected by means of the reflections which take place from one object to another. The middle of the day is the hour for those studies of harmony, which are among the most momentous to the landscape painter; at this hour too, he must study the clouds, their combinations, their effects, and all the accidents of light and shade rapidly succeeding each other, and forming compositions which seem the most arbitrary, and yet are nevertheless subject to general laws.

The effects of evening, and those of the setting sun, seem to present fewer difficulties than those of the dawn of day. It is remarked that landscapes representing sunsets,

are much more numerous than those representing sun rising; which may be because in the former the tones are more divided, because the magnificence of the scene more forcibly strikes the imagination, and is more deeply impressed upon it. The author thinks, also, that the model of this moment of the day is more frequently before the eye of the artist; for in fact, the habits of social life do not permit us to be so often witnesses of the sun rising.

The night is included among what are called the four parts of the day; and it is one of the favourite subjects of the landscape painter: but how can night be painted, since it extinguishes all colours? Night, too, has its sun. At the appearance of the moon, a new light illumines all objects: its lustre, though far inferior to that of the sun, suffices to dispel darkness, and by means of strongly marked shadows, produces the most striking effects. The author advises his pupil, above all things, to penetrate into the forests; to see there the infinite variety of the effects of this silvery light. He observes further, that of all phenomena, that of the moon-light may be studied with the most precision. All around the painter is calm, all appears stationary, all invites to contemplation and favours the operations of the memory; for it is almost always from memory that the landscape painter must work; and if he can, during the day, catch with his pencil some effects, notwithstanding their perpetual mobility, he is forbidden from doing the same by night; and even if the moon should give him sufficient light, yet it would be a deceitful light, the falseness of which would be shewn by that of the day.

If the first course of study in the first part of the work, seems to be confined to the space of a day, this is merely in consequence of the theoretical analysis of the subject: the second course, for the same reason, comprises the space of a year.

The author proceeds to shew his pupil the model which he is to imitate, under the four aspects, which the four seasons present.

He begins, and that on good grounds, with the winter. Trees are the chief ornament of landscapes; but the study of trees has its anatomy, like that of the human body; and as the knowledge of the muscles cannot be acquired from living bodies, it is necessary, in the same manner, to study the tree in that kind of state of death to which winter seems to have reduced it, after having stripped it of the foliage, which, to the eye, gives it life; for how shall we get acquainted with the form of the great branches, and the true arrangement of the smallest boughs, when all these co-ordinate parts are concealed under the covering with which vegetation adorns them? The structure of the tree must therefore be studied in the only season when the eye can follow it, from the origin of the trunk to the summit of the highest branches. This winter study includes also that of the forms and colours of the bark of every species of tree; and it is by a repeated series of observations, made in this season, that the landscape painter will learn to distinguish, and to express the peculiar cha-

acter of each tree, whether it be clothed in its leaves, or stripped of them.

Spring will give to his studies more attractions and more extent. In the eyes of the vulgar, the verdure which adorns the fields, the hills, the orchards, the meadows, presents as it were only one tint. What appears so agreeable to the eye in nature, would however have a very bad effect in the imitation: for nothing is more displeasing in a landscape than an excess of green tints; and nothing is therefore more difficult than to succeed in expressing, by painting, the charms of spring. The art of the landscape painter, in studying these tints of tender green, is to discover their varieties, and to express their gradations so as to strike the eye.

Summer shews nature to the landscape painter, with the full formed features, if we may so express it, of the age of virility. Every object of imitation has acquired its form, its determinate colour, its development, and a durable aspect. This is the season to put in practice the lessons of winter in the conformation of trees; but advantage must also be taken of it, for the study of a multitude of plants, which have but now acquired their growth, which have attained all their beauty, and which are to act an important part in the foreground of the picture. Summer is the season, when the most brilliant light illumines all the objects circumscribed by the horizon; when the heat produces most of those phenomena, which seem to be beyond the power of imitation; those burning skies, those masses of clouds which contain the thunder in their bosom, those impetuous winds which make the forests heave, and raise the dust in clouds. It is in this season that nature offers to the landscape painter the most varied scenes, in the heavens, in the earth, and in the empire of the waters.

But autumn will often have the preference over summer, for the richness of the tints of the foliage, and the diversity of tone spread over all nature. During this season the landscape painter must hasten his studies; for each day making a remarkable change in the features of his model, he must be apprehensive that it will soon offer him only a cold and discoloured image.

Thus our author comes back to the point whence he set out, to winter; which he again considers, with respect to the pictures which this season of mourning affords, but which is not so dull to the landscape painter as to the inhabitant of cities. Winter also has its charms, its green trees, its varied effects, its snows, the lustre of which is enhanced by the contrast of lighter firs. The ice also has its sports, its promenades, its diversions; and the painter does not now want either objects of observation, or subjects proper for the display of his talents.

The second part of the theory of landscape is also in two sections; and this division results from the distinction which has been introduced into this kind of painting, between those compositions which seem to be only faithful portraits of scenes existing in each country, of their productions, their

buildings, their inhabitants, and those compositions, in which the artist transports the scene he has imagined into a country of his own creation, and which he embellishes with the most pleasing or the most noble subjects which fable or history presents.

The author treats also of landscapes considered in what he calls the rural style, and what he calls the historical style.

This division naturally classes in two distinct series his observations on the merits and the beauties of the two schools, which have distinguished themselves in the two styles.

The landscapes of the Flemish and Dutch school belong to the first. We should here accompany the author, and collect his remarks on the different degrees, or the varieties of the talents of a multitude of masters, who have each taken nature under diverse aspects, and who have made their pictures a kind of mirrors, in which theory may sometimes cause its lessons and the application of its precepts to be better understood.

In the second division are the great masters of the French and Italian schools, who have found means to make their landscapes historical pictures, either by ennobling the forms of nature, or by introducing subjects of history or mythology, by adorning them with ornaments borrowed from the arts of antiquity, or by reproducing in them allegories by turns ingenious or affecting.

As easy as it has been to follow the author in the didactic march of the first part of his treatise, so difficult would it be, above all in an article of a journal, to give an account of a series of observations suggested by the view of the masterpieces of great artists; observations, of which he himself more than once acknowledges, that it would be difficult to render their value palpable in a discourse; so hard is it for beauties, which address themselves to the eyes, to find equivalents which may render them sensible to the mind.

In fact, this second part is only the application (demonstrated by the works) of the studies, the importance of which has been enforced, and their order prescribed, in the first part.

Our readers will perceive how much scope the subject of this theory might afford for descriptions, and for the abuse of that descriptive style, which so soon becomes fatiguing, particularly in prose. We must be obliged to the author for having avoided affectation and excess in this respect. The work recommends itself by a due measure of reason and imagination, of taste and judgment, of precepts put in action, and examples submitted to criticism. It will be agreeable to those who seek in the arts only pleasure, useful to those who desire to investigate the grounds of their enjoyments, advantageous to amateurs to enlighten their taste, necessary to artists to perfect their studies, to direct their judgment, and to enrich their imagination.

## ORIGINAL CORRESPONDENCE.

DUBLIN UNIVERSITY.

*Mr. Dupin and the Quarterly Review.*

A valued correspondent has drawn our attention towards a notice of Mr. Dupin's work on Marine Establishments, &c. in the last Number of the Quarterly Review (page 57), which he considers as not remarkable for urbanity; and we are convinced that if the Reviewers had been aware of the circumstances of the case, they would not have inserted Mr. Dupin's allegations without a reproof rather than a tacit acknowledgment of their justice. Mr. D. states in substance, that when he, accompanied by a learned doctor, visited the Library of Dublin University, he was obliged to go on hastily without stopping any where, and watched as if he were suspected of a design to steal a book; and this, the Reviewers observe, is sufficient to justify, in some measure, his querulous remarks respecting Ireland. It is with pleasure we can redeem that country and the University of Dublin from the aspersions cast upon them by the foreign traveller; for which purpose we trust the following explanation, in the words of our correspondent, will be deemed quite satisfactory.

"Mr. Dupin, though acquainted with some of the Fellows and Professors, from whom he received every attention due to a stranger and a man of letters, chose, when visiting the Libraries to be introduced by a gentleman who was totally unconnected with the University, had only taken many years since the degree of Bachelor of Arts, and who, from his professional and other avocations, had probably no knowledge of the rules which govern the Library. Had Mr. Dupin applied to the proper means for procuring access to the literary collections in Dublin, no doubt he would have felt himself bound to praise the public as liberally as he has praised the private hospitality of Ireland."

## ARTS AND SCIENCES.

DR. OLBERS ON THE MEASUREMENT OF AN ARC OF THE MERIDIAN, IN DENMARK.

*Bremen, December, 1819.*

The operations for measuring an arc of the meridian, which the King of Denmark has ordered to be carried on in his dominions, between Lunenburg and Skagen, were on account of the gloomy weather, closed for this year about the end of October at Lyssabell, in the island of Alsén. The lovers of science in all Europe are justly attentive to the progress of this operation; which being carried on according to the enlightened orders, and with the liberal support of his Danish Majesty, under the direction of a most able astronomer, Professor Schumacher, promises to throw light on many important subjects, both in the French and English measurements of the meridian: there always appeared certain anomalies between the several parts of the arcs measured, and it remained doubtful whether they were to be as-

cribed to the irregular curvature of the terrestrial meridian, or to a local attraction occurring in some places, which diverted the plummet from its vertical direction, or to small faults, remaining constant for a time, in the astronomical instruments employed. Experience has proved that in all such instruments, however ingenious the contrivance and however excellent the workmanship, such slight permanent faults may occur, and that they are as difficult to discover as to avoid. The only means to be fully secure from them appears to be to repeat the observations with different instruments. The judicious liberality of the King has enabled Professor Schumacher to do this. The astronomical part of the English measurement was executed with the admirable zenith sector of Ramsden, and that of the French with the repeating circles of Borda. The King has borrowed the first from the English Government, for the Danish measurement; the place of the latter has been more than supplied by a most excellent eighteen-inch repeating circle, by Reichenbach, with an improvement in the mechanism. Here, therefore, the two kinds of instruments were first used together, which in preceding measurements had been employed singly; and between which a comparison was first made last year, on the journey of the French astronomers to England, and by the conveyance of the zenith sector of Ramsden to Dankirk. But Professor Schumacher has also obtained another zenith sector, by Troughton, an artist no ways inferior to Ramsden; and possesses also what is called the universal measuring instrument, by Reichenbach. Thus richly furnished, and seconded by most able assistants, this celebrated astronomer and distinguished observer will probably solve all doubts. Next year (1820) the Professor will go with all his instruments to Skagen, the most northerly station, then repeat his observations at Lunenburg, with the instruments not yet employed there; and lastly, in autumn, measure the first basis in the neighbourhood of Hamburg. It is much to be wished that the government of Germany may be induced to follow the laudable example of Denmark, and by joining the measurement there, continue the arc of the meridian to be measured (which from Skagen to Lunenburg, will be about 44 degrees) to the frontiers of Italy, where it would be easy to prolong it still farther. A great deal has already been done in Germany and Italy, which perhaps only wants to be connected together, and with the Danish measurement. It were also to be wished that some triangles might be measured from Bremen to those in Holstein; thus fully to rectify the geographical position of our city, as hitherto determined by astronomical observations, by means of a comparison with the perfect data which will be furnished by the measurement in Denmark. W. OLBERS.

GLASS FROM STRAW.—Wheat straw, without any addition, may be melted into colourless glass with the blow-pipe. Barley straw melts into a glass of a topaz yellow colour. (*Coastable's Magazine.*)

A new grass, unnoticed by Dr. Roxburgh, which produces a perfect silicious deposit in the joints, has been discovered in the mountains of India, between the Circars and Nagpore.

**REMARKABLE DISCOVERY IN CHEMISTRY.—**  
CONVERSION OF RAGS INTO SUGAR.  
*Munich, Jan. 1820.*

Dr. Vogel, Member of the Royal Academy of Sciences, has submitted to a careful examination in the laboratory of the Academy of Munich, the surprising discovery of Mr. Braconnot, of Nancy, of the effects of concentrated sulphuric acid on wood and linen. He has not only fully confirmed this discovery, so as to lay before the Academy an essay on the subject, and show the products resulting from the original experiments, but also extended his own experiments, with equal success, to other similar vegetable substances, such as old paper, both printed and written upon, and cut straw. By diluting the sulphuric acid with a due addition of water, sawdust, cut linen, paper, &c. were converted into gum and saccharine matter. It must excite great interest in all reflecting minds, to see an indissoluble, tasteless substance, like the filaments of wood, converted, by chemical reaction, into two new bodies, and chemistry thus exercise a power, which, but lately, appeared to belong to nature alone, and in particular to vegetation. For this artificial formation of sugar and gum, now discovered, must not be confounded with the extraction of these two substances from bodies in which they already existed, a process which has been known from time immemorial. What has now been discovered, is a *transformation*, a *metamorphosis*, of which the most ingenious chemist had previously no idea; and it affords a new proof of the boundless extent of the domain of practical chemistry. A paper upon Dr. Vogel's repetition and investigation of Mr. Braconnot's experiments, and those added by himself, is promised in one of the next numbers of the Journal of Arts and Manufactures, published by the Bavarian Polytechnic Society.

**LEARNED SOCIETIES.**

**OXFORD, Feb. 5.**

On Thursday last the following Degrees were conferred:—

*Doctor in Medicine*.—James Adey Ogle, Trinity College. *Masters of Arts*.—Rev. John Steedman, Pembroke College; James Hall, Wadham College; Samuel Pepys Cockerell, and William Arundell Bouverie, Fellows of Merton College; and Rev. Robert Crawford Dillon, St. Edmund Hall. *Bachelors of Arts*.—William Baron, Esquire, Wadham College, grand compounder; Charles Anthony Hunt, Merton College; George Parker Cleather, Exeter College; David Dundas and Thomas Lambard, Students of Christ Church; Henry Parsons, Scholar of Balliol College.

Yesterday the Rev. Edward John Burrow, M. A. of Trinity College, was admitted Bachelor in Divinity, grand compounder.

**CAMBRIDGE, Feb. 4.**

The late Dr. Smith's annual prizes of 25*l.* each, to the two best proficient in mathematics and natural philosophy among the commencing Bachelors of Arts, are this year adjudged to Mr. Henry Coddington and Mr. Charles Smith Bird, of Trinity College, the first and third Wranglers.

Croxtan Johnson, Esq. Fellow Commoner of Emmanuel College, was on Friday last admitted Bachelor of Arts.

A grace passed the Senate yesterday, for granting to the University of Cephalonia, (of which the Earl of Guilford is Chancellor,) a copy of all the books now in the University Press, or which have been printed at the expense of this University.

**ORIGINAL POETRY.**

[By Correspondents.]

**LINES.**

Bells toll for peasants, and we heed them not;  
But, when proclaiming that the nobler die;  
Roused by the grandeur of their lofty lot,  
Musing we listen, moralizing sigh.

Such knells have now a sad, familiar sound;  
Oh, that, which spoke worst woe to Albion's isle,  
More unaccount'd flung its murmurs round,  
Child'd the warm heart, and stole the gayest smile.

We cannot grieve alike o'er youth and age:  
There, loveliest scion of the royal tree,  
We mourn'd in anguish Time could scarce assuage;  
We wept—and, oh! not only wept for thee!

Survivors claim'd the bitterness of our tears;  
And we had sorrows, that were all our own;  
We, who had cherish'd hopes for future years,  
Too long indulg'd, too soon, alas! o'erthrown.  
But thee, the age-worn monarch of these realms,  
Thyself survivor of each dearest tie,  
We mourn not with the sorrow that o'erwhelms,  
But with the silent tear of memory.

It is not now the blossom in its prime,  
Torn in fresh vigor from its parent root,  
Scattering on vernal gales before its time,  
The golden promise of expected fruit;  
It is the oak, once monarch of the glade,  
Which lives again in many a clinging tree;  
Itself, all branchless, sapless, and decayed,  
Yields to its full completed destiny.

Thy sun was not eclipsed in sudden night,  
But ran its course, and slowly verging set;  
Preparing shadows had involved its light,  
And stol'n the poignant anguish of regret.

To spare worse pangs than ever madness proved,  
That friendly darkness of the mind was given,  
That thou might'st never mourn the fondly loved,  
Nor know their loss on earth, till met in heaven.

Yet lingering sadness in our hearts is found;  
'Tis still a pensive thought, that all is past;  
'" Farewell," is ever of a mournful sound—  
Part when we may, 'tis parting still, at last.

We thought not on thy life, nor mourned thy death;  
But death hath now recall'd thy life once more,  
And the last pang, that drew thy parting breath,  
Seem'd to our hearts thine image to restore.

We muse on all thou wert, and tears will start;  
When shall we see, so good, so great again?  
But wherefore ponder not on what thou art,  
High o'er this brief abode of woe, and pain?

Oh! what a glorious change from dark to light,  
From double darkness of the soul and eye,  
When thy freed spirit spread its wings for flight!  
To thee 'twas death to live, 'tis life to die.

For thee? it is to all, whose anchor'd faith  
Enters beyond death's transient veil of gloom;  
But, oh! how perfect was thy living death,  
Who wert thyself thine own joyous tomb!

Those darken'd eyes no more obstruct the day;  
That mind no more spurns reason's blest control;

Far from its ruined temple of clay,  
All eye, all reason, soars the happy soul.  
Dull are those cars no more, but, raptur'd, share  
Notes, far from earth's best harmony remov'd;  
But, oh! of all the hear'nly music there,  
Is not the sweetest, every voice beloved?

Say, as the hour of blissful death drew nigh,  
Did not around thy couch bright angels stand,  
Reveal'd in vision to thy mental eye,  
And sweetly whisper, "Join our kindred band?"

"Leave thy poor crown of earth, whose every gem  
Was but the splendid covering of a thorn;  
For thee, ev'n now a brighter diadem,  
Cluster'd with beams, by seraph hands is borne.

"That crown not less domestic virtues twine,  
Than patriot faith, unsullied, unsubdued,  
Which never purchas'd at ambition's shrine  
A nation's glory, with a nation's good.

"Come! where, beyond the portals of the grave,  
The loved, the lost, to thy embraces press:  
Come, where a Saviour, who has died to save,  
Lives, loves, and reigns, eternally to bless."

*January, 1820.*

**THE COURTING.**

Dear Annie, dinna tremble so,  
Nae warlock stily wanders here,  
'Tis but the burnie's gentle flow,  
And sound of stirring leaves you hear.

The birdies on the greenwood spray  
Have ceased their melting notes o' love,  
Nae trouth's in the streamlet play,  
But hush'd is a' the sleeping grove.

Nay lassie, raise thy tearfu' ee,  
Part from thy face the gowden hair;  
Nor let the rosy colour flee  
From that dear cheek so palely fair,

Deem not these birken siller stems  
Which glisten in the soft moonlight,  
Where evening hangs her dewy gems,  
The burnish'd arms of hostile knight.

Then dinna, dinna, tremble so,  
Let luve, dear lassie, banish fear;  
'Tis but thy lover's plighted vow,  
His whisper'd faith you trembling hear.

**EPITAPH**

*On a tomb-stone in the Churchyard of Torryburn, Fife-shire.*

At anchor now, in death's dark road,  
Rides honest Captain Hill,  
Who serv'd his King, and fear'd his God,  
With upright heart and will.

In social life sincere and just,  
To vice of no kind given;  
So that his better part, we trust,  
Hath made the port of heaven.

## TO A LADY.

From the empire of Sadness my heart has  
 rebell'd,  
 And to Mirth will I fealty swear;  
 But there must I thank, that this tyrant is quell'd,  
 For I ne'er could believe, until thee I beheld,  
 That a smile could out-rival a tear.

EWING.

## VARIETIES.

The Society of Emulation at Cambrai has proposed the following subjects for the prizes of 1820:—

The medical topography of the district of Cambrai: The eloge of Lamoignon de Malesherbes (proposed in July 1818): A national ode, the subject of which is left to the choice of the candidates. The agricultural question, which was proposed in 1817, and deferred to the competition of 1818, is definitively withdrawn.

The prize for each of these subjects is to be a gold medal, worth 200 francs.

Dr. Bell's system of education has been established at Irkutsk in Siberia, by the Privy Counsellor Speransky.

**THE MOVING MOUNTAIN.**—Accounts from Namur say, that the Moving Mountain has made terrible progress during the night from the 30th to the 31st of January. It has advanced more than six feet; the communication between that city and Dinant, which is the great road to Paris, is shut up: people must now go by way of La Plante, along the Meuse, and in case the waters should rise as they did last month, the passage would be impossible. The house of Mr. Stapleaux is cracked by the pressure of the earth, and that of Mr. Duilleux is threatened by the neighbourhood of a mass which is sixty feet higher than the roof.

**Anecdote of his late Majesty.**—Among the many anecdotes of his late Majesty, with which the periodical press abounds, we have not seen the following:—The late celebrated mathematical instrument maker, Mr. Ramsden, was frequently deficient in punctuality, and would delay for months, nay, for years, the delivery of instruments bespoken from him. His Majesty, who had more than once experienced this dilatory disposition, once ordered an instrument, which he made Ramsden positively promise to deliver on a certain day. The day, however, came, but not the instrument. At length Ramsden sent word to the King that it was finished; on which a message was sent him, desiring that he would bring it himself to the Palace. He however answered that he would not come, unless his Majesty would promise not to be angry with him for his want of punctuality. "Well, well," said the King, "let him come; as he is conscious of his fault it would be hard to reprove him for it." On this assurance he went to the Palace, where he was graciously received; the King, after expressing his entire satisfaction with the instrument, only adding, with a good-natured smile, "You have been uncommonly punctual this time, Mr. Ramsden, having brought

the instrument on the very day of the month you promised it; you have only made a small mistake in the date of the year." It was, in fact, exactly a year after the stipulated time.

**CERF ACTON.**—A stag, to which the name of Acteon has been given, has made his debut at Francou's Circus in Paris. He performs the same feats as a well-managed horse; beats time in the midst of fire-works, &c. This spectacle attracts crowds to the Cirque; curious to see so timid an animal taught the bearing of the most courageous.

**LONGEVITY.**—Etienne Delametrerie, born blind, died lately in the hospital at Bourges, aged 103 years and 18 days. For more than a century he was an inhabitant of a world he never saw. Like many of his darkling companions in the brute creation, he was employed for sixty years in turning a grindstone.

**Singular Phenomenon.**—During the night of Tuesday last, there fell, in the township of Broughton, on the south shore, so great a quantity of black powder, as completely to cover the snow which was then on the ground. A small quantity of the powder has been brought to town, and will be analysed. (*Quebec Gazette*, Nov. 18.)

For the information of our chemical readers, we are authorized to state, that the new metal, Cadmium, originally discovered by Professor Stromeyer, in foreign ores of zinc, has been also found by Professor E. D. Clarke, of this university, in the Derbyshire Calamine. Dr. Thomson, Regius Professor of Chemistry at Glasgow, has examined the Cadmium obtained by Professor Clarke from our English ores, and has confirmed his observations. (*Cambridge Chronicle*.)

**GEORGE BIRKEN,** the boy whose wonderful powers in calculation have attracted so much notice, has been rescued, by a public subscription at Edinburgh, from the degraded situation of a common show, and a fund raised to give him a liberal education. He is now thirteen years of age; and the progress of his mind will be watched with philosophical care, by some of the learned members of the university where he is placed, and of the Royal Society.

A new Society of Arts is projected in Edinburgh. It will resemble that of London, and have a hall for the deposit of models, &c. as at the Adelphi.

Two English gentlemen, some time ago, visited the field of Bannockburn, so celebrated for the defeat of Edward's army. A sensible countryman pointed out to them the positions of the hostile nations—the stone where Bruce's standard was fixed during the battle, &c. Highly pleased with his attention, the gentlemen on leaving him, pressed his acceptance of a crown-piece. "Na, na," said the honest man, returning the money. "Keep your crown-piece, the English has paid dear enough already for seeing the field of Bannockburn." (*Constable's Magazine*.)  
**One of Plato's Infants!**—A Professor of Natural History, at Wetteran, reared and kept for three years a cunary bird without feathers. It has been held that no bird could exist in that state.

## LITERARY NOTICES.

*Contents of the Journal des Savans for Jan. 1820.*

C. B. Hase Leonis Diaconi Calcoensis Historia.—Reviewed by Mr. Raoul Rochette.  
 John Gotthof. Lindor. Kosegarten De Mo-hauneele Elm-Batuta Tingtana, ejusque itineribus.—Mr. Silvestre de Sacy.

Gaetano Cattaneo, Equejale, monumento antico di bronzo del Museo nazionale Ungherese.—Mr. Raoul Rochette.

Ed. Dodwell's Tour in Greece.—Mr. Letronne.

Raoul Rochette, Deux Lettres à Mylord Comte d'Aberdeen.—M. Letronne.

H. T. H. Laënnec. De l'Auscultation mediate.—M. Tessier.

## METEOROLOGICAL JOURNAL.

FEBRUARY, 1820.

Thursday, 3.—Thermometer from 31 to 33. Barometer from 30, 12 to 30, 17.

Wind S. E. and F. — Generally cloudy.

Friday, 4.—Thermometer from 31 to 35. Barometer from 30, 19 to 30, 21.

Wind W. S. E. — Generally cloudy, till the evening, when it became clear.

Saturday, 5.—Thermometer from 31 to 43. Barometer from 30, 17 to 30, 49.

Wind S. E. 1. and 2. — Generally cloudy.

A drizzling rain part of the afternoon.

Sunday, 6.—Thermometer from 35 to 50. Barometer from 30, 05 to 30, 20.

Wind S. W. 3 and 2. — Generally cloudy till noon, the rest of the day fine and clear.

Monday, 7.—Thermometer from 45 to 51. Barometer from 30, 30 to 30, 31.

Wind S. W. 1 1/2. — Generally cloudy.

Tuesday, 8.—Thermometer from 43 to 47. Barometer from 30, 31 to 30, 32.

Wind S. W. 2.—Generally cloudy. Sunshine at times in the afternoon.

Wednesday, 9.—Thermometer from 38 to 52. Barometer from 30, 25 to 30, 11.

Wind S. E. 1. and S. W. 3.—Generally clear, with clouds passing.

Edmonton, Middlesex. JOHN ADAMS.

## TO CORRESPONDENTS.

*The Translation from Florry's Memoirs, &c. which F. S. censures as erroneously rendering "Ma gloire est faite à moi," as if it were "pan me," "my glory is made for myself," instead of "my own glory is established"—is not ours, but belongs to the English edition of the work.*

*To S. N.'s two questions, we answer, 1st, that we cannot tell till we are the suppressed poem; and, 2dly, that till we see specimens of the letters, we cannot tell.*

*C. F. is utterly mistaken; we do not even know of the existence of any "Theatrical Party." Our opinions upon the stage, as on every other subject, are impartial and unbiased.*

*Endymion, if we may judge from his poetry, is even more struck by the moon than his nameake of old. We would to Jupiter he had also his taste, Endymion's sonnamus dormire.*

Conrad's lines want measure.

## ERRATA.

*In the Scotch song, last Number, for "Jude" read "Gude." In the third line of the same Song, for "he," read "ye." In the preceding Number, p. 77, for "Isabella in the Mourning Hride, read "Isabella in the Fatal Marriage."*

### Miscellaneous Advertisements, (Connected with Literature and the Arts.)

*British Gallery, Pall Mall.*

**THIS GALLERY**, for the Exhibition and Sale of the Works of Modern Artists, will be opened on Thursday next, the 17th inst. By order,

JOHN YOUNG, Keeper.  
Admission 1s.—Catalogue 1s.

*For Gentlemen's Libraries, Reading-Rooms, &c.*  
Price 8s. Plain, and 7s. finely Coloured.

**CHRONOLOGICAL CHART**, showing, in one view, the contemporary Sovereigns of Europe, from the Norman Conquest of England to the present time, on a sheet of imperial drawing paper. Printed for R. J. Holdsworth, 18, (south-side) St. Paul's Church-Yard.

### BOOKS PUBLISHED THIS DAY.

Randomly printed in 4to, with Maps, &c., uniformly with Park's and Barrow's Travels, price 2l. 6s.

**TRAVELS IN NUBIA and in the INTERIOR of NORTH EASTERN AFRICA.** By J. L. BURCKHARDT. With a Life and Portrait of the Author. Printed for John Murray, Albemarle Street.

Randomly printed in small 8vo, with Ten Plates, price 7s. 6d. A new Edition of

**A NEW SYSTEM OF DOMESTIC COOKERY**, formed upon PRINCIPLES OF ECONOMY, and adapted to the Use of Private Families. Comprising also the ART of CARVING. Observations on the Management of the DAIRY, and POULTRY YARD, Instructions for HOME BREWERY, WINES, & COOKERY for the SICK, and for the POOR; many very useful MISCELLANEOUS RECEIPTS, and DIRECTIONS proper to be given to SERVANTS both in Town and Country. To which is prefixed an ESSAY on DOMESTIC ECONOMY and HOUSEHOLD MANAGEMENT, comprising many Observations which will be found particularly useful to the Mistress of a Family. BY A LADY.

- This is really one of the most practically useful books of any which we have seen on the subject. The Lady who has written it, has not studied how to form expensive tables for luxurious tables, but to combine elegance with economy, she has given her directions in a plain sensible manner, that every body can understand; and none are not confined merely to cookery, but are extended to the variety of objects in use in families; by which means the utility of the book is very much increased.

Printed for John Murray, Albemarle Street; sold also by every other Bookseller in England, Scotland, and Ireland, of whom may be had, latest published.

**THE NEW FAMILY RECEIPT BOOK**, a new Edition, greatly improved, handsomely printed in small 8vo, price 7s. 6d. in boards.

**HEDIN; or the SPECTRE of the TOMB.** A Tale. By the Honorable WILLIAM HERBERT, Esq. Printed for John Murray, Albemarle Street.

In the Press, 4to.

**TRAVELS THROUGH HOLLAND, GERMANY, and Part of FRANCE**, in 1819, with reference to their Statistics, Agriculture, and Manufactures. By W. JACOB, Esq. F. R. S. Printed for John Murray, Albemarle Street.

*Statistical Account of Scotland.*  
In 2 vols. 8vo. with an accurate sheet Map of Scotland, Price 1l. 4s. boards.

12. The Preceptor's Key; containing Answers to the Questions and Exercises on—1. *Adam's History of Great Britain*.—2. *Adam's History of Rome*.—3. *Adam's Elements of Useful Knowledge*, fifth Edition.—4. *Jamieson's Grammar of Logic*.—5. *Jamieson's Grammar of Rhetoric*. By A. Jamieson; 18mo. price 4s. 6d. bound.

The intention of Interrogating Children in History, and other subjects which are more immediately connected, in storing the mind with useful knowledge is obvious. That the system not only improves the mind, but that it also calls into action the powers of memory, exercises the judgment, and excites the pupil to habits of thinking, is universally acknowledged. However irksome this may appear as a task, it will ultimately prove beneficial to the learner, and become an agreeable and useful amusement.

† A new and complete School Catalogue, for 1820, may be had gratis.

**THE MYSTERY; OR, FORTY YEARS**

AGO. A Novel. In 3 Volumes.

Of chance or change, O! let me never complain,  
Else shall he never, never cease to wail;  
For from the Imperial dome, to where the swain  
Rears his lone cottage in the silent dale,

All feel the assault of fortune'sickle gale.\*

This Novel is not wholly fictitious. It will be found to contain some curious particulars respecting the interesting Explorer of Africa, Major Housington; together with the most remarkable incidents of a Journey performed in that quarter of the globe "Forty Years Ago." Printed for Longman, Hurst, Rees, Orme, and Brown, London.

*New History of Spain*.—Price 12s. 6d. boards.

**THE HISTORY OF SPAIN** from the earliest

ages of which we have any authentic Records, to the return of Ferdinand VII. in 1814, accompanied with Chronological and Genealogical Tables, of the Visigoths and Spanish Princes and Caliphs, and a list of the contemporary Sovereigns at the end of each reign; also the Political Arrangements of Europe, as settled at the Treaty of Paris, with Notes. No. 161.

SATURDAY, FEBRUARY 19, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*An Account of the Principalities of Wallachia and Moldavia, including various Political Observations relating to them.* By William Wilkinson, Esq. late British Consul to the above-mentioned Principality. London, 1820, pp. 294.

The bad construction in the title-page, which we have just copied, will no doubt impress our critical readers with the notion that this book is not very excellently written; and we must say that it is not the work of a person in habits of literary composition. The author, however, resided for several years in the principalities which are his subject, and he supplies a good deal of sensible observation in his own way,—intelligibly if not elegantly. As Consul, he had peculiar opportunities for obtaining intelligence, not apparent to casual travellers; and altogether he has placed the latest details of the ancient and magnificent Eastern Empire before us in a light more obvious than any in which we have hitherto seen it.

Of the original composition of the people of those Greek provinces; of the early history of the Dacians, and of the contests of their descendants with the followers of Islam, we shall say nothing; except that, about 200 years ago, Wallachia and Moldavia were definitely subjugated by the Turks, and have, since that era, been governed, agreeably to a partial constitution left them, by governors appointed by the Porte. The population, according to the nearest calculation, approaches to 1,000,000 of souls in Wallachia, and 500,000 in Moldavia, and the last peace of Bukarest. They are divided into boyars, or nobles of the different ranks; the tradesmen of all descriptions; and the peasants, with others who are liable to the common taxes and contributions. So numerous is the station; and so rapid the succession of Hospodars or Governors in this quarter, that, during 90 years, to the beginning of this century, no fewer than forty different princes reigned in Wallachia, in the space of the time it was occupied by the Russians; from 1770 to 1774; by the Austrians and Russians, from 1789 to 1792; and by the Russians again from 1806 to 1812; that is to say, at the rate of a sovereign, more or less, every two years. Bukarest, the capital of Wallachia, contains 100,000 inhabitants, 366 churches, 20 monasteries, and 30 large houses, or caravans-

ras. Yassi, the capital of Moldavia, is a smaller but better built town, with 40,000 inhabitants and seventy churches. The streets of both are paved with thick pieces of timber thrown across, and fastened like a wooden bridge. The port of Galatz, however, is more usefully interesting than either, and we copy the account of it.—

Galatz (the sea-port of the two principalities) is in Moldavia, but nearly touches the frontier of Wallachia: it is situated at the beginning of the broadest and deepest part of the Danube, distant sixty miles from the Black Sea, sixty-five from Yassi, and seventy-two from Bukarest. The river is so far very navigable for ships not exceeding three hundred tons burthen. Its principal entrance from the sea is not very easy to make, owing to the islands which divide it into three great channels, two of which are very shallow and dangerous. But ships bound hither take pilots on board, and with this precaution, very few accidents take place, particularly in the fine season.

The navigation of the Danube closes in the month of November; and in the severest winters, even this part of the river is completely frozen over for the space of five or six weeks. In the month of March, ships begin to make their appearance again, and as they have not the inconvenience of a tide against them, they are enabled to come up close to the wharfs, and to remain there until their business is finished.

Galatz is the great market for the produce of the two principalities, and the only landing-place for some principal articles of importation. Having all the resources of a seaport, it is apparently a very flourishing town. Its market is always well stocked with the productions of the interior. The timber, masts, and staves are conveyed to it along the small rivers, that come from various parts of the country, and fall into the Danube nearest to it. There are public granaries for the wheat, and a great number of large warehouses, belonging to private merchants, for all articles. It is chiefly inhabited by commercial men, who, notwithstanding the rigour of the prohibitive measures, often find the means of exporting some quantity of wheat, and other contraband articles; but their principal trade is that of importation. The town and its dependencies are governed by two deputies of the Prince of Moldavia, called *Percalabi*. The number of the fixed inhabitants does not exceed seven thousand, but the great concourse of people occasioned every year by commercial pursuits, gives it the appearance of being very populous, and all the bustle of a place of great trade. The presence, in particular, of a great number of commercial vessels, increases considerably that appearance.

Although Galatz is the general depot for many goods of importation, it is not the principal market for them: they are conveyed to those of Bukarest and Yassi. Coffee, sugar, pepper, rum, lemons, oranges, and foreign wines, are the principal articles of this description. The local consumption of the first, in both provinces, is calculated at 800,000 okes every year: of the second, 900,000 okes; and of the third 35,000 okes; that of the others is merely eventual. Their importation, however, surpasses this quantity, and might be still carried to a greater extent, as the provinces of Galicia, Bukovina, Transylvania, Temesvar, and Servia, are partly supplied with those articles by the markets of Bukarest, Yassi, and Galatz.

The general system of this import trade is ill contrived, and it is subject to many inconveniences. The purchasers have recourse to the markets of Smyrna and Constantinople, where, of course, they buy at high prices. The goods, which have already paid custom-house duty in Turkey, are taxed with a new duty of the same kind, of three per cent., on being landed or brought into the principalities, as well as with other charges of an arbitrary nature, which amount to as much more. The latter are not, indeed, established by the local governments, but merely exacted by their officers, and as they are tolerated, they become unavoidable, unless the proprietors of the goods happen to be subjects of European courts, and as such, receive protection and assistance from the consuls residing in the country.

Wallachia and Moldavia are at present supplied by Germany with all kinds of cotton and woollen manufactures and hardware, either by land or by the Danube.

The plain and printed calicoes, the chemises, glass and earthenware, brought to their markets, are, without exception, German; but they are called English, and as such sold at higher prices than they would fetch were their origin widely known.

The consumption of the woollen cloths is very extensive; that of the superfine qualities alone is valued at 200,000. sterling every year. Some French cloths are brought into the country, but as their prices are considerably higher than those of Germany, they do not meet with much demand. French cambrics and English muslins are always profitable articles to speculators, and always remain long on hand.

As furs of all kinds form a part of the national costume, and are likewise necessary, owing to the natural rigour of the climate, they are an article of vast importation: Russia supplies the principalities with it, and takes in return brandy and wine, and imperial ducats.

Most of the merchants carrying on trade

in these countries, are natives, or Greeks. Some have been naturalised in Russia or in Austria, and receive protection from those powers; an advantage which is of no small consequence to their affairs. Of late years, some natives of the Ionian Islands, have begun to trade in the principalities, and the English flag, borne by their vessels, is now frequently displayed on the Danube.

Some overland expeditions of goods coming from Smyrna, are now and then made by way of Enos and Adrianople; but they are attended with risk and difficulty; besides which, the amount of charges surpasses by eight per cent. those incurred by way of Galatz.

The natural richness, and the various resources of Wallachia and Moldavia, are such, that if those countries could enjoy the important advantages of a regular government and a wise administration, under which industry and agriculture should receive their due encouragement, the trade of exports laid open, the commercial intercourse with foreign nations set upon a proper footing, and finally, the mines explored, they would in a short time become the most populous and most flourishing provinces of Europe. The harbour of Galatz would soon stand in rivalry with all the ports of the Black Sea, not excepting Odessa.

The fertility of the soil is such as to procure nourishment for ten times the number of the present population, and leave wherewith to supply other countries besides; the common return of cultivation being sixteen-fold, and in more favourable seasons, twenty-five.

Nature has furnished them with every possible means of becoming prosperous: men have ever proved themselves the determined enemies of their prosperity.

The following political information, which we meet with a little further on in the volume, will no doubt be thought a curious development of some of the springs on which the marvellous agreement between the Emperor Alexander and Buonaparte at Erfurth proceeded.

A plan of partition had been formed at Erfurth between the emperors Alexander and Napoleon, by which the Turkish provinces were to fall to the share of Russia, and Spain to that of France. It was after this understanding between the two sovereigns that overtures were made to England. The English negotiation took time, and before it came to a decided issue, Buonaparte declared to his senate that the principalities of Wallachia and Moldavia were annexed to the dominions of his friend and ally the Emperor Alexander. When, however, Buonaparte found England determined to treat upon no basis which did not expressly admit of the evacuation of Spain, and that by entering into such terms he left a decided advantage to Russia with respect to Turkey, without reaping any benefit to himself from the political bargain made at Erfurth, he changed his views. The continental system,

which he endeavoured to justify in attributing the general calamities of Europe to a tyrannical perseverance in war on the part of England, furnished him with a sufficient pretext for engaging Russia to continue her war against Turkey, who had just entered into terms of friendship with England. On the other hand, he prevailed upon the Turkish government to insist on the restitution of the principalities occupied by the Russian armies, and to continue hostilities so long as the Russian court should withhold its consent to that measure. His desire of keeping these two powers at variance with each other could not but increase when he had subsequently formed the plan of invading Russia, who, isolated on one side by the Turks, and on the other by the Persians, was thus forced to employ considerable armies on distant frontiers.

The exhausted state of Turkey, the mediation of England, and the impatience of Russia, who was pressed by the hostile preparations of France, evidently intended against her, hastened the conclusion of peace in 1812 between the Mussulman powers and the Russians.

But it is pleasanter to us to follow the author in his descriptive sketches than in his politics; and only remarking that he is an advocate for giving Wallachia to Austria, we hasten to a few extracts characteristic of the country.

About two hundred and ten days of the year are holidays, and they are strictly observed by the inhabitants, as far, at least, as relates to the exclusion of all kinds of work. The public offices, although they have so great a portion of the year to remain inactive, are allowed besides, a fortnight's vacation at Easter, and during the hottest days of summer. In these useless and pernicious days of idleness, whilst the Boyars' chief occupation consists in seeking the means of killing time out of their homes, the lowest classes spend it with their earnings at the brandy-shops, where prostitutes are kept for the purpose of attracting a greater number of customers, and of propagating with vice the most horrible of all the diseases with which human nature is afflicted.

The number of this disgraceful class of females is so great at Bukarest, that the late Aga, or police director, suggested to the prince the plan of levying a capitation tax on each, whereby he would create a new revenue of some hundred thousand piasters. This plan, contrary to expectation, was not put into effect, though it was not likely to meet with obstacles.

The manners of society among the Wallachian Boyars are not remarkable for refinement. The general topics of social conversation are of the most trivial nature, and subjects of an indecent kind frequently take the place of more becoming discourse; they are seldom discouraged by scruples of any ladies present.

In the habitual state of inaction, brought

on by a natural aversion to every serious occupation which does not immediately relate to personal interest, both sexes, enjoying the most extensive freedom of intercourse with each other, are easily led to clandestine connexion; the matrimonial faith has become merely nominal.

Various other customs contribute to domestic disorders prevailing in a great number of private families. Parents never marry their daughters, to whatever class they may belong, without allowing the dowries beyond the proportion of their means, and to the great detriment of the male children, who, finding themselves provided for, look upon marriage as a means of securing a fortune, and consequently regard it as a mere matter of pecuniary speculation. Feelings of affection or sentiments of esteem are therefore out of the question in the pursuit of matrimonial engagements, and money remains the only object in view.

When a girl has reached the age of fifteen or fourteen, her parents become anxious to procure a husband for her. They do not wait for proposals, but make the offers, sometimes to three or four men at a time, stating with them the amount and nature of the dowry they are disposed to give. They enter into a regular negotiation with a greater amount is required, and finally settle with him who remains satisfied with the most reasonable terms. The inclination of their daughter are never consulted on the occasion, and too great a disparity of age, other personal defects on the part of the future husband, never appear to them as objectionable. The girl is sometimes perfectly unacquainted with the man of her parent's choice; and, at her tender age, unable to form any judgment on the state of matrimony, she submits to their will with indifference. Not long after the nuptials, she is left perfect mistress of her actions, her domestic affairs are entirely put into the hands of the servants, and she never interferes with the neglected by her husband, and at full liberty to dispose of her time as she thinks proper. She forms connexions of intimacy with men more experienced in the world than herself. The attractions of pleasure and society become too strong to be resisted, the example of others, with the numerous temptations that surround her, prove, now or later, fatal to her virtue. To the harshness which may have subsisted between her and her husband, succeeds disgust; quarrels soon follow, and blows sometimes are spared on her. Her condition becomes last intolerable, she quits her husband's house, seeks for a divorce, and generally obtains it, however frivolous the plea in true sense of the law.

The church of Wallachia and Moldavia the only one professing the Greek religion that authorises divorce; or more properly speaking, the only one that abuses the power of pronouncing it, the authority being granted to the patriarch of Constantinople on occasions of the most particular nature, and indeed never made use of.

In the principalities, the sentence of

force is pronounced so frequently, the motives alleged are sometimes so frivolous, that it never affects the reputation of a woman, so as to degrade her in her ordinary rank of society; nor does it in the least become a scruple to the delicacy of the men, whatever may have been the nature of its motive.

There are but few families at Bukarest who have long continued in an uninterrupted state of domestic harmony, and fewer still who can point out some relation who has not gone through a divorce.

Sometime back, a Wallachian lady of quality, who had brought but a small fortune to her husband, became desirous of fixing her residence in one of the principal streets of the town, and she pressed him to lay aside his accustomed system of economy, to sell his estate, the revenue of which gave them the principal means of support, and to build a fine house in that street. The husband, more reasonable than herself, positively refused to listen to her extravagant proposal; and the lady, incensed at his upbraiding her for it, quitted his house, and shortly after sued for a divorce, which she obtained. This lady, who has since remained single, professed great piety, and is still considered as a very pious woman.

Not long after, a young Boyar, contrary to custom, fell in love with a very beautiful young woman, of the same rank and age. The parents of both agreed on their union, and the nuptials were celebrated by public festivities. This couple was looked upon as the only one in the country whom a strong and mutual attachment had united. At the end of the first year the husband was suddenly attacked by a pulmonary complaint, and induced by the physicians' advice to separate himself for some time from his wife, and go to Vienna in order to consult the best medical men. After eighteen months' absence, finding himself perfectly recovered, he hastened back to Bukarest impatient to see his wife, to whom he had not ceased to write, but whose letters had latterly become much less frequent. On his arrival he found the most unexpected changes in his family affairs. His wife had gone to her parents, refused to see him, and had already consented to marry another! Her father, who was the chief instigator of her sudden resolution, had negotiated the second marriage, because it suited his own interests.

The legitimate husband claimed his spouse through every possible channel; but he was not listened to, and government declined interfering.

The sentence of divorce was pronounced by the metropolitan; and, although the husband's refusal to sign the act rendered it perfectly illegal, the second marriage took place; the ceremony was performed by the archbishop in person, and public rejoicings were made on the occasion.

The circumstances of this adventure were the more remarkable, as the second husband had been married before, and divorced his wife after six weeks' cohabitation, when he saw the possibility of obtaining this lady's hand.

Another lady of the first rank separated her daughter from her husband, with whom she had lived six years, and caused a sentence of divorce to be pronounced. She gave for reason, that her daughter's constitution suffered considerably by frequent pregnancy. The husband, who was by no means inclined to the separation, and who knew his wife to enjoy the best health, made remonstrances to no effect: and he was condemned by government to give back the dowry, and to pay damages to a considerable amount, for having spent a part of it, although he proved to have employed the deficient sum for the use of his wife and family.

These three instances of the degraded state of morals in these countries are selected from numerous others that occur daily. They are such as to excite astonishment, and appear almost incredible; yet they created no other sensation at the time than other common news of the day, deserving but little notice.

The mode of instructing the Wallachians and Moldavians in the precepts of religion, is not, however, calculated to animate them with excessive zeal, and to propagate fanaticism. They are merely taught to plunge headlong into all the ridicules of superstition, the inseparable attendant of ignorance; and it is probably owing to the total absence of fanaticism that the priesthood exercise a less powerful influence here, than they do in other Greek countries. All the ecclesiastical dignitaries being of obscure origin, and mostly of the lowest extraction, they are personally despised by the Boyars. Their spiritual power is alone respected.

The rites ordained by the established church are the same as those of the patriarchal church. Persons who have not received baptism in it, are not considered as Christians, nor even honoured with the name of such.

Frequency of confession and communion, and the punctual observance of a vast number of fast-days, during the year, are prescribed with severity. They have become the most essential points of faith, and the people believe with confidence that an exact adherence to them is sufficient to expiate the heaviest crimes, particularly after the confessor's absolution, which, in most cases, is to be obtained by the means of a good fee.

We should here have closed our notice of Mr. Wilkinson's production, had it not been for a very singular paper in the appendix: viz. "An explanation of the Nizam-y-gedid (the new military) institution," attempted to be introduced by the Ottoman government, translated from the Turkish MS. of *Ishelebi-Effendi*, a dignitary of high rank. The Effendi reasons in a manner so very singular that he is highly amusing to European minds, while conveying much information; and we have rarely met with an oriental document more full of whimsicality and truth, of man-

ner to entertain and matter to instruct us. We can only however select a few passages to show how the writer argues the points at issue between him and the Janizaries, who rebelled against the new system, and butchered both the Sultan and his Vizier. The worthy Effendi thus describes the beginning of the discontents.

After these points had been taken into serious consideration, some men were in the first place dispatched to the corps of the Janizaries for the purpose of selecting from thence some young and chosen soldiers, whom they were to discipline and train to the use of arms. Upon this, our braves who are engaged in the thirty-two trades, considering that if they were obliged to attend punctually to the exercise of common and small arms, they would be occupied with that instead of their private affairs, and would be brought into trouble, no longer receiving their pay once in three months gratuitously, and without doing any thing for it, began to powder the matter, stroking their beards and mustachios, and to vent their discontent by saying, "We are not made for this sort of work, and we will have nothing to do with it." Whatever pains were taken to enlighten their understandings, they obstinately persisted, addressing each other by these or similar terms, "Ho! Ali Sacka Babu, Oda Bashli, Bush Karakoulouk-gee! • what say you to this business? the exercise of the Nizam-y-Gedid is now introduced; henceforth no pay is to be had without service, and what they call exercise is very troublesome service; it is true that drawing up in a line makes a better show; but if they send us to war, we can fire our muskets, and then charging sword in hand, we can put the Russians to flight and storm their camp. May Heaven preserve from decay our corps and our chiefs! we shall then take our pay when it is issued, and pass our time agreeably." Such were their expressions, as though they could by frigid reasoning, and senseless allusions, induce the Sublime Government to abandon this enterprise, when the experience of two wars had proved beyond dispute, both the total inefficiency of their services, and the feeble condition of the Mahometan community.

After other arguments, the Effendi proceeds—

It has happened to me a thousand times to find myself engaged in dispute with a crowd of contentious fools, who say, "Is there any occasion for these new troops of the Nizam-y-Gedid? At the time that the Ottoman race conquered the world with the sabre, there were no such forces. Let the enemy present himself, and we will lay our hands on our sabres, and at a single charge make piece-meal of them. Only let us see the intentions of our enemy, we will storm their camp, sword in hand, upset their throne, trample his crown under

• The titles of some superior officers, amongst the Janizaries.

our feet, and penetrate even to the most distant of their countries."

To these bravoes I thus addressed myself:

"Hark ye, comrade! do you know that ever since the year 1146 I, as well as my father, have served with all my might in the corps of Janissaries, and have been engaged in several wars, and have seen the world both hot and cold, and feeling from the world's basket, have passed through the hoop of the elements." Having moreover been a prisoner in the hands of the enemies of religion, I became fully acquainted with their deceit and treachery, their discipline, and the successes which they have obtained over the Sublime Government. It has thus been easy for me to gain an intimate knowledge of many things, the truth of which cannot be easily understood from the mere perusal of our annals. As I am now eighty-seven years of age, if all those affairs that have passed since the year 82, with which I am thoroughly conversant, were to be written, they would fill several volumes. There are, however, certain events taken as well from history as from what has fallen under my own observation, which I wish to relate to you; and as my discourse shall be free from malevolence and bad passions, I trust in God that you will hear me with satisfaction, and will one day bless me."

He dwells upon the effect of the introduction of discipline among the forces of the Crabs of Europe, to which they resorted in consequence of their dread of the Emperor of Islam.

All the Crabs being seized with consternation, after communicating with each other, held a council in a place appointed, to which they invited men of wisdom and experience. The conclusion they came to was this: "The Ottoman Emperor having introduced an admirable system into his army, and established a corps for the express purpose of keeping it up, we shall no longer be able to keep face with such well disciplined troops: as the soldiers of the Islam are naturally brave, they will fall in among us, sword in hand, and make a speedy end of us; and as the opinion which they hold that those who die in war are martyrs, and go immediately to Paradise, makes them fight with great zeal, it is evident that if we do not establish good and sufficient military regulations, the Ottomans will conquer the whole of Europe, and oblige us all to pay the Haratch. It is our business therefore to find some method of preventing those soldiers from closing with us." They concluded their conference by forming a masterly project, and inventing a method of using with expedition their cannon, muskets, and other instruments of war, and prohibiting their troops from engaging in commerce, they obliged them to pass their whole time in learning military exercises, in which they made such progress that it became at last impossible to break their ranks. In truth, it is well known to those who are acquainted with history, that in the wars which have

\* These are proverbial expressions to denote the vicissitudes of fortune.

taken place since the invention of this new system of tactics, the Ottomans have been most frequently worsted, because they found it impossible to make use of their sabres among the infidels as they wished to do; for their regular troops keep in a compact body, pressing their feet together that their order of battle may not be broken; and their cannon being polished like one of \* Marcovitch's watches, they load twelve times in a minute, and make the bullets rain like musket balls; thus they keep us an unintermitted discharge of artillery and small arms. When the Islamites make an attack upon them with infantry or cavalry, the enemies of our faith observe a profound silence, till the soldiers of Islam are come close up to their front, and then at once giving fire to some hundred carriage-guns, and to seventy or eighty thousand muskets, overturn our men in heaps without so much as receiving a bloody nose. When they have thus by a few volleys caused thousands of the people of Islam to drink the Sherbet of martyrdom, the surviving remnant are wont to fly.

It is a certain fact, that we have seen in the wars persons, who, having never in the course of their lives taken a gun in their hands before, but spent all their time in the exercise of some trade, and knew not what they were about, but first put the ball into their muskets, and then the powder above it. It has been sometimes proved by experience, that as these people know not how to handle their ammunition, it would be better that they should leave the army rather than remain with it; because being of no use, they do harm by the disorder which they create. Some of our raw soldiers who do not know the proper charge of powder, by putting too great a quantity into their guns, cause them to burst, and thus maim, or even kill both themselves and those who stand near them; and many of our impractised horsemen who, when mounted on their steeds, fancy themselves the heroes of the age, and would not deign to give a salutation even to their own fathers, when they draw their sabres in action, wound the heads of their horses, and thus cover themselves and their beasts with blood; this awkwardness of theirs causes those who see it to utter ejaculations of surprise. In short, it is evident to men of understanding, that as the talents of reading, writing, riding on horseback, shooting with the bow, playing on an instrument, and other similar acquirements, will not come spontaneously to persons unskilled, and un instructed in them; so likewise victory cannot be obtained without a knowledge of the art of war, which is a particular, and noble branch of science, independent of others.

There are indeed certain considerations which may induce us to pardon those calumniators of the Nizam-y-Gedid, who are any wise connected with the old corps; but do those persons who are by no means attached to them, and who know the difference between alum and sugar, and between good and evil, show any sense in daring to abuse

\* Markwick Markham, a London watch-maker in great esteem with the Turks.

so noble a science? Their perverseness and obstinacy are astonishing, seeing that, notwithstanding the taste which the infidel race has always had of our raw troops, they do not allow it to be sufficiently proved, that if a war should break out, these ignorant beasts pressing together in masses of one or two thousand men, will be unable to resist the tactic of the enemy.

The writer relates instances of panic and flight, disgraceful to the old troops, and of the loss of their cooking kettles, the greatest infamy that can befall a Turkish regiment. On the other hand, he praises the bravery and efficacy of the Nizam-y-Gedid; for example, against the mountaineers of Rumelia.

Since that insolent race first showed themselves, several Veziers and other officers had been sent against them without effect. Having formed the wicked design of destroying the Nizam-y-Gedid institution from its roots, they now exerted their whole strength and gave battle. Although the regular troops had with them neither their cannon, howitzers, or mounted men, and were engaged in the midst of a severe winter, snow, rain, and mud, and though the rebels were strongly posted in a town, they nevertheless marched up to the attack, and without regarding the advantageous position of the insurgents, while they were themselves up to the knees in mud and water, they knocked down half of the rebels like rotten pears, sending their souls to hell, and obliged the rest to fly. In a short time the field of action was covered with the vile carcasses of the rebels, and those who were taken alive reported that they called out to each other, "Ah! comrade, these troops which they call Nizam-y-Gedid, are not what we took them for." In these exclamations they betrayed the sense of their own inferiority. Every one knows that at last these rascals, unable to make a stand on any side, climbed the mountains by night, and fled.

He also panegyricizes the stratagems to which his favourite troops resort; and as he justifies these in a whimsical manner, we shall take leave of this curious picture of the military force of Turkey with the illustration.

Should it happen that the enemy is as skilful and well trained as themselves, and employs against them the same discipline, then of the two parties, that will be victorious whose chiefs are enabled, by the favour of Divine Providence, to put in practice with superior address, the new science and stratagems of war which they have learned, because the apostle of the Most High, our great prophet (on whom be the blessings and peace of God!) himself condescended to use military stratagems. This sacred tradition is thus related.

During a holy war which was carried on in the happy time of the apostle of God, (on whom be peace!) a certain valiant champion of the enemy's army came out to offer single

combat, and demanded that the glorious Ali should be opposed to him. Ali, well pleasing to God, having received the command of the Apostle, girded on his sword only, and immediately went forth alone to the place appointed for the combat. When this friend of the Most High met that infidel, he thus addressed him: "I come on foot having one sword; why come you out on horseback having two swords and two bows?" The great Ali spoke to him again, saying "let these things be so; but I come out alone to give battle on our side, why do you bring another man and come both together?" The infidel, at this question, looked about him believing that another man had followed him, when at the same instant, the great Ali, in the twinkling of an eye, made the vile head of the reprobate fly off. The death of the said wicked person having been a source of joy to the followers of Islam, the excellent Ali, meeting the great prophet on his return, related to him the admirable stratagem by means of which he had slain that wretch. This holy tradition has been vouchsafed unto us.

*The Tribute of a Friend.* By N. T. H. Bayly, St. Mary Hall, Oxford. Oxford, 1819. 8vo pp. 15.

*Mournful Recollections.* The same. 1820. pp. 8.

*Small Talk.* The same. 1820. pp. 18.

Of these slight productions, the two former belong to the pathetic, and the last to the gayer class of poetry. They have given us a favourable opinion of the author in both. He seems to possess two very essential qualities for a poet—feeling and fancy; and his general talent is decidedly worthy of being stimulated to a more elevated and continuous flight than any it has hitherto undertaken. The friend whose premature death called forth the elegiac tribute was Thomas Walter Clarke Darby, of St. John's College, who died in November last, aged 18; and the following quotation will show how affectionately he was mourned.

Again—again—oh! let me hear you speak,  
Call me, embrace me, look on me again;  
My hand is on your forehead, it shall seek  
To give relief, and mitigate your pain;  
And yours will soon press mine—"tis only weak,  
Hope cannot be quite lost—life must remain.  
I see his bosom heave, I hear his breath—  
'Tis sleep—"tis stupor—any thing but death.

It is not death—though motionless he lies,  
That may of ease and slumber be a token:  
No friendly glance now beams from those dim eyes,

By those pale lips no feeble words are spoken,  
Far better were complaints, and painful sighs,  
Than silence—silence never to be broken!  
Yet still he sleeps—we may in time restore—  
No, no—his sleep is death—he wakes no more.

My task is over; and I'll not repine,  
Since all his tedious pangs are at an end;

Beside his bed I shall no more recline,  
To all his whispered wants, no more attend:  
I ne'er shall see his moist eyes fixed on mine,  
In silent recognition of his friend;  
I never more shall cool his fevered brow,  
Or bathe his cheeks—all, all are icy now.

He eulogizes the virtues of his loved companion, and draws a natural and affecting picture of youthful hopes disappointed.

When last we parted, his young heart was sad;  
But we were full of hope, that future days  
Would bring a happy meeting; and we had  
Delightful plans, projecting many ways  
Of being blest together; he was glad  
To press my hand; and he would often raise  
Schemes of unbounded pleasure shared with me—

This might have been—but this can never be.

We thought of happy meetings—and we met—  
But never to be happy: grief and pain  
Had changed his cheerful face; my eyes were wet

With tears I laboured to conceal in vain.  
I feel his feeble arms embrace me yet,  
Whilst mine were thrown around him; and again

I hear him whisper in a gentle tone  
"My dear, dear friend—I never had but one."

I followed as a mourner to the scene  
Where he lies buried now; and I returned—  
In tears returned to be where he has been,  
And spend my life without him.

There are few compositions more difficult than the pourings out of heartfelt lamentation. If art is visible, the effect of nature is destroyed; and, if some art is not employed, the mere ebullitions of grief are crude and uninviting. The happy medium has, we think, been hit by Mr. Bayly, as far as his verse pretends; and he preserves his consistency to the end; which is more than can be said for Lord Lyttleton's Monody, or other celebrated effusions of this kind.

The Mournful Recollections are of similar character. They thus commence.

O Time! I ask thee not to steal away  
My present grief; I wish not to be gay:  
My heart were worthless, could thy hand remove

My deep affliction for the Friend I love.  
Bring me not smiles, though cheerfulness returns,  
And lights the mourner's cheek, his heart still mourns;

A smile can never cure, though it conceals  
The hopeless anguish which the bosom feels;  
Forgetfulness alone can cure regret;  
And whilst I live, I never can forget.

The following lines breathe the same pensive spirit.—

Short was the season of our joy; it passed  
In mutual delight, too sweet to last;  
When young, and fair, and innocently gay,  
His fancy pictured many a happy day:  
The hand of sickness smote him; every limb  
Was weakened and unnerved;—how unlike him

Who moved so lately, with his merry glance,  
First in the sport, and lightest in the dance.  
I was his constant nurse;—and though I shed  
Tears of unfeigned affection o'er the dead;  
It soothed me, when I think that I was there,  
Watching his sickly form with trembling care.  
That kneeling by his side, he often heard  
My voice join his in prayer, and every word  
Of heavenly truth, a consolation gave,  
Which softened all the terrors of the grave.  
It was my arm which always raised him up;  
From me alone he took the medicine cup;  
When hot, and faint with thirst, my hand sup-  
plied  
His last cool draught;—and in my arms he died.

Oh! there are feelings Time can never blot,  
Years may elapse—they cannot be forgot;  
His dying look—though months have passed away—

It haunts me still,—it seems but yesterday.—  
It is an easy task, for hearts at rest,  
To talk of brighter days to the distressed;  
To show us joys the future may reveal,  
And speak of that composure, which they feel.  
They may remind us tears, and sighs, are vain;  
Alas! can hopelessness diminish pain?  
They say when God afflicts us, it is fit  
That we should suffer meekly, and submit;  
Yes, we submit, and place our trust alone,  
In one last hope,—to go where they are gone.  
We know his dispensations must be borne,  
We bow to his behest; yet still we mourn;  
Religion teaches us to hope for bliss:—  
But in another region—not in this.

But we leave these pieces of sombre colouring to give a part of the livelier picture, entitled *SMALL TALK*, which, notwithstanding its name, is a great subject. After a playful invocation, and description of the present mania for writing, the critics come in for their due notice.

But critics all my budding hopes may blight;  
They're vastly disagreeable, no doubt;  
When sparks peep forth affecting to be bright,  
With large extinguishers they put them out:  
These vile Reviews annihilate us quite,  
And spoil our daily rest, like fits of gout;  
Yes, just like gouty fits, for they appear  
As periodical, and as severe.

But I profess to be, and am indeed  
One of the lofty highly favoured few;  
I'll scribble in security, nor heed  
Aught the severest of the throng can do:  
They tell us what we may, or may not read;  
What with applause, or censure we may view;

They are small wits—to that I don't object,  
It makes us greater with the more select.

They may be mischievous at times, I own,  
When private pique or malice intervenes;  
Though vast decision sits upon their frown,  
They're not infallible by any means:

Some in maturity have met renown,  
Whose lays were dunned in toto, in their teens:

Great critics (like great poets) sense have got,  
Small critics (like small poets) have not.

Some very knowing persons ne'er peruse  
Old books or new, though they adorn their shelves;

But monthly or else quarterly they use  
Opinions borrowed from reviewing clergies;

And thus, whilst they are taking in Reviews,

They're very often taken in themselves.  
Judgments are dangerous at second hand—  
We should not prate unless we understand.

A painter might as well attempt to trace

A distant prospect which he never saw ;

The Devil's Bride, or any other place ;

Unseen, it would be difficult to draw ;

Yet ere they read a book, with wondrous

grace

Men praise a beauty, or condemn a flaw ;

When books are named, and others praise or

blame,

They look exceeding wise, and do the same.

This is no imaginary sketch, but the  
portraits are met every day. Other  
species of Small Talk are illustrated ;  
but we can select only a specimen.

Small talk is indispensable at routs,

But more so at a little coterie,

Where friends in number eight—or therea-

bouts—

Meet to enjoy loquacity and tea.

If small talk were abolished, I've my doubts

If ladies would survive to fifty-three ;

Nor shall the stigma, ladies, fall on you,

Men love a little bit of small talk too.

What changes there would be if no tongues ran

Except in sober sense and conversation ;

There's many a communicative man

Would take to silence and to cogitation ;

'Twould stop old maids (if aught that's earthly

can)

And cut the thread of many an oration :

Old bachelors would dandle through the day,

And go on in a very humdrum way.

What would become of those who, when at

prayers,

Lend down their heads and whisper in their

pears :

Those at the play who give themselves such

airs,

Careful each celebrated speech to lose ?

How would the poor man suffer, who prepares

For small song parties which he can't refuse ?

What would become of all the gay pursuits,

If all gay people suddenly turned mutes ?

Partners at balls would look extremely blue,

Whilst waiting for their turn to point the

toe ;

Youths tête-à-tête would scarce know what

to do,

Over their juice of grape, or juice of shoe ;

Two people in a chaise might travel through

England and Wales—and they in fact might

go

Over the continent, and all the way

Be confidential once or twice a day.

Lovers would think it very hard, I fear,

If sober sense they were condemned to speak ;

Husbands and wives a voice would seldom hear,

Unless it happened to be washing week ;

The language of the eyes, I think, 'tis clear,

Old married people very seldom see ;

(Couples oft disagree, I'm told,—but this

is just by way of a parenthesis.)

How very peaceable we should be then,

None would have words, c'en bullocks would

be dumb ;

How changed would be the busy hum of men ;

The fame of certain wits would prove a hum ;

Tattlers, deprived of speech, would seize a pen,

They are a nuisance not to be o'ercome ;

Schemers the credulous no more would balk,

For Schemers would very rarely end in talk.

These changes are not all ;—I'll not proceed,  
I've mentioned quite enough in my narration ;  
They'd be so universal, that indeed

They'd baffle any man's investigation.

To calculate them all—I must exceed

George Ridder, who is famed for calculation :

Arithmetic to him's a pleasant game—

"He listed in numbers, for the numbers

came?"

There are two or three short poems ;  
but we have, at least looking at the  
bulk of the works before us, transgressed  
all bounds : we trust the extracts  
will be our apology.

*Memoir of the Early Campaigns of the  
Duke of Wellington in Portugal and  
Spain.* By an Officer employed in  
his Army. London, 1820. 8vo.  
pp. 234.

This well-written and intelligent record  
of events, deeply interesting to  
every Briton, affords a capital contrast  
to the Buonapartean histories of that  
general's wars, which have lately in-  
undated us. The candour and modesty  
of the English writer, his fairness and  
manly truth, are sterling proofs of national  
honour and honesty, opposed to the  
false-colourings and falsehoods on the  
other side, which have so forcibly  
brought to our minds the line of Burns :

"Some books are lies from end to end."

The perfect information to which it  
is evident the author had access, the  
handsome manner in which, as a soldier,  
and the able manner in which, as a  
historian, he has availed himself of it,  
gives this work a peculiar claim to at-  
tention, and enhances the value of that  
which, even in common hands, would  
have been valuable from the intrinsic im-  
portance of the subject. We have heard it  
ascribed to the pen of Lord Burghersh,  
and readily believe that a production so  
distinguished for strict veracity, plain-  
dealing, liberality, exalted sentiment,  
justice, knowledge, and observation  
emanated from a British nobleman,  
whose gallant services afforded him the  
opportunities for becoming ac-  
quainted with events ; and whose en-  
lightened mind dictated the statement  
of facts in the best possible shape.

The period embraced is from the com-  
mencement of Sir Arthur Wellesley's career  
on the peninsula, to the final expulsion of  
Massena from Portugal ; namely, from July  
1808, to May 1811, and including the battles  
of Vimiera, Corunna, Talavera, Busaco, and  
Fuentes d'Honor ; the convention of Cintra,  
and other affairs of the utmost moment. In  
a political, as well as in a military point of  
view, the narration is singularly meritorious,  
and we greatly admire the simple straight-  
forwardness with which the noble officer un-

folds springs and describes results, hitherto,  
we will say, very imperfectly understood by  
the public. The conduct of Sir Harry Bur-  
rard, and Sir Hew Dalrymple, during their  
brief commands, the course and character of  
the brave Sir John Moore, the real causes of  
the abandonment of the wounded at Talave-  
ra by Cuesta (not by the English general), the  
interior movements and intrigues of the Span-  
ish juntas, and the remarkable position of  
the combatants and issue of their measures  
at Torres Vedras, are more clearly explained  
than we have ever seen them before ; and  
most unquestionable materials for future history  
provided by a book as unostentatiously  
put forth as it is ably executed.

It is not our intention to follow the  
noble Lord into details, but we shall  
extract a few leading passages to illus-  
trate the publication and substantiate  
the opinion we have ventured to pro-  
nounce. The atrocities committed by  
the enemy are more than once noticed,  
and with perhaps greater generosity  
than just abhorrence, the author endeavours  
to palliate these inhuman prac-  
tices, so disgraceful to the soldiers of a  
civilized country. When the English  
troops first landed on the banks of the  
Mondego—

The French were in possession of Lisbon,  
and the country north of it as far as Leyria,  
which has been recaptured from the Portu-  
guese by a force under the orders of General  
Margaron. On the entry of the French into  
this town, they committed the most atro-  
cious acts of cruelty\*. As an instance of  
the brutality of a superior officer, the —  
of — related of himself, that upon en-  
tering the town, he met a woman with a  
child at her breast, that the appearance of  
the infant excited his pity, but " *se rapel-  
lant qu'il était soldat,*" he pierced the two  
bodies with a single thrust of his sword.  
When the English advanced-guard arrived  
there, it found in one of the convents the  
dead bodies of several monks, who had been  
killed by the French soldiers ; some of whom  
had dipped their hands in the blood of their  
unfortunate victims, and had dined with it  
the walls of the convent.

\* The cruelties committed by the French  
army in this instance, and throughout the whole  
of its campaigns in Portugal, had their origin  
in the nature of the war in which it was now  
for the first time engaged. Till this period,  
wherever the French soldiers had established  
themselves, whether by the defeat of the armies  
which defended the country invaded, or other-  
wise, they found the people submitting to their  
rule ; when, in Portugal, therefore, the nation  
rose in hostility against them, they considered  
such resistance as rebellion, and looked upon  
the inhabitants taken in arms, as disturbers of  
the public peace, and therefore entitled to no  
mercy or consideration. The officers also hoped,  
by inflicting vengeance on the patriots, to arrest  
the progress of an insurrection which menaced  
their total overthrow. It would not be fair to  
argue, from the conduct of the French in Por-  
tugal, that in other situations they would be led  
to adopt similar proceedings.

At a subsequent period we have a similar picture of horror.

Lord Wellington evacuated Coimbra on the approach of the enemy, upon the 1st of October; the town had generally been quiet by the higher classes of inhabitants during the preceding days; a considerable proportion, however, still remained, hoping that the enemy might yet be prevented from getting possession of it. But about ten o'clock on the morning of the first, there was suddenly an alarm that the enemy was approaching; the report was soon magnified into his having entered; and at one burst the whole of the remaining inhabitants ran shrieking from the town. The bridge, which is very long and narrow, was at once choked by the crowds which were pouring upon it; and the unhappy fugitives, who found their flight impeded, threw themselves into the river, and waded through it. The Mondego was fortunately not deep at this time, the dry season had kept it shallow; but there were three or four feet of water in many of the places where the unfortunate inhabitants passed it. In the midst of all the horrors of this scene; of the cries of the wretched people who were separated from their families; of those who were leaving their homes, their property, their only means of subsistence, without the prospect of procuring wherewithal to live for the next day, and of those who believed the enemy (with his train of unheard-of cruelties) at their heels; the ear was most powerfully arrested by the screams of despair which issued from the gao, where the miserable captives, who saw their countrymen escaping, believed that they should be left victims to the ferocity of the French.

The shrieks of these unhappy people were fortunately heard by Lord Wellington; who sent his aide-de-camp, Lord March, to relieve them from their situation; and thus the last of the inhabitants of Coimbra escaped from the enemy.

It is not in the nature of this work to dwell upon scenes of misery, such as have been now described; but the recollection of them will last long on the minds of those who witnessed them. The cruelties of the French had made an impression upon the Portuguese, that nothing could efface; it seemed to be beyond the power of man to avert the enemy's approach. The whole country fled before him; and if any of the unhappy fugitives were discovered and chased by a French soldier, they abandoned every thing to which the human mind is devoted, to escape from what they looked upon as more than death, the grasp of their merciless invaders. Innumerable instances of these melancholy truths might be detailed; but it would waste the time of the reader, and the relations of the horrid acts committed by the French would be too shocking to dwell upon.

Nor shall we dwell on these savage barbarities, which could only be perpetrated by monsters hateful to human nature, for whom hell, rather than earth, was a fit scene of action.\* That

meanness is a concomitant of cruelty, is made manifest by the following anecdotes relative to the evacuation of Portugal after the convention with Junot.

After the signature of the convention by Sir Hew Dalrymple, at Torres Vedras, and not at Cintra, as has generally been supposed, two officers, Major General Beresford and Lord Proby, were sent into Lisbon to superintend its execution. The history of their disputes with the French would hardly be believed. It would be interesting to record them, as instances from which the characters of many of the individuals belonging to the French army might be collected, and the value of their point of honour appreciated.

The first object to which the attention of the British commissioners for the execution of the convention was drawn, was to enforce the spirit of that instrument, by preventing the French from carrying off the plunder of Portugal. With this view General Junot, after much opposition on his part, was constrained to issue an order to his army, requiring it to deliver up, into the hands of the commissioners appointed for that purpose, every species of plundered property which it retained in its possession. Within a few hours, however, of the issuing of this order, information was brought to Major General Beresford, that Colonel Cambyse, aide-de-camp to General Junot, had seized upon the Prince Regent's horses, had carried them from the royal stables, and was embarking them as the property of General Junot.

The statement, upon being inquired into, was found to be correct, and General Kellerman was applied to, to prevent this robbery; he immediately attacked Colonel Cambyse with great severity of language, and ordered the horses to be restored.

The next day an attempt of the same sort, by the same officer, was made upon one of the carriages belonging to the Duke of Sussex, which was actually embarked; Major General Beresford, upon being made acquainted with it, sent his aide-de-camp to Colonel Cambyse, to remonstrate with him (in terms not very agreeable) upon the repetition of a conduct so disgraceful to the character of an officer. This lecture was, however, of but little avail, for during the time that General Beresford's aide-de-camp was speaking, the second carriage belonging to the Duke of Sussex was removed to the river, for the same purpose of embarkation;

sens was before the Lines at Torres Vedras.) the French subsisted solely on the plunder of the country they occupied. The irregular manner in which this mode of obtaining supplies was conducted led to the perpetration of the most revolting atrocities. Torture inflicted upon the inhabitants, to extract from them the secret of their depôts of provisions and property, was one of the expedients most common to the French soldiery. The murder of the peasantry seemed to be committed without remorse; the capture of the women was converted often into a source of profit. Nothing more revolting to the mind of civilized man can be produced, than the list of horrors committed during this lamentable period.

both carriages were afterwards recovered, and Colonel Cambyse threatened with a voyage to England as a prisoner, if he continued a line of conduct such as he had till then pursued. Various other traits might be related of this officer, but an act of General J—'s, will be more interesting, and more worthy of record: he had carried off a considerable number of pictures, and embarked them on board his own vessel, from the house of the Marchioness of Anjija; upon being required to give them up, he answered, that they had been given to him. This having been found to be incorrect, he denied all knowledge of the transaction, and impeached a relation of his who was on board the ship with him, but who immediately proceeded to one of the transports, where he hoped to remain concealed. A threat of preventing the General from sailing, till the pictures were disgorged, soon brought this gentleman back to the frigate, and Captain Percy directed him to go on shore to give an account of the transaction; he refused, however, to acknowledge the jurisdiction of the commissioners, and declared his determination not to land. The bayonets of the marines were called for, to persuade him; they proved effectual, the gentleman was landed, and soon after, the pictures were returned. Another general officer, on the day of his embarkation, carried off, from the office of the commissioners, all the papers and documents which he was able to collect, in a short visit he made to it while the commissioners were absent; and if he had not been driven back to Lisbon by contrary winds (when he was forced to return them) would have involved their proceedings in complete confusion.

How much the English soldiery were annoyed at the interruption of their victories by the convention, is whimsically painted in the annexed.

The feeling of the army which had fought the battle of Vimiera, was at this time most hostile to the armistice which had been agreed upon.

The expression of a pirate in one of the regiments which had most gallantly asserted the superiority of the British arms, deserves to be recorded: whilst marching in his column to Sobral, he appeared to be looking for something which he had lost; and upon being asked what he was in search of, replied, *ten days*, which he believed he should never find again.

The following is also a curious incident, connected with the same event.

The corps under the orders of Sir John Moore marched from Torres Vedras to Mafra. The leading division, under Major General the Honourable Edward Paget, had nearly reached that place, when a French officer, who commanded a piquet in the town, desired that the English army would not advance, as he had no orders to retire; the circumstance was reported to Sir Hew Dalrymple, who attempted to persuade the French officer to evacuate, but finding his efforts ineffectual, and being desirous to avoid engaging in any fresh hostilities; he

\* During the whole of this period, (while Mas-

ordered his troops to bivouac, for the night, on the ground they occupied. The next morning the French officer sent word, that he had received orders to retire with his 100 men, and that the British army was at liberty to enter the town. This story was the occasion of much witicism among the soldiers.

Lord B.'s reflections on the fatal and glorious battle of Corunna appear to us to be exceedingly just.

Thus ended the second campaign in which the British troops had been engaged in the Peninsula. It would be a melancholy task to canvass it throughout; the last action was worthy of the men that have since delivered Spain from its merciless invaders; but the movements which preceded it were far from being generally approved. Great difficulties were hinted opposed to Sir John Moore; but it would appear that in his own mind they were too highly rated. He discharged his duty to his country, however, with his utmost zeal. He died fighting to maintain its glory, and his name will ever be ranked amongst its heroes.

Having, by these selections, shewn the quality of this work, we shall only add two or three further miscellaneous extracts.

An incident which took place on the night of the surrender of Almeida, deserves to be mentioned, to shew the hostility of the Portuguese peasantry to the French. Colonel Pavetti, the chief of the gens d'armes of France, in Spain, had gone to Almeida with Marshal Massena, when he left his headquarters at the fort of La Concepcion, to reduce the garrison to surrender; when the firing recommenced, Colonel Pavetti (who was unwell) set out upon his return to his quarters; he was accompanied by a Lieutenant, a Captain, and twelve men; the night was extremely dark and stormy, and he lost his way. He met with a Portuguese shepherd, whom he took for his guide, and who promised to conduct him (the vengeance of these Frenchmen hanging over him) to the fort of La Concepcion. But this peasant could not resist his feelings of animosity; he found courage to mislead the party; and under the pretence of having missed his way, brought it to his own village. He persuaded Colonel Pavetti to put up for the night in the house of the Jues de Fora, and pretended that he would procure provisions for him. Instead, however, of employing himself in that way, he collected the inhabitants, fell upon the French, killed them all except the colonel, whom he beat most severely, and his servant who stated himself to be a German. The next day the colonel was brought, with two ribs broken and other damages, to the head-quarters of Lord Wellington; where he was attended to, and afterwards sent prisoner to England.

To appreciate this event, it must be remembered that it took place in the middle of an army of 60,000 Frenchmen; that their revenge awaited those who were concerned in it; but that, notwithstanding, the animosity

of the Portuguese was too strong to be resisted by any calculations of the retaliation which was likely to follow the act that was committed.

On the retreat to Torres Vedras, it is judiciously remarked.—

We have thus conducted the British army to the termination of one of the most extraordinary operations which was ever carried into effect; the boldness of the original conception, as well as the perseverance and success with which it was executed, will command the admiration of all military men. The ascendancy which the character and talents of Lord Wellington had obtained over the minds of all those who were within his guidance or control, could alone have enabled him to effect a plan which involved in it such fearful consequences. To have persuaded a foreign government and army, but lately subjected to his direction, to abandon the greater proportion of their country almost without a struggle, to the ravages of an invader; to see his approach to the capital without fear or hesitation, speaks of itself a confidence in the talents of the commander which is without example. Not less extraordinary was the mode in which a movement in retreat was executed from Almeida to Torres Vedras, a distance of 150 miles, in presence of a superior army, whose object was, by every exertion in its power, to harass the corps opposed to it; yet not a straggler was overtaken; no article of baggage captured; no corps of infantry, except where the invaders were routed at Busaco, was ever seen or molested. Of all the retreats which have ever been executed, this deserves most to be admired. The steady principle on which it was carried into effect could alone have secured its success. Lord Wellington never swerved from his purpose; the various changes which every day occur in war, made no impression on his determination. The great event of a battle, such as that of Busaco, won over an enemy who was surrounded by an hostile nation, never induced him to change the plan of operations which he was convinced would in the end produce the most decisive advantages. Guided by such a principle, Lord Wellington was enabled triumphantly to execute his plan; the successes which have since attended his career are the best evidences of his wisdom. It is a singular circumstance, that when in his turn Massena had to conduct his army in retreat over nearly the same ground to the frontiers of Spain, although he had the advantages of making his preparations in secret, and of disguising the moment of putting it into execution, yet he was constantly overtaken; the corps of his army beaten and harassed; and in every action which he was compelled to fight, he was driven with loss and disaster from his positions.

Lord Wellington placed his army on the ground marked out for it in the course of the 8th, 9th, and 10th of October. The lines, as they have been termed, extended from Albandra to the mouth of the Zizandra; the whole distance may be computed

at about twenty-five miles from right to left. The term of lines was but little applicable to them; the defences procured by art were confined to closed redoubts placed upon the most essential points, and calculated to resist, although the enemy's troops might have established themselves in their rear. They were thus enabled to protect the formation of the army upon any point attacked, before the enemy could bring cannon in operation with the troops which he might have pushed forward between them.

From this period, the 12th of November 1810, to the 4th of March, 1811, both armies retained their respective positions; the only events of any importance, were the arrival of the 9th corps of 10,000 men, commanded by General Cte. Erlon, which was placed by Massena to protect his right at Leiria; and the junction of 5,000 men, who were brought by General Foy upon his return from Paris, where he had been sent by Massena, soon after his arrival opposite our lines, to render an account of the operations of the French army, and of its situation. Buonaparte received the relation of these events with much indifference; and observed upon the excuses General Foy was directed to make, for the loss of the battle of Busaco, "Ah bah! les Anglais de tout temps ont battu les Français."

We cannot conclude better. Waterloo must have riveted the conviction.

*Biographia Curiosa; or Memoirs of Remarkable Characters of the Reign of George the Third. With their Portraits. Collected from the most authentic sources.* By George Smeeton.

Of this publication, which is to consist of thirty monthly numbers, making three volumes, No. 1 has appeared. It contains accounts and portraits of the Corsican Fairy, of William Stevenson a Scotch beggar, of Elias Hoyle a Yorkshire centenary, and of Sam House a Westminster publican and republican. The engravings are executed in a good style, and the matter is amusing; we quote the simple annals of Hoyle as a specimen.

"This venerable man was a native of So-werby, in Yorkshire, being, at the time the accompanying portrait was taken, 113 years of age. His life is another convincing proof of the invaluable blessings of sobriety and industry; for, by his labour alone, "that offspring of want and mother of health," he maintained a numerous family in glorious independence; not one of them receiving parochial relief, although he was only a journeyman mechanic: he was enabled to follow his employment till he was 110 years old.

Yorkshire has produced more instances of longevity than any county in England: the cause of which is probably to be ascribed to the salubrity of the air, and sobriety of its inhabitants. The following is a list of persons who resided in Yorkshire, and attained the age of a century and upwards."

\* Vide Easton's Longevity.

Alice Atkinson, of the city of York, aged 109: died 1749.—Jane Atkins, of the city of York, 100: died 1761.—Ann Armstrong, of Aldborough, 114: died 1765.—Anne Blake, of North Leeds, 114: died 1763.—Margaret Bartlmer, of Leeds, 102: died 1765.—Robert Butterfield, of Halifax, 102: who from 40 years industry as a wool stapler, acquired a fortune of 40,000*l.* he died 1781.—S. Brigg, of Hoosier Hall, near Craven, 100: died 1782.—William Birkhead, of Brork House near Cleckheaton, 100: died 1797.—Francis Coudit, 4 of Burythorpe near Malton, 150: died 1768.—Ralph Coulson, of Grimstone, 107: died 1771.—Margaret Champney, of Carlton, 102: died 1782.—Mary Cousen, of Wakefield, 103: died 1790.—Peter Delme, esq. of Leeds, 104: died 1773.—Mrs. Dawson, of Wakefield, 104: died 1798.—Mr. Frank, of Pontefract, 109: died 1782.—Marry Gummersell, near Wakefield, 107. She was mother of 14 children; grandmother to 33; great grandmother to 84, and great great grandmother to 25: in all 156 descendants; she died 1763.—Thomas Garbutt, of Huggworth, 101: died 1773.—William Gibson, farmer, of Hutton Bush, 102: died 1796.—Ann Hatfield; of Tinsley, 105: died 1770.—Mary Hall, of Bishop Hill, of which place she was sexton, 105: died 1759.—Elizabeth Hodgson, of Scampton, 110: died 1759.—William Hughes, of Tadcaster, 127: died 1769.—William Harwick, of Leeds, 100: died 1772.—John Houseman, of Scarsay near Thirsk, 111: died 1777.—Jonathan Hartop,

of Aldborough near Boroughbridge, 198: died 1791.—Mary Halmshaw, of Wakefield, 102.—The celebrated Henry Jenkins, of Ellerton upon Swale, 169: died 1670.—Ann Johnson, of Aldborough, 102: died 1766.—Joan Jones, of Gisborough, 103: died 1772.—Samuel Johnson, of Bridlington, 104: died 1779.—Mary Jackson, of Cropton, 104: died 1789.—George Kirtan esq. of Oxnip Hall, 125: died 1769.—Mary Ker-haw, of Pontefract, 103: died 1788.—Robert Laurence, of Gisborough, 100: died 1761.—Daniel Lero, esp. of Leeds, 103: died 1771.—Thomas Loveday, of Scrooby, 101: died 1789.—Richard Matherman, of Ripley, 102: died 1766.—Mrs. Moore, of Rigny, 107: died 1768.—Mrs. Mawhood, of Pontefract, 100: died 1792.—Mrs. Ouden of Holbeck, near Leeds, 106: died 1795.—Robert Ogilvie, of Rippon, 115: died 1762.—Mrs. Pilkington, of Bicester, 107: died 1757.—John Phillipst, of Thorn near Leeds, 117: died 1742.—Sannell Paudames, of Yeddington, 105: died 1792.—Martha Preston, of Barnsley, 125: died 1769.—Eleanor Rulston, of Jurrow Quay, 102: died 1788.—Bartholomew Rymer, of Rippon, 100: died 1791.—John Shepherd of Tadcaster, 109: died 1757.—James Simpson, near Knaresborough, 112: died 1766.—Joshua Simpson, esq. of Hanslet, near Leeds, 104: died 1780.—Margaret Scurrell, of Honiton, 108: died 1784.—James Sainpser, of Ousdwick, 103: died 1791.—Mrs. Tate, of Malton, 105: died 1772.—Joseph Thompson, of Walmgate Bar, 103: died 1781.—Mrs. Todd, of Richmond, 105: died 1789.—Mr. Wright, of Hatton, 102: died 1776.—Mr. Wheatley,

of Leeds, 106: died 1780.—Mr. Whip, of Bishop Wilton, 115: died 1784.—Mrs. Wharton, of Thirsk, 103: died 1791.—Major Wilkins, of York, 100: died 1766.—Sarah Wight, of Breray, 106: died 1760.—Henry Wells, of Whitby, 109: died 1794.—Susannah Wood, of Newton upon the Ouse, 109: died 1780."

If the ensuing Numbers are as entertaining as this, there can be no doubt, but that like most magazines of this sort, the Biographia Curiosa will be very popular.

### *The Percy Anecdotes. Part III. Youth.* pp. 180.

The third monthly Number of this excellent little work has appeared, and is devoted to illustrate various sorts of precocity. We select from several hundred stories, half a dozen, as samples of the Editors' skill.

The last but one seems to indicate that they have a real existence; and that the names of Sholto and Reuben Percy are not merely assumption.

*Prince Henry, Son of James I.*—Prince Henry, the son of James I. (of England), who perished in his eighteenth year, possessed all the elements of an heroic and military character. Had he lived to ascend the throne, the days of Agincourt and Cressy would have revived, and Henry IX. have rivalled Henry V., whom he resembled in his features. This youth has furnished the subject of an interesting volume: and in the British Museum there is a MS. narrative, written by one who was an attendant on the prince's person from the age of three to thirteen years, a time of life when but few children can furnish anything worth relating about themselves.

The first time he went to the town of Stirling to meet the king, observing on the road a stack of corn, it fancifully struck him as similar in shape to the top he used to play with. "That's a good top," said he. "Why do you not then play with it?" answered one of his attendants. "Set you it up for me, and I will play with it." This is just the fancy we might expect in a lively child, with a shrewdness in the retort above its years.

Being questioned by a nobleman whether, after his father, he had rather be king of England or Scotland, he asked which of them was best. Being answered, "England," "Then," said the Scottish-born prince, "would I have both." At another time, on reading this verse in Virgil—

"Tros Tyrinæ mihî nullo discriminē agitur," the boy said he would use that verse for himself, with a slight alteration; thus:

"Anglus Scotusve mihî nullo discriminē agitur."

Even in the most trivial circumstances his bold and martial character displayed itself. Eating in the king's presence a dish of milk, the king asked him why he ate so much child's meat: "Sir, it is also man's meat."

Once taking up strawberries with two spoons, when one might have sufficed, he

† He was very temperate in his living, and used great exercise, which together with his occasionally eating a raw new-laid egg, enabled him to obtain so extraordinary an age.

James Hatfield died the same year, at the same age. He was formerly a soldier; when on duty as a sentinel at Windsor, one night, at the expiration of his guard, he heard St. Paul's clock in London, strike thirteen strokes instead of twelve, and not being relieved as he expected, he fell asleep; in which situation he was found by the succeeding guard, who soon after came to relieve him: for such neglect he was tried by a court martial, but pleading that he was on duty his legal time, and asserting, as a proof, the singular circumstance of hearing St. Paul's clock strike 13 strokes, which upon inquiry proving true, he was in consequence acquitted.

His father and mother died of the plague in their house in the Minories in 1766; and he perfectly well remembered the great fire of London. He was short in stature; had been married five times; and left 7 children, 26 grand children, 74 great grand children, and 140 great great grand children. He could read to the last without spectacles, and play at cribbage with the most perfect recollection. On Christmas day 1789, he walked nine miles, to dine with one of his great grand children. He remembered Charles II. and once travelled from London to York with the facetious Killigrew. He eat but little, and his only beverage was milk. He enjoyed an uninterrupted flow of spirits. The third wife of this very extraordinary man was an illegitimate daughter of Oliver Cromwell, who gave with her a portion amounting to about 500 pounds. He possessed a fine portrait of Cromwell by Cooper, for which a Mr. Holford offered 300 pounds, but

was refused. Mr. Hartop lent the great Milton 50 pounds soon after the restoration, which the bard returned him with honour, though not without much difficulty, as his circumstances were very low. Mr. Hartop would have declined receiving all, but the pride of the poet was equal to his genius, and he sent the money with an angry letter, which was found among the curious possessions of this venerable old man.

She had been a widow upwards of 50 years, and her faculties were unimpaired to the last. Such was her health and activity, that, when in her 77th year, she walked from Wakefield to London, a distance of 184 miles, and returned again on foot.

He was a most remarkable fox hunter, following the chase on horseback till he was 80 years of age: from that period to 100 years he regularly attended the unkenelling the fox in his single chair.

A travelling tinkler, he was married 73 years, and had 12 sons and 13 daughters, had all his senses perfect, and could see to work a short time previous to his death.

He lived under 8 crowned heads, and was able to walk till within a few days of his death. His teeth were good and his sight and hearing tolerable. At about the age of 28, being constable of his parish, he, upon some disorders, committed two of Oliver Cromwell's soldiers to the town stocks: the Protector far from resenting it, wished that every one of his police officers had but half his courage.

He was a man of good health and activity. He was game keeper to Sir Bellingham Graham, Bart. of Norton Conyers, and shot game flying in his 99th year.

gully exclaimed, "The one I use as a rapier, and the other as a dagger."

The bickerings between the prince and his tutor, Adam Newton, are amusing. When Newton wishing to set an example to the prince of heroic exercises, one day practised the pike, but with little skill, the prince taunted him on his failure. Newton obviously lost his temper, and observed, "That to find fault was an evil humour." "Master, I take the humour of you," "It becomes not a prince," observed Newton. "Then," retorted the prince, "doth it worse become a master."

The tutor once irritated at losing a game at which he was playing with the prince, said, "I am meet for whipping boys." "You vaunt then," retorted the prince, "that which a ploughman or cart driver can do better than you." "I can do more," said the tutor, "for I can govern foolish children."

On this the prince, who in respect for his tutor would not carry the jest farther, rose from the table, and in a low voice, said to those near him, "He had need be a wise man that could do that."

A musician having played a voluntary in presence of the prince, was requested to play the same again. "I could not for the kingdom of Spain," said the musician; "for this were harder than for a preacher to repeat word by word a sermon that he had not learned by rote." A clergyman standing by observed, that he thought a preacher might do that. "Perhaps," rejoined the young prince, "for a bishoprick."

One of his servants having cut the prince's finger, and sucking out the blood with his mouth, the young prince said to him pleasantly, "If, which God forbid! my father, myself, and the rest of his kindred, should fail, you might claim the crown, for you have now in you the blood-royal."

In one of the prince's excursions into the country, having stopped at a nobleman's house, the prince's servants complained that they had been obliged to go to bed supperless, through the parsimony of the house, which the little prince at the time of hearing seemed not to notice. The next morning the lady of the house coming to pay her respects to him, found him turning a volume that had many pictures in it; one of which was a painting of a company sitting at a banquet: this he shewed her. "I invite you, madam, to a feast." "To what feast?" she asked. "To this feast," said the boy. "What, would your highness give me but a painted feast?" Fixing his eye on her, he said, "No better, madam, is found in this house." There was a point in this ingenious reprimand, far exceeding the wit of a child.

Such are a few of the anecdotes of a prince who died in early youth, gleaned from a contemporary manuscript, written by an eye and ear witness. They are trifles, but trifles consecrated by their genuineness, and by the rank of the individual to whom they relate.

*Ignorance of fear.*—A child of one of the crew of His Majesty's ship, Peacock, during

the action with the United States vessel, Hornet, amused himself with chasing a goat between decks. Not in the least terrified by destruction and death all around him, he persisted, till a cannon ball came and took off both the hind legs of the goat; when, seeing her disabled, he jumped astride her, crying, "Now I've caught you." This singular anecdote is related in a work called, "Visits of Mercy, being the second journal of the stated preacher to the hospital and almshouse, in the city of New York, by the Rev. E. S. Ely."

*Lord Thurlow.*—This eminent lawyer's superiority of abilities was very early manifested both at school and at college. They extorted submission from his equals, and impressed his seniors with respect. The following anecdote is told of him. Having been absent from chapel, or committed some other offence which came under the cognizance of the dean of the college, who, though a man of wit, was not remarkable for his learning; the dean set Thurlow, as a task, a paper in the Spectator to translate into Greek. This he performed extremely well, and in very little time; but instead of carrying it up to the dean, as he ought to have done, he took it to the tutor, who was a good scholar, and a very respectable character. At this the dean was exceedingly wroth, and had Mr. Thurlow convened before the Masters and Fellows to answer for his conduct. Thurlow was asked what he had to say for himself. He coolly, perhaps improperly, replied, "that what he had done proceeded not from disrespect, but from a feeling of tenderness for the dean; he did not wish to puzzle him!" The dean, greatly irritated, ordered him out of the room; and then insisted that the Masters and Fellows ought immediately to expel or rusticate him. This request was nearly complied with, when two of the Fellows, wiser than the rest, observed, that expelling or rusticating a young man for such an offence would perhaps do much injury to the college, and expose it to ridicule; and that as he would soon quit the college of his own accord to attend the Temple, it would be better to let the matter rest, than irritate him by so severe a proceeding. This advice was at length adopted.

Thurlow was not forgetful of the kindness which he experienced on this occasion. When he rose to the woolsack, he procured for one of the gentlemen who recommended lenient measures, the Chancellorship of the Diocese of Lincoln.

Such was the consciousness which Thurlow felt of his towering abilities, that long before he was called to the bar, he often declared to his friends that he would one day be Chancellor of England; and that the title he would take for his peerage would be Lord Thurlow, of Thurlow.

*Lord Nelson.*—Lord Nelson was, from his infancy, remarkable for his disinterestedness and intrepidity. When at School at North Walsham, the master, the Rev. Mr. Jones, had some remarkably fine pearls which his scholars had often wished for; but the attempt to gather them was in their opinion so hazardous, that no one would

undertake it; when Horatio, on seeing all his companions staggered, came forward and offered to brave the danger. He was accordingly lowered down from their dormitory by some sheets tied together; and thus, at a considerable risk, secured the prize; but the boldness of the act was all that the young adventurer regarded; for on being hauled up again, he shared the pearls among his school-fellows, without receiving any for himself; and added, *I only took them because every other boy was afraid.*

It is also related of him, that, at an earlier period, and when he was quite a child, he strayed from his grandmother's house, at Hilborough, after birds' nests, with a cow-boy. The dinner hour arriving without his appearance, the alarm of the family became very great, for they apprehended that he had been carried off by the gipsies. Search was instantly made in various directions; and at length he was discovered, without his companion, sitting with the utmost composure by the side of a stream which he had been unable to pass. "I wonder, child," exclaimed the old lady, on seeing him, that hunger and fear did not drive you home." "Fear never came near me, grandmamma!" replied the infant hero.

*Scientific Sagacity.*—In the winter of 1790, as a number of boys were skating on a lake in a remote part of Yorkshire, the ice happened to break at a considerable distance from the shore, and one of them unfortunately fell in. No house was near, where ropes or the assistance of mere aged hands could be procured, and the boys were afraid to venture forward to save their struggling companion, from a natural dread, that where the ice had given way, it might give way again, and involve more of them in jeopardy. In this alarming emergency, one of them, of more sagacity than the rest, suggested an expedient, which for its scientific conception, would have done honour to the boyhood of a Watt or an Archimedes. He might probably remember having seen, that while a plank placed perpendicularly on thin ice will burst through, the same plank, if laid horizontally along the ice, will be firmly borne, and afford even a safe footing; and applying with great ingenuity and presence of mind, the obvious principle of this difference to the danger before them, he proposed to his companions that they should lay themselves flat along the ice, in a line one behind another, and each push forward the boy before him, till they reached the hole where their playmate was still plunging, heroically volunteering to be himself the first in the chain. The plan was instantly adopted, and to the great joy of the boys, and their gallant leader, they succeeded in rescuing their companion from a watery grave, at a moment when, overcome by terror and exertion, he was unable to make another effort to save himself. Reader, excuse a tear of gratitude. The name of the boy saved was—REVEREN PERRY.

*An apt Version.*—The late Dr. Adam, Rector of the Grammar School, Edinburgh, was supposed by his scholars to exercise a strong partiality for such

us were of patrician descent; and on one occasion was very smartly reminded of it by a boy of mean parentage, whom he was reprehending rather severely for his ignorance—much more so than the boy thought he would have done, had he been the son of a *right honourable*, or even of a plain Bailie Jarvie. "You dunce!" exclaimed the rector, "I don't think you can even translate the motto of your own native place, of the *gude town* of Edinburgh. What, sir, does '*Nisi Dominus frustra*' mean?" "It means, sir," rejoined the boy smartly, "that unless we are lords' sons, we need not come here."

ANALYSIS OF THE JOURNAL DES SAVANS,  
FOR OCTOBER, 1819. (*Concluded.*)

Art. V. Voyage en Persie, fait dans les Années, 1807, 1808, 1809. 2 vols. 8vo.

This work, though published anonymously, is known to be the production of Mr. Adrien Dupré, who was attached to the legation of General Gardane.

In the space of 18 months, *i. e.* from 8th of September 1807 to the 1st of May 1809, the author, proceeding from Constantinople through Asia Minor, &c. to Bagdad, thence to Hamadan, Isfahan, and Selkiraz, from which latter city he made several excursions, traversed the most remarkable provinces of the Persian empire in different directions, visited a great many cities, and resided in the most celebrated. He had abundant opportunities of making good and useful observations, and we must do him the justice to say that he has neglected none of those which, being relative to the details of the route, the productions of the country, or objects of trade, may be of some advantage to commerce and geography.

Among the most interesting parts of the work, are the detailed account of the Casmire shavies; the statement of the military tribes established in Persia; a highly important table of the weights, measures, and coins, in use in the different provinces of that Empire; and a chapter, containing not only the itineraries of the route of the author, but also thirty-seven others, which give the distances of a great number of towns and villages in Persia, and even of the neighbouring countries.

Mr. Dupré is now engaged in a second work; *viz.* his "*Voyage à la côte des Akkas*," which will doubtless contain interesting information respecting a country of which we know very little.

Art. VI. Note on some Epithets descriptive of Bouddha, by Mr. Abel Remusat.

Though an enquiry into the denominations by which the Hindoos designate their divinities be in general futile, because there is often reason to believe them arbitrarily invented by the poets, there are however some, so consecrated by custom, that they must be considered, not as mere rhetorical ornaments, or means to fill up a hemistich, but as the expression of a well established opinion on the attributes of the being to whom they are applied. Of this nature are the epithets descriptive of Bouddha, the

number of which is very considerable; but which, being all taken from the books considered as sacred, and alluding either to traits in the life of this mythological personage, or to the attributes which serve to characterise him, cannot have been changed since they were invented, and serve to designate him in litanies, invocations, and legends, in a fixed and invariable manner. In the 4th volume of the *Mines of the East*, I gave a very complete list of these epithets, from the most authentic sources: I now return to the subject, to seek the solution of a question, which has engaged some systematic writers in Europe, and which, by a singular chance, is connected with the great question of the origin of the arts, civilization, and religions of the East.

The celebrated Sir William Jones, whose authority must be allowed great weight in subjects relative to the literature of Persia and Hindoostan, but whose discourses at the annual meetings of the Society of Calcutta, should, in my opinion, be read with great distrust, in what relates to the antiquities of Asia, is, I believe, one of the authors who have spoken in the most express manner of statues of Bouddha with frizzled hair, evidently made, says he, "*with the design of representing him in his natural state.*" This is one of the particulars adduced by the ingenious author in the number of incontestible facts; it is indeed, we may say, the only one, which he points out among these facts, which, according to him, authorize us to think, that Ethiopia and Hindoostan were peopled by the same race. "It may be added, in support of this idea, (continues he) that it is difficult to distinguish the mountaineers of Bahar and of Bengal, in some of their features, especially the lips and the nose, from the modern Abyssinians; and that according to Strabo, the ancient Hindoos differed from the Africans only in having their hair straight and smooth, while that of the Africans was woolly or curled; a difference which proceeded chiefly, if not entirely, from the respective humidity or dryness of their atmosphere." I shall not dwell on the material error contained in these last words, which, after the labours of modern naturalists, needs no refutation. In what precedes, too, I shall only take the assertion relative to Bouddha, which would tend to make us consider him as having been, in the opinion of his worshippers, an Ethiopian, foreign to the Indian race—a real African negro, with thick lips, a broad flat nose, and frizzled hair.

I shall draw my proofs exclusively from the writings of the Bouddhaists themselves; and I need not remark, how greatly superior their authority is to that of the literati of Europe, and even to the authors attached to the worship of Brahma, the only ones who have been consulted by the English authors.

In these books we find the different names given to Bouddha, arranged and distributed in sections; the first contains 58: but these names express, almost all of them, the moral perfections and powers of Bouddha, considered as a divinity: *Deatitiera*, the

God of Gods; *Dharmasasudimi*, the honourable King of the Doctrine; *Mahdmd*, the Great Saint; *Narzottamah*, the most Exalted of Men; *Guananagarah*, the Sea of Virtues, &c. These denominations, therefore, do not furnish us with any data adapted to the subject before us.

But the Bouddhaists have not confined themselves to the enumeration of the moral qualities, in which this principal divinity is superior to all others; they have also made a description of the corporeal qualities which distinguished him in his human form, and have composed a series of phrases, from which it is possible to draw a complete portrait of Bouddha, considered as a material and terrestrial being. In this point of view, they have assigned him 32 visible qualities, and 80 sorts of beauties. Here it is natural to look for the features, which it would be necessary to know, in order to determine to which of the varieties of the human species the personage may have belonged, who has been worshipped since his death by the name of Bouddha. Now far from finding in this collection of 112 phrases, destined to the description of his human body, any thing resembling the figure of the negro, which it is so easy to characterise, and so difficult to mistake, we observe in this number several features which evidently belong to the Indian race, and which it is impossible to apply to that of the negroes of Africa.

Mr. Remusat quotes \* several of those phrases; Bouddha is called "*with the golden complexion*," which must doubtless be understood of the olive colour of the Hindoos, and not the black of the negro: *his body was without spot, and brilliant; his nails red like copper; his lips rose like the fruit called bimba. His hair was in rounded curls*, which, in figures of Bouddha, executed by unskillful artists, may have been taken for frizzled hair; but as if it had been intended to provide against this interpretation of the word curls, we find another epithet which fixes the sense of it. The hair of Bouddha was not mixed or frizzled. Lastly, which is decisive, he is stated to have had a prominent nose, which might probably be equivalent to aquiline, but most certainly cannot be applied in any manner to the broad flat nose of the African negroes.

Mr. R. appeals to persons acquainted with the language for the exactness of his explanation of the Sanscrit phrases which he has translated, not directly, but through the medium of the Chinese, the Mongol, and the Mandchou. He has chosen only such as appeared the most characteristic: but on looking over the others in his translation of that part of the book which contains them, (*s. Mines of the East*, vol. 4.) there are many which it would be equally difficult to reconcile with the idea of Sir W. Jones, and certainly not one that favors it.

Declining to make use of any of the nu-

\* Mr. Remusat states that he has made use of Chinese, Mongol, and Mandchou translations of the books of the Bouddhaists, and quotes in those languages the phrases which he selects to illustrate his opinions. *Ed.*

merous legends in which Boudha is made to act a part which is wholly fabulous. Mr. R. observes, however, that it is worthy of remark, that no feature in any of those legends has the slightest relation to the foreign physiognomy which some would attribute to Boudha, and that he is always represented with a degree of beauty equal to his power. If Mr. R. had not contented himself with repeating the opinion of Sir W. Jones respecting the negro features attributed to Boudha, he might easily have accumulated proofs of another kind, that he was not an Ethiopian come from Africa to Hindoostan, but, that his birth being once admitted as an historical fact, all the traditions, without exception, agree in placing it in one of the kingdoms of central India. This is a fact established by too many testimonies, all concurring, though independent of each other, to render it necessary to dwell upon it. Even should some statues of Boudha have frizzled hair, there are many ways of explaining this fact, and an English gentleman furnishes us with one, which is perhaps not the worst. In a notice upon the *Djainas* drawn up and translated at Madjori, by the Bramin Cavelly-Boria, from documents furnished by a priest of that sect it is asserted that the *Mahdantas*, or ascetics, of the second class, must not use razors, but employ their disciples to pull up their hair by the roots. On which Major C. Mackenzie, remarks, that these sectaries attribute to the effects of this operation the appearance of the heads of their *Gourous*, which the Europeans have supposed to represent curled or frizzled hair. This is an explanation which would dispense with our making Boudha a negro with woolly hair. Were it certain that this god had received from ancient times the name of *Mali*, which is given in the *Vyacurna*, not to the legislator Boudha, but to the genius of the planet Mercury, and which does not mean black, as P. Paulin de S. Barthelemi thought, but spotted, and which at all events, might very well have been given to inhabitants of Dukschin by the Indians of the north, a fact of this nature would surely not deserve to be reckoned among the particulars which may make known the history of Indian civilization, and authorise us to think that it may have been brought from Ethiopia to Hindoostan, and had its origin among the negroes. Such trifling circumstances are not calculated to throw light on such extensive and complicated questions. The affinity which seems to exist between several points of the religions and the institutions of India and Egypt, gives rise to important and difficult problems; but it is not by alleging some specious arguments, or by indulging in reflections in which there is always something superficial, that these problems can be solved.

## ARTS AND SCIENCES.

### THE TURQUOISE.

Dr. Gotthelf Fischer, Professor of Natural History in the University at Moscow,

has lately made some inquiries into the subject of the Turquoise, which seem to us to possess considerable novelty: we are indebted for the knowledge of them to the *Asiatic Journal*.

Turquoise, is a name which has been erroneously given to two different substances; the oriental turquoise being a true stone, a clay coloured by oxide of copper, or even by arseniate of iron; and the common turquoise, occidental turquoise, or turquoise adolopite, being a fossil, a petrefaction, a tooth, or a bone, coloured by a metallic phosphate; and not belonging to the mineral kingdom at all.

We imagine that very few persons are aware of this distinction. The former is the *Calaité* or *borea* of Pliny, in his chapter on opaque blue gems, lib. 37, c. 8; and no doubt the *καλαίς* and *καλλαις* of the Greeks. Mr. F. restores the appellation Calaité, and claims a place for this substance among the minerals or stony bodies to which it pertains, and from which it has only been excluded by the more generally known turquoise of Europe, properly described by Reaumur as a tooth coloured by copper. Indeed every part of a skeleton may be converted into turquoise, when placed in contact with coppery bodies, and especially with phosphate of copper. The Calaité, or Oriental Turquoise, is found in several mines in Persia, where it is highly valued. Pure stones of the size of a pea are difficult to be procured; those of the size of a nut are extremely rare. The Persians, Afghans, and other Asiatic nations, use them as amulets, for ornamenting their creases, and for the usual purposes of jewellery. There are some varieties.

The turquoise with which we are all more familiar, it is now proposed to designate as the odontolite; as, though the whole animal may be rendered turquoise by being penetrated and coloured by metallic oxides, particularly by copper, the teeth alone, owing to their hardness, are capable of becoming turquoises in the full acceptance of the word. Many teeth of unknown animals have been found so converted in copper mines, &c. but the principal deposits for the formation of these precious bodies are in France. Furnaces, and a process (kept secret) are employed to produce this artificial turquoise, which is, however, distinguished from the real stone by being less hard, by losing its colour in distilled vinegar, and by dissolving completely in nitric acid. The true Calaité withstands these tests, and bears a finer polish.

## LEARNED SOCIETIES.

### OXFORD, FEB. 12.

On Saturday last the Rev. Edward John Burrow, B.D. of Trinity College, was admitted Doctor in Divinity, grand couponder.

On Thursday last the Rev. Samuel Hall, M.A. Fellow of Brasenose College, was admitted Bachelor in Divinity; and the Right Hon. Dudley Ryder, Viscount Sandon, Nobleman of Christ Church, was admitted Bachelor of Arts.

## ROYAL IRISH ACADEMY.

January 24th, 1820. *Papers Read.*

A method of computing Astronomical Refractions for small Altitudes, by the Rev. John Brinkley, D.D. and M.R.S.A. Archdeacon of Clogher, and Andrews Professor of Astronomy in the University of Dublin.

The object of this paper is to deduce, by means of a modification of the result of the hypothesis, of a density decreasing uniformly by a very simple investigation, the refraction, at any low altitude, corresponding to any heights of the barometer and thermometer. Hence tables are deduced for zenith distances between 80° and the horizon which scarcely yield in simplicity to the French tables, and enable us to obtain the quantity of refraction as changed by the weight and temperature of the atmosphere in which, near the horizon, the French tables appear entirely to fail. The author takes occasion, in a note, to correct a slight mistake, into which Doctor Young seems to have fallen, with respect to an expression used by Archdeacon Brinkley, in his paper, "On the Analytical Investigation of Refraction," published in Vol. XXII. Trans R. S. Academy.

On the Inscription of Regular Polygons in a Circle. By Samuel James, Esq. communicated by the Rev. F. Sadler, D.D. M.R.S.A. Secretary to the Academy.

This paper contains the mode of inscribing geometrically a polygon of 17 side in a circle. The author introduces his construction by remarks on this branch of geometry, which had remained almost without attention from the time of the Greek geometry till, in the year 1801, M. Gauss, in his "Disquisitiones Arithmeticae," called the attention of the scientific world to the subject, and proved the possibility of inscribing in a circle a such regular polygons as have the number of their sides expressed by  $2^n + 1$ , being also prime number. The construction, however, for these polygons, has not as yet been made public.

On the development of the series for the Sine or Cosine of Multiple Arcs. By Humphrey Lloyd, Esq. Undergraduate in Dublin College. Communicated by the Rev. J. J. Singer, Secretary to the Academy.

The object of this paper is to deduce, from elementary algebra, the expressions for the sine and cosine of multiple arcs, in terms of the sine or cosine simply, which had hitherto not been effected without fluxion. They are derived from the expansion of De Moivre's formula, and the author has annexed some other analytical expressions calculated to show the utility of that theorem.

An Analysis of the Cynecetics of Oppian. By the Rev. W. H. Drummond, LL.B. M.R.S.A.

This paper is properly a continuation of one read to the Academy during the last year, on the life and writings of this neglected Greek poet. Doctor Drummond has given in his analysis, which is very full, many passages abounding with high poetic beauty and very interesting to the naturalist, as con-

taining a fair specimen of the knowledge of Natural History, which had been acquired at the time of Oppian.

## FINE ARTS.

## THE BRITISH GALLERY.

This attractive exhibition has been shut in consequence of the Royal demise: if we form an estimate of the state of the Arts in this country sixty years ago, by what is transmitted from that period, and then cast our eye over these walls, we must be prone to acknowledge how much they have advanced under the beneficent sceptre of George the Third. With but very few brilliant exceptions, which may almost literally be said to belong to the early years of the last reign, painting and sculpture were generally at a low ebb in England. Since then many bright stars have risen and set; and, at this day, our country stands, we presume to affirm, without dispute, the highest on the national scale of excellence in the cultivation of the Fine Arts. The theatrical airs, and exaggerated anatomy of France; the imitative feebleness of Italy; the deep sleek of Flanders and Holland; and the hardly ennobled talent of other states, whence war has scourged the nobler pursuits of humanity, present nothing to compare with the various and exuberant wealth of our British school. Far be it from us to deny the highest attributes of genius to individual foreign artists; but setting nation against nation in the glorious competition, we repeat, with pride and triumph, that there is none to match Great Britain.

From this general view it behoves us to let ourselves gradually down to particulars, deserring perhaps of some remarks.

The yearly accumulation of art, while it develops and displays more talent and progressive improvements, must also increase the struggle of contemporary merit: we feel the shackles imposed on us by repeated observations upon like subjects; and impediments much more difficult to be overcome must arise from the same cause to painters, whose task it is not merely to express an opinion, but to create a work which shall differ from the multitude thus annually produced. We are embarrassed, they must be disheartened; we are perplexed what to say, they can scarcely be able to tell what to do. In our dilemma, the points at which we have principally aimed, throughout our many criticisms, have been the interests of the artist, the development of the principles of painting, and the direction of the public. The nature of the theme must necessarily lead to a recurrence of technical terms, which the lovers of art, visiting the exhibitions, may be supposed sufficiently to understand, but by which our distant and general readers can be little informed. In the choice now offered us, and never were the materials of which a modern gallery was composed in our time more worthy of attention) we feel it our duty to be select, and to mark only pictures of distinguished excellence for regard. In so

doing, we shall further endeavour to check what appears to us to be an excess which has grown out of public notice, and which can only end in disappointment and mortification to thousands who engage in the profession from mistaken impressions, either arising from the facilities afforded to the study of art, or the encouragement obtained by a few; to these it may be proper to observe, that mediocrity must sink in neglect; and in the warning voice of Mr. Fuseli, exclaim, "It is better to deter than to deceive."

There are above 300 paintings in this year's collection, and several pieces of sculpture. The contributors amount in number to more than one hundred and fifty, and include many names of the foremost celebrity, as well as youthful aspirants to fame. A good many of the subjects have been exhibited before, but they are new (we calculate roughly) in the proportion of ten to one; so that besides old friends with new (varnished) faces, we find novelties enough to captivate our senses. Next week we shall resume these strictures, and notice particular works.

ROYAL ACADEMY.—Last week Mr. Abraham Cooper and Mr. William Collins were elected Members of the Royal Academy, in the room of the late Messrs. M. Lloyd and E. Bird. The former, Mr. Cooper, has raised himself from humble life to this distinction by the mere dint of extraordinary talents; and his animal paintings, for truth and spirit, have rarely been excelled. The latter, Mr. Collins, has no superior for delightful landscape; his coast-scenes are almost always peculiarly beautiful, and his figures finely introduced.

## MUSEUM OF THE CROWN PRINCE OF BAVARIA.

Munich, Jan. 6th.

Yesterday the celebrated Faun of the Palace of Barberini, purchased by his Royal Highness the Crown Prince, happily arrived here without being damaged. After this colossal mass of marble had safely passed over the Appennines and Tyrolean mountains, a delay of eight days was occasioned by a bridge near Kufstein, which was unable to bear the weight: but soon were all obstacles overcome, and the chest is now placed in one of the saloons of the Museum. The collection of our Crown Prince has now, exclusive of the *Egna* statues, two works of art, which after the *Torso* and the fragments of the *Parthenon*, according to our opinion, bear most evidently and incontrovertibly the stamp of Grecian originality and perfection, namely, this Faun and the celebrated statue of the Son of Niobe, bought at Vienna. But that these two masterpieces do not stand alone here, appears from a list of some of the works which are placed in two saloons, where, besides above twenty other fine works, we see the celebrated *Medusa*, from the Palace of Rondanini; the colossal *Pallas*, from the Villa of Albani; the colossal *Muse* of *Ageladas*, from the Barberini Palace; the beautiful *Venus*, from the Palace Bracchi; the well known *Vaccarellas*; two *Uras*,

found in Athens and Rhodes, of Grecian antique workmanship; the *Jason* tying his Sandal; the colossal *Heros* from the Barberini Palace; excellent *Hermes* of *Xenocrates*, *Xenophon*, *Miltiades*, *Socrates*, and the remarkable statue of *Alexander*, from the Palace Rondanini. This collection now consists of more than two hundred articles.

## ORIGINAL POETRY.

## A SCENE.

"There is a ban upon me.—The thick air  
Parches my brow, and in my haggard eye  
There lives a glassy splendour: woe's a shrink,  
And children fly me: nay, immortal man  
Bestows a curse (unask'd) upon the wretch  
Whom ruin has blasted. Look upon me well,—  
Am I unlike the thing I was? or has  
The breath of those who raised me to the skies  
Been tainted?—Would ye know my story?—  
Listen.

I am a wretch of desperate fortunes; main'd'd,  
And touch'd by plague and burning pestilence,  
(Tho' harmless now) and rack'd by inward pains.  
But more by pondering on the scenes of joy  
Long past and gone-for ever.—I have lost  
What made this earth a paradise,—the wife  
I lov'd and worshipp'd like the heavens.—She's  
gone:

Aye, dead and mouldering like the common soil  
You tread upon—but this I might have borne,  
Tho' hard; but she was slain, polluted, torn,  
With all our children from their home, to ruin.  
I liv'd and turn'd a madman. How I laugh'd  
At all the slanders that the world cast on me!  
And when they beggar'd me I laugh'd, and bit  
My chains, and shriek'd in horrid jubilee.  
They bound me to the slimy ground, and none  
Of all I had befriended lent me comfort.

My limbs were rag and riven: my frame grew  
parch'd—  
And, like a madden'd hound, my tongue roll'd  
out,

Foaming;—but no one sooth'd, The loathsome  
toad  
Is stamped on; so was I.—My heart was struck,  
And I was brandish'd thro' the living world,  
A villain half condemn'd. The rabble shrank  
From one so vile; but I was innocent.  
Let me not talk of this.—I rave, I rave.

'Tis well I do at times, for that upholds me.  
Look at you drivelling idiot—he is happy.  
You foam orator.—Is he wretched?—No.  
But I have partial glimpses of the past,  
That come like burning sun-beams: aye, and  
dart

Scorching, right through my brain. My flesh is  
gone;

It withers and wastes away; and thro' my heart  
A knife is driven, altho' you see it not.  
I'm shaven to the crown, and my dark hair,  
(I was so proud of it!) was torn away,  
To make me quite a mockery: but I bear it,  
And will bear more—much more."

—Thus from his straw,  
Shriek'd one poor, frenzied wretch, whose look,  
methought,

Spoke somewhat strangely of nobility.  
His eye was glass'd and wide, and rang'd about  
his prison. On his bony limbs he wore  
Rude fetters; and his hands were clench'd, as  
tho'

He felt internal pains: then he breath'd hard,  
And look'd half upward in reproach, and turn'd  
A wistful, piteous eye on me.—I strove  
To sooth; but he grew weaker every hour;

And now and then he smil'd in bitter anguish.  
There seem'd a rapturous, terrible joy, like one  
About to roam in freedom. Hope was gone :  
That had departed with belief ; and he  
Gaz'd like a dying comet on this world,  
Fearless of that to come.—Now his blue lip  
Seem'd losing all its colour, and a film  
Spread like a subtle web across his eye.  
Slowly. His nose grew white ; and yet the  
breath

Thro' the distending nostrils whistled hard,  
Like gusts of wind, at prolong'd intervals.  
He grasp'd his rug and strove to rise,—in vain.  
We lifted him, and then he gasp'd and groin'd,  
And open'd wide his mouth.—The sounds were  
hoarse,

And half resembled words a learner utters.  
He shook his head, and fell against my arm  
With all his weight. A while I held him there,  
And now and then look'd at his moisten'd brow,  
And spoke some words of comfort. He was  
still silent :

But he gazed steadfastly upon the wall,  
Where he had once sketch'd curious images.  
This lasted long. I spoke again, but he  
Still answered not, but gasp'd and gasp'd.—At last  
I looked more closely at him, and I found  
I had been holding in my arms—a corpse.  
W.

[By Correspondents.]  
TO PITY.

Kind Pity, daughter of the skies,  
Where'er thy plaintive voice we hear,  
The echo is our bosom sighs,  
And the bright token is a tear.

Where want and poverty reside,  
Where sorrow sits apart to mourn ;  
Shunn'd by the "glittering sons of pride,"  
Thy sympathetic footsteps turn.

Oh ! may thy presence never cease  
To light the shade of human woe ;  
To shed the dawn of Hope and Peace  
On man's brief narrow space below.

D—

## THE DRAMA.

All the theatres reopened on Thursday : Drury Lane with a selection of music and several addresses on recent events ; Covent Garden with additional verses, by Colman, to the national air of God save the King ; the Surrey with a solemn dirge ; and others with various tributes of public feeling.

## VARIETIES.

The following is a list of the receipts of the different Theatres of Paris, during the year 1819 :—

Academie Royale de Musique, 522,786 francs ; Comedie-Française, 679,342 fr. ; Opera-Comique, 694,571 fr. ; Second Theatre-Français, 256,453 fr. ; Opera-Italian, 245,76 fr. ; Vaudeville, 511,228 fr. ; Variétés, 605,173 fr. ; Gaîté, 460,988 fr. ; Ambigu-Comique, 406,184 fr. ; Cirque-Olympique, 295,568 fr. ; Porte-Saint-Martin, 501,917 fr. Total, 5,082,881 fr. Eleventh of the profits for the poor, 462,080 fr. ; a twentieth, levied on the Secondary Theatres, for the support of the Opera, 134,203 francs.

There is a remarkable vegetable curiosity in the Department of Moselle ; namely an elm, planted near the church of Bettange.

The trunk of this tree measures fourteen feet in diameter one way, and between seven and eight the other. It is hollow, but the cavity is divided by concentric partitions formed of ligneous layers which have resisted decomposition. These partitions are so widely separated one from the other, that a man may pass between them.

According to local tradition, this tree has existed since the time of the Druidical worship, to the ceremonies of which it was consecrated.

THE ARCTIC EXPEDITION.—Accounts, via Montreal, purporting to announce the arrival at the mouth of the Copper-mine River, of the expedition sent out last year to explore Baffin's Bay, have been published in a Dublin paper. The authenticity of this relation seems to be more than problematical, and we are sorry to suspect that it is an invention, the more discreditable as the dearest private feelings, as well as public interests, are wrapt up in the fate of the gallant navigators on board of the discovery ships. But even supposing the story to be true, the fact established would not go far towards the solution of the great geographical question at issue. It has long been thought probable, that the Copper-mine river ran into an arm of Baffin's Bay stretching more to the westward than is laid down in charts ; and the extreme uncertainty of the observations of Mr. Hearne tend greatly to strengthen the conjecture ; since neither the direction of the river, nor the degree of longitude of its mouth, are at all established by his statements. It may, for aught we know, flow much more to the east than is supposed ; and when the shortness of the degrees in this latitude are considered, it requires no great hypothesis to believe that an expedition might reach this point from Baffin's Bay, and be nevertheless as unlikely as before to arrive at Belur's Straits.

The *Savage of Java*.—It is stated in a letter from a traveller in Batavia, that a savage has been found in the woods of the island ; it is thought that he must have lost himself in the earlier part of his youth, and he now seems to be about thirty years old. He speaks no articulate language, but hells like an animal, or rather larks, for his voice is like that of a dog. He runs on all fours, and as soon as he perceives any human being, he climbs up a tree like a monkey, and springs from one branch to another. When he sees any bird or game, he catches at it, and very seldom misses his prey. As yet he has not been able to accustom himself to the usual mode of living and food of the human species.

A French amateur already known for the services he has rendered to the fine arts, has procured a collection of the fine compositions of sacred music, which are annually performed during passion week in the Pontifical Chapel at Rome. He intends to have them performed publicly in Paris during passion week.

A model of a plough has been shipped on board the *Jeanne-Louise*, bound for Havre, from the United States. This plough, which has been recently adapted throughout all

the northern parts of America, is to be submitted to the examination of the Royal Agricultural Society of Paris. It is expected that it will afford important advantages to rural economy.

## LITERARY NOTICES.

Mr. Sharon Turner's third edition of the History of the Anglo-Saxons, is nearly ready. It will contain (we are informed) the addition of several observations and dialogues of our King Alfred, on the subjects discussed by Boethius—a fuller analysis of the heroic poem on Beowulf—a larger view of the Witen-gemot, or Anglo-Saxon Parliament—and a detail of the population of the Anglo-Saxons.

## METEOROLOGICAL JOURNAL.

FEBRUARY, 1820.

Thursday, 10.—Thermometer from 35 to 47.  
Barometer from 30, 04 to 30, 21.

Wind S. W. and N. W. 1.—Generally cloudy till noon, when it became clear.

Friday, 11.—Thermometer from 29 to 44.  
Barometer from 30, 29 to 30, 21.

Barometer from 30, 47 to 30, 41.

Wind N. E. 3. and S. E. 1.—Generally clear. A white frost and thick time in the morning.  
Edmonton, Middlesex. JOHN ADAMS.

TO OUR SUBSCRIBERS.—Complaints of irregularities in the transmission and delivery of the *Literary Gazette* have reached us ; for none of which, it is possible that our own Office may have been responsible ; but the neglect generally lies with the persons to whom the orders of which we have no cognizance, are given. We have, however, enforced a new and more regular system, and may securely promise, that henceforward the utmost punctuality on the part of our publishers may be relied on. In other cases, we are not, that the parties employed need only have the complaint against what is wrong made to them, to rectify it. Any friends disappointed through past negligence, we shall be happy to satisfy. Title pages for the volume for 1819, have been sent to Mr. Milliken, Bookseller, Dublin ; where they may be had gratis by our Subscribers in Ireland Upon application, we will do the same in Edinburgh, or any considerable place in England where wanted for binding up the *Literary Gazette*.

### Miscellaneous Advertisements, (Connected with Literature and the Arts.)

#### British Gallery, Pall Mall.

To be viewed three days preceding.

#### New Library.

THE new select patronage bestowed upon FARMAN'S ESTABLISHMENT is the best proof of the superior excellence of the New System. The principal feature of the plan is to prevent disappointment, insuring Subscribers every New Work as soon as published. Terms of subscription to be had at the Library, 179, New Bond-street, next the Clarendon Hotel.

### BOOKS PUBLISHED THIS DAY.

#### Holt's Life of Sir Isaac Newton.

In 8vo, Price 8s. Part I. (to be continued weekly), of THE PUBLIC and DOMESTIC LIFE of his late Most Gracious Majesty, GEORGE the THIRD; comprising the most eventful and important period in the whole Annals of British History; compiled from authentic Sources, and interspersed with numerous interesting Anecdotes. By EDWARD HOIT, Esq. London: Printed for Sherwood, Neely, and Jones, Paternoster Row; and sold by all Booksellers.

At its expected, this valuable work will be completed in Seven Parts. By a very large page and close printing, it will contain as much matter as is usually found in Three Volumes of a similar size. It will be neatly printed on good paper, and embellished with about thirty highly-finished Portraits of the most distinguished public characters of the Reign, engraved by Brown, Cardon, Beaumont, and others, from Paintings by Sir William Beechey, Reynolds, Oyle, and other eminent Artists.

**MY OPINIONS SINCE THE PEACE.** By Sir ROWLAND OLDACRE, Bart. Price 1s. 6d. The nation trembles at each blow.

That No give Aye, and Aye give No.

Printed for Longman, Hurst, Rees, Orme, and Brown, Paternoster Row.

#### In 8vo. price 8s. boards.

**AN HISTORICAL and STATISTICAL ACCOUNT of the PRINCIPALITIES of WALLACHIA and MOLDAVIA**, including various Political Observations relating to them. By WILLIAM WILKINSON, Esq. late his Britannic Majesty's Consul to the above-mentioned Principalities. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, recently published, Germany since the Revolution, by Professor Guizot, late Editor of the 'Rheinisch Mercury.' Translated from the German, by John Black. 8vo. 16s. 6d. 16s.

#### Just published, price 1s.

**THE TRIBUTE of a Friend to the Memory of WALTER DARBY, Esq. JOHN'S College, Oxford.** By N. T. M. BAYLY, Esq. May Hall, Oxford. Printed for J. Vincent; sold by Barratt, Bath; and Sherwood, Neely, and Jones, and Hatchard, London. Where may be had, by the same Author, Small Talk, price 1s.

#### In 8vo. price 8s. 6d.

**THE HECUBA, ORESTES; PHENICIAN VIRGINS; and MEDEA of EURIPIDES**, literally translated into English, from the Greek Text, by J. Porson. Printed for D. A. Talbot, Oxford; and sold by Longman, Hurst, Rees, Orme, and Brown, London.

#### For Schools.

Just published, 12d. 6d. octavo, bound.

**HOMER'S ILLIAS; a new Edition, with English Notes.** This is a very compact and useful edition of the Iliad, for the use of Schools. The force of the Poet's, a distinguishing beauty of the Grecian poet, is well pointed out. It will be found, by every all comparison, the best edition for the use of Schools, at present extant.—*Antiquarian Review*, September, 1819.

This is, perhaps, the most useful edition of the *Macranean* bard, that has yet made its appearance. It is also critical in an eminent degree, and contains a judicious and well-written account of the digamma, together with a dissertation upon the Homeric metre, principally taken from the writings of Professor Niebuhr and Mr. R. P. Knight. The Notes are partly original, and partly from Heyne, Clarke, and Knight. The author has judiciously culled the best critical matter of his work by quotations from Pope's admirable translation, and adorned it with a few parallel passages from the Roman Poets, and from our illustrious countryman Milton.—*New Monthly Magazine*, Oct. 1819.

Printed by A. J. Valpy; and sold by G. and W. B. Whitaker; Longman and Co.; Baldwin and Co.; Loxington and Co.; F. C. and J. Rivington, London; Macreid and Co. Edinburgh; Canning and Co. Dublin; and all other Booksellers. Of the same may be had, bound, Horace, with English Notes to the Odes, 5s. 6d. Horace, no Notes, 8s. 6d. A new Edition of Virgil, 18mo. 3d edition, 4s. the same with English Notes, from Delphin, 4s. no Interpretation, 7s. 6d. the same, with Heyne's Text, and Delphin Notes, no Interpretation, 6s. 6d. Caesar's Commentaries, Orellii's Text, many plates, no Interpretation, 10s. 6d. Julius, without Verses or Phrases, 7s. 6d. Horace's Iliad, from the Text of Heyne, 7s. Elegiacs Latinæ, 4s. 6d.; Greek Grammar, 6s. 6d.; Greek Dialects, 4s.; Latin Grammar, 3s. 6d.; Latin Dialects, 3s. 6d.; Amphitryon, Aulularia, Captives, and Rudens, of Plautus, with English Notes, 4s. 6d.; Latin Vocabulary, 2s.; First Exercises, 4s. 6d.; Latin Dialogues, 2s. 6d.; Cicero de Amicitia et de Senectute, with Rostri's Notes, 8s. by Barker, 3d edition, 4s. 6d.; Principia Orationum, Historicæ et Cæsaræ, 3s.; Poetical Chronology of Ancient and Modern History, 4th Edition, 4s. 6d.; Epistolæ M. T. Cicero's, 3d Edition, 2s.; the Germany and Agricola of Tacitus, from Broterus, with all his Notes, 8s. by the same, 2d edition, 5s. 6d.; C. Nepos, with English Notes and Questions, by Brindley, 3s. 6d.; Eutropius, with ditto ditto 2d edition, 3s. 6d.; Latin Prose, by ditto 4s.; Greek Testament, 8 vols. 8s. by Rev. E. Valpy, 2s. 12s. 6d.; Large Paper, 4s. 6d.; Greek Septuagint, with the Apocrypha, 1 vol. 8vo. 12s. 6d.; Epitome Sacre Historiæ, with English Notes, 8d edition, 3s. 6d. 11s. Please to ask for Valpy's editions of the above Works.

Handsomely printed in small 8vo, similar to Domestic Cookery, price 7s. 6d. in boards, a New Edition, greatly improved.

### THE NEW FAMILY RECEIPT-BOOK: A

Collection of more than Eight Hundred truly valuable Receipts (omitting those in Medicine and Cookery) in various Branches of Domestic Economy, selected from the Works of British and Foreign Writers of unquestionable experience and authority, and from the attested Communications of Scientific Friends. Dedicated, by permission, to Dr. CHARLES TAYLOR, Secretary to the Society of Arts, Manufactures, and Commerce; to whose superintendence the work has been submitted, and to whom the Editor has been indebted for many Valuable Communications.

"This book is a proper and almost indispensable companion for the 'New System of Domestic Cookery.' It contains a large quantity of truly valuable Receipts than any book of the same kind ever contained. There are few things which the reader can seek for Domestic Use, on which he will not find some useful information."

Printed for John Murray, Albemarle Street; sold also by every other Bookseller in England, Scotland, and Ireland, of whom may be had, lately published.

A NEW SYSTEM OF DOMESTIC COOKERY; in a New Edition, small 8vo. 7s. 6d. boards.

Handsomely printed in 4to, with Maps, &c. uniformly with Park's and Barrow's Travels, price 21s. 6d.

### TRAVELS IN NUBIA and in the INTERIOR

of NORTH EASTERN AFRICA. By J. L. BURCKHARDT. With a Life and Portrait of the Author. Printed for John Murray, Albemarle Street.

#### In the Press, 4to.

### TRAVELS through HOLLAND, GERMANY,

and Part of FRANCE, in 1819, with reference to their Statistics, Agriculture, and Manufactures. By W. JACOB, Esq. F. R. S. Printed for John Murray, Albemarle street.

### CASES of a SERIOUS MORBID AFFECTION,

principally incident to Females after Delivery, Abortion, &c. and arising from Uterine Hemorrhage, under Venesection, Menorrhagia, protracted Lactation, Diarrhœa, Aphasia, Constipation, Scybala, or other Causes of Excitation and Irritation. By MARISSA L. HALL, M. D. F. R. S. E. &c. Printed for Longman, Hurst, Rees, Orme, and Brown, London. Also, by the same author, a Second Edition, with considerable Additions, on the Mimosæ; or a Descriptive, Diagnostic, and Practical Essay, on Disorders of the General Health, in their simple and complicated Forms, contrasted with some acute and insidious Diseases; being an attempt to prosecute the Views of Dr. Hamilton, and Mr. Abernethy.

In the press, and shortly will be published, a new Edition, in 7 vols. 8vo. of

### THE REIGN of GEORGE the THIRD. To

which is prefixed, a View of the Progressive Improvement of England, in Prosperity and Strength. By ROBERT BISSET, LL. D. author of the Life of Burke, &c. Continued to the Accession of the King. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

"Dr. Bisset's History is highly praise-worthy—it narrates with greater detail and completeness than Macfarlane, Reiburn, or Adolphus, the transactions of the present Reign. The style is natural, yet elegant; the information abundant, yet select; the criticism loyal, yet liberal. In short, it appears to us more likely than any of the rival histories, to annex itself to Home and Smollett, as the regular and generally received continuation of the History of England."—*Annual Review*, Vol. 2.

"We most recommend this as a work replete with both information and amusement—and while it is free from any spirit of party, it breathes throughout a firm attachment to tempered freedom, and the spirit of the British Constitution, a sincere regard for the British character, and a just veneration for the rights of reason, of religion, and morality."—*Literary Journal*, vol. A, page 486.

11s. For every favourable accounts of this work, see the Monthly Review for October, and the British Critic for November, 1801; and the Anti-Jacobin Review for November, 1800.

## A New Periodical Work.

On the first of March will be published, price 2s. 6d. the first Number (to be continued monthly) of a new Work, called

**THE ARCADIAN.** Containing, amongst other matters—The commencement of a Series of Dead Letters or Letters from the Dead to several Living Ladies and Gentlemen of notoriety. No. 1. From the late Miss E. . . . P. . . . who died at Mrs. . . . 's Boarding School, at Chelsea, in consequence of perpetually reading Little's Poems, which had been incautiously lent her by one of the housemaids; to T. . . . M. . . . Esq., a fashionable Poet. A Letter to Mr. Cobbett, by one of the first Political Writers of the day. *Carmin Axtuals*: a Song for the Summer, to the tune of "Where ha' ye been a'day, my boy Tammy?" To be sung to John Can Hobhouse, Esq., now a prisoner in his Majesty's Jail of Newgate; and one or two of his Epistles thereto, with Notes and Illustrations. A Review of the acted Drama; of New Publications; Macmillan; Comparative Criticism; Anecdotes; Original Poetry; Observations on Men and Manners, &c. Printed for John Miller, Burlington Arcade.

## Clare's Poems.

In foolscap 8vo, price 6s. 6d. boards.

## Shakespeare.

London: Printed for Taylor and Hessey, Fleet-street; and E. Drury, Stamford.

## Portraits of celebrated Musical Composers.

On the First of March will be published, by T. BOO. SEY, and Co. 26, Holles-street, Oxford-street, handsomely pointed on fine paper, music size, and containing a finely engraved Portrait of Beethoven, No. 1. of a Series of

**PORTRAITS** of the most eminent Foreign Composers. A Number of this work will be published regularly on the first of every Month, containing a highly finished portrait, accompanied by a short Biography; consequently it may either be used for the purpose of illustration, or will form a work of itself, at the option of the purchaser. The price of each Number to subscribers will be 7s. A few copies will be printed with proof impressions of the plates, price 3s. each. Those ladies and gentlemen who are desirous of subscribing to the work, are requested to send their names as early as possible, as the price will be raised after its publication. Also just published, by T. Bossey and Co. The Life of John Sebastian Bach, translated from the German of Dr. Forkel, with Musical Examples, price 6s. in boards.

## For Schools.

**EXERCISES** in LATIN PROSOODY and VERSIFICATION, with Exercises and Questions, designed as an Introduction to the scanning and making Latin Verses. The third edition. By the Rev. C. BRADLEY. Price 4s. bound.

"The perusal of this book has afforded us much satisfaction; and we can confidently say, that of its kind, it is of a very superior description. With the arrangement we are, particularly pleased; the rules are developed with all possible propriety, and the Examples are highly appropriate. We recommend these Exercises to the patronage of all persons engaged in Classical education."—*Crit. Rev. Dec. 1815.*

A Key may be had, price 2s. 6d. Printed by A. J. Valpy, and sold by Longman and Co.; Whitakers; and all other booksellers. Of whom may also be had, by the same author.

Corsetti Negota Vitis; with English Notes, and Questions for Examination, price 5s. 6d. bound. 2d. edition. European History, with English Notes and Questions, 2s. 6d. bound. Second edition.

Ovidii Metamorphoses Selectæ, with English Notes and Questions. Second edition. 4s. 6d.

\* \* \* It has been the design of the Editor to exchange from the above edition every objectionable expression, and to add to a correctly printed text, Questions for the examination of the pupil, and short Notes in English, explanatory of the Geography, Mythology, History, and Customs of the Ancients.

Longman and Co.'s Catalogue of Old Books for 1820.—Price 2s. 6d.

**THE FIRST PART of a GENERAL CATALOGUE of OLD BOOKS** for the year 1820; containing the classes of Theology and Ecclesiastical History, in various Languages; History, Biography, Antiquities, and Miscellaneous subjects, in English. Printed for A. K. Newman and Co. Lambeth-street.

The third Edition, in 2 vols. 8vo, embellished with several coloured plates, price 20s. boards.

**LETTERS from the COURT of TRIPOLI**, written during a Ten Years Residence in that country. Published from the Originals, in the possession of the Family of the late RICHARD TULLY, Esq., the British Consul.

\* \* \* Like Lady Wortley Montagu's, these papers had the merit of bringing every thing immaterially before the eye; but they far exceed her's in the importance of their statements, and at the same time, never awaken the mind of the reader a suspicion that the author has been more anxious to say a good thing than a true one. *Electric Review.*

Printed for Henry Colburn and Co. Conduit Street.

Completion of the *Franklin MSS.*—*Part 25th.* **FRANKLIN'S MEMOIRS**, the 5th and 6th vols. in octavo, comprising his Posthumous Writings, published from the Originals, by his Grandson, WILLIAM TEMPLE FRANKLIN, Esq. The Memoirs of Dr. Franklin are now complete in 3 vols. 8vo. 12s. 6d. France, 2 vols. 12s. 6d. Each Part is separately and the public are advised to complete their sets without delay. London: printed for Henry Colburn and Co. Conduit Street.

In 4 vols. 24mo French, 3 vols. 18s. **JULIEN DELMOUT, or the NEW ERA**: a Novel, actually founded on the Events that have occurred in France during the last 30 years, and containing many curious and original anecdotes, connected with the French Revolution. BY MADAME DE GALLIS. Printed for Henry Colburn and Co. Conduit-street. Of whom may be had, by the same author,

1. Petrarch and Laura, 2 vols. 10s. 6d.
2. Jane of France, 2 vols. 12s.
3. Zuma, and other Tales, 2 vols. 6s.
4. Henry le Grand, 3 vols. 12s.

\* \* \* Specially will be published, in 2 vols. 8vo.

**GEORGE the THIRD; his COURT and FAMILY.** Printed for Henry Colburn and Co. Conduit-street.

In 12mo. price 4s. 6d.

**THE MOTHER'S MEDICAL ASSISTANT**, containing Instructions for the Prevention and Treatment of the Diseases of Infants and Children. By SIR ARTHUR CLARKE, M.D. &c. &c. author of an Essay on Batching. Printed for Henry Colburn and Co. Conduit-street.

In the press, and speedily will be published, printed uniformly with Park's Travels, in 4to, and illustrated with a Map, and numerous Plates.

**TRAVELS in the INTERIOR of AFRICA** to the SOURCES of the SENEGAL and GAMBIA, undertaken by order of the French Government, and performed in 1818, by M. G. Mouton. Edited by F. K. BOWDICH, Esq. Conductor of a Mission to Aden. Printed for Henry Colburn and Co. Conduit-street.

In foolscap 8vo, with an elegant Frontispiece, representing Lady Russell in the Tower, price 6s. 6d. boards.

**LETTERS on HISTORY**, addressed to a Noble Grandchild. Part 2. Profane. By the noble Mar. of Devon's Gift, &c. &c. Printed for Baldwin, Cradock, and Joy, London; and Sowerby and Walter, Colchester. Of whom may be had, price 6s. boards, *Letters on History*, Part 1. Sacred. Also, *Somebody's Remembrance*, price 1s.

**ON the CAUSES of the PRESENT DISCONTENTS**, with Suggestions on the Politics of the Edinburgh Review. Price 6s. 6d.

\* \* \* These Reflections were first published in a number of a well known and very popular miscellany, (*Blackwood's Edinburgh Magazine*)—at the suggestion of some friends, felt whom the author feels great respect; they are now reprinted in a separate form. Printed for T. Cadell and W. Davies, Strand; and W. Blackwood, Edinburgh.

London: Printed for the Proprietors, by W. POPE, 67, Chancery Lane; Published every Saturday, by W. A. SCRIPPS, at the Literary Gazette Office, 30, (Exeter Change) Strand, where Communications, &c. &c. are requested to be addressed to the Editor.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom; but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 162.

SATURDAY, FEBRUARY 26, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

### SOUND MIND.

*Sound Mind; or Contributions to the Natural History and Physiology of the Human Intellect.* By John Haslam, M. D. &c. London. 8vo. pp. 192.

*Sound Mind* is a captivating title, and in the present instance, ushers into our notice an exceedingly clever and ingenious book. We do not, indeed, agree in all the positions laid down by the author, nor do we think that his deductions are always logically accurate. But with regard to the acuteness of his observations, to the originality of many of his conceptions, and to the practical good sense which marks his arguments and opinions, we must say they are such as to stamp his work with a high character both as a philosophical inquiry, and a popular view of a generally interesting subject.

That Dr. Haslam has studied Duguid Stewart, and Reid, will very soon be discovered; perhaps it would have appeared more candid had he acknowledged his obligations to them, instead of declaring (preface, vi.) "I determined to throw off the shackles of authority, and think for myself." Perhaps, too, language a little less figurative and more definite would have been "more german to the matter;" but the latter, and most important parts of the Essay, are free from this blemish, and form a perfect contrast to the poetical licence in the earlier pages. It is curious to notice how completely the sentiment and the style of the following passage are at odds with each other.

Imagination may indeed enliven the cold pages of historical narrative, and blend the "Tide Dulci"—but even here she is a profane intruder; and a vigilant eye must be directed, lest, in some unguarded moment, her seductive blandishments should decoy the nakedness of truth. A sedate and unambitious recorder of facts, does not presume to describe her regions, or to enumerate her attributes. That delightful task must be performed by her votaries,

"The poet, the lunatic, and the lover;"

nor should the Orator be excluded from his fair participation and kindred alliance with this airy and fascinating group.

But this is in the preface to, and not in the body of a metaphysical disquisition.

VOL. IV.

In the latter, however, there are examples of looseness of composition, which had better have been avoided: *ex. gr.* on perception. "The first operations of the infant are to educate its senses, in order to [that it may] become acquainted, through these organs, with surrounding objects."—"We have neglected to detect and cultivate that which is obvious," &c. &c. Now, though the meaning is still pretty clear, notwithstanding this want of precision in terms, it must be allowed that more elaborate nicety would have better become the nature of the production. And we are glad to deliver our critical objections at setting out, because we find so much to admire as we proceed, that were we not to pursue this course, it is extremely probable that our review would be all praise and not strict justice. We should forget trifling defects in the contemplation of general excellence. But the misuse of words is the less excusable in Dr. Haslam, from his perfect knowledge of their value, and of the necessity for their definite employment, especially in philosophical reasoning. We never encountered a more sturdy advocate for this principle; and his skill in etymology (particularly in derivatives from the Saxon), is applied with singular effect throughout the whole of this treatise. We may, however, point out one of his definitions, which strikes us as almost a bull.

*Perception.*—The intrinsic meaning of this word is the taking, seizing, or grasping, of an object, from the latin *cum* and *capio*, and the same figure pervades most of the European languages.

This definition is surely gratuitous; for in all the derivative changes with which we are acquainted, (not excluding those of pigeon-pie, cucumber, and King Joseph, of facetious notoriety) we are not aware of any more untenable than that *Cumception* should be the original of *Perception*. But it is scarcely fair to raise a prejudice against so excellent a volume by taking hold of a few slight blemishes; and we shall therefore now advance to the more agreeable duty of stating its predominating merits.

The chapters are devoted to the investigation of Perception, Memory, Speech and the Human Hand, Language, Will or Volition,

Thought or Reflection, Reason, and Instinct. On each of these interesting topics we have the ideas of a highly enlightened and acute mind; the philosophy of the subject forcibly elucidated by results obtained through long practice; the dryness of discussion relieved by anecdotes which entertain the reader while they happily support the theories of the writer; and in fine, argument and illustration going hand in hand, so as to unite the *Utile dulci* in a degree rarely experienced in researches professedly recondite and abstruse.

As it is our purpose rather to recommend than analyse this work, we shall not follow the learned Dr. methodically; but endeavour to make such selections as will show the manner in which he has executed his design of "merely contributing to the Natural History and Physiology of Intelligent Beings," without the formality, abstraction, or diffuseness, of a regular dissertation. We have only further to premise, that all his reasoning is of the purest moral and religious tendency; and that our extracts, being chosen rather from possessing the qualities of piquancy and separableness than on account of their superior strength and bearing on the inquiry, must leave these principal points very insufficiently appreciated, except by reference to the "*Contributions*."

From the chapter on Memory we copy the following rather whimsical passage—

The term memory has been Anglicised from the Latin *Memoria*; yet we possess two other words of similar meaning, and from their derivation, in a certain degree, explanatory of this process; namely, to *REMEMBER* and *RECOLLECT*. Thus if an individual have seen any particular animal, and given sufficient attention to perceive accurately its construction, so as to possess a complete perception of the different parts or *members* of which it is composed; he would, in the absence of the animal, be enabled to remember it. If his hand had been duly educated he might form its model, or chisel it from a block of marble; or on a plain surface, according to the rules of art, might make a drawing of the animal, and with such exactitude of its different *members*, that it would appear to those who compared it with the original, that he perfectly *re-membered* it. To recollect is only a different figure for the same process, and implies to regather or collect, those parts which have been scattered in different directions.

An anecdote connected with this mental process is worth preserving—

The simple acts of perception and memory appear to be the same in man and animals; and there are many facts which would induce us to suppose, if these faculties be identical in their nature, that the endowment of the latter is more excellent. This conjecture is hazarded from the greater susceptibility of the organs of some animals, and from their wonderful recollection of tracks which they have traversed. Among the phenomena of memory there are two very curious occurrences, and for which no adequate explanation has been hitherto afforded. Many of the transactions of our early years appear to be wholly obliterated from our recollection; they have never been presented as the subject of our thoughts, but after the lapse of many years, have been accidentally revived, by our being placed in the situation which originally gave them birth. Although there are numerous instances on record, and some perhaps familiar to every reader, I shall prefer the relation of one which came under my immediate observation. About sixteen years ago, I attended a lady at some distance from town, who was in the last stage of an incurable disorder. A short time before her death, she requested that her youngest child, a girl about four years of age, might be brought to visit her, and which was accordingly complied with. The child remained with her about three days. During the last summer some circumstances led me to accompany this young lady to the same house. Of her visit when a child she retained no trace of recollection, nor was the name of the village ever known to her. When arrived at the house, she had no memory of its exterior; but on entering the room where her mother had been confined, her eye anxiously traversed the apartment, and she said, "I have been here before, the prospect from the window is quite familiar to me, and I remember that in this part of the room there was a bed and a sick lady, who kissed me and wept." On minute inquiry none of these circumstances had ever occurred to her recollection during this long interval, and in all probability they would never have recurred but for the locality which revived them.

The chapter "on the intellectual superiority which man has acquired by speech and the possession of the hand," is one of the most curious. Our limits compel us to pass over the first branch; but the last, the important seat of the organ of touch, shall supply some specimens of the author's powers and ingenuity.

The science of accurate measurements has been exclusively discovered by man; and for the attainment of this important acquisition, it will be seen that the hand has been chiefly and progressively instrumental. When we contemplate the present state of man, in our own nation, surrounded by the conveniences which gratify his wants, and behold him *practised in their enjoyment*, we

are little disposed to revert to that period of his history, when he struggled to continue his existence, and trace his tardy progression from rudeness to refinement.

Pleas'd with himself, the coxcomb rears his head,

And scorns the dunghill where he first was bred.

Although we now measure space and time, bodies solid and fluid, heat and its absence, with the facility of a single glance; yet if we consider the slow and painful steps, by which such acquisitions have been attained, we shall be forcibly impressed, how much we are the creatures of patient experiment; and also how mainly the hand has contributed to our advancement. If we investigate the standards of admeasurement, we find that many have been derived from the human body, and more especially from its operative instrument, the hand. That the members and dimensions of our own body should have been the original standards of measurement is most natural, and the terms in which they are conveyed afford a sufficient illustration of the fact. Thus we have a nail; *pollex, pounce, pulgada*, Swedish *tum*, for an inch; which word has been misapplied by our Saxon predecessors, and corrupted from the Latin *uncia*, which related only to weight. We still measure by digits, by fingers' breadth, by hands high. Cubit from *cubitus*, was formerly employed. We now retain *ell, anner, ulna*, Foot, pace, *pas, pes*. Yard, not as Mr. Troke supposed from the Saxon *gyrdan*, to prepare, but from *gyrdan, engere*, and is employed to represent the girth of the body. Fathom, the distance of the arms when extended to embrace, from which the meaning is implied in most languages. But it will be immediately perceived, that measurement could not proceed to any considerable extent, could neither be compounded by addition, nor subdivided, without the employment and comprehension of numbers.

In our childhood we are taught the knowledge of numbers; and those who have superintended the work of education, must have witnessed the difficulty of impressing on the mind of the child, this kind of information. Alphabetic characters compared with numbers, are readily acquired: whether it be from the imperfect manner in which the science of numbers is usually taught, or from the actual difficulty in comprehending the subject, it is not pretended to determine; although, from some considerations, the

• It is equally curious to observe that geographical positions, and the principal features of sea and land, have derived their origin from the rude anatomy of the human body. Thus, in a short enumeration we have *cave or head-land, nose, nose, or nose; the brow of a mountain; tongue of land; mouth of a river; chaps of the channel; neck of land; arm of the sea; coast, outer, the ribs*. We are said to penetrate into the heart of the country, or to remove to the back settlements. We descend into the bowels of the earth, in order to discover a vein of ore. We ascend from the foot of the mountain; and from its ridge (back), survey the prospect surrounding. Numerous additions might be contributed by further recollections.

latter is most probable. The names of different objects are easily acquired, and children examine such objects by their different senses, more especially by the eye and touch; they become desirous of learning their properties, or of becoming acquainted with their construction; and this investigation affords them delight, and excites or gratifies their curiosity. But numbers possess no such attraction; numbers do not involve any of the obvious properties of these objects, neither their colour, shape, sound, smell or taste; it therefore becomes perplexing for them to comprehend, if five similar substances, as so many apples, or nuts, be arranged before them, why each should bear a name, different from the thing itself, and different from each other: why this *one* should be termed one, another two, and the next three.

In acquiring a knowledge of numbers, as far as the senses are concerned, the eye and the touch are especially exercised; but it appears that the touch is the corrector of the sight; if fifty pieces of money be laid on a table, they will sooner and more accurately be numbered by the touch than the eye; and we know in other instances, that the motion of the hand is quicker than the discernment of the sight. There are many circumstances although they do not amount to a proof which might induce us to consider, that the human hand has much contributed to our knowledge of numbers.

As far as we possess any direct evidence none of the animals are capable of numbering; and this constitutes an essential difference between them and man in their intellectual capacities. In states of weakness of mind, this defect in the power of numeration is very observable, and forms a just and admitted criterion of idiocy; and it is well known that such persons exercise the organ of touch in a very limited degree, compared with those of vigorous capacity: their fingers are likewise more taper, and their sensitive extremities less pulpy and expanded. The same state of the organ of touch may be remarked in some lunatics who have become idiotic, or where the hands have been confined for a considerable time.

If man had been created without hands, and consequently, without the acute organ of touch, which resides in the extremities of these members, we must at least have been strangers to the "cloud-capt towers the gorgeous palaces, and the solemn temples" which he has reared. Had the up extremities of the human body terminated at the wrist, such a man as Phidias might have existed, but his occupation would have been unknown. Thus truncated, how would the fleet have been constructed which row the laurel at the Nile, at Copenhagen, Trafalgar? The eternal city could not have existed, nor would our own metropolis have had a being. If we reflect for an instant we shall perceive that all the conveniences we enjoy, all the arts we practise, and sciences which elevate and dignify our nature, could never have been realised in a handless community. Speech might have prevailed, but its record could

have been established, and intelligent sounds would only have served to breathe forth the lamentations of misery and despair, or the accents of discontent. We must have remained unasked, and perished from the inclemency of weather: man would have owed "the worm no silk, the beast no hide, the sheep no wool." It would be superfluous to pursue this subject further, as the reader has only to consider the superior enjoyments, and accumulated monuments, of art and of wisdom, which the mind of man has produced by the agency of his hand.

"Molto opra egli col senno ed con la mano."

The importance of the hand will, we doubt not, be so much enhanced with the majority of our readers, after perusing this philosophical, and, in parts, poetical encomium, that even lovers and brides will desist from exalting the heart at the expence of that member, in the derogatory way that has heretofore been too usual.

The chapter on language is a sketch, and very amusing: it shews that Johnson's Dictionary is by no means an authority for the derivation of words. In the following is the substance of the investigation of "Will, or Volition."

Had the mind of man, like animals, been furnished with instinct, which, in them, implies a wise, preconcerted, and unvarying performance of important functions, for their individual preservation, and for the continuance of their race,—as may be exemplified in the construction of the habitations of the bee and beaver, together with their wonderful economy,—the fabrication of the spider's web, and many others,—he would, like them, have been stationary; having received from infinite bounty and wisdom sufficient for his destination: his will would have been directed by unerring motives: and thus his conduct would have been absolved from all responsibility. But man is gifted with few instincts, which appear to decline as his reason advances: his intellect is more capacious, and of a finer staple; he possesses additional organs for the accumulation of knowledge; and, by the peculiarity of his construction, is enabled to preserve his acquisitions, to avail himself of the treasures of those who have preceded him; and to transmit his collections to posterity. Man, in possession of ampler materials and superior capacity, becomes the architect of his own mind; and to him it is alone permitted, by the aid of experience, and the estimate of reason, to direct his actions: but this generous and exalted faculty involves him in awful responsibility. The same light which discovers to him that which is good and lawful, also exposes its opposite, which is evil and forbidden: and the nature of good and evil, as it forms the foundation of human institutions, has been derived from our experience of their effects, or a calculation of their tendencies. The will of man, therefore, is as free as his experience dictates, and his reason urges to action: yet, that he

should often act in opposition to both, is as lamentable as certain: in the transport of immediate gratification, or in the hopes of enjoyment, precept ceases to influence, and example loses its warning.

*Video meliora proboque, deteriora sequor.*

Of what is said concerning Reason, we can only give the definition.

In general terms it may be defined, *the means we employ for the attainment of the end proposed; the employment of knowledge for the discovery of truth; or the process of demonstration*; whether the object be an arithmetical sum, a geometrical problem, or a discourse on taste.

And with regard to that which approaches nearest to reason, viz. instinct in animals; we have but room for a small portion of Dr. Haslaui's very entertaining view. He says—

It is not improbable that they dream; and at such times, the recollection of objects and scenes may be presented to them in visible phantasmas; and in the delirium of canine madness, they are observed to snap at imaginary existences; but this is far below the process that constitutes reflection, which consists in the capacity of reviewing the whole of our perceptions; and it has been endeavoured to point out that this can only be effected through the medium of intelligent sound, or its visible representative. If we were to contend for their capacity of reflection, we must, at the same time, acknowledge, that they do not appear to derive any improvement from the process; and to suppose them endowed with that which was nugatory, and contributed in no degree to their advancement, would be an idle and useless hypothesis. When not employed and directed by man, their lives are principally occupied in procuring food, and in the propagation of their species; and when their appetites are satisfied, they repose or sleep: when not guided by instinct, they seem to act from established habits, or the dictates of immediate impression. They are capable of considerable acquisitions under the coercive tuition of man, and may be taught a variety of tricks for his amusement or profit; but they do not appear to comprehend their utility, or to hold these instructions in any estimation, as they never practise them when alone. The most accomplished bear would not dance for his own entertainment; and the learned pig never attempted to become a school-master to the hogs of his acquaintance.

There is a brief but admirable conclusion, with the last sentences of which we also shall close our remarks; only once more impressing on the public the general excellence of this book, and its peculiar fitness for the younger classes of cultivated intellect, who wish, in the noblest study of mankind, to be gifted with a SOUND MIND.

When we consider the attributes of the Deity and the nature of man, we can never be induced to conclude that the tribunals of

this world are the courts of final retribution. Man bears in his intellectual construction the badge of moral responsibility, and, consequently, the germ of future existence: and the only incentive that can urge him to the advancement of science, and the practice of virtue, is the reward that Revelation has unfolded.

*A Song to David.* By the late Christopher Smart, M.A. Fellow of Pembroke Hall, Cambridge; and prose translator of Horace. London, 1810. 12mo. pp. 55.

This very remarkable and scarce poem has been sought out and republished, in consequence of an incidental notice in the *Quarterly Review*; which, mentioning that neither Anderson nor Chalmers had been able to recover it, expressed great regret at the loss of such a production, and composed under such circumstances. The high eulogies bestowed upon the *Song of David* by three authorities so respectable as Anderson, Chalmers, and, though last not least, that accomplished judge of poetry, the editor of the *Quarterly Review*, were quite sufficient to quicken inquiry concerning it; and we are exceedingly well pleased to have it in our power to bring so extraordinary a performance more fully before the public than it has hitherto been.

Written by the unfortunate bard while confined in a madhouse, and committed by means of a key to the wainscot of his room, when denied the use of pen, ink, and paper; nothing of adventitious interest can be imagined to exceed that which is attached to this poem. True, it will be seen that it is disfigured by occasional meanness of expression; that it is unequal, and that it has a number of defects: but the strength, the feeling, the majesty of thought, and the grandeur of language which distinguish its nobler parts, are not only sufficient to establish it as a sublime work, but to prove the perfect truth of the line...

"Great wit to madness nearly is allied."

We will not detain our readers longer from the verse: it begins with a fine invocation to David...

\* The treatment of lunacy is now, thanks to the advancement of humane philosophy and science, much better understood. Mildness, not harshness, dictates to the regime observed in regard to our unfortunate fellow-creatures deprived of reason. We have for some time past been collecting and arranging materials, for a view of this subject; and trust in a few numbers to have to lay before our readers an acceptable statement both of curious facts and of the best modern practical opinions. *Edt.*

O thou, that sit'st upon a throne,  
 With harp of high majestic tone,  
 To praise the King of Kings!  
 And voice of heav'n—ascending swell,  
 Which, while its deeper notes excel,  
 Clear, as a clarion, rings:  
 To bless each valley, grove, and coast,  
 And charm the cherubs to the post  
 Of gratitude in throngs;  
 To keep the days on Zion's mount,  
 And send the year to his account,  
 With dances and with songs:  
 O servant of God's holiest charge,  
 The minister of praise at large,  
 Which thou may'st now receive;  
 From thy blest mansion hail and hear,  
 From topmost eminence appear  
 To this the wreath I weave.

Follows a historical glance at the  
 lustre of David's character, which thus  
 concludes

Pleasant—and various as the year;  
 Man, soul, and angel, without peer,  
 Priest, champion, sage, and boy;  
 In armour, or in ephod clad,  
 His pomp, his piety was glad;  
 Majestic was his joy.  
 Wise—in recovery from his fall,  
 Whence rose his eminence o'er all,  
 Of all the most rev'd;  
 The light of Israel in his ways,  
 Wise are his precepts, prayer, and praise,  
 And counsel to his child.  
 His muse, bright angel of his verse,  
 Gives balm for all the thorns that pierce,  
 For all the pangs that rage;  
 Blest light, still gaining on the gloom,  
 The more than Michael of his bloom,  
 The Abislag of his age.  
 He sung of God—the mighty source  
 Of all things—the stupendous force  
 On which all strength depends;  
 From whose right arm, beneath whose eyes,  
 All period, power, and enterprise  
 Commences, reigns, and ends.  
 Angels—their ministry and meed,  
 Which to and fro with blessings speed,  
 Or with their citterns wait;  
 Where Michael, with his millions, bows,  
 Where dwells the seraph and his spouse,  
 The cherub and her mate.  
 Of man—the semblance and effect  
 Of God and love—the saint elect  
 For infinite applause—  
 To rule the land, and briny broad,  
 To be laborious in his laud,  
 And heroes in his cause.  
 The world—the clust'ring spheres he made,  
 The glorious light, the soothing shade,  
 Dale, champaign, grove, and hill,  
 The multitudinous abyss,  
 Where secrecy remains in bliss,  
 And wisdom hides her skill.

How delightful the first line, and  
 how admirable the last and fourth last  
 stanzas! The author dilates on the  
 sacred songs of his hero, and some of  
 his epithets possess the very soul of  
 poetry; for example, he specifies among  
 the beauties of creation, "the shells in  
 the *wealthy* deep;" the shoals that leap  
 upon the surface, and "love the glan-

cing sun;" the gems hid in earth "which  
 their darts of *lustre* shenth," &c. &c.  
 The music of the King of Israel is also  
 exquisitely described;

As he such melody divin'd,  
 And sense and soul detain'd;  
 Now striking strong, now soothing soft,  
 He sent the godly sounds aloft,  
 Or in delight refrain'd.  
 When up to heav'n his thoughts he pil'd,  
 From fervent lips fair Michael smil'd,  
 As blush to blush she stood;  
 And chose herself the queen, and gave  
 Her utmost from her heart—

To this succeeds a mystical account  
 of the "seven pillars of the Lord," each  
 designated by a Greek letter; and next  
 an exercise on the decalogue, which  
 commences with wonderful sublimity...

Tell them, I AM, JERUHAN said  
 To MOSES; whil' e'er heard in dread,  
 And, smitten to the heart,  
 At once above, beneath, around,  
 All nature without voice or sound,  
 Replied, O LORD, THOU ART.

A rather inferior descant upon the  
 transcendent virtue of praise and adora-  
 tion, (but displaying nevertheless many  
 vigorous touches) occupies about a  
 dozen of pages, and leads us to the fol-  
 lowing exquisite exercise upon the sea-  
 sons and their right use.

• Sweet is the dew that falls betimes,  
 And drops upon the leafy limbs;  
 Sweet Hermon's fragrant air:  
 Sweet is the lily's silver bell,  
 And sweet the wakeful petals smell  
 That watch for early prayer.  
 Sweet the young anise, with love intense,  
 Which smiles o'er sleeping innocence;  
 Sweet when the lost arrive:  
 Sweet the musician's ardent beats,  
 While his vague mind's in quest of sweets,  
 The choicest flowers to live.  
 Sweeter in all the strains of love,  
 The language of thy turtle-dove,  
 Pair'd to thy swelling chord;  
 Sweeter with ev'ry grace endued,  
 The glory of thy gratitude,  
 Respir'd unto the Lord.  
 Strong is the horse upon his speed;  
 Strong in pursuit the rapid glide,  
 Which makes at once his game:  
 Strong the tall ostrich on the ground;  
 Strong through the turbulent profound  
 Shoots xiphias † to his aim.  
 Strong is the lion—like a coal  
 His eye-bell—like a bastion's mole  
 His chest against the foe:  
 Strong the gier-eagle on his sail,  
 Strong against tide th' enormous whale  
 Emerges, as he goes.

The young nurse, and the lion, pre-  
 sent images of tender beauty and pro-  
 digious force, unsurpassed by any ima-  
 gination in the whole circle of poetry.

\* Has not Lord Byron seen this? His Don  
 Juan otherwise presents a singular coincidence.

† The sword-fish.

The same strain is continued...  
 Beauteous the fleet before the gale;  
 Beauteous the multitudes in mail,  
 Rank'd aris, and crested brands:  
 Beauteous the garden's umbrage mild,  
 Walk, water, incanted wild,  
 And all the bloomy beds.  
 Beauteous the moon full on the lawn;  
 And beauteous, when the veil's withdrawn,  
 The virgin to her spouse:  
 Beauteous the temple, deck'd and fill'd,  
 When to the heav'n's of heav'n's they build  
 Their heart-directed vows.  
 Beauteous, yea beauteous more than these,  
 The Shepherd King, upon his knees,  
 For his momentous trust;  
 With wish of infinite conceit,  
 For man, beast, mute, the small and great,  
 And prostrate dust to dust.  
 Precious the bounteous widow's mite;  
 And precious, for extreme delight,  
 \* The largest from the churl:  
 Precious the ruby's blushing blaze,  
 And † alpha's blest imperial rays,  
 And pure carulean pearl.  
 Precious the penitential tear;  
 And precious is the sigh sincere;  
 Acceptable to God:  
 And precious are the winning flowers,  
 In gladness Israel's feast of bowers,  
 Bound on the hallow'd sod.  
 More precious that diviner part  
 Of David, e'en the Lord's own heart,  
 Great, beautiful, and new:  
 In all things where it was intent,  
 In all extremes, in each event,  
 Proof—answ'ring true to true.  
 Glorious the sun in mid career;  
 Glorious th' assembled fires appear!  
 Glorious the comet's train:  
 Glorious the trumpet and alarm;  
 Glorious th' Almighty's stretch'd-out arm;  
 Glorious th' enraptured main:  
 Glorious the northern lights astream;  
 Glorious the song, when God's the theme;  
 Glorious the thunder's roar:  
 Glorious hosannah from the den;  
 Glorious the catholic amen;  
 Glorious the martyr's gore:  
 Glorious—more glorious is the crown  
 Of Him, that brought salvation down  
 By meekness, call'd thy Son;  
 Thou that stupendous truth believ'd,  
 And now the matchless deed's achiev'd,  
 DETERMIN'D, DARR'D, AND DONE.

The profusion of imagery, the clus-  
 tering of stupendous thoughts, the big  
 poetical enthusiasm, the sweetness an  
 force of expression, and the nature  
 sublimity which reign throughout the  
 stanzas, rarely depreciated by any ane  
 maly, leave us nothing to say but to ex-  
 press our astonishment at the min  
 which could conceive and execute them  
 and our amazement, at the circum-  
 stances under which they were pro-  
 duced. The Song to David, is indee  
 a wonder in the moral world, and de-  
 serves as much the investigation of th  
 philosopher, as the admiration of th  
 lover of poetry.

† Rev. xii. 17.

*The Mystery.* 3 vols.  
[Second notice.]

Observing that even that portion of the periodical press which is chiefly devoted to political subjects, has been pretty generally attracted to this novel; we feel the more sensibly that the *Literary Gazette* did not do it justice by quoting only one of its ludicrous scenes in low life. We ought to have stated, that the author, in conducting his hero into the heart of Africa, takes occasion to introduce from original materials and render subservient to the purposes of romance, the superstition which plants a shrub over a grave, and considers it sacrilege in a stranger to touch it; the barbarities exercised by the Moors on unfortunate Europeans; the Great Desert, with its salt and fresh-water springs; and the practice of beating female children to make them eat enough to render themselves beautifully corpulent, as described by Mungo Park; the sufferings of the crew of the *Medusa*, and many of the peculiar habits and customs of the natives. In this part he draws the picture of a Missionary undergoing every species of hardship in the arduous task of spreading the gospel in these burning regions. Timid and weak in earthly concerns, he is bold and fearless in his Master's work. The character is finely drawn, and ingeniously connected with the story:—the Missionary assists Harley, the hero, in his escape, and after encountering many dangers, and being severely wounded, perishes in the manner thus described.

The mind of the gentle Smithers, accustomed to suffer and submit, was unusually agitated by the execution of Harley's project for escaping from the Moors. He was ill at the time from the treatment he had recently experienced on account of his refusing to work on the Sabbath. He had never been much in the habit of riding, and was soon dreadfully galled by the unaccustomed exercise which a desire to escape forced on him, though he continued to advance without a murmur, feeling that not only his own safety, but that of his companion, depended on his resolutely enduring the torture, and getting rapidly forward. The intolerable heat to which he was exposed in the desert, the unfortunate fracture of his arm, and the ceaseless anxiety he felt on account of the man who had wounded him, from an apprehension that the impetuosity of Harley might requite his perfidy with death, completed the overthrow of a constitution before much impaired, by his unremitting exertions in the cause which had brought him to Africa, and the ungrateful return made by many of those whom he sought to benefit. Charles offered him some of the gum, which he had obtained from the pretended interpreter, in the hope that it would allay in some measure the raging thirst of his delirious friend; but he disdainfully rejected it, and asked "why he should make use of that poor substitute for water, when the river Jordan rolled its watery stores at his feet, and invited him to drink his fill?" Still speaking, he knelt down, and imitated the act of drinking, by taking some of the sands they were travers-

ing, into his mouth. His offended palate instantly rejected the supposed cooling beverage, exclaiming, "*He hath filled me with bitterness, he hath made me drunken with wormwood. He hath also broken my teeth with gravel stones, he hath covered my tongue with ashes.*" But he added, in an assumed tone, "*He will deliver me yet. Though I have gone astray like a lost sheep, he will seek his errand yet, for I have not forgotten his commandments.*" While uttering the last sentence, he seemed more himself than he had previously been. Harley remarking this, again attempted to recall him to a consciousness of his real situation, and to encourage him to proceed; but instead of attending to him, Smithers had thrown himself down, and was now rolling over and over in the sand. After a while, exhausted by pain and fatigue, he remained motionless, and seemed likely to obtain a little repose. The excessive heat would have made it almost impossible for them to go on, had Smithers retained his senses, and Harley therefore easily reconciled his mind, to indulge in a little rest. Exposed to the sun's persecuting fires, Smithers lay at full length, with his face upwards. Charles feared to move him, lest by trying to change his position, he should bring on another paroxysm, and deprive him of that tranquil insensibility which seemed to afford him a temporary refuge from pain. His hat had fallen off, and this his companion propped up, so as to interpose a little between the ghastly countenance of the Missionary, and the great luminary of the sky which still poured its unrelenting brightness on the plain. Falling on his face, he threw an empty water-skin over his own head, and waited the effect of this respite from fatigue on his companion, in painful suspense. At the end of two hours, he heard the delirious Smithers call out aloud, "awake thou that sleepest." Harley had slept not, but now summoned to proceed, he considered that policy and humanity concurred in requiring him to obey the call. The sun was fast declining, and the anguish attendant on an attempt to walk was less insupportable than it had been. Smithers advanced with a rapidity that frequently left Charles, who was charged with the conveyance of the little means of refreshment that remained to them, considerably in the rear. The Missionary was evidently bereft of reason, but the most blissful illusions gladdened his delirious moments. Frequently would he exhort his pining friend "to press forward with joy and thankfulness, since their painful wanderings were so nearly at an end, that he could now not only see the river which bounded their thorny path, but he could also perceive the shining *Ones* waiting to welcome and receive them on the farther shore, as they had done *Christian* and *Hopeful* before, and the thrones on which the faithful were to be exalted, to sing glory to the Lamb, and all the joys of the New Jerusalem, lay open to his ravished view." It was the last effort of the kind, that religious enthusiasm could gain from exhausted nature. The strong impulse that had lifted the feeble Missionary above the consciousness of pain and fatigue

was no more, and he suddenly sunk to the ground. He attempted to speak, but articulation failed. The purport of what he wished to say it was impossible for Charles to comprehend. Smithers pointed to his heart, and seemed anxious to express what he had now no power to utter. Harley was persuaded that in the instant his speech failed him, he had an interval of reason, but it expired with the struggle to give it language. His inanimate form lay extended on the sands, and a flush of unusual colour in the face, and short interrupted breathings, alone indicated that the sufferer still lingered within the precincts of life. It was in vain that Harley attempted to administer the slightest relief to the prostrate and perishing Missionary. Incapable of receiving nourishment, or of listening to the soothing language of friendship, he knew nothing of what passed around. Respiration became more difficult, it was plain that he was dying, but many hours might elapse before he would breathe his last. Charles reflected that those from whom they had escaped, by this time informed of the route their late captives had taken, and guessing the direction in which they would subsequently travel, might be rapidly approaching the place where he watched over the unconscious form of one, who in all probability would never again wake to sense and recollection; and who, if he should do so for a moment, could profit nothing from cares, which in all probability would endanger his own life. Would it then be because one could not escape, to devote both to destruction? Acting thus, he was sure that he should do that against which the poor Missionary would not have failed to remonstrate, had he retained the power of thinking; and uselessly to sacrifice his own existence, was to do that which could hardly be justified. Ought he not then to take the course which policy would recommend; exert the little strength that remained to him, to extricate himself if possible, from the desert, and leave his unhappy friend whom no human power could snatch from the jaws of death, to perish alone?

Such were the suggestions which the feeling designated by the multitude, *prudence*, strove to press upon Harley for the regulation of his future conduct. In the busy world, how many men are there who are called "*good*," even in the city of London, who would rejoice if they had no fair an opportunity of breaking from calamity, so plausible an excuse for abandoning the unhappy! Memory and sensibility, faithful to virtue, forbid Charles to avail himself of such ideas. [He determines to abide by him to the last, and overcome with fatigue sleeps a few moments; on a waking, he finds] Smithers reclined in precisely the same attitude in which he had previously seen him. He was still gazing on his form, but imperfectly seen through the darkness that prevailed; when he started at feeling his hand suddenly grasped with intelligent eagerness by the prostrate sufferer. "Is it my dear brother—is it my countryman, whose hand I grasp in mine?" Surprise and emotion almost deprived Harley of the power of making a reply. He at

length, answered in the affirmative, and enquired if he could do any thing to relieve him? "To relieve me!" exclaimed the dying man. "O no. The Lord has already relieved me. I feel no pain, and I am about to enter into his Paradise. My heart is full of joy that I see the termination of my pilgrimage; but tears fill my eyes for you whom I leave behind. But do you not feel yourself revived as it were by a miracle? For a moment infinite mercy has permitted me to speak the words of reason and of truth to the kind but too impetuous companion of my latter journeyings. O my brother! be faithful to the end. Then shall we one day rejoice together, that 'Our soul is escaped as a bird out of the snare of the fowler. Let not suffering and persecution dismay.' Remember the words of St. Peter: 'Beloved, think it not strange concerning the fiery trial, which is to try you, as though some strange thing had happened unto you,' and bear in mind also that we read in the Revelations, that 'as many as he loves, he rebukes and chastens.' Preserve as a treasure these precious words of consolation, and they will support you in the hour of trial." "But you exert yourself too much. Already I perceive your voice to falter. Take a little water." "Not a drop: it cannot re-invigorate my mortal frame; you have none to spare, and none do I want. Why should we feed with oil the lamp that can no longer give light? I feel that I grow weaker; and I rejoice at it. That I have awakened to reason, and that I have found you by my apparently lifeless clay, are merciful dispensations for which I know not how to be sufficiently thankful. I can only reward your kindness and brotherly love by giving you this, and my sincere wish and fervent prayer, that it may prove as fruitful of consolation and joy to you, as it has been to me in my wanderings." With these words Smithers handed to Charles the little Bible, which through all his delirium and insensibility he had not ceased to clasp. The present was received with tears. "Check these sorrows," said Smithers, "they are sinful, and tend to sadden the hour of my departure. Take charge too of this little pocket book. It contains the letters of brother Bowman, giving an account of the progress of grace in those parts which he had visited before we parted. Every thing of worldly value that I had about me when I first sought these inhospitable regions, was taken from me by the barbarians that are dwellers therein, but they left to me what was above all price, the Bible, and the papers which I now confide to you. Of the one, alas! they knew not the surpassing worth, the other, all their diligence in the work of deprecation failed to discover." Here he paused. For a few moments he was unable to proceed from weakness. Charles again pressed on him the relief which a draught of water might afford, but this he steadfastly refused. "No—No—My earthly wants are at an end. The cold dew of death hangs on my brow. Yet a few moments and I shall lie at rest. The cares of life are over, and I rejoice that the hour is come which is to relieve me from its infirmities. In the

pocket book which I have given you, the address of the secretary to the Society of Friendly Christians, whose unworthy representative I have been, will be found. To him, if you reach England in safety, convey its contents, and communicate such particulars concerning me as they may be desirous to learn. Above all, fail not to tell, how wonderfully I have been sustained in my trials, and how providentially I met with a countryman in the wilderness who cheered and assisted me while I lived, and left me not till he had closed my eyes, in nature's last and most refreshing sleep." Harley assured him that whatever his future fate might be, he would remember the charge thus laid upon him, and fail not to execute it without loss of time on his arrival in England, if ever it should be his fate to get there. "And now, O father, receive my weary spirit," prayed the expiring Missionary. "Farewell, my poor, dear friend. I go—I go—O that you were equally happy. I go to him 'in whose presence there is fullness of joy, and at whose right hand, there are pleasures for evermore.'" His voice grew weaker. For a few moments he was quite silent. Charles doubted whether he had not ceased to breathe; when, to his infinite surprise, his departing friend seemed to have gained a sudden accession of strength, and he began to sing the following hymn, which he had composed himself.

Almighty power who hung this ball  
In space, and being breathed on all;  
Now waft thy servant to that shore  
Where sin and sorrow are no more.  
My spirit, long in exile here,  
Called home to thy celestial sphere,  
Shall like the lark at morn arise,  
With songs of rapture to the skies.  
In mercy he who loves the just,  
Consigns any body to the dust;  
And ends mortality's career  
Of foolish hope, and idle fear.  
He calls my panting soul away,  
With joy his bidding I obey;  
Death! close the dream of joyless strife,  
And wake me to substantial life.

His voice failed him at the close of the second verse, and instead of singing, he but faintly repeated the concluding stanzas. He then strove to utter a prayer of which but few words could be heard by Charles. The sounds were now so faint as to be wholly unintelligible—they ceased—He was no more.

#### THE DEVIL.

*Le Diable peint par lui-même*, by M. Collin de Plancy, author of the *Dictionnaire infernal*. (From the French.)

Talent is not sufficient to recommend the historian. He must have a hero, and if possible a novel one. From Achilles down to Charles XII, and even to a later period, all great actions have been so carefully recorded that the majority of panegyrist and poets have been obliged to extol vices for want of virtues; and the writer who is now required to bring a great character before the world, does not well know where to look for one. Distinguished men have in all ages been rare; and as soon as a little hero rises up, twenty

historians rush forward to carry him off in triumph, and scarcely allow him time to finish his exploits.

M. Collin de Plancy, after the example of Dante, has descended to the infernal region in quest of his heroes. In his *Dictionnaire infernal* he made us acquainted with the mighty deeds of spectres and phantoms, and the gambols of faïres, gnomes, &c. Now he presents us with the king of all nocturnal beings—it is Satan, Belzebub, Pluto, Arimanes, Tentates, or Lucifer;—finally, it is the Devil himself.

Hitherto we have been enabled to form but very imperfect notions of the above singular personage: when we speak of him or language conveys no definite idea. He is conjured up on every occasion; his name a continual source of contradiction and absurdity; and all because we do not know him sufficiently. Thus, a frank obliging man is called a *good-natured devil*: one of bold and determined disposition is a *devil of a man*: a person who excites our compassion is a *poor devil*; an entertaining man is a *devilish wit*; when out of humour with ourselves we wish the *devil may take us*; of a troublesome affair we say the *devil is in it*; a man who wants his dinner says he is *devilish hungry*; if he has no money he says the *devil is in his purse*. Consequently, it is impossible to form any precise idea of the nature of this hero of the infernal regions.

By some, his satanic majesty is described as having bat's wings, duck's feet, ears like mushrooms, a nose nine inches long, its tusks of a wild-boar, and horns which he can turn back at pleasure, when he wishes to travel incognito. Others assert that he is a winged serpent, or that he has an eagle beak, a cloven foot, and is entirely black. The natives of Nigritia, however, for reasons equally good, maintain that he is white.

But perhaps it is more interesting to ascertain what form Satan assumes when he slips into our houses or ranges through the field at midnight. This is the inextricable difficulty; for of the many ingenious persons who have been favored with a sight of the devil, there are not two who agree. He said to be capable of assuming any form he pleased. Sometimes he disguises himself as a goat, a hare, a black-bird, a toad, or a frog at other times he transforms himself in the trunk of a tree, a salad, a calf's head, a hoghead of wine. Many ladies have seen him in the disguise of a monk, and more have known him to assume the form of a features of a pretty woman.

In India, where he is exceedingly populous, he nevertheless condescends to shew himself whenever he is asked: it is more necessary to utter a fervent prayer for appearance. There, if we may believe the good Jesuit who relates these particulars, appears glistering in gold and precious stones attended by a gay retinue, surrounded by young virgins, escorted by several regiments of cavalry, and a vast troop of elephants superbly caparisoned. He grants to the unfortunate whatever they request, recommends charity, and orders the rich Indians give feasts to the poor.

But these are not the only good actions recorded of the devil: he is not continually spreading his nets and tempting holy persons to the commission of sin; he is occasionally honest and disinterested; and M. Collin de Plancy does his utmost to prove that the infernal monarch frequently restores the sinner to the path of salvation. Sometimes, indeed, he is severe through excess of goodness.

For instance, it was rather cruel to transform a poor nun into a demoniac, because, as Gregory the Great relates, she repaid herself with a lettuce before she had said her *Benedicite*; or to forbid a hungry man to eat some real, because it happened to be part of a descendant in the fifth degree of a cow that had been stolen.

On another occasion the devil proved himself still more austere. He appeared under the form of an unknown knight to Count Maçon, and carried him off in the presence of his terrified guards and attendants. The pious historians who relate the above anecdote, take care to add, that the Count had many sins to answer for; that he was in the habit of robbing convents, and that he paid but little respect to the clergy.

In all ages the Devil has rendered great service to the learned, for whom he has always evinced particular regard. Sculiger was said to have entered into a compact with him, Socrates, Apuleius, Agrippa, Cardan, Cagliostro, are reported to have had familiars who inspired them with knowledge. Roger Bacon was imprisoned because the Devil taught him mathematics. The Knights Templars, and Joan of Arc, were accused of holding communication with demons; and M. Collin de Plancy himself would have been burnt a hundred times over, had he lived in former times and known all the fine things which he now ventures to disclose.

Our ancestors had no mean opinion of the human mind, that they deemed it incapable of producing any thing without the aid of the devil. John Faust, one of the inventors of printing, was suspected of holding open communication with the Prince of Darkness. In Switzerland the common people entertain a high notion of his talents, that they attribute to him the construction of several water-pieces of architecture. Denis le Chartreux says, that the Devil is a great geometer; Milton asserts that he excels in the building of bridges; and Tertullian informs us that the Devil is so good a natural philosopher that he can carry a sieve full of water without spilling a drop.

For more ample details we must refer the reader to the work. It doubtless contains some few pages which timid eyes might wish to pass over; but it is nevertheless very amusing, and M. Collin de Plancy's hero is as good as most others.

ANALYSIS OF THE JOURNAL DES SAVANS, FOR NOVEMBER, 1819.

Art. I. Excursion agronomique en Auyvergne, &c. par J. A. Victor Yvart.

An interesting account of an agricultural visit to a part of Auyvergne, particularly the environs of the Mont d'Or, and the Puy-

de-Dôme; it recommends the introduction of more irrigation into French husbandry.

Art. II. Codex Naxareus, &c. à Matth. Norberg.—2d Article, (See Literary Gazette, No. 142.)

Having given an account of 'his book in our 142d Number, we refer our readers to it; and content ourselves with stating, that in this second article, Baron de Sacy enters into a very elaborate critique, (occupying no less than 20 pages in 4to.) on the five volumes published by Mr. Norberg, of whose translation he does not speak very favourably. He intends to give, in a third Article, a view of the doctrine of the Christians of St. John, according to the book of Adam.

#### RUSSIA.

Art. III. Histoire de l'Empire de Russie, par M. Karamsin. Tom. I. and II. traduit par M. M. Saint Thomas & Sauffert.

A history of Russia was, considering the works of Voltaire and Levesque, a desideratum in Russian, much more than in French literature. Mr. Karamsin, forgetful also of Herberstein, whose work is popular in Russia and Germany, has considered his subject as being still entirely new; and, after some reflections on the interest and utility of historical studies, and especially of natural history, he points out the ancient chronicles and original monuments from which he has extracted the annals of his country. These are chiefly the chronicles of Nestor and Basil, who lived at the end of the 11th century, and of five anonymous writers of the 12th and 13th centuries. The other documents are extracts from records, both Muscovite and foreign, lives of saints, letters of bishops, genealogies, military ordinances, contemporary memoirs, medals, inscriptions, maps, and other documents taken from the archives. The author thinks that these annals may naturally be divided into three parts: the ancient, from Rurik to John III; the middle, from John III. to Peter the Great; the modern, to the Emperor Alexander. The system of apianages characterizes the first; the second is that of the monarchy; and the third is distinguished by the change in the manners of society. This application of the word modern seems to us worthy of attention. In fact, Russia is modern only since the end of the 17th century; France is so ever since the reign of Francis I.; and Italy since the age of Dante. Mr. Schlozer reckons five successive states of Russia; he calls it *beginning* from 862 to 1015; *divided* from the time of Sviatopolk to that of the Mongols, *oppressed* from Bati, to John III. *victorious* till Peter I., and since that time, *flourishing*. But, according to Mr. Karamsin, the age of St. Vladimir was an age of power and glory, to which the name of *infancy* is inapplicable; the empire had been divided before 1015; and the time of the false *Dmitri* was distinguished by misfortunes, rather than by military successes.

The two volumes now published in French, come down only to the year 1169, leaving us two centuries from the period which the author calls the *middle*. They furnish some novel information.

In the first two chapters, the author enquires into the origin of the Russians, and agrees with Nestor, that the *Varangians*, "who, in 862, became the first sovereigns of the country, to which they gave the name of Russia, were Scandinavians, from the extremity of the Baltic." Having disposed of those thorny questions, he gives an interesting description of the *physical and moral character* of the Slavonians in general, and particularly of the *Slavonian Russians*. This third chapter contains instructive details, hitherto but little known, on the mythology of the ancient inhabitants of Moscow, on their calendar, their political institutions, their writing, on the various dialects, such as the Myrian, the Croatian, the Polish, the Russian, which were introduced among the Slavonian tribes in proportion as they were subdued, dispersed, and confounded with other people. A singular trait of their language is, that the same word, *vek*, signifies both *life* and *century*, probably because a hundred years constituted the usual period of the life of man.

The history, or the chronological narrative of facts from 862, begins with the fourth chapter. The author has not, however, strictly confined himself to the order of time. The extracts from the *Russian Law*, or code of Yaroslav, who died in 1054, will prove highly interesting to those persons who study the history of social institutions and of the securities given to persons and property. In one copy of this code there is an article, which ordains, that in all criminal causes, the plaintiff must appear with the defendant before twelve citizens, who are sworn, and on their soil and conscience shall discuss, verify, and declare the facts, leaving to the judges the right of determining and applying the penalty. To these extracts Mr. Karamsin has added short explanations, and judicious reflections.

The review is generally favourable to the work, and we are led to expect an interesting continuation in the succeeding volumes.

#### ORIGINAL CORRESPONDENCE.

AURORA BOREALIS, &c.

[Extracted from the Letter of a Traveller in Newfoundland.]

In Europe the cold and dry winds always blow from the N. E.; in America always from the N. W. When these winds prevail the sky is clear and of a deep azure blue, and nothing can equal the beauty of the nights. The moon sheds a brighter lustre than in Europe, and in her absence the brilliant light of the stars supplies her place.

The sight of an Aurora Borealis, which is very frequent in these hyperborean regions, produces the most wonderful effect, and is indeed one of the most extraordinary phenomena of nature. It generally appears in the form of a brilliant girdle of light, the extremities of which repose on the horizon, covering the heavens with its coloured rays. Even the splendor of the moon does not eclipse its magnificent effulgence. A crackling like the rustling of silk precedes its appear-

nance; the light spreads rapidly over the sky, with a slight noise, and the rays unite in the zenith in the form of a crown.

The Aurora Borealis often presents the singular appearance of two standards floating in the air, and its different tints of light afford successively the coup-d'œil of so many vast zones of silk of divers colours. At other times, it extends itself in vast columns of fire, the brilliancy of which insensibly fades, or by rapid oscillations transforms itself infinitely, and changes its colours from the most brilliant yellow to the darkest brown; and after having brightly illumined the firmament, extends majestically from the horizon to the zenith and suddenly vanishes, leaving behind a sombre and uniform trace: the light immediately reappears, and again vanishes with the same rapidity. Lastly, it often shews itself in glorious rays, the number and brilliancy of which successively increase till they fill the whole atmosphere, and form the most striking sight that can be imagined; the sky is covered with sparks, and it cracks and hisses with a noise absolutely resembling that of a superb fire-work. This phenomenon, which is generally considered as the effect of electricity, is almost always the precursor of storms; and when these latter rise in the N. E. they spread the greatest obscurity over the whole island of Newfoundland.

In the spring there is much rainy and foggy weather. Towards the beginning of June, the change in the climate is sensible; and from the middle of July and sometimes earlier, to the end of August, the heat is so great as to oblige the people to put on summer dresses. Not a single cloud is to be seen, particularly from ten o'clock till four: it is sometimes hotter than in the Antilles.

The nights are of extraordinary beauty. The clearness of the sky, the purity of the atmosphere, the brilliant light of the moon, the uncommon lustre of the stars, which almost all appear in the horizon, each resembling the light of a distant vessel, produce the most delightful scene that can be imagined.

It is impossible to form an idea of the magnificence of the spectacle, which the Bay of Conception, presents on such a night, at the season which is called Capetlin-Kutt: then its immense surface is covered with myriads of fish of every species and of every size, all equally engaged, some in pursuit, and others in evasive manoeuvres to escape. The whales rise and plunge alternately, dashing and spouting the water into the air; the cod bounding upon the waves, and reflecting the light of the moon upon their silvery scales; the Capetlin, saving itself in vast shoals, seeks a refuge on the coast where the waves throw an immense multitude upon the sand, which become the prey of women and children, who with baskets come to collect this supply, while the fishermen in their boats, with their nets, take it upon the coast, and gather a still more valuable, and not less abundant harvest.

#### MANUFACTURES, &c. IN FRANCE.

The following Report of the Central Jury,

on the products of French Industry, presented to Count De Cazes, cannot fail to be interesting to our commercial readers.—

“At all times the French carpet manufactures have been remarkable for tasteful designs, and brilliant and durable colours. The sale of these carpets has, however, always been extremely limited; they were manufactured at vast expense, and were in some measure exclusively destined for the palaces of the royal family. Owing to recent improvements, carpets may now be manufactured with equal perfection at a moderate price. However, the jury are of opinion that the labour may be still further simplified, and the gold medal is offered to the first manufacturer who shall attain this object.

The French paper manufactures, which were long defective with respect to the articles used for size and the manner of applying them, are annually undergoing improvements. At the last exhibition the paper manufactures of Annonay, surpassed all the specimens of preceding years. In some manufactures, the vat sizing is employed; and this method, which is doubly economical, as it diminishes manual labour, and improves the quality of the paper, will probably be universally adopted. The art of making paper entirely by mechanism, is a French invention. Sheets of paper six hundred feet long, manufactured by this method, were presented to the public at the late exhibition.

The manufacture of ornamental paper hangings is constantly improving in France. Specimens of landscapes, both coloured and uncoloured, and compositions after the antique, prove the surprising advancement made in this branch of industry.

Among recent improvements, the jury remarked a new method of imitating gold ornaments.

The improvements in the art of preparing iron, have a greater interest, as France now possesses nearly five hundred large furnaces, or Catalanian forges, which annually produce about a million quintals of cast and wrought iron: the use of carbonated iron, and the process of refining with coal, at the reverberating furnace, are among the new introductions, which promise the happiest results. Great activity prevails in the steel and brass manufactures; the preparation of platinum, which is rendered malleable by a newly discovered process, and the working of the tin mines of Vaulry and Piriac, present new resources to French industry: finally, the manufacture of all sorts of iron ware improves in proportion to the progress effected by the chemical and mechanical sciences in the working of metals.

The reporter made honorable mention of the establishment for the construction of improved agricultural instruments, which is superintended by M. Molard. At this establishment, ploughs of cast iron have been manufactured, on which the jury bestowed unqualified approbation: they possess the advantage of being more durable than wooden ploughs, are less liable to go out of repair, and more manageable, without being less solid.

Our limits do not permit us to follow the reporter through his learned examination of the improvements that have taken place of late years in optical instruments, fine clock work, and astronomical clock-work. We must, however, notice a new invention which will form an epoch in the history of stringed instruments; namely, the violin of M. Chanot, which produces a tone as full and melodious as the old instruments which are so rare and highly valued.\*

The specimens of soda, alum, acids, ceruse, vermilion, scented soap for the toilette, indigenous sugar, gelatine, and all the alimentary products presented at the exhibition, exceeded the utmost expectation of the jury.

#### ASTRONOMY OF THE ORIENTALS.

(Abridged from the *Calcutta Journal*.)

The following are some of the astronomical measures of time relating to the sun and moon, according to the calculations of the Hindoo astronomers, and by which the Bramins, Moguls, and other Mohammedans in India chiefly go, in the reckoning of time:

The lunar year they reckon 365 days, 22 garris, 1 pull. The solar year they reckon 365 days, 15 garris, 30 pulls, 224 peels, Indian time:—60 peels making 1 pull, 60 pulls 1 garri, and 60 garris 1 day. According to which the following table is constructed.

Peels.	Pulls.	Garris.	English Time.
25	—	—	1 second
124	—	—	5 seconds
25	—	—	10 seconds
374	—	—	15 seconds
50	—	—	20 seconds
75	14	—	30 seconds
150	24	—	1 minute
750	125	—	5 minutes
1500	25	—	10 minutes
2250	374	—	15 minutes
3600	50	—	20 minutes
4500	75	14	30 minutes
9000	150	24	1 hour
18000	300	5	2 hours
27000	450	74	3 hours
36000	600	10	4 hours
45000	750	124	5 hours
54000	900	15	6 hours
63000	1350	224	9 hours
108000	1800	30	12 hours
216000	3600	60	1 day

From this table it appears that the Indian year, of 365 days, 15 garris, 30 pulls, and 224 peels, is equal to 365 days, 6 hours, 12 minutes, and 9 seconds of our time; and accords with our sidereal year nearly, which is stated at 365 days, 6 hours, 9 minutes, and 144 seconds. The Indian lunar year, reckoned at 354 days, 22 garris, 1 pull, measures 354 days, 8 hours, 48 minutes, 24 seconds English time; which very nearly corresponds with that settled in our tables, at 354 days 8 hours, 48 minutes, 36 seconds.†

\* For a detailed account of M. Chanot's admirable improvements on the violin, see a report of the French Institute, inserted in the *Literary Gazette*, Sept. 13th, 1817.

† See Frazer's History of Nadir Shaw, passing through Fergana's Astronomy.

The lunar cycle, or period of 19 years, as also that called the Chaldean or eclipsic period, confessedly originated with the Eastern astronomers:—and that we may see the agreement of the Oriental astronomers with our European calculators, we here insert the measure of 19 sidereal and lunar years after both accounts, thus:—

## Indian time reduced.

	Days.	Hrs.	Min.	Sec.
19 × 365 days	= 6935	0	0	0
19 × 6 hours	=	4	18	0
19 × 12 min.	=	0	3	48
19 × 9 sec.	=	0	2	51

Indian time ... 6939 21 50 51

Ferguson's Tables, p. 190, 6939 20 55 354

Difference .... .. 54 154

Hence the difference between the Indian and European is 54 min. 154 sec. in 19 sidereal years.

## Indian lunar years reduced.

	Days.	Hrs.	Min.	Sec.
19 × 354 days	= 6726	0	0	0
19 × 8 hours	=	6	8	0
19 × 48 min.	=	0	15	12
19 × 34 sec.	=	0	0	7 36

19 × 12 lunations = 6732 23 19 36  
6 lunations = 177 4 24 12  
1 lunation = 29 12 44 2

235 lunations = 6939 16 27 50  
Ditto by English tables = 6939 16 26 51

Difference .... .. 59

The difference between 235 lunations composing the lunar cycle of 19 years by both reckonings less than one minute! Considering the supposed ignorance of the Eastern astronomers in the elements of true science, their want of necessary and accurate mathematical instruments, and the skill for the more profound and elaborate calculations of our European and justly famous practitioners, their determination on the exact measures of the sidereal and lunar year is truly admirable, and deserving our highest commendation.

## DISCOVERY OF ANGLO-SAXON AND OTHER COINS, &amp;c. &amp;c. IN SWEDEN.

A peasant of the name of Bryngel Tonsson, and some labourers lately digging for stone, in a woody field on the estate Dalsland and Tullhagen, in Bolstads Socken, found a great number of old standards, and other silver of a fine standard. The latter consists of nine bracelets, of four different forms; a thick silver twine, bent together, but broken off at both ends, appearing likewise to have been used as a bracelet; and several shapeless silver pieces, weighing altogether 46 ounces. The bracelets weighed from 1 to 3½ loth (a loth is half an ounce). Of the legible coins, there are 242 whole pieces; the illegible and defaced amount to about 70. The former consist of 87 English or Anglo-Saxon coins, all except three, of king Ethelred, and only two of his father, king Edgar; 83 of them bear the date of 1006. The rest of the coins, with the exception of two Kufic of the years of the

Hegiri, 286 and 308 (the years 899 and 920 of the Christian era), are all German, among which are 90 of the Emperors Otto I.—III. and the Empress Adelheid; several of different princes, as of Duke Bernard I. of the Palatinate; Henry of Bavaria (the Lame?) &c. &c. the rest are of Cologne, of the time of the three Ottos. From the age of these coins, it seems that we may infer with tolerable certainty, that this treasure was confided to the earth, the only deposit-bank which at that time existed, rather earlier in the 11th century than this era has been brought to light in the 19th.

This silver, doubtless, belonged to a rich person, and had most probably been a booty taken in war. Pirates (Wikingers) and soldiers were the richest persons in the country.

Why so many coins of king Ethelred have been found together in Scandinavian ground, is probably owing to the heavy tribute called *Danegeld*, which this monarch had to pay for many years, probably in ready money, to Denmark; which was then circulated in various ways, even among the inhabitants of Sweden, besides what Swedish warriors brought from the expeditions to England, in which they took a distinguished part. Some also might be brought by the English missionaries, and some in the regular course of trade. As the kingdom had no coin of its own, German and English money, together with the Arabian, brought by merchants and others from the east, formed the only currency of the kingdom.

The articles now found confirm what tradition says, that gold and silver armlets and bracelets were then in use. Bracelets seem originally to have been an ornament peculiar to warriors, who swore oaths by their bracelets, which were not to be broken. They were sometimes given by sovereigns or generals as rewards of valour, or signs of favour, and sometimes to persons not of the military profession. Saint Siegfried, who lived in those times, had received a gold bracelet from Olof King of Norway, which he employed in the redemption of Christian prisoners from heathen slavery.

The coins have been offered, as the law directs, to the Crown for purchase. His Majesty gave the necessary orders on the 11th of January, and they are now deposited in the Royal Cabinet of Antiquities.

## LEARNED SOCIETIES.

## OXFORD, FEB. 19.

UNIVERSITY INTELLIGENCE.—On Saturday last the following degrees were conferred:—

*Master of Arts*.—Rev. Frederick Charles Spencer, Christchurch.

*Bachelors of Arts*.—Rev. Henry Palmer, Worcester College; Christopher Sidney Smith, Corpus Christi College; John Leigh, Brasenose College; Bernard John Ward, Trinity College; James Espinasse, Balliol College.

Thursday last the Rev. Robert Mason, of Queen's College, was admitted Bachelor in Divinity.

## CAMBRIDGE, FEB. 18.

At a congregation, on Tuesday, the Rev. Henry Browne, M. A. of Lincoln College, Oxford, was incorporated of King's College; and the Rev. John Davies, M. A. of St. John's College, Oxford, was incorporated of St. John's College, in this university. Mr. George Rider, of Catherine Hall, and Mr. Thomas Warden, of Trinity Hall, were, on the same day, admitted Bachelors of Arts.

## RUSSIAN UNIVERSITIES.

The six Universities of Russia have the following districts assigned to them: 1. To the district of the Moscow University belong the Governments of Moscow, Smolensko, Caluga, Tula, Rjasan, Wladimir, Costroma, Wologda, Twer, and Jaroslaw. 2. To the district of the University of Wilna, the Governments of Wilna, Grodno, Wilepsk, Mohilen, Minsk, Volhynia, Kiew, and Podolia. 3. To the district of the University of Dorpat, Livonia, and Courland, originally likewise Old Finland, but the latter now belongs to the University of Abo, in New Finland. 4. To the district of the University of St. Petersburg, which is not yet organized, the governments of St. Petersburg, Pleskow, Novogorod, Olonez, and Archangel, are for the present assigned. 5. The district of the University of Charow comprehends the Ukraine, Orel, Kursk, Woronezh, Tschernigow, Pultawa, Cherson, the Crimea, Jekatherinoslaw, and the countries of the Don and other Cossacks. 6. Lastly, to the district of the University of Kasan belong, Kasan, Astracan, Orenburg, Ufa, Wjatka, Perm, Tamlow, Nischneigorod, Saratow, Pensa, Caucasus, Simbirsk, Tobolsk, Tomsk, and Irkutsk, together above 200,000 (German) square miles in extent. Yet some young people from the country of the Buriates, Tschukli, and Tungusians, who are distant about 2000 miles from Kasan, have come to study at the university of that city; many belonging to the Tartar tribes have also come to study at the University of Kasan.

## FINE ARTS.

## THE BRITISH GALLERY.

In pursuance of our design, we shall, in a few consecutive Numbers of the Literary Gazette, select for notice the principal works in this Exhibition; consulting generally the merit of the productions in our classification; but, in a good many instances, postponing others for the sake of our own convenience, and in order to mature our criticisms, where matter, not attainable by the mere view of a picture, is desirable.

No. 213. *A Highland Whisky Still, in Argyleshire*. D. Wilkie. R. A.

Our first glance at the exhibition strongly impressed us with the superior excellence of this picture; nor has our subsequent examination of it lowered our opinion. We do not hesitate therefore in saying, that so far as the execution, and the choice and ar-

range of the materials, of which the subject is composed, can be estimated, this is the finest specimen of Mr. Wilkie's pencil. Nor would we qualify it even in this slight degree, were it not palpable, that, admirably as he has treated this truly Scottish scene, some of his preceding works have an advantage, in the greater number of characters, in sentiment, and in the more general nationality of the habit or custom which he has chosen for the display of his unrivalled talents. In the present instance, there is, superadded to the best qualities of the Flemish School, a degree of expression far beyond those foreign masters; who, in most cases, contented themselves, in the conduct of their performances, with what regarded the colouring, *chiaro scuro*, and handling. For so much, ordinary nature and common character sufficed to them; and they shone in the application of their means and skill. Yet on these, their peculiar grounds, the picture before us has abundant claims to admiration; and when time shall have done for it as much as for them, it may vie with the very foremost of the Flemish masters. There are few subjects of this class which could have afforded the artist so fair an opportunity of showing his judgment in the choice of the picturesque, and of throwing upon his objects a light and shade equally conducive to the effect of the piece, to which the varied colours of which they partake give a tone and character well suited to harmonize and set off each other.

The interesting interior is occupied by figures the most appropriate; and if their occupation and quality have less of emotion than some of Mr. W.'s other performances, nothing can be more just or suitable to their situation and employment. The profound deliberation with which the old man examines the clearness and *proof* of the whiskey, is equal, we may say superior, in its kind, to any thing that ever was done; nor is the figure in shadow much less ably painted; at any rate it has all that belongs to its business and place. In this part, the accessories and still life are surpassingly beautiful; and when we examine the effect of the colouring arising from the varied broken tints of similar hues, out of which so much harmony is produced, together with the composition as a whole, we cannot but congratulate the purchaser on possessing a chief-d'œuvre of British art.

Our regard for the subject, too, is raised by poetical association; and we recognise it as one in which we can sympathize; not as it refers to the use of spirits and their pernicious consequences, but as reminding us of the joyous or heroic feelings, to which the inspiring beverage has often given rise; and so happily expressed in the glowing language of Burns.—

"But bring a Scotchman frae his hill,  
Clap in his cheek a Highland gill,  
Say such is royal George's will,  
And there's the foe:  
He has aue thought, but how to kill  
Twa at a blow."

Besides this inimitable performance, Mr.

Wilkie has two other pieces in the Gallery; No. 17. *A Veteran Highlander, who served at Minden*; and 109, *A Bacchanalian gathering Grapes*.

The former, it may readily be imagined, is in his usual style: the latter is an excursive flight into the regions of classic art; and quite sufficient to show the versatility of the artist's talents. The names of Poussin and Rubens, on such subjects, have been so long used by the dealers to conjure with, that we despair of any other to draw the amateur into the circle; but if any can, this may. The general effect is rich, and belongs to the highest style of art. What we do not like so well, is the want of beauty in the female forms, and of truth in some of the flesh tints. Yet there are parts, beyond which we deem it hardly possible to carry the powers of painting.

No. 141. *Macbeth.—John Martin.*

The scene is, the Vanishing of the Weird Sisters—

"Stay ye imperfect speakers, tell me more."

As by the wand of an enchanter, we are again brought to a sight of the marvellous. The skill with which this artist, on a former occasion, arrested our attention, in spite of the regularity of protracted lines, and formal splendour of his architecture, is here displayed with full liberty; and the field of imagination is opened with a bold and daring hand. The sublime character of the clouds and sky, mingling with the more solid elements which compose the scene, are well suited to the storm of the wild and barren heath. The characters of Macbeth and Banquo appear in the midst of a blaze of light, while the weird Sisters are enveloped in a veil of obscurity; a mist is drawn before them, that may well make them seem the unearthly shapes of a distempered fancy, such as the immortal bard intended to draw.—

"That look not like the inhabitants of earth,  
And yet are on't."

The band of time will do much for this picture, in toning down some crudities in the colouring. The conception is grand, and though rather a manner-like repetition, it sustains the high reputation of the artist.

No. 30. *The Day before the Wedding.—M. W. Sharp.*

This cabinet gem is one of Mr. Sharp's happiest efforts: the subject is treated with a playful elegance; and in its little drama, the bride of to-morrow is coyly resisting the lover of to-day, who is drawing her towards a pedlar, in order that the latter may try on the ring, which is to bind her for ever. An old lady is carefully inspecting the operation of fitting the conjugal pledge; and these four figures make up the principal group. In the back ground is seen the signing and sealing of the marriage contract. The costume is Spanish, and the architecture, with which the brilliancy of the colouring and the style of execution well accord, superb. The story is delightfully and humourously told, the composition is charming, and the whole finished in a masterly style.

# STAINED GLASS.

Copy of a Letter addressed to Messrs. Robins, Auctioneers, Covent Garden.

Gentlemen,

I feel it a duty incumbent upon me, as the oldest artist in the kingdom, in the art of Painting on Glass (in varying colours) to address you through the medium of the public papers, in vindication of British genius, in that particular branch of the fine arts, commonly called "Stained Glass," to enquire by what authority you have made such bold assertions as are contained in an advertisement, respecting a sale of Painted Glass, coming forward in the month of March next, under your hammer; in which you presume to set up the works of a French artist, as "the finest efforts that ever have appeared in the art of Painting on Glass," adding, "that the point has been conceded by the first artists." Now, gentlemen, I call upon you to give the names of those artists who (you say) have so decidedly pronounced on the merits of those pieces, and so kindly transferred the fame acquired by British genius to Monsieur de Marne, an artist residing in Paris. When you favour us with their names, we shall then be able to form an opinion, whether the rank they hold in the estimation of the judicious part of mankind, entitle their verdict in Monsieur de Marne's favour, to any consideration. Another question, I must request an answer to—What do you mean by "Three Pieces of Glass," to form one subject? Can a picture have more than one surface? If two or three pieces of glass are used to form a view, or subject, does it not become an optical delusion? and consequently not entitled to the rank which a *picture* holds in the works of art; because a *picture*, (if well executed) unites in itself all the points of excellence on one surface, which are so pompously puffed off by you, in Monsieur de Marne's three-fold glass contrivances. When I reflect that England has to boast of such men, in the art of Painting on Glass, as Peckett, Jarvis, Hill, Egington, Backler, assisted by the genius of West, Mortimer, and other artists of high consideration, I cannot tamely stand by, and see their well-deserved fame sacrificed by the frothy nonsense of an auctioneer's advertisement, to gratify the vanity of a Frenchman, at the expense of truth, candour, and justice, without an effort to expose the delusion. Expecting an answer, I remain, &c. &c.

Feb. 23, 1820. J. PEARSON.

112, Great Russell Street, Bloomsbury.

P. S.—These sentiments are not new to you, as you will perceive by referring to my letter on the same subject, dated May 22d, 1815, in answer to a challenge of yours to the artists of this country, five years ago, when these very superior specimens were offered by you for public sale, without success.

[We insert this as a fair reclamation in favour of British art; but must say, at the same time, that however Messrs. Robins may find it neces-

any to eulogize articles in the way of business, more respectable and honourable men are not to be found in London.—*Editor.*

## ORIGINAL POETRY.

[By Correspondents.]

EULOGY ON BURNS THE POET.

Remember the bard, though mute is his lyre,  
And with'er'd for ever the hand that he flung  
O'er its chords, while with more than a patriot's  
fire,  
He the triumphs of freedom and bravery sung.  
He had strings too for beauty, love, virtue, and  
truth,  
That shone ever bright, and as free from  
decay  
As those lines which the easterns beheld in their  
youth,  
And glaz'd on in age as their souls fled away.\*  
Remember the bard like the huma sublime, †  
He ne'er sinks to the earth, so exalted his  
flight,  
But winging his way thro' sweet poetry's clime,  
O'er his dear native land pours his heaven-  
drawn light.

Oh! Caledon, guard thou his ashes with awe,  
For thy poetick world was deserted and dim  
Till he rose on thy darkness, and Scotia then  
saw

That world of the muse all illum'd by him.

In the island of Paros a marble was plac'd  
On its rugged and desolate sea-beaten shore,  
Where woe could be seen but the blue ocean's  
waste,

And noisil could be heard but the sea's deaf-  
ning roar.

Should a stranger but fail in respect to the tomb,  
As many all heartless would fearlessly dare,  
Swift a race of avengers sprung forth from its  
gloom,

And punished his crime as he fled in despair. ‡

Thus, Scotia, protect thy lov'd poet, whose name  
Should be blest by each child, with its infantine  
breath;

And should critics presume e'er to sully his  
fame,

Best forth from his tomb, and quick sting  
them to death.

Tet stay—let the drivellers from death be re-  
deem'd,

Where giving them honours from which they're  
exempt—

'Twere declaring their venom too highly es-  
teem'd,

So leave them to die of neglect and contempt.

R. R. N.

\* The lines in the mountain, recorded in ori-  
ental tales, and said to last for ever.

† An eastern bird that flies continually in the  
air, and never touches the earth.

‡ The tomb of Archilochus was placed on the  
sea-shore, in the island of Paros, and the  
poets feigned, that in the cavities of the stone,  
worn away by the waves, a swarm of wasps was  
concealed, ready to avenge the least insult that  
could be offered to it.—Vide Notes to the  
Pursuits of Literature.

## THE SNOW-DROP.

O! thou white flower,  
Arisng from the earth,  
In winter's last departing hour,  
And the Spring's birth!

Innocent thing

Without perfume! thy bell  
Seems o'er thy silent grave to fling  
A bridal spell.

Beauty like thee  
Endears the heart and dies:—  
Thy root is thy eternity,—  
Her's in the skies.

Islington.

MARIA.

"WE'RE NA JUST YOU."

The stars a' blinkin  
Set ane thinkin  
What the de'il maks 'em thus aye winkin,  
Fu' weel I ken,  
Among us men,  
The een gang na frae mickle drinkin,  
O' the lift, I ween  
Yon stars are the een,  
An the braw blue sky a bowrin has been;  
Then fill a bowl ample,  
Nor let sic bright example  
Low for us loons frae Heaven in vain.

EVAN.

*Additional Verses to the national Anthem,  
written by Geo. Colman, and sung at  
Covent Garden Theatre.*

Lord! while thy chast'ning hand,  
Wide through this loyal land,  
Sorrow doth fling,  
Each Briton's heart-felt tear,  
Shed o'er the Father's bier,  
Bids us the Son revere;  
God save the King!

Long may war's clangour cease!  
Long may the Dove of Peace  
Here spread her wing!  
I, ul'd thus, in sweet repose,  
From domestic foes,  
Oh! from black treason's blows,  
Heaven guard the King!

While George's praise we sound!  
Rally his throne around!  
United cling!  
Think who upheld his Sire!  
Who quell'd the Despot's fire!  
Rais'd Britain's glory higher;  
'Twas George our King.

## SONG.

I saw a sunbeam on the sea,  
Dancing ro light and merrily,  
As if its rays were form'd to lave,  
And glitter in the summer wave,  
Brightly, for ever!

I saw a rosebud in its bloom,  
Scenting the air, with rich perfume,  
And then, methought, a flow'r so fair,  
Must always flourish sweetly there,  
And perish never!

A dark cloud came, the sun-beam fled,  
And winter found the rosebud dead;  
And then I thought me—bless and joy,  
Should ev'ry hour of life employ,  
Ere death can sever,  
Our beings from each dear delight,  
And, with eternal shades of night,  
O'ercast those dreams of happiness,  
Our sighing souls would fain possess,  
When lost for ever!

J. L. S.

Plymouth, Feb. 1820.

"Life makes the soul dependent on the dust;  
Death gives her wings to mount above the  
spheres." YOUNG.

Weep no more, that her azure eye  
Hath ceased to glisten,  
That her wary locks in the damp grave lie,  
That her lip hath lost its crimson dye,  
That you vainly listen  
For her voice of witching melody.

Weep no more that each fleeting grace  
This earth hath given,  
Hath left for ever her form and face;  
That her soul hath run its mortal race;  
And the joys of heaven  
The changing woes of this world replace.

Weep no more, oh! weep no more!  
Would'st thou renew  
The colours that deck'd the worm before?  
Would'st thou its grow'ling shape restore?  
For the lovelier hue,  
The lighter wings which heavenward soar:

VENERS.

From "The Mystery," a Novel.

THE SUN AND THE DEW.

The Sun, from his chariot of gold saw the Dew.  
Illum'd by the first gleam of orient day;  
In splendour he burst on the lowly one's view,  
Who, trembling, reflected his earliest ray.  
"Fair Dew," he exclaimed, "'tis with grief  
and surprise,

On yon rugged bramble such brightness I see;  
O! ascend to the place you should find in the  
skies,—

Haste, dearest! come shine here with me."

Surpris'd and alarm'd such a lover to meet,  
All-blushing Dew shrunk, his regards while  
she bore:

But felt, in her soft trembling bosom, a heat  
She never had known, till that moment, before.  
And, listening now to the tempter's false  
tongue,

Inhaled the sweet poison; and soon, passion-  
tow'd,  
From the humble, but fostering bramble, she  
sprung,—

That moment, for ever was lost.

Thus oft sordid Wealth, the poor cottager's  
charms

Permitted by some fatal chance to behold,  
Lures the fair to abandon a parent's fond arms,  
For greatness and rank, falsely proffer'd, and  
gold;

And dazzled by these, if unguarded the maid  
The heartless deluder with favour shall view;  
Destroy'd all her peace, to shame she meanly be-  
tray'd,  
She fades, like the vanishing Dew.

## BIOGRAPHY.

CHRISTOPHER SMART, M. A.

We have thought that a brief notice  
of Mr. Smart, which we abridge from  
Chalmers' English Poets, might not be  
unacceptable in the same sheet in which  
the extraordinary effusion from his pen,  
(or rather key) while labouring under  
mental derangement, appears, by a  
chance and odd coincidence, immedi-  
ately after the review of a very inge-  
nious inquiry into sound mind.

Christopher Smart was born rather prematurely, at Shippbourne, in Kent, 11th April, 1722: his father was possessed of an independency of about 300*l.* per ann. and acted as steward on the Kentish estate of Lord Barnard, afterwards Earl of Darlington. His mother, a Miss Gilpin, belonged to the family of the celebrated reformer of that name. Christopher was only 11 years old, and still at school, when his father died, so involved in circumstances, that the family property was obliged to be sold. It is stated, that long previous to this period the boy had shown an inclination for poetry, and had even, (though this seems more than doubtful,) made verses when only four years old. On the death of his father he left Maidstone and went to Durlham, in the neighbourhood of which city some of his paternal relations resided, and belated to him with friendly kindness. He was also well received at Rahy Castle, and patronised by the Hon. Mrs. Hope, and by the late Duchess of Cleveland, who allowed him 40*l.* a year till her death, in 1742. In October, 1739, he was entered at Pembroke Hall, Oxford, being then in his 17th year. At College he was more distinguished by his poetical efforts and classical taste, than for the usual academical pursuits; and, notwithstanding his constitutional delicacy, soon became a general favourite with such of his contemporaries as were men of gaiety and vivacity. His fortune did not enable him to keep such company, and he was speedily involved in difficulties, which genius and literary habits are ill calculated to surmount when opposed to worldly wisdom and prudential selfishness. As might be expected, they lasted him through life, and embittered his being; drove him to intemperance, the only blot on his otherwise blameless character. In 1743 he was admitted Bachelor of Arts, and in 1745 elected a Fellow of Pembroke. He had previously acquired considerable fame by his *Tripos Verses*, and by the translation of Pope's Essay on Criticism, and other poems, into Latin verse. A comedy, now lost, and other productions, were the fruits of this period. A soliloquy of the Princess Periwinckle, the heroine of the play, describing her conflicting passions, pride, love, and reason, has the following ludicrous comparison—

Thus when a barber and a collier fight,  
The barber beats the luckless collier—white.  
The dusky collier heaves his pond'rous sack,  
And, big with vengeance, beats the barber—black.  
In comes the brickdust-man, with grime o'er-spread,  
And beats the collier and the barber—red.  
Black, red, and white, in various clouds are toss'd,  
And in the dust they raise, the combatants are lost.

In 1747 Smart took the degree of M. A. and became a candidate for the Seatonian prize, which was adjudged to him for five years, four of them in succession. In 1763, he married Miss Ann Maria Caruan, the daughter by a former husband of Mary, wife of the late respected Mr. John Newbery. This gentleman seems to have engaged him in a general scheme of authorship, and he relinquished

the prospect of a regular profession. "This we doubt was a luckless change, for writing and puffing in periodical works is now but a *bad* substitute, and was then a worse, for powerful exertions in any of the liberal pursuits. Smart contributed principally to the Oxford and Cambridge Miscellany, the Old Woman's Magazine, and other humorous publications. He also wrote several prologues and epilogues, upon which, as well as his other compositions, he set a much higher value than others acknowledged to be just. His pleasing manners, however, procured him the friendship of Johnson, Garrick, Dr. James, Dr. Burney, and other eminent men. Garrick, when he was in distress in 1759, gave him the profits of a free benefit at Drury Lane Theatre. Johnson wrote papers for him in the Universal Visitor; and Dr. Burney set several of his songs to music. A dispute with Doctor, afterwards Sir John Hill, gave rise to a bitter satire, entitled the *Hilliad*; and the remarks made on his first published collection of poems, 4to, 1752, set him at daggers drawn with all reviews and reviewers. From 1754 to 1756, it is supposed that Smart's health was bad, and that both his person and purse suffered so much in consequence of his negligent and irregular habits, that temporary alienation of mind was frequently the result of embarrassments preying upon his fervid imagination. He had at this time two children. The unhappy bard would fall upon his knees and say his prayers in the street, and insist on passengers praying with him; but his lunacy was sometimes dangerous, and his confinement was necessary to keep him from the intemperance which made it so. After his release, he acted with greater composure, had pleasant lodgings near the Park, and was supported partly by his literary labours, and partly by 50*l.* per ann. granted from the Treasury. In 1757 he published his prose translation of *Horace*. In 1763 the *Song to David*, which we have quoted so largely, was given to the world; and also a small miscellany of poems on several occasions. In 1764 appeared *Immanuel*, an Oratorio, the music by Worgan; and an *Ode to the Earl of Northumberland*, with some other pieces, were produced; but they afforded, amidst fine bursts of imagination, only too strong evidence of disordered intellect. In 1765 he executed a neat and faithful poetical translation of the *Fables of Phædrus*, with the Appendix of *Gindius*: his translation of the *Psalm*, in the same year, gave melancholy proof of decay of powers. Two years after, *Horace* was republished, with a metrical translation, containing many fine passages; but in the year 1768 his last work, "The Parables of our Lord," &c. done into familiar verse, seems to indicate more completely than any of his later performances a want of judgment, approaching to imbecility. At length he was confined in the King's Bench Prison, or, rather in the Rules, which his brother-in-law, Mr. Caruan, obtained for him; and there he died of a liver complaint, after a short illness, on the 18th of May, 1770. He left two daughters, who, with their mother, set-

tled respectively in the bookselling trade at Reading.

Mr. Smart's piety was so fervent, that he wrote parts of his religious poems on his knees. He was friendly, affectionate, and liberal to excess. His conversation agreeable after he got over a habitual shyness. In poetry, his lighter pieces are preferred by Mr. Chalmers; but his rich and original fancy in serious composition needs no praise in this Journal, where such eminent proofs of it are given. The *Hilliad* is coarse; but for the expression of profound contempt, and poignant ridicule, is perhaps unequalled in the English language—the first of its class. For example—

"O thou, whatever name delight thine ear,  
Pimp! poet! puffer! 'pothecary! play'r!  
Whose baseless fame by vanity is buoy'd,  
Like the huge earth, self-centered in the void,  
Accept one part-ner thy own worth' explore,  
And in thy praise be singular no more.

A paltry play'r, that in no part succeeds,  
A hackney writer, whom no mortal reads.  
The trumpet of a base deserted cause,  
Dammed to the scandal of his own applause.

• • • • • by Jove assigned,  
The universal butt of all mankind.

But his amiable and religious poems deserve better to be remembered than this severe castigation; and it is probable, that this revival of one of them may lead to a more general perusal of the rest than they have had for half a century.

## THE DRAMA.

KING'S THEATRE.—"The obscene, witty, and immortal Rabelais has furnished Mr. Hullin with the subject of a Comic Ballet, which is decent, dull, and temporary. Gretry founded an opera on the adventures of the renowned Panurge, on the Isle of Lanterns; and the Ballet-Master has turned that into dancing, which Gretry turned into fiddling. Much more, we think, might have been made of the materials: for though the circumstances are extravagant, they are not ill-adapted for comic action and lively *Trip-tick* expression. In some of the details there is considerable merit; but taken as a whole, Panurge does not reach the *beau idéal* of a perfect ballet, which, in the opinion of amateurs, and connoisseurs of compositions of that sort, should be as intelligible as a philosophical essay, and as interesting as a sentimental novel. For ourselves we must say, that we never distinctly understood the language of the legs, nor could catch with grammatical accuracy the point—of the toes. We are therefore generally well satisfied with notions of grace and activity, merely for their intrinsic qualities and provided a dancer spins round a dozen of times like a top, we are surprised to see heart's content, without going into the recited translation of the pinonette into some necessary incident connected with the fall of the piece. In short, we consider it yet absurd to be trying to trace solid sense in a plot, narrative in a pas senl, and a word of meaning in a high jump.

**DRURY LANE.**—*Madame Vestris*, an English lady, (we believe,) though of foreign parentage, and affecting a foreign prefix to her name, made a first and very successful appearance on these boards, last Saturday, in *Lilla*, in the Siege of Belgrade; and has since confirmed the favourable impression of the public, in another musical part. Her voice is remarkably clear, and her style of singing is excellent. Some flurry, appropriate to the occasion, as the bills would say, prevented her from executing the most difficult passages correctly, and seemed a little to confuse her runs and impair her shades. But we have no doubt that she will not only acquire more power, but that what she already possesses will be displayed to greater advantage, as she gains confidence, which the favour of her reception is well calculated to inspire. It may be remembered, that this lady played some years ago at the King's Theatre, since which she has visited the Continent.

**COVENT GARDEN.**—*Too Late for Dinner*. A farce under this appalling name, and reported to be written by Mr. Theodore Hook, was produced on Tuesday. It is a lively, bustling, humorous thing, was only interrupted by laughter during its performance, and at its close received the unanimous plaudits of a very full house. Two brothers of very dissimilar characters, but of initially similar names, viz. Mr. F. (Frederick) and Mr. F. (Francis) Poppleton, are mistaken for each other, and in various affairs of taverns, rows, love, driving, and dining, the wild habits of Frank create great confusion when substituted for the modest bearing of Fred. These gemini are sustained by Messrs. Connor and Jones; the latter, in the thoughtless rage, being the very soul of the piece, which he absolutely carries through like wild-fire, by the sheer force of his gaiety and spirit. The other parts are Pinchot, a retired haberdasher (Mr. Blanchard); and Twill his nephew, and successor in trade (Mr. Liston); Bobby, a Yorkshire servant to Mr. Frederick Poppleton, (Mr. Emery); the widow Thomson (Mrs. Davenport); her niece (Miss Foster); their maid (Mrs. Gibbs); and Pinchot's daughter (Miss Beaumont). Mrs. Thomson is contriving a match between the sober brother and the latter; while Twill, who is a complete Cockney dandy, is intended for her own niece, Emma. The intrusion of Frank, however, discovers these projects. He falls in love with Emma at a ball, and in the hope of seeing her at Calver Lodge personates Frederick, and accepting the invitation meant for him, drives out to Blackheath with poor Twill in his *shay*. Their misadventures on the road, and the lover's insolvency to the honest citizen's family when disappointed in meeting his adored, lead to an angry separation; after which the graver Poppleton arrives "too late for dinner," and is paterfamiliasly refused admittance, under the supposition that it is Blackbell wishing to break in again. An enticement however takes place. Repentance is promised, forgiveness granted, and each young lady takes a husband for better or for worse. There are many good points

in the dialogue, which, without straining for effect, is generally easy and spirited, and ever and anon enlivened with some witty turn or play on words. Indeed, it has no faults that may not be overlooked in a farce, and many good qualities which we see very seldom in modern dramatic compositions.

**ORATORIOS, &c.**—On Friday was produced at Covent Garden a musical performance, learnedly called, from Seneca, a grand *epicædium*: we wonder that *epicædium* was not lugged into the interludes, *epimones* into the choruses, *epicædium* into the songs, and all the other *epia*, whether combined with *træpe*, or *Σάλαρος*, or *træpe*, into the other parts of music; for since we are to have a Greek compound for a funeral song, why should our affectation stop short in the remaining appellatives, and the jockey of Greek, Latin, Italian, and English be left incomplete? We did not attend the theatre, but on the report of a friend, venture to say, that the whole selection was very excellent and very heavy, the entire execution very able and very tiresome.

**DRURY LANE.**—We have seldom witnessed a fuller house, or an alder performance, than Wednesday's oratorio presented at Drury Lane. The most admired pieces of Mozart's Requiem had been judiciously selected for the first act, and derived additional excellence from the manner in which they were executed by Mrs. Salmon, Miss M. Tree, Miss Goodhall, Braham, Pyne, and a Mr. Swift, who successfully made his first appearance that evening. A grand scena and aria, compoed for the occasion, and alluding to our late loss, were given by Madame Bellocchi, with exquisite taste, and the most powerful effect, and produced a rapturous encore. The same justice was done to most of the airs in the first part of Haydn's Creation, which formed the second act. Between the second and the third Madame Bellocchi was also encored in a beautiful cavatina, by Rossini; and, in the third act, which was miscellaneous, Miss Porey obtained the same honour in an air of Mozart's "Come May, bring pleasant weather." The whole concluded with Beethoven's Battle Symphony, executed in all its fullness and tempestuous grandeur.

There are Oratorios at the Coburg, for the especial ears of the inhabitants of "Camberwell, Walthow, Peckham, and the environs," every Friday.

**MISS MACAULEY.**—This lady has again appealed to the public, and presented a sort of mono-dramatic entertainment at the Crown and Anchor. She has unquestionably considerable merit; but we cannot anticipate any beneficial result to her from these exhibitions; nor do we think that she has so much reason to complain of public or managerial injustice, as to excite a feeling favourable to her claim for a reversal of the judgement.

Mr. LLOYD has commenced astronomical lectures, illustrated by an orrery, for the Wednesdays and Fridays during Lent, at the Haymarket Theatre.

Mr. MATTHEWS has announced a new "At Home," at the old place: to begin on Monday

Ivanhoe has been dramatized for Drury Lane, under the title of *The Hebrew*; and Keau is to play Isaac of York. The character seems almost drawn for him, and we anticipate a striking display of his peculiar energy and talent in the part; especially in the dungeon-scene, where he is threatened with torture, and braves the worst when he hears of his daughter's dishonour.

#### FOREIGN DRAMA.

##### THEATRE ROYAL DE L'OPERA COMIQUE.

First representation of *La Bergère Châtelaine*, an Opera in three Acts.

The story of this new opera, which carries us back to the chivalrous days of the crusades, appears to be borrowed from a German romance.

The Lord of Rochefort, on his departure for Palestine, leaves his wife under the protection of his brother, who, losing sight of his most sacred duty, and eager to inherit the poor wealth of his brother, overwhelms the great *Châtelaine* with all kinds of indignity. To preserve her infant daughter from ill-treatment, the wretched mother, on her death-bed, charges Bertha, her faithful attendant, to convey the heiress of Rochefort far from the residence of her cruel uncle. Bertha retires to the territories of the young Count de Montfort, with the child, who passes for her daughter, under the simple name of Lucette.

At the age of eighteen, Lucette appears a model of beauty and virtue:—she captivates the heart of the young Count de Montfort, whose life she has saved after a combat, in which he was dangerously wounded. The faithful nurse acquaints the Duke of Brittany with the Count's passion; and at the same time discloses to him the illustrious origin of the supposed shepherdess. The Duke determines to put the Count's fidelity to the test; and for this purpose he introduces him to the beautiful Baroness de Courcy, as the lady he intends him to marry.

The fair Baroness, however, is no other than Lucette, disguised in a dress of the most costly description. Montfort, like a true lover of the eleventh century, though not insensible to the charms of the Baroness, firmly resolves to remain faithful to Lucette. He hastens to Bertha's cottage, where he finds his mistress attired in her humble habiliments.

The Duke, however, is not satisfied with this trial. He contrives another stratagem, and declares his intention of marrying the fair shepherdess to Robert, a protégé of the Bailly of the district, who takes the thing seriously, and abandons his village sweetheart for Lucette; finally, after once more introducing the Baroness, who vainly tenders her rank and fortune, the Duke rewards the fidelity of the lovers, and restores the young shepherdess to her rightful honours.

The piece was favourably received. The music, which is the production of M. Aubert, is deserving of praise, particularly the opening chorus, a *quartett*, and the finale to the second act, which was loudly applauded.

## VARIETIES.

When we lately gave a list of the French travellers who had proceeded to foreign countries for scientific purposes, we omitted to mention M. Cailland of Nantes, who set out for Egypt a few months ago. The last accounts stated that he had arrived at Alexandria, and was preparing to sail up the Nile, to pursue his investigations under the protection of Mohammed-Ali-Pasha.

*Anecdote.*—During the late sudden inundation of the Rhine, a hare, unable to escape through the water to an eminence, climbed up a tree. This one of the boatmen, rowing about to assist the unfortunate inhabitants, observed, pulled up to the tree, and mounted it, eager for the game, without properly fastening his boat. The terrified hare, on the approach of its pursuer, sprang from the branch into the boat, which thus set in motion, floated away; leaving its owner in the tree, in dread of its being washed away by the current; till after several hours anxiety, he was perceived and taken off by some of his companions:—*German Paper.*

The American newspapers state, that a silver mine, of very pure ore, above six feet in thickness, has been discovered near Zanewille, Ohio, at the depth of 130 feet; and that a company has been formed to work it.

A letter from the Cape of Good Hope mentions that M. Lalande, the French naturalist, has transmitted several valuable objects to the collection of the Jardin du Roi, among which are a skeleton of a hippopotamus, for the gallery of comparative anatomy; the carcass of a whale 75 feet long; skulls of several of the indigenous races of Africa, &c. The Minister of the Interior has granted funds for M. Lalande's important journey, on the application of the Professors of the Museum of Natural History.

A young chamois, which was caught some months ago among the Alps, and which M. Magol presented to the French Museum of Natural History, lately arrived at the menagerie of the above establishment:—it is perfectly well in health, and is continually receiving the visits of the curious.

The Royal Parisian Academy of Sciences, of which the Duke d'Angoulême is perpetual President, renewed its bureau at a late sitting. The Chevalier Fabre-Paleprat is appointed Vice-president; M. Bepou second Vice-president; the Marquess de Monferrier, General Secretary; M. Bellart, Private Secretary; M. Dabat, archivist; and M. Dofigny, Treasurer.

*ANCIENT CUSTOM.*—We do not remember to have seen the following curious custom mentioned before: the paragraph appears in the *Morning Chronicle*, with an anonymous signature. "Early on the 1st. of March, the *Young Maidens* of the Village of Steban Hethe (now called Stepney,) used to resort to Goodman's Fields (the only remains of which now not built upon, is the Tenter Ground,) in search of a blade of

grass at a *redish time*; the charm being, that the fortunate finder got the husband of her wishes within the month."

## PICTURES SOLD SINCE THE EXHIBITION OF THE BRITISH GALLERY OPENED.

Battle of Waterloo; Directors of the British Institution;—George Jones. A Veteran Highlander; R. P. Knight, Esq.—D. Wilkie, R. A. The Reaper's Repast; Countess de Grey.—W. F. Witherington. Pistol announcing the Death of Henry IV.; Frederick Webb, Esq.—John Cawse. Heath Scene, near Ryegate; — Smith, Esq.—John Wilson. The Cobler at Home; B. Chapin, Esq.—W. Kidd.

## LITERARY NOTICES.

We hear that Lord Byron has finished two more Cantos of Don Juan; and, of course, they may be expected to appear this season.

The second novel, by the author of Waverley may, we presume, also be anticipated within a few months, though we do not see it advertised. If rumour speak truth, *The Monastery*, will fall short of none of its precursors in interest and effect. The period is that of the unhappy Mary, Queen of Scots.

A poem of Mr. Shelly's has, we are informed, been transmitted from abroad.

Travels, poetry, and novels, seem almost wholly to engross the literature of our times.

## METEOROLOGICAL JOURNAL.

FEBRUARY, 1820.

Thursday, 17.—Thermometer from 19 to 37. Barometer from 30, 31 to 30, 26.

Wind S. E.  $\frac{1}{2}$ .—Generally clear.

Friday, 18.—Thermometer from 18 to 34.

Barometer from 30, 27 to 30, 25.

Wind E. b. S.  $\frac{1}{2}$ .—Morning clear; the rest of the day cloudy.

Saturday, 19.—Thermometer from 30 to 34.

Barometer from 30, 26 to 30, 25.

Wind N. b. E. 1.—Generally cloudy.

Sunday, 20.—Thermometer from 25 to 31.

Barometer from 30, 25 to 30, 11.

Wind W. and S. b. E.  $\frac{1}{2}$ .—Cloudy; snow most of the day.

Monday, 21.—Thermometer from 27 to 32.

Barometer from 30, 01 to 29, 59.

Wind S. b. E. and E. N. E.  $\frac{1}{2}$ .—Morning cloudy, thick fog from about 9 till 11, after wards generally raining.

Tuesday, 22.—Thermometer from 26 to 43.

Barometer from 30, 00 to 29, 99.

Wind N. E.  $\frac{1}{2}$ .—Cloudy.

Rain fallen, 425 of an inch.

Wednesday, 23.—Thermometer from 39 to 51.

Barometer from 29, 86 to 29, 66.

Wind S. E. 1.—Cloudy with some rain in the afternoon. In the evening it became clear.

Rain fallen, 175 of an inch.

From the intense cold in Norway, we may expect our cold weather has not yet left us.

Osterdalen, Feb. 2, 1820

On the 20th. of Jan. the Thermometer (Reaumur's Scale) was 34 $\frac{1}{2}$  below zero, and the quick silver was frozen. This is the severest cold observed. The snow is six feet deep on an average, and by the great drift, many lives have been lost.

Note.—By Hutchin's experiments, mercury will freeze at 40° below zero of Fahrenheit's scale.

Lat. 51. 37. 34. N.

Lon. 0. 3. 51. W.

Edmonton, Middlesex. JOHN ADAM

## TO CORRESPONDENTS.

The Editor of the Literary Gazette can hardly answer the question respecting the *Invader's Son*, that to the *Dee* is replete with poetical truth; but the verification does not appear to flow in sufficient ear. This is, however, merely matter of opinion; as others may approve of *Invader's Son* in that species of composition, in which requires rather neatness and fidelity. With respect to the main point, a respectable publisher is best person to consult; and the Editor can only say, that fashion, more than merit, holds the lance in such cases.

O! has taught us exclamation in two ways—his signature and by his poem.

Amicus says we have not "kept our word;" his mistake is his, and so he might have said. This notice would then have been spread, and there would have been no us about the matter,

### Miscellaneous Advertisements, (Connected with Literature and the Arts.)

#### British Gallery, Pall Mall.

THIS GALLERY, for the Exhibition and Sale of the Works of Modern Artists, is open daily, from ten in the morning until five in the afternoon.

JOHN YOUNG, Keeper.

Admission 1s.—Catalogue 1s.

#### Genius Pictures.

By Mr. BULLOCK, at his Egyptian Hall, Piccadilly, on Monday, February 23rd, punctually at One.

A very valuable Collection of ITALIAN, FRENCH, FLEMISH, and DUTCH PICTURES, comprising and sole property of a private Gentleman, comprising admirable specimens of the following celebrated masters, viz. Cagliari, Cressi, Schwartz, Etienne, Schidone, Rubens, Poussin, Parmegiano, Lingelbach, T. Mola, Teniers, Van Buren, R. di Pisanò, Van der Meer, Le Duc, Netscher, Mignon, Bock, Treu, Harns, Howard, Powell, Stubbs—particularly the Infant Christ and St. John, a beautiful Cabinet set, by Leo, da Vinci, a Holy Family, Trevizani, and Rev. St. John, Giovanni Cressi; Alexander and Pina, Le Brun; an original Portrait by Rubens, &c. &c. To be viewed and Catalogued had.

MR. BULLOCK respectfully announces, that, in the course of the ensuing Spring, he will have the honour of submitting to Sale by Auction, at his Egyptian Hall, Piccadilly, the first part of an extensive and well known Entomological Cabinet of William Beaman, Esq. (declining a general collection) Catalogues prepared, and due notice of the days of Sale will be given in future advertisements.

#### Highly valuable Provincial Newspaper.

##### A PARTNER WANTED.

THE Proprietors of a Provincial Newspaper, long and excellently established in one of the most beautiful Cities in England, is in immediate want of a Partner, who must thoroughly understand the Editing and Management of a Paper, on Loyal and Constitutional Principles—he must also be a gentleman of high respectability and character, and consent to undertake almost the exclusive arrangement of the Office. The capital required will be at least 3000*l*.

Tax is stated to prevent useless applications, and to avoid unnecessary correspondence. On the whole, of the truly valuable concerns would be disposed of on terms most advantageous to a Purchaser. The sale of such a desirable property is not often made public, being more complete and compact than perhaps any thing of the kind in the Kingdom; now would it not be offered for sale on any terms; but for the declining health of the present Proprietor, who is ordered to a milder climate. For particulars apply by letter only, post paid, to Mr. Arthur Hicks, to the care of Mr. Murray, Esq. Warwick-square, Negate Street, London.

P. S. Merit letters of enquiry will not be answered, and now but Principles will be treated with.

#### BOOKS PUBLISHED THIS DAY.

Instantly printed in 3 vols. post octavo, price 1*l*. 10*s*. 6*d*. the second Edition of

IVANHOE. A Romance. By the Author of Waverley, &c. Printed for Archibald Constable & Co. Edinburgh; and Hurst, Robinson, and Co. Glasgow, London. By whom will be published in a few days, Illustrations of Ivanhoe. Engraved by Charles Heath, from Designs by R. Westall, R. A.

#### A Universal School Book.

A new Edition, being the twentieth, price 5*s*. 6*d*. bound, THE CLASS BOOK, consisting of LESSONS arranged for Every Day in the Year, extracted from the works of the best Authors, and combining instruction in every useful subject, with elegance of Composition. By the Rev. DAVID BLACK, author of the leading Exercises, Universal Preceptor, &c. &c. Printed for Longman, Hurst, Rees, Orme, and Brown, London.

Of whom may be had, Hours Reading Exercises, or Easy Lessons, between Novels Spelling Book and the Class Book, with one colored Copy, 2*s*. 6*d*.

Handsome printed in small 8vo, with Ten Plates, price 7*s*. 6*d*. a New Edition of

#### A NEW SYSTEM OF DOMESTIC COOKERY, formed upon PRINCIPLES OF ECONOMY, and adapted to the Use of Private Families.

Comprising also the ART of CARVING, Observations on the Management of the DAIRY, and POTTERY, &c. &c. Instructions for HOME BREWERY, WINES, &c. COOKERY for the SICK, and for the POOR; many useful MISCELLANEOUS RECEIPTS, and DIRECTIONS proper to be given to SERVANTS both in Town and Country. To which is prefixed an ESSAY on DOMESTIC ECONOMY and HOUSEHOLD MANAGEMENT, comprising many Observations which will be found particularly useful to the Mistress of a Family. BY A LADY.

"This is really one of the most practically useful books of any which we have seen on the subject. The Lady who has written it, has not studied how to form expensive articles for luxurious tables, but to combine elegance with economy, she has given her directions in a plain sensible manner, that every body can understand; and these are not confined merely to cookery, but are extended to a variety of objects in use in families; by which means the utility of the book is very much increased."

Printed for John Murray, Albemarle Street; also sold by every other Bookseller in England, Scotland, and Ireland, of whom may be had, lately published,

THE NEW FAMILY RECEIPT BOOK, a New Edition, greatly improved, handsome printed in small 8vo, price 7*s*. 6*d*. in boards.

Handsome printed in 8vo. price 7*s*. 6*d*. sewed, No. 3, of

#### THE EDINBURGH PHILOSOPHICAL JOURNAL, conducted by Dr. BREWSTER and Professor JAMIESON. Contents:—Mr. Welch on his Improvements of the Steam-engine; Vega, on Curious Ripples near Malacca; Mr. Scoresby on the Colour of the Greenland Sea; Mr. Young on Poppy Oil; Mr. Lizar on a new style of Engraving; Mr. Herschell on a new mode of Analysis; Mr. Whytton on Cars for Steam Boats; Dr. Mac Culloch on Pear; Dr. Gillies on peculiar Case of Vision; Mr. Anderson's new Atomometer; Dr. Hibberton on the Rocks of Shetland; Account of a Subterranean Glacier; Dr. Fleming on the Scutellaria Gelatinosa; Dr. Hamilton on a Map of Asia; Vega on a Table of Proportional Logarithms; Dr. Brewster on Tabasheet; Mr. Neill on the Ayrshire Rose; Mr. De La Beeche, on the depth, &c. of the Lake of Geneva; Account of the Slide of Alpagnac; Mr. Herschell on Mother of Pearl; Mr. Watt on the Micrometer; Mr. Morton's Patent Sling; Mr. Stephenson on the Scottish Fire Series, in 1819; Rev. Mr. Jamieson on a Method of uniting Bee Hives; Amici's Reflecting Microscope; Dr. Hibbert on the New Cod Bank of Shetland; Mr. Fresnel's Discoveries respecting Infection of Light; Mr. Herschell on the Hypocyclophorus Acid; Menzies's Account of his Tour in Iceland, 1819; Dr. Brewster's History of Polarisation; Dittus on a Singular Case of Phosphorescence; Amici's Discoveries on the Motion of Sap; Mineralogical Report respecting Elba; Colonel Beaufoy on the Diurnal Variation of the Needle; Proceedings of Public Societies; Scientific Intelligence, &c. Printed for Archibald Constable and Co. Edinburgh; and Longman, Hurst, Rees, Orme, and Brown, London. Of whom may be had, the preceding numbers of this Journal, price 7*s*. 6*d*. each.

#### Corn Trade.

Price 12*s*. second Edition, considerably enlarged, AN ESSAY ON THE EXTERNAL CORN TRADE. By R. TORRENS, Esq. F. R. S.

"Our readers will find a very able discussion of the comparative effects of a free and a restricted Corn Trade, on the subsistence, the agriculture, the commerce, and the finances of the country, in Colonel Torrens's Essay on the External Corn Trade. This is one of the most valuable contributions that has of late years been made to the science of Political Economy."

Edinburgh Review, No. 63. Published by Constable and Co. Edinburgh; Hatchard, Piccadilly; and Hurst, Robinson, and Co. 30, Cheap-side, London.

Complete, in 8 vols. 8vo. the 8th ed. price 2*l*. 5*s*. of SACRED BIOGRAPHY; or, the HISTORY of the PATRIARCHS; being a Course of Lectures delivered at the Scots Church, London Wall. By HENRY HUNTER, D. D. London: Printed for Longman, Hurst, Rees, Orme, and Brown; Scatcherd and Letterman; Lackington and Co.; J. Murray; R. Scholey; Baynes and Son; Sherrwood, Neely, and Jones; Baldwin, Cradock, and Joy; T. Hamilton; G. and W. R. Whittaker; Ogle, Duncan and Co.; T. and J. Aldine; Hurst, Robinson, and Co.; M. Saunders; Edwards and Co.; and Sterling and Stide, Edinburgh.

#### Baretti's Italian Dictionary.

In two vols. 8vo. price 2*l*. 5*s*. boards, a new edition of DIZIONARIO DELLE LINGUE ITALIANA ed INGLESE, di GIUSEPPE BARETTI. Preceduto da una Grammatica delle due Lingue. Seconda Edizione, corretta e migliorata.

Londra: per F. C. J. Rivington; Scatcherd e Letterman; J. Nunn; J. Cuttill; R. Otridge; Cadell e Davies; Wingrave e Collingwood; Longman, Hurst, Rees, Orme, e Brown; Lackington, Hughes, Harding, Mayor, e Jones; J. Richardson; Boney e Son; J. Mawman; J. Doxey; J. Asperger; Dolan e Co.; J. Bagster; Baldwin, Cradock, e Joy; G. e W. R. Whittaker; Ogle, Duncan, e Co.; Simpkin e Marshall; G. Mackie, e W. Mason.

"THE MYSTERY; or, FORTY YEARS AGO. A Novel. In 3 Volumes, price 1*l*. 1*s*. 6*d*. Of change or change, I let not man complain, Elise shall he never, never cease to wait! For from the imperial dome, to where the swain Rears his lone cottage in the silent dale, All feel the assault of fortune's fickle gale."

This Novel is not wholly fictitious. It will be found to contain some curious particulars respecting the interesting Explorer of Africa, Major Hume; together with the most remarkable incidents of a Journey performed in that quarter of the globe "Forty Years Ago." Printed for Longman, Hurst, Rees, Orme, and Brown, London.

Handsome printed, in one volume, octavo, with the Maps, price 12*s*. boards,

#### THE JACOBITE RELICS OF SCOTLAND; being the Songs, Airs, and Legends of the Adherents of the House of Stuart. Collected and illustrated by JAMES HOGG, author of "The Queen's Wake," &c. &c. Printed for T. Cadell and W. Davies, London, and William Blackwood, Edinburgh. Of whom may be had, by the name Author,

1. The Queen's Wake: a Legendary Poem. The sixth Edition, 8vo. 12*s*.

2. Nador of the Moor; a Poem, 8vo. 7*s*. 6*d*.

3. The Brownie of Bodabreck, and other Tales (in prose) two vols. 12*s*. 1*s*. 6*d*.

Handsome printed, in 2 large volumes, octavo, price 1*l*. 4*s*. 4*d*. in boards,

#### THE LIFE OF ANDREW MELVILL: containing Illustrations of the Ecclesiastical and Literary History of Scotland, during the latter part of the Sixteenth and beginning of the Seventeenth Century. ## System of Books for Commercial Education.

## MORTIMER'S COMMERCIAL DICTIONARY.

ANY; or Merchant's and Tradesman's Complete Library, enlarged, revised, and corrected to the present time. By W. Dickinson, Esq. 8s. 6d.

2. A System of Practical Arithmetic, applicable to the Present State of Trade and Money Transactions, illustrated by an unusual number of Examples under each Rule. By the Rev. J. Joyce, A new, revised and stereotyped Edition, price 3s. 6d. bound.

N. B. The general preference which has been given to this Practical System of Arithmetic in the Commercial Schools of the Metropolis, and of the great Trading and Manufacturing Towns, has encouraged the Proprietors to confer on it an advantage not possessed by any other System, that of casting it in Solid Pages of Stereotype. It is, therefore, and must for ever remain, without an error, a feature of a book of figures, which will be duly felt by all experienced Tutors.

3. A Key to the above Work, in which every Sum is worked at length, and to which is annexed, a System of Mental Arithmetic, and a discovery for examining Sums in the four first rules—also in Stereotype, 3s. 6d.

4. The Elements of Book-keeping by Single and Double Entry; comprising several Sets of Books. Also in Stereotype, that of casting it in Solid Pages of Stereotype. It is, therefore, and must for ever remain, without an error, a feature of a book of figures, which will be duly felt by all experienced Tutors.

5. A Series of Blank Books, adapted separately to the four Sets of Accounts in the work, ruled faint and red, and relieving the Tutor from the trouble and anxiety in that respect which usually attend the teaching of Book-keeping.

6. The Elements of Land-Surveying, in all its Branches, practically adapted for the Use of Schools and Students. By Abraham Crucker, Land-Surveyor, of Frome, in Somersetshire. Illustrated with a greater variety of Copper-plates than any other work of the kind, also with upwards of One Hundred Woodcuts. Fourth Edition, Stereotyped, Price 5s. bound.

7. Universal Stenography; or a Complete and Practical System of Short-Hand. By William Maynor, LL. D. The English Edition, in two Parts, Price 7s. 6d. 8s. An easy Grammar of Geography, for the Use of Schools; with the requisite Problems on the two Globes, with numerous Examples for Exercise; and nearly Five Hundred Questions for Answers by the Pupil, on the Plan of the Interrogative System. — 8. Questions without Answers. By the Rev. J. Goldsmith. A new Edition. Stereotyped, illustrated by Fifteen Views of Capital Cities, and with new Maps. Price 3s. 6d. bound. Printed for Longman, Hurst, Rees, Orme, and Brown, Paternoster Row, with the full allowance to Schools.

## State Trials.

In royal 8vo. price 11. 11s. 6d. boards, Vol. XXVII. being the Sixth of the Continuation of

## A COMPLETE COLLECTION OF STATE

TRIALS and Proceedings for High Treason and other Crimes and Misdemeanors, from the earliest Period to the Year 1785, with Notes and other Illustrations. Compiled by T. B. Howell, Esq. F. R. S. F. S. A. And continued from the year 1785 to the present Time. By Thomas James Howell, Esq.

The Cases comprised in this Volume are  
1. The Trials of James O'Connell, Arthur O'Connor, Esq. John Brien, John Allen, and Jeremiah Leary, on an indictment for High Treason; A. D. 1798. (Continued from the preceding Volume.)

2.—6. TRIALS for the IRISH REBELLION, viz. of Henry and John Sheares, Esqrs. Barristers; of John Mac Cann; of William Michael Byrne; of Oliver Bond, merchant; and of Theobald Wolfe Tone; all for High Treason, A. D. 1798.

7. Trial of John Vint, George Ross, and John Parry, for a Libel on the Emperor of Russia, A. D. 1799.

8. Trial of John Cuttill, for Publishing a Seditious Libel, A. D. 1799.

9. Trial of Gilbert Wakefield, Clerk, for a Seditious Libel, A. D. 1798.

10. Trial of an Action brought by Mr. Wright against Thomas J. W. Fitzgibbon, Esq. High Sheriff of the County of Tipperary, for Assault and Battery, A. D. 1799.

11. Proceedings on an Information against the Right Hon. Arthur, Earl of Thanet; Robert Ferguson, Esq. Barrister at Law; Carter, Browne, Esq.; Dennis O'Brien, Esq.; and Thomas Thompson, Esq.; for a Riot and other Misdemeanors, A. D. 1799.

12. Proceedings in the Case of Benjamin Flower, Printer, on a Commitment by the House of Lords, for a breach of privilege in publishing a Libel on the Bishop of Llandaff, A. D. 1799.

13. Trial of William Byrne, of Baldernan Wicklow, Esq. on charges of Rebellion and Murder, A. D. 1799.

14. Trial of John Tuite, otherwise Captain Fearnaugh, for the Murder of the Rev. George Knipe, A. D. 1799.

15. Trial of John Devereux, Jun. of Shillbeggan, Wexford, for Rebellion, A. D. 1799, 1800.

16. Proceedings in the Case of James Napper Tandy and Harvey Morris, Esqrs. attainted of High Treason, A. D. 1800; and

17. Trial of James Hatfield, at the Bar of the Court of King's Bench, for High Treason, A. D. 1800. [New first published.]

London: Printed for Longman, Hurst, Rees, Orme, and Brown; J. M. Richardson; Black, Kingsbury, Parbury, and Allen; Baldwin, Cradock, and Joy; E. Jeffery and Son; J. Hatchard and Son; R. H. Evans; J. Bookers; J. Booth; Dod, and Calkin; and T. C. Hansard.

For the accommodation of such persons as possess Hargrave's State Trials, a separate title-page has been printed, so as to render the Continuation applicable to that as well as to the octavo edition. Those, who wish to possess the Modern State Trials as a separate Work, or as a Supplement to either of the Collections, may be provided with it accordingly.

By whom are also recently published. Vol. XXXIX. and XL. of HANNAH'S PARLIAMENTARY DEBATES. Containing the Proceedings of both Houses of Parliament, from the 2d of May to the close of the last Session.

Also Vol. XXXV. of the PARLIAMENTARY HISTORY of ENGLAND from the earliest Period to the year 1805, from which last mentioned Epoch, it is continued downwards in the Work entitled "Hannah's Parliamentary Debates."

The 36th and last Volume, which will bring down the Work to November, 1805, the Period when "Hannah's Parliamentary Debates" were commenced, is nearly ready for delivery. The Volume of General Index will be completed with all possible expedition.

Printed in the Edinburgh Review, No. 43, June, 1815, p. 209, note, mention is made of this Work in the following words: "The (New) Parliamentary History. We cannot quote this careful and judicious collection without bearing testimony to its singular merits. It deserves, as well as the State Trials, to be numbered among the most useful and best conducted Works of late years. Both are indisputable parts of all collections of English History. To mention two such important Works, in a note on the review of so worthless a publication as that before us, may seem to be a treatment very unbecomingly to their importance. The truth is, that it has long been intended to notice them more becomingly; that such an intention is far from being now relinquished; but that experience of the accidents which are apt to delay the execution of literary projects induces us to take the earliest opportunity of expressing all our readers of their great value."

Price 3s. 6d. 12mo. boards.

POEMS for YOUTH. BY A FAMILY CIRCLE. London: Printed for Robinson and Sons, Liverpool; Longman, Hurst, Rees, Orme, and Brown; Baldwin, Cradock, and Joy, Paternoster Row; George Cowie and Co. Poultry; and Hayward and Koscoe, Orange Street, Bloomsbury, London.

In 2 vols. 8vo. boards, price 11. 4s.

## THE HISTORY OF THE CRUSADES for the Recovery and Possession of the HOLY LAND.

By CHARLES MILLS, Esq. author of "A History of Mohammedanism." London: Printed for Longman, Hurst, Rees, Orme, and Brown.

••• The object of this work is to supply the want in English Literature of a full relation of the European Expeditions into Palestine. A view is also taken of the Christian Institutions and the Latin States in the East, during the heroic Ages of Christianity.

## Works of Dr. Mavor.

A new, improved, and enlarged Edition, Price 1s. 6d. of THE BRITISH NEWS; consisting of the Lives of Illustrious Britons, who have distinguished themselves by their Virtues, Talents, or remarkable Advancement in Life, from Alfred to the present Time; with incidental practical Reflections. Written on the principle, that Example is prior to precept. By WILLIAM MAVOR, LL. D. Printed for Longman, Hurst, Rees, Orme, and Brown, London; and to be had of all Booksellers in Town and Country. Also, by the same author,

2. Select Lines of Plutarch, in 12mo. 6s. bound.  
3. The Elements of Natural History, 12mo. 7s. 6d.  
4. Classical English Poetry, 12mo. 6s. bound.  
5. The English Spelling Book, the 12th Edition, improved, 1s. 6d. bound.

## Geography, as settled by the late Treaties.

A new Edition, with fifteen Views of capital Cities, and new Maps, price 3s. 6d. bound in red.

AN EASY GRAMMAR of GEOGRAPHY, for the Use of Schools, containing a brief Analysis of (Geographical Facts) also the requisite Problems of the two Globes, with numerous Examples for Exercise; and nearly Five Hundred Questions, for Answers by the Pupil, on the plan of the Interrogative System. By the Rev. J. GOLDSMITH. Printed for the use of the Student in Divinity, as well as the Library. A new Edition, revised by the same Author, and with many new Engravings, price 15s. bound.

In 3 Vols. 21. 12s. 6d. boards.

## THE GREEK TESTAMENT; a new Edition

—Containing the best Notes from Harpocration, Kypke, Schleusner, Rosenmüller, &c. in familiar Latin: together with parallel passages from the Canon, and with references to Vigenius for Idioms, and to Beza for Ellipses. Griesbach's various readings are given preserved in the Notes. Intended for the use of the Student in Divinity, as well as the Library. A new Edition. The Preface on the Bench has stated, that every reading in this Edition is edited and explained exactly as it should have done. By the Rev. E. VALLPY, B.D. Master of Norwich School, and Chaplain to the Bishop of Norwich. A few Copies, large Paper, 41. Printed by A. J. Valpy and sold by Longman and Co. Stationers, &c. Whitakers, Kingsway, and all other Booksellers.

The Greek Septuagint, with the Apocrypha; from the Text of Bos and Holmes. Price 11. 4s. printed hitherto in one volume, octavo, for use in Churches and Chapels, as well as the Library. Same title as the Greek Testament.

••• The Text and Sept. may also be had uniformly bound in 4 vols. By the same,

Elegant Latin, or Rules and Exercises illustrative of elegant Latin style. Price 4s. 6d. 6s. edition.

Homers Iliad, with English Notes at the end. Price 4s. 6d. 6s. edition.

In 1 vol. 12mo. Price 8s. boards.

THE EMIGRANTS GUIDE to UPPER CANADA, or a History of the present State of that Province, collected from a Residence therein during the Years 1817, 1818, 1819. Interpersed with Reflections by C. STUART, Esq. Retired Captain of the Honourable East India Company's Service, and one of His Majesty's Justices of the Peace for the Western District of Upper Canada.—Deliberate, Decide, and Dare!

A Work intended to deter from rash and to suit reasonable enterprise in Emigration; by displaying from a source which professes to be authentic (and of which is now upon the spot, open to close enquiry) the accumulated miseries actually inevitable resulting from the former, and the strong and far more genuine of independence presented by the latter. Published by Longman, Hurst, Rees, Orme, and Brown, London.

London: Printed for the Proprietors, by W. POPE, 47, Chancery Lane: Published every Saturday, by W. A. SCHUBERT, at the Literary Gazette Office, 36 (Exeter Change) Strand, where Communications (post paid) are requested to be addressed to the Editor.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom; but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 163.

SATURDAY, MARCH 4, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*George the Third, his Court, and Family.*  
London, 1820. 8vo. 2 vols.

This is a pleasing well written biographical compendium of the events of the late long and interesting reign. It is neither prosing nor very political, but replete with anecdote and statements of facts; and consequently offers, especially at the present moment, when all minds are so feebly alive to the subject, a very agreeable miscellany either for desultory or regular reading. After a brief account of the family of Brunswick, it starts with the birth of Prince George in 1738, and from that period narrates the principal occurrences of his life, to the date of its lamented termination. A few extracts will best display the character of this publication; and we select them with little regard to arrangement, observing the order of time rather than the congeniality of subject, and only looking that we do not stumble on matters generally known, instead of the novelties which the volume contains.

1739.—On the first anniversary of the birthday of the infant heir presumptive, there was great concourse of nobility and gentry at Norfolk House, to congratulate their Royal Highnesses, accompanied with a whimsical exhibition of sixty youths, all under twelve years of age, sons of eminent citizens, who had formed themselves into a Lilliputian company of foot soldiers, in proper military clothing, and arrived at Norfolk House in betsey coaches, when the Prince went to receive them with an invitation to enter. They accordingly alighted, formed into close column, and marched into the princely residence with drums beating, colours flying, and music playing before them. In this order they proceeded up stairs into the drawing room, where they were received by their royal cousin, Prince George, who was seated with a hat and feather; after which they were permitted to kiss his hand, as well as those of the new-born Edward, and the Princess Augusta.

THE Walpole's mode of administration was certainly corrupt, we are afraid, cannot be controverted; a fact too which he himself never denied, bearing the jokes of his friends upon that subject with great good nature.

During a dinner party repeated a line from Horace containing the word "Bibisti,"

"Pray, Sir Robert," says one of his friends, "is that good Latin?"—"Why, I think so—that objection have you to it?"—"Why," says the other drily, "I did not know but the word might be *bribe-isti* in your Horace."

Though Prince George, on the death of his father, in 1751, became heir apparent, yet he did not succeed of course as Prince of Wales: nor was he particularly distinguished from the rest of the Royal Family until that creation took place; for even in the new form of prayer he was merely included generally—the form being to pray for "Their Royal Highnesses the Princesses of Wales, the Duke, the Princesses, the issue of the Prince and Princess of Wales, and all the Royal Family."

## Anecdotes of George II.

Hasty and rather obstinate in his disposition, he often found it difficult to yield to the state reasons, or other reasons of policy, by which the cabinet were generally guided. On one occasion he had promised a vacant situation, of some consequence, to one whom he wished to oblige; but the cabinet were as obstinate as himself, and resolved to carry their point: accordingly, the next time when they sat in the palace, in an apartment next to the King's closet, a blank appointment was drawn up, in order that they might pay to his Majesty the empty compliment of asking what name should be inserted in the commission. The difficulty was, however, to fix upon the individual member who should brave the royal anger in the closet: and the choice fell upon the witty Lord Chesterfield, who boldly, but respectfully entered the closet, with a pen in one hand, and the blank commission in the other, and enquired of the King to whom he pleased that the vacancy should be given. "Give it to the Devil!" replied the angry Monarch; when Chesterfield very coolly prepared to fill up the blank, but stopped short, saying, "Would your Majesty please that this commission should run in the usual form—"To our trusty and well beloved cousin, the Devil?" The clouded brow was instantly relaxed into a smile, and the cabinet carried their point.

George II. and his Queen preferred the Haymarket Theatre to the one in Lincoln's-inn-fields, which latter was notwithstanding always the most fashionable and crowded; so that Lord Chesterfield coming into it one night, and being asked if he had been at the other house,—"Yes," said he, "but there was nobody there except the King and Queen; and as I thought they might be talking business, I came away!"

On another occasion, George II. was sitting at the Theatre, and the performers had delayed their appearance, to the great annoyance of the audience; but shortly after,

to their great amusement, a rat leaped upon the stage. Two gentlemen were sitting next each other in the boxes, one of whom was known to be an enthusiastic pory, as the other was a rigid, but loyal, whig. The whig observed that this made good the old adage, that a rat might look at the King.—"Yes," replied the whig, with consummate gravity, "and a very good King too!" To which the pory, a little nettled, replied, notwithstanding his gravity, "Yes; and a very good rat too!"

When George the Third was crowned, it is stated that—

The King's whole behaviour at the coronation was justly admired and commended by every one, and particularly his manner of ascending and seating himself on his throne after his coronation. No actor in the character of Pyrrhus in the *Destined Mother*, not even Booth himself, who was celebrated for it in the "Spectator," ever ascended the throne with so much grace and dignity.

Amongst other anecdotes connected with this event, it has been noticed of archbishop Secker, that he had the honour of baptizing his Majesty, confirming him when Prince of Wales, marrying him at St. James's, and crowning him at Westminster; besides which he christened his present Majesty, the Duke of York, and some others of the Royal Family,—a series of distinguished circumstances which can hardly be paralleled in the history of any other archbishop.

1773.—It has been confidently stated, that it was the King's intention at this period to institute a new order of knighthood, to be called the Order of Minerva, for the encouragement of literature, the fine arts, and learned professions. The order was intended to consist of twenty-four knights and the sovereign, and to be next in dignity to the military order of the Bath. The knights were to wear a silver star of nine points, and a straw-coloured ribbon from the right shoulder to the left. A figure of Minerva was to have been embrodered in the centre of the star, with the motto, "*Omnia posuere Seclaria*."

So certain were the literati of the measure being adopted, that some alterations actually took place amongst the well-educated candidates for the new honours; and it is extremely probable that the only cause of its failure was the King's apprehension that the numerous jealousies which would arise even from the fairest selection of talent and ability, would render its institution an evil rather than a benefit, especially at a moment when party measures ran so very high upon political subjects.

1785.—In the distribution of honours, the King never forgot his own personal feelings, though he sometimes granted to political

solatation what was by no means agreeable to himself. Indeed, in one instance he is said to have yielded a baronetcy for a jeu d'esprit. The late Dr. Elliot had never been a favorite; and when Lord George Germain requested his Majesty to confer the title on that physician, the King manifested much unwillingness, saying, at length, "But, if I do, he shall not be my physician." "No, sir," replied his lordship, "he shall be your majesty's baronet, and my physician!" This excited the royal smile, and the bloody hand was added to the doctor's arms.

The King was always mindful of his promises: and this year he conferred the bishopric of Winchester on Lord North's brother, then Bishop of Worcester, in compliance with an engagement pledged to Lord North a few years before, obtained under circumstances which display a little of the general system of court intrigue. Lord North had been particularly anxious to procure the see of Winchester for his brother, and took a singular method of obtaining it, by asking for him the archiepiscopal mitre of York, on the demise of Dr. Drummond. He well knew that the King intended to confer this dignity upon the Bishop of Chester, Dr. Markham, as a reward for the particular care which he had taken of the Prince of Wales's education; he asked it, therefore, expecting a refusal, but still appeared to use the privilege of a prime minister in urging his claim. His Majesty, as he was well aware, continued resolute; and the premier, as if on a forlorn hope, said, "I hope then your majesty will have no objection to translate him to Winchester, when that see may become vacant." To this the King assented; and the death of Dr. Thomas shortly after completed the arrangement.

Before attending divine worship, he made it a rule to read Barrow's Sermons every Sunday evening; having previously marked off with a pencil the divisions which he intended to read, so that the entire collection, with a little variation, lasted all the year round.

He was always a friend to religious liberty. The King's Joiner was a Methodist preacher; and his body coachman was a rank Methodist. The person last alluded to was old Daddy Saunders. It was known to the King that his coachman was a Methodist, but that never caused him to get one unkind word; and His Majesty, when the old man had retired, if he met him, never failed to stop his carriage to say, "Saunders, how do you do?"

Lord Mansfield, on making a report to the King of the conviction of Mr. Malowny, a Catholic priest, who was found guilty, in the county of Surrey, of celebrating mass, was induced, by a sense of reason and humanity, to represent to His Majesty the excessive severity of the penalty which the law imposed for the offence. The King, in a tone of the most heartfelt benignity, immediately answered, "God forbid, my lord, that religious difference in opinion should sanction persecution, or what of one man within my realms suffering unjustly: issue a pardon immediately for Mr. Malowny, and see that he is set at liberty."

On another occasion, passing through a town near Windsor, a rattle were collected interrupting the devotions of some itinerant Methodists, when the King, inquiring the cause of the riot, was told that it was only some affair between the townspeople and these enthusiasts; but he immediately replied: "The Methodists are a very quiet kind of people, and will disturb nobody; and if I learn that any persons in my employ disturb them, they shall instantly be dismissed."

This soon spread through the place, and tranquillity was almost instantly restored. Zoffany was once engaged as a portrait painter, of whom the following anecdote has been related.

When he commenced his first picture of the royal family, there were ten children. He made his sketch accordingly, and attempting two or three times, went on with finishing the figures. Various circumstances prevented him from proceeding. His Majesty was engaged in business of more consequence; Her Majesty was engaged; some of the princes were unwell. The completion of the picture was consequently delayed, when a messenger came to inform the artist that another prince was born, and must be introduced into the picture. This was not easy, but it was done with some difficulty. All this took up much time, when a second messenger arrived to announce the birth of a princess, and to acquaint him that the illustrious stranger must have a place on the canvass. This was impossible without a new arrangement: one-half of the figures were therefore obliterated, in order that the grouping might be closer to make room. To do this was the business of some months; and before it was finished, a letter came from one of the maids of honor, informing the painter that there was another addition to the family, for whom a place must be found. "This," cried the artist, "is too much; if they cannot sit with more regularity, I cannot paint with more expedition, and must give it up."

We now take a few passages from the closing scenes of his Majesty's life at Windsor—1810.

His personal appearance then was ruddy, and full; his voice sonorous; he conversed with cheerfulness, but with his usual rapidity, mingled with a little hesitation.

Though his hat was formed so as to shade his eyes, yet his actions sufficiently manifested his decayed, or decaying sight, as he always felt before him with his cane, especially in ascending or descending the steps; so that it was affecting to see him, though he himself always appeared cheerful when he spoke, and in other respects seemed as if nothing was the matter with him.

After breakfast, except on Sunday, His Majesty generally rode out on horseback; and, considering his age and infirmity of vision, he still mounted his horse with almost his former agility.

In his ride he was always accompanied by two of the princesses also on horseback, whilst some of the ladies of the court gene-

rally followed in a hansom, or other open carriage. But in these excursions he was unable to manage his own horse; in consequence of which two of his attendants were close by him, one of whom carried a little stick, with a hook at one end, holding or that part of the bridle next to the curb, so that if the horse should start or stumble instant assistance might be given.

Towards the close of 1810, the heavy and heart-rending affliction, which for so many years separated a venerated sovereign from his people, was first observed to take place hastened, if not actually brought on, by domestic sorrow for the loss of his beloved daughter, Amelia, on the second of November, the last act of whose filial tenderness evinced that it was not in the power of sickness, severely as it operated on her, to lessen the amiable temper of her mind; for, languid as she was at some periods, and tortured with pain at others, a desire of testifying her affection for the best of fathers was one of the strongest feelings of her heart.

She wished to present that royal parent with a token of her filial duty and affection, and she had the satisfaction of placing on his finger a ring, made by her own directions for the express purpose, containing a small lock of her hair, inclosed under a crystal tablet set round with a few sparks of diamonds. The effect of that present on His Majesty's heart, after so many trials during the progress of her illness, the public had too soon cause to lament; for the circumstance of an and able and beloved daughter, in the prime of life, passing rapidly on to her dissolution, in the midst of the most acute sufferings, naturally preyed on the mind and the parental feelings of the good old King. Indeed, it seemed that his whole soul became absorbed in the fate of his daughter: he dwelt on with harassing and weakening grief and despair; till at length the powers of his mind standing gave way, and he fell a prey to the mental disorder, under which he had suffered so much about twenty years before.

On some occasions he kept the physician when they made their reports, two or three hours in minute enquiries; indeed, so restless was his anxiety, that he was accustomed to receive a report every morning at seven o'clock, and afterwards every two hours in the day. At three o'clock regularly he went to her lodge to visit her, and the effect of these visits upon his heart was visible in his tears.

To describe the exact progress of the unhappy malady would now be as little interesting to public curiosity, as indecorous public feeling; it is sufficient to state, that the violence of the relapse staggered it hopes even of the most sanguine of the medical attendants, though the state of bodily health suggested no fears for his life: indeed his constitution must have been of the best stamina, to resist the copious bleedings, and violent opiates, which it became necessary to administer, independent of a second paralytic attack, which seized him in the month of July.

Prayers for recovery, which had been for some time discontinued, were now resumed.

in all the churches and chapels throughout the empire; indeed, very soon afterwards, all the symptoms became so alarming, that it was even thought necessary to prepare and arrange all the ceremonies used in the proclamation of a new sovereign; and the due notices were issued to the proper officers for that purpose.

At this period of awful suspense, it was craving to understand, in the month of September, that the unhappy monarch was now become more tranquil and composed; and that he experienced occasional intervals, in which he could recognize those about him, and was also susceptible of the consolations of religion: notwithstanding which, however, it was soon officially announced that all his medical attendants, except one, considered his ultimate recovery as extremely improbable, though they did not entirely despair of that happy event, hoping much from the remaining vigour of his bodily health and constitution.

The year 1812 opened with very little hopes of the king's resumption of his royal functions: as the report, on the eighth of January, acknowledged the positive continuation of the mental disorder to its former extent; and, though certainly not in a worse state absolutely, yet that all the physicians in attendance then agreed in stating that they considered a final and complete recovery impossible, but under certain modifications of hope or despair as to the possibility of that event.

Still must it be remembered, that at intervals his Majesty was capable of attending to general politics, and even of giving very just opinions on the probable success of the operations in Spain. Indeed, the physicians agreed that there was no fatuity in his Majesty's case, though his blindness was certainly unfavorable to recovery, because it was thence more difficult to manage him.

At the period in question, also, the consciousness of regal state gave a peculiarity to his complaint, which increased the medical difficulties: yet, upon the whole, his perception was good, though accompanied by a multitude of erroneous floating ideas. His memory too was firm and tenacious: he detailed anecdotes accurately, but could not exercise judgment; his powers of conversation still strong, but frequently mutilated the deep effect which the suppression of royal authority had made upon his mind.

In 1813, the fortunate results of the continental warfare once more restored Hanover to the House of Brunswick; and in 1814 it was erected into a kingdom, in order to preserve the balance of diplomacy with the other German States at the General Diet; and soon after the imperial and royal visit to the country took place, an occurrence which would have afforded to the secluded monarch his highest satisfaction, had he been permitted by Providence to enjoy it.

It was said indeed at the time that he was aware of the circumstance, and wished much to see the two royal personages; but his illness would not admit of it, as it was upwards of two years since His Majesty had

been shaven. His beard was very long. His usual dress was a silk night-gown, in which, from his age and physical infirmities, he reminded the spectator of the person and appearance of King Lear. Her Majesty visited him once a-week; but the princesses had not seen him for a considerable time. During the progress of the war, the news of the day was read to him, but latterly his want of sight had been further aggravated by total deafness.—His small stock of intellectual enjoyment had been thus greatly reduced, as he could no longer hear any news, nor amuse himself with the harpsichord, of which he was very fond, and on which he played with taste. As might be naturally expected, the recovery of Hanover gave him peculiar pleasure. After the battle of Albuera, and before the lanciers were introduced into our army, he repeatedly recommended them, and stated, that, in that improvement, the British army would be complete. His Majesty's memory still continued unimpaired.

In 1816, we are told, respecting his health at that period, we may state that at times he was tolerably composed. The number of persons specially appointed to attend him by the doctors were reduced from six to two, and his principal pages admitted, and had been for some time, to wait upon him, as when he enjoyed good health. His Majesty dined at half past one o'clock, and he in general ordered his dinner: he invariably had roast beef upon his table on Sundays. He dressed for dinner, wore his orders, &c. His Majesty, together with his attendants, occupied a suite of thirteen rooms, which are situated on the north side of Windsor Castle, under the state rooms. Five of the thirteen rooms were wholly devoted to the personal use of the King. Doctor John Willis slept in the room adjoining the royal apartments, to be in readiness to attend His Majesty: every morning, after breakfast, about half-past ten o'clock, he waited on the Queen, to report to her the state of the King's health; he afterwards proceeded to the princesses, and other branches of the royal family, who happened to be at Windsor, and made a similar report to them. In general, Her Majesty returned with Dr. Willis down a private staircase leading into the King's suite of rooms, and conversed with her royal husband. The Queen was the only person admitted to discourse with the King, except the medical gentlemen and His Majesty's personal attendants.

Of the peers of Scotland at His Majesty's accession, only the Duke of Gordon, born 1713, who inherited the title 1752, is alive. The twenty judges of the courts of session and exchequer in Scotland have been exactly three times renewed during this reign; the appointments to the bench being sixty in number, exclusive of two promotions of puisne judges to the president's chair. Of the members of the faculty of advocates at the accession, four are alive, viz. Robert Craig, of Riccarton, and Robert Berry.

• We have reason to believe that this is a mistaken notion; though not shaven, the beard was clipped close.—Ed.

both admitted in 1754; and Sir Hay Campbell, and James Ferguson, of Edinburgh, the present members of Parliament for Aberdeenshire, both admitted 1757. Of the society of writers to the signet, at the accession, only one, Cornelius Elliot, of Woollec, is in existence. Of the peers of England and Ireland, at the commencement of this reign, five are alive, the Earl, now Marquis of Drogheda, the Earl of Carlisle, Earl Fitzwilliam, Viscount Netterville, and Viscount Bulkeley, all of whom were under age at the accession, with the exception of the Marquis of Drogheda, now in his ninetieth year, and at the head of the generals of this army.

The venerated monarch may thus be said to have been almost left alone in an empire, which had been so long under his paternal sway: yet even then, all hopes of mental recovery were not entirely lost; for although a gentleman, who, by particular favour, saw him in the month of November, describes him as sitting in a satin night-gown, lined with fur, his head reclined upon a table, evidently unconscious of every thing, still were there reports of flashes of intellect like recovery; but too soon followed with hints of a decline of constitution, and even some surmises of an approaching demise. It is a fact, however, that a few months ago, the organs of his constitution seemed quite unimpaired; and it was remarked, that few lives promised a surer duration for several years, notwithstanding His Majesty's advanced age; but about December a gradual loss of strength and flesh were perceptible; since which time the medical gentlemen attendant on him considered themselves bound to prepare the public mind, by alluding to the infirmity of his age in the monthly bulletin.

But the final scene is now over; briefly, then, we shall throw together a few of the observations which the interest of the case has excited in almost every breast, and drawn from almost every pen.

First, then, we may observe, that the present age has not done justice to the King's abilities. His conversation in public was sometimes light and superficial; but he often had a purpose in such dialogue, and as often entered into it to relieve himself from the weight of superior thoughts. The King taking exercise, and amusing himself with those about him, and the King in the cabinet, were two different men. In the discussion of public affairs, he was astonishingly fluent and acute; and his habits of business enabled him to refer with ease to the bearings of every subject. His successive ministers have each borne testimony to the dignity of his manners, as well as the readiness of his understanding, when he put on the character of the sovereign. Nothing which was submitted to him was passed over with indifference or haste. Every paper which came under his eye contained marks of his observation; and the notes, which he almost invariably inserted in the margin, were remarkable as well for the strong sense as the pithiness of their character. His moral and religious character was above all praise.

*Hedin; or the Spectre of the Tomb. A Tale, from the Danish History. By the Honourable William\* Herbert, cler. London, 1820. 8vo. pp. 45.*

The "honourable cler," whose Spenserian stanzas we sit down to notice, inspired us with a very unfavourable opinion of his performance by the singular affectation of his title-page; and we have been agreeably surprised to find that, though strongly tainted with the same species of absurdity, the work displays unquestionable marks of talent, and furnishes several passages of a nature so truly poetic, as to excite our wonder at their being produced by the same mind which descends to such puerilities. We never, indeed, perused a book so illustrative of character. All the early parts are disfigured with a sort of literary dandyism, which is exceedingly annoying: one feels inclined, notwithstanding the smoothness of the verse, to toss the thing into the fire; but as it is short, read on, and finally discover, that as the author warms and becomes in earnest with his subject, his native genius surmounts his artificial foppiness, and he pours forth

\* Some injudicious friend of this author had very recently the temerity to call the attention of the public to him by a superlative panegyric in the newspapers in which "Scott, Byron, Herbert, and Moore," were classed as the four great bards of the age. Not only were Campbell, Southey, Crabbe, Wordsworth, Coleridge, Gifford, Rogers, Montgomery, Croly, Croker, Cornwall, Millman, Wilson, and many others, set aside as unworthy of comparison, but it appeared in the sequel that Herbert was infinitely superior even to the three who had the honour to be mentioned along with him. Nothing can be more injurious to a writer than such preposterous attempts at bolstering up a name certainly not yet so celebrated whatever it may be hereafter. We quote the conclusion as an instance of the puff suberb.

"Herbert's poetry is more equal than either Scott's or Byron's, and it would be more difficult to point out defects of taste in it. He has, perhaps, more variety of character than Byron; but does not dive so deep into the recesses of the human mind; though the last Canto of *Helda* shews strong powers of terrible pathos; nor has he that striking talent of representing domestic manners, which is almost peculiar to Scott. He ranges more in the fields of the imagination than Scott, but does not cling to the deep passions, like Byron. In the description of scenery, he is fully equal to the Scotch Poet. It might be difficult to say, which of the three displays the greatest beauties. There are passages in the works of Scott and Byron, and in Herbert's *Helga*, which may be placed in competition with any poetry that was ever written. The union of poetical force with correct judgment, renders it probable that Herbert might be eminently successful in heroic poetry. His enumeration of heathen deities, though by no means the finest passage in *Helga*, will not lose a jot by comparison with that of Milton." !!!

some energetic and beautiful composition, in lieu of the prettinesses of his prior verse.

The subject is taken from Professor Suhm's *Historie af Danmark*.

"Hogni and Hedin were very celebrated in the reign of Frode the Third. Hedin, the son of Hiovard, a Norwegian prince, came with 150 ships to fight Frode. With 12 vessels he preceded the rest of his fleet, having placed a shield on his mast, as a token that his purpose was amicable: and friendly terms were speedily arranged. A tributary king in Jutland, named Hildur, had a daughter of exquisite beauty, called Hildur. She and Hedin, having been both prepossessed in favour of each other by previous report, met privately, and became exceedingly enamoured. Hedin and Hogni afterwards sailed together on maritime expeditions, the latter not being aware of Hedin's affection for his daughter. Hogni was a person of majestic carriage, and very imperious disposition; Hedin of inferior stature, but remarkably well made. Hogni offered his daughter in marriage to Hedin, and they pledged themselves by joint oaths to revenge the death of each other; after which they sailed against the Orkneys, which they subdued. After their return home, Hogni received information that Hedin had seduced his daughter before her marriage to him, which was looked upon as an heinous offence; and giving credit to the report, he attacked Hedin, who was at sea under the king's orders, but having an inferior force, took refuge in Jutland. When Frode heard this, he summoned them, and tried to bring about a reconciliation: but Hogni was inflexible, and demanded the restitution of his daughter; whereupon the king gave orders for a duel, in which Hedin received a severe wound; but Hogni took compassion on his youth and beauty, and spared him. But sometime after they met again on Hithin's island, near Rogaland, in Norway, and slew each other. It was rumoured in those superstitious times (A. D. 360), that Hildur so deeply regretted them, that by means of incantations she waked up the dead, who thereupon renewed their conflict: and that they would continue to do so every night till the end of the world. This story was the original cause of battle being called by the old Scalds the sport of Hilda."

From this story Mr. Herbert has, in some degree, departed, and, for the sake of greater unity of action, caused the heroes to fall in the first combat. The name of Hogni, as unmusical to British ears, he has changed to Harald; and in other respects availed himself very effectively of ancient Scandinavian manners and superstitions, to enrich his picture with appropriate accessories. It is our disagreeable task now to animadvert upon the blemishes of which we have complained: we shall, in conclusion, perform the pleasant duty of pointing out excellences. After an in-

vocation to Norway, we are thus introduced to the younger warrior.

Sons of the rock, in strife and tempest brave,  
Thine offspring roan'd like sea-cavews, o'er  
the wave;  
Yet faithful Love, by the pure-glowing light  
Of thy bleak snows, with northern streamers  
bright,  
And high-born Honour and chaste Truth  
abode.  
Strong was thy race, and matchless in the  
fight,  
But none unival'd as young Hedin strode,  
Bold in the battle's surge, and first in glory's  
road.

Here we find "abode" without any relation to place or people, an insulated verb without a meaning; and here we find a comparison where there can be no comparative degree, since an "unival'd" hero can have no equal even among a "matchless" race.

The poem proceeds to describe the scene of contest.

Gay laugh'd the sun on Danish fustibord,  
And fast in Leyra's Port the fleet was moor'd;  
And there were lists, as if for combat soon,  
And in the midst twelve thrones; on every  
throne

A scepter'd prince, in gorgeous garb array'd,  
They waited on the voice of Dan's great son,  
His sovereign word twice fifty kings obey'd,  
And many a lordly knight from Denmark's court  
outtrade.

In this stanza the antiquated expressions "boom" and "outtrade" are hardly tolerable in modern poetry, which is bound to employ the improved language of the age to which it belongs, and not revive what is obsolete, merely, as it seems, for its quaintness. The position of the twelve thrones, too, in the midst of the lists, is an oversight, as no spot could be, of necessity, more clear of incumbrance than this site: and "word," here implying order or command, does not convey that meaning, and cannot be said to be "obeyed."

The warriors are painted; the lovely Hilda the spectator of the strife, the king endeavouring in vain to procure a reconciliation, forbidden by the chivalrous feeling of that era: the whole is animated and flowing; but we object to such phrases as "kindred strife," for the strife of kindred, and to "beware" and "bewraying," for betray and betraying. Our grammar will not authorise the former, and the latter is precisely in point to prove, that if the author had been content to employ good words in common use, instead of affecting less certain and older phrasesology, he would have been more intelligible, and less liable to blunder. B.

\* We are aware that he may defend himself on the authority of Dryden; but that author

way means to discover, expose, and is derived from a Saxon verb bearing that sense: betray, on the contrary, far from being synonymous, is derived from the French *trahir*, and is used by Milton and Addison to signify show. In the Bible, and in Shakspeare, the distinct and separate sense of these words is always preserved, and to confound them is a recent corruption of the English tongue.\* Hilda ineffectually prays to be sacrificed instead of seeing her father and lover engaged in mortal combat.

"If *hundred frauds* require a forfeit life,  
 "Let Hilda fall, sole cause of civil strife!  
 "And thou, dread sire, if ever free from stain  
 "I sooth'd thee, sang to thee in grief or pain,  
 "Winning with virgin kiss the *sprite* of woe,  
 "Let thy proud daughter still small grace  
 regain!  
 "Grant her with joy to meet the murderous blow,  
 "And o'er her cold cheek *hear* a parent's blessing flow."

The "still regain" is objectionable, and "hear a blessing flow," is rather confusedly metaphorical: but the next stanza is even more liable to censure, the first line for want of euphony; and all the rest for want of meaning.

*She ceased; stillness ensued, as when the deep  
 foretells a storm, and yet the whirlwinds  
 sleep.*  
 Like the sad beam of reason faintly spread  
 o'er the born maniac on his dying bed;  
 like the last radiance of the setting sun,  
 like night's wild tempest wraps the sky in  
 dread;  
 A gleam, that show'd like hope, though hope  
 was none:  
 A beam of life, when life's frail glass was nearly  
 run.

We can form no notion of what these similes refer to; whether to Hilda's ceasing, or to the ensuing stillness:—we only feel that they are inapplicable to either.—images without likeness, similes of dissimilitude. The trumpet lays to the fight.

In burst on Hilda like death's keenest throes,  
 Rebounding life: stately and slow she rose;  
 Her lovely bosom, passing mortal mould,  
 Seem'd like a shape of marble still and cold;  
 It throbb'd not, moved not, stiffen'd by despair,  
 And whiter than her vestment's snowy fold.  
 So calm, so pale, so exquisitely fair,  
 She seem'd like beauty's wraith, and scarce of  
 life aware.

This will not fail to remind readers of Lord Byron; but henceforward we are in conditional in its conditions against him. We may also note that most of the errors introduced into our language have flowed from authority, being looked to instead of etymology. Ed.  
 \* Obsolete words may be inaudibly revived, when they are more sounding or significant than those in practice. Dryden.  
 \* See Dr. Johnson; also Haslam on Sound and Meaning, reviewed in our last Number.

much more delighted with Mr. Herbert, though he does talk rather silly of *The rum'd heart strain'd* to meet the shock of woe.  
 and of the sleeplessness of Hilda.

whom the strong desire  
 Of her lost Hedin gnawed with secret fire.  
 There is, we think, exquisite force and beauty in the following anticipation of Hilda's horror, when, awaking from her swoon, she shall find her dearest ties on earth "dead, gory, stiff."

There is a sense which words can ne'er express,  
 That blunts the sufferings of keen distress;  
 A rapture e'en of woe, that drags the mind  
 Beyond the sphere of ills it leaves behind;  
 Ope a new heaven with no dark clouds o'er-  
 cast,  
 Where the thought roams sublime and uncon-  
 fined;  
 A pride of grief, when earthly hopes are past,  
 That mounts above the storm, and soars upon  
 the blast.

Nor is her restoration to sense managed with very inferior skill.

She did not rend with one wild shriek the air,  
 Nor gave her soul to frantic vain despair;  
 Nor did her bosom heave one piteous sigh.  
 Say, was she faithless to love's hallow'd tie?  
 Was her heart pangless? or her feelings lying?  
 Could woman's cheek in such an hour be dry?  
 Or the keen anguish of that deadly sight  
 Pass like a summer dream, and yield to new  
 delight?

O never yet was sire more fondly loved!  
 Nor ever heaven's all-judging eye approved  
 A pair more closely link'd by nuptial band,  
 Than he, whose cold grasp holds his comrade's  
 hand  
 In death united, and that beauteous fair,  
 Whose placid calmness does her soul com-  
 mand,  
 Still as the lake unmoved by breath of air,  
 And stately as the swan that sails unruffled there.  
 On her cheek glow'd love's bloom and living  
 fire;  
 But, not unworthy of her valiant sire,  
 There was a proud endurance in her eye,  
 And in her veins heroic blood throbb'd high.  
 Honour's pure beam adorned each gentler  
 grace,  
 Patience to bear, and fortitude to die.  
 Had the keen sabre smote her lovely face,  
 She ne'er had shrunk or winc'd unworthy of her  
 race.

The lowness of "wink'd" is perhaps sufficiently exalted by the knowledge that to meet death without winking was reckoned the noblest proof of northern courage. The first line of the last stanza bears a resemblance to that sweet couplet—

O'er their warm cheeks and rising bosoms move  
 The bloom of young desire, and purple light of  
 love.

It is however very fine. Hilda's visit to the grave, and her incantation, are truly poetical, and worthy of the fearful interest of the subject..

To the still grave she bent her fearless way,

While her dark thoughts with nature's gloom  
 conspire;  
 Awhile she seem'd in anguish to survey  
 The monumental pile that wrap'd his mouldering  
 lay.

But not to mourn she sought that mansion lone,  
 Or weep unceasing upon the dreary stone,  
 And in her sorrow there was nothing meek;  
 Gloomy her eye, and lowering seem'd to speak  
 A soul by deep and struggling cares distraught;  
 And the bright hectic flush upon her cheek  
 Told the mind's fever, and the darkling thought  
 With haughty high designs and steadfast passion  
 fraught.

Strange signs upon the tomb her hands did  
 trace;  
 Then to strong spells she did herself address,  
 And in slow measure breathed that fatal  
 strain,  
 Whose awful harmony can wake the slain,  
 Rive the cold grave, and work the charmer's  
 will.  
 Thrice, as she call'd on Hedin, rang the plain;  
 Thrice echo'd the dread name from hill to  
 hill;

Thrice the dark world sent back the sound, and  
 all was still.

Then shook the ground as by an earthquake  
 rent,  
 And the deep bowels of the tomb upsent  
 A voice, a shriek, a terror; sounds that seem'd  
 Like those wild fancies by a sinner dream'd;  
 A clang of deadly weapons, and a shout;  
 With living strength the heaving granite  
 tem'd,  
 Inward convulsion, and a fearful rout,  
 As if fiends fought with fiends, and hell was  
 bursting out.

And then strange mirth broke frantic on her  
 ear,  
 As if the evil one was lurking near;  
 While spectres wan, with visage pale and  
 stark,  
 Peep'd ghastly through the curtain of the dark,  
 With such dire laugh as Phrency doth *berrey*.  
 It needs a gifted hand, with skill to mark  
 \* Hilda's proud features, which no dread betray,  
 Calm amid lonesome deeds and visions of dismay.  
 Speechless she gazed, as from the yawning  
 tomb

Rose Hedin, clad as when he met his doom.  
 Dark was his brow, his armour little bright,  
 And dim the lustre of his joyless sight;  
 His habergeon with blood all sprinkled o'er,  
 Portentous traces of that deadly fight.  
 His pallid cheek a mournful sadness wore,  
 And his long flowing locks were all defiled with  
 gore.

There have been those, who, longing for the  
 dead,  
 Have gazed on vacancy till reason fled;  
 And some dark vision of the wandering mind  
 Had ta'en the airy shape of human kind,  
 Giving strange voice to echoes of the night,  
 And warning sounds by heaven's high will de-  
 sign'd.

But this was bodily which met her sight,  
 And palpable as once in days of young delight.  
 High throbb'd her heart; the pulse of youth  
 swell'd high;  
 Lore's ardent lightning kindled in her eye;  
 And she was sprung into the arms of death,  
 Clasp'd his cold limbs, in kisses drunk his

\* The italic letters will indicate what we  
 dislike in the foregoing, for reasons it would  
 be prolix to state.

breath;  
In one wild trance of rapturous passion blest,  
And reckless of the hell that burn'd beneath.  
On his dire corset beats her leaving breast,  
And by her burning mouth his icy lips are press'd.

Stop, fearless beauty! hope not that the grave  
Will yield its wealth, which frantic passion  
gave!

Though spells accursed may rend the solid  
earth,

Hell's phantoms never wake for joy or mirth!  
Hope not that love with death's cold hand can  
wed,

Or draw night's spirits to a second birth!  
Mark the dire vision of the mound with dread,  
Gaze on thy horrid work, and tremble for the  
dead!

All arm'd, behold her vegeful father rise,  
And loud, "forbear, dishonour'd bride!" he  
cries.

With starting sinews from her grasp has  
sprung

The cold wan form, round which her arms  
were slung;

Again in parody of warlike steel  
They wake those echoes, to which Leyra rung;  
Fierce and more fierce each blow they seem  
to deal,

And smite with ruthless blade the limbs that no-  
thing feel.

Darling she stands beside the silent grave,  
And sees them wield the visionary glaive.  
What charm has life for her, that can compare  
With the deep thrill of that renew'd despair?  
To raise the fatal ban, and gaze unsear.

As once in hope on all her fondest care!  
In death's own field life's trembling joys to  
clean,

And draw love's keen delight from that abhorred  
scene!

The paths of bliss are joyous, and the breast  
Of thoughtless youth is easy to be blest.

There is a charm in the loved maiden's sign:  
There is sweet pleasure in the calm blue sky,  
When nature smiles around: the mild control  
Of buoyant fancy bids the pulse thrum high;  
But when strong passion has engross'd the  
soul,

All other joys are dead; that passion is its whole.

The beaming sun may wake the dewy spring,  
The flowers may smile, and the blithe green-  
wood ring;

Soft music's touch may pour love's sweetest  
lay,

And young hearts kindle in their hour of  
May;

But not for Hilda shall life's visions glow;  
One dark deep thought must on her bosom  
prey.

Her joys lie buried in the tomb below,  
And from night's phantoms pale her deadly  
bliss must flow.

There still each eve, as northern stories tell,  
That lone mound her spirit wakes the spell;  
Whereat those warriors, charmed by the lay,  
Fence, as if in sport, the deadly fray:  
Till, when as pale grows the gloom of night,  
And faintly glows to peer the morning's ray,  
The spectre paces fadeth from the sight,  
And vanisheth each form before the eye of light.

This spirited and admirable conclu-  
sion would redeem a thousand faults,  
far more enormous than those we have  
designated... faults, we repeat, not of

genius, but of affectation. Let Mr.  
Herbert leave off *cler-ing* it, and all  
such weaknesses; give the rein in a  
manly way to his powerful imagina-  
tion; and we will be bound for him he  
will produce works more deserving of  
the eulogy of his newspaper panegy-  
rist than either Helga or Hedin.

#### HISTORICAL VIEW OF HANNOVER.

(*Abridged from Hodgskin's Travels.*)

Though deformed with opinions  
which we cannot but consider as repre-  
hensible both in politics and morals;  
though frequently led astray by the  
silly metaphysics of a school, which  
under the pretence of superior know-  
ledge, tends to plunge mankind into  
vices and crimes worse than those of  
savage ignorance; \* though so inele-

\* For example, in censuring the punishment  
of child-murder by torture, which no one de-  
fends, but which no one of common sense un-  
derstands, he is perverted by the lights of a false philosophy  
would condemn for these reasons, he thus, as it  
seems to us, becomes the apologist for the  
crime. At present it is no longer doubted, that  
society is rather injured than benefited by a  
number of children being thrown upon it. So far,  
therefore, as the increase of the society is  
concerned, it is not injured by infanticide.  
Though an infant be born alive, a few moments  
of misery can give it no connection with the  
world; it can have no knowledge of enjoyment;  
and if its being be extinguished before it has well  
existed it may be doubted if it suffer any injury.  
How common is the exclamation, that the poor  
child was well rid of a troublesome world. Neither  
the child, therefore, nor the society, can be said  
to suffer by the crime of the mother. But the  
child is in fact a part of the mother, and might  
be as great a source of enjoyment to her as the  
faculty of vision. To deprive herself of a mo-  
ther's love, and her child of life, is synonymous  
with doing herself a serious injury. The state  
of misery to which a woman in European so-  
ciety must be reduced before she can bring her-  
self to do so foul a deed, gives her a claim to  
our pity; and it is most cruel to add to her  
misery, by torturing her to confess what she  
has done herself so much injury to conceal. In-  
fanticide is a terrible crime, inasmuch as it is a  
terrible injury to the unhappy mother who com-  
mits it; but while it is concealed, it can do the  
society no injury whatever.

Being unknown, it could have no effect as an  
example; and the more perfectly it was con-  
cealed, the more exclusively did the whole evil  
belonging to it fall on the unhappy mother. By  
lawgivers endeavouring to discover such a crime,  
and by making it known, they spread that  
horror which men so naturally feel on such an  
occasion, through a greater number of bosoms,  
and they inform all those from whom it was  
most desirable such information should be  
forever concealed, that it is possible to commit such  
a crime, and yet escape punishment. An idea  
that they never could have formed, but for the  
trouble the lawmakers took to discover and in-  
flict punishment on the crime. In this case it is  
the law itself, it is the meddling of legislators,  
which in reality causes all the evil which may  
fall on the society from the conduct of the fe-  
male. And if the evil which any action causes

giant in style as often to employ a for-  
eign idiom †; and though guilty of  
mixing up more of home comparisons  
than is necessary in foreign travel, it  
has occurred to us that we might ex-  
tract an account of the kingdom of  
Hannover from Mr. Hodgskin's recent  
publication, more satisfactory than any  
that we are aware of in the possession  
of the British public, deeply interested as  
it is in the circumstances of that portion  
of the mighty Empire now united under  
the sceptre of George the Fourth.

We shall be as brief as possible in  
bringing all the important facts toge-  
ther.

There is no land properly called Han-  
nover, and this is the only monarchy in Eu-  
rope whose title is borrowed from the chief  
city of its territories. This title was first  
used when Ernest Augustus, the father of  
George I. obtained the dignity of an elector  
of the Empire, and it is now applied both  
to the newly acquired and to the long pos-  
sessed German dominions of his majesty.  
The history of this part of Germany prior to  
the above period, mentions the Dukes of  
Brunswick-Wolfenbüttel, or Lüneburg, or  
the prince of Kalenberg, or the Archbishop  
of Bremen, but the name *Hannover* was then  
used only to designate an almost independ-  
ent city, which often refused obedience to  
its nominal sovereigns, and never obeyed  
them but on stipulated conditions.

Hannover, (properly so spelt) consists of  
eleven provinces, viz. 1st. the Archbishopric  
of Bremen, dukedom of Verden, and  
Land Hadeln; 2d. Dukedom of Lüneburg;  
3d. Counties of Hoya and Diepholz; 4th.  
Principality of Kalenberg and county of  
Spiegelburg; 5th. Bishoprick of Hildesheim;  
6th. Principalities of Göttingen and Gruben-  
burg; 7th. Bishoprick of Osnabrück; 8th.  
County of Lingen; 9th. Circle of Meppen and  
Embsbüren; 10th. County of Bentheim;  
and 11th. Principality of East Frisia.  
There are 11,045 square geographical miles  
of territory; and the population amounts  
to between 1,800,000 and one million and a  
half of souls. Seventy-three cities and above  
5300 market towns are scattered over the  
kingdom; the annual births are from 43,000  
to 45,000; and, owing to the influx of emi-  
gration, they have recently exceeded the  
deaths by nearly one-fourth. "The eastern  
is the boundary Elbe, with the exception  
of a small portion of territory which lies on  
the eastern side of that river; West Fried-  
land, belonging to the king of the Ne-  
therlands, bounds it on the west: that por-  
tion of Westphalia which belongs to Prussia,  
and the principality of Lippe-Detmold, lie  
on the south-west; Hesse Cassel on the  
south; Brunswick and Magdeburg, belong-  
ing to Prussia, on the south-east side." In

to the society be the measure of the guilt of that  
action, legislators are, in such cases as this, far  
more guilty than the unhappy mothers.

† Ex. Gr. "In Hannover so well as in Eng-  
land," &c. &c. a hundred times repeated.

the northern boundary are the mouths of the rivers Ems, Weser, and Elbe. Sophia, the mother of George I. obtained for her husband in 1692, the dignity of an Elector of the Empire; though three of the other electors, and most of the princes of the empire, opposed this grant from the Emperor; and Ernest Augustus, consequently, never enjoyed more than the nominal rank. From 1700, when Sophia was declared heiress to the British throne, to 1708, when that elevation became more certain, these obstacles were surmounted, and the Elector George, who had succeeded his father in 1698, was fully invested with the rights belonging to his title, and with those of Arch-treasurer. Hannover at that period comprized only 2120 square geographical miles, and about 350,000 inhabitants. Lüneburg, thrice as large, and with twice the number in population, became united to it in 1705, by the death of the Elector's uncle. Bremen and Verden, were purchased from Denmark for about 100,000 rix-dollars, in 1715; and Beutheim was also acquired by money in 1753. The remainder of these dominions have been obtained by the late arrangements in Europe.

The present government consists of H. R. H. the Duke of Cambridge, President of the Cabinet Ministry, and Governor General: the Cabinet Ministers have the title of "Excellency" and have the different departments entrusted to them, with subordinate officers and secretaries. But there is a branch of power to which we have no parallel; it is called the *Kammer*, Chamber, and its duty is to manage the whole of the domains and property belonging to the crown; including regalia, certain rights to forests, to salt, to metals, to levy tolls, and other privileges, together with rather more than one sixth of the whole land of the ancient dominions, without including what did belong to religious bodies, but now under the control of the Monarch. The Duke of Cambridge presides over the *Kammer*, assisted by one of the Ministers, a vice-president, and six counsellors, with a great many *Camararlen*, secretaries, writers, &c. It is of course, a court of much influence throughout the country. That portion of the land which is the property of the crown is divided into what are called *Amts*, each of which in general comprises several parishes. Over the *Amt*, an *amtman*, who is a juriconsult, is placed as magistrate. Land not under the government of some *Amtman*, or of some towns, belongs to the nobles, and they exercise the powers of government over it. The *amtmen* are appointed by the Chamber, when they are noblemen, as they sometimes are, they take the title of *Landroost*. When the latter are not themselves learned in the law, they have a juriconsult, who is then called *Amt's* assessor, placed under them. These persons have the power of enforcing the orders of government in their respective districts. They correspond strictly to no magistrates of our country, but resemble the justices of the peace more than any other. The police of their districts is under their controul. They have certain servants, or *Fogies*, who may be con-

sidered as the instruments of this police. They communicate frequently with the governments, both of the provinces and the general government, which are consequently well-informed of every occurrence.

Each village, again, has what is called a *Vorsteher*, or Bannmeister, who is the organ to expound the will of the superiors to his fellow-parishioners, and to forward the reclamations or complaints of the whole parish to these superiors. He is generally chosen by the inhabitants yearly; he is a farmer or some other inhabitant of the parish; he has something to do with the administration of the church, and of the poor, and, on the whole, exercises functions somewhat similar to our churchwardens and overseers combined. The provincial governments extend their authority to every thing—even to regulate the killing of sparrows, the keeping of pigeons, the duties of midwives, the extirpation of weeds. In short, there is hardly an action of human beings capable of being prescribed, respecting which one or other of these governments has not issued directions. The practice of medicine is subject to police regulation. The power of the crown is very considerable over the magistracy of the towns; the clergy generally over all classes of the population eligible to office or employment.

The Protestant church in Hannover is administered by *Pastors* (parish priests), with from 60*l.* to 400*l.* per annum. Each has a *Canter* (Clerk), and a *huater* (Sacristan). The general superintendence lies with a *Consistorium*, resembling the synods and general assembly in Scotland. Tythes are the property of the crown, of particular nobles, or of some corporate body.

An eighth part of the people, principally in Hildesheim and Osnabrück, are however Roman Catholics. They have a bishop in each of these two provinces. Besides the Prince Bishop, our Duke of York, who, whether ecclesiastic or layman, is the temporal

\* The consistoriums regulate all matters relative to the discipline of the clergy. They are the trustees of all the funds which yet belong to it. They superintend the business of education; they very often appoint schoolmasters; they have the examination of all candidates for clerical offices; and they lend their aid to the well government of the people. They are also ecclesiastical courts, which decide in cases of divorce. Those of Celle and Hannover pronounced the divorce between George I. and his wife some few years before he was called to the throne of Great Britain. They are the judges in all complaints made against the morals of the clergy. As an instance of their power and practice in such cases the following anecdote may serve: The wife of a clergyman was delivered of a child some few months earlier than was consistent with the date of her marriage. The parishioners complained of their pastor. The affair was examined by the consistorium, and, in spite of his observing that the fault of his wife was not his fault, he was removed to another parish, of which the emoluments were less. As the character of his wife was known, there was some truth, as well as wit, in the observation of a lady, who, when this story was told her, said it was as shame to punish the poor man for what he had not occasioned.

ral governor. A conceit for these is now negotiating at Rome; but the Catholic Church is endowed with little wealth, as the church possessions have been secularized, and the priests are allowed only small salaries and establishments. The head of this church is the Abbot of Loccum, the independence of whose abbey was secured by the treaty of Westphalia; he alone remains in the similitude of pristine power. He is elected alternately by the crown and chapter, and has a revenue equal to one of our poorest bishopricks. There are 25 secularized religious corporations for both sexes in Hannover; but their funds are extremely limited, their priors, &c. mere sinecurists, and their general executive, the *Kloster Cammer*, appointed by the Crown.

The new constitution of this kingdom is modelled upon that of Britain. Its representative system consists of 101 persons, 43 of whom represent the nobility, 10 the clergy, 27 the towns, and 6 the holders of free property, which has not the privileges of nobility attached to it. Four of the six represent the free proprietors of Friesland, one of those of Hoya, and one is sent by the inhabitants of the marsh lands on the Elbe. Those elected as representatives of the Clergy are chosen by the chapters of the secularized convents, above mentioned; and the representatives of the towns are elected by the magistrates. The parliament is called the *Jahres-Gesellschafft*—the Assenting Society. The deputies who live out of the town of Hannover receive each 12*l.* 4*l.* per day; those who live in that town only 6*l.* 8*l.* The officers of the assembly have higher allowances. Members may resign if they please; otherwise the elections are for life.

The army of Hannover consists of about 13000 regulars, including 1500 cavalry; the *landwehr* is estimated at 18,000 men. The former are recruited by voluntary enlistment; the latter by ballot, as in our militia, but with useful modifications. They are exercised a month in every year, and only subject to military discipline during that time. A force of at least 30,000 men is thus always available. Punishments are severe, and ruining the gauntlet still a common infliction. The officers receive their first commission from the bounty of the sovereign, and rise afterwards according to seniority. Every one must study three years at a military school.

The revenues of Hannover consist of about half a million sterling of Domianal income, and of the produce of seven taxes (viz. on land, on out-goes consumed in towns, on brewing and distilling, on salt, on stamps, on imported articles, and on income and persons), estimated at a total of half a million more. The national debt is above three millions, and the whole expenditure, including the interest, is not calculated at so much as one half of the revenue.

The administration of justice is committed to patrimonial courts, justice chanceries, and a court of appeal. The first mentioned have jurisdiction in civil suits only, or in both civil and criminal. The members are appointed by the proprietors and magistracy in their respective towns. There are seven

superior tribunals called Justice Chanceries, each with a jurisdiction over several provinces. The chief court of appeal is at Celle in Luneburg, and was established in 1713. It consists of a president, two vice-presidents, and eighteen judges. The three presidents, and six of the judges, are appointed by the crown; the other twelve by the States, so that every province has a judge in the court, acquainted with its local laws. The salaries are from 250*l.* to 300*l.* a-year, exclusive of fees. This Court is famous for impartiality. There are subordinate courts of appeal in every county, but this is the last resort.

The land of Hannover is divided amongst persons who may be conveniently classed thus:—The sovereign, the nobles, town and religious corporations, persons not noble. One sixth at least, as we have mentioned, belongs to the sovereign, and possibly more than three-sixths may belong to the nobles, one-sixth to the corporations, and less than one-sixth to persons not noble. That which belongs to the sovereign is again divided in general into large portions, which have once been noble or ecclesiastical properties, and are now let by the crown in their entire state. They may contain from 500 to 3000 acres, or in the unfruitful provinces even more, with rights of pasturage over large districts, and in some cases, with a right to the services of the peasants. The tithes also are sometimes united to them. They are let to the gentlemen, to individuals, or to noblemen filling the office of gentlemen: but it is always considered as a favour to have them, and they are let only to those persons whom the government wishes to gratify or reward.

There are 64 noble properties in the kingdom, several of which are united in the hands of one person; but there is no one nobleman whose income amounts to more than 30,000 Thalers, or 5000*l.* per year. Counts Hardenberg and Platen are amongst the most opulent of the nobility.

Rents are from 7*s.* to 12*s.* per acre, and the occupiers of small portions of land are divided into *meyers* (again subdivided into half *meyers*, or quarter *meyers*, according to the size of their farms), and *Leibeigern*, which strictly speaking means a person who owns his own body, and nothing more. The *meyer* pays the landlord a yearly sum, or quantity of produce; and also a certain sum when from death or transfer the proprietary is changed. The landlord cannot alter these conditions, except the heir is an idiot, or the rent for the renewal of the lease has not been paid. The conditions by which the *leibeigern* holds his land are also fixed, they are not the arbitrary will of his lord, and it descends with these to his children; but they are conditions of service so onerous, that they reduce him almost to slavery. He is obliged to cultivate the land of his lord a certain number of days in the year, to neglect his own harvest while he is carrying in that of his lord, to employ his horses to bring home his lord's wood, to supply his lord with coach-horses when he demands them; in short, to do him all sorts of feudal services.

There is no legal provision in Hannover for the poor. The *Vorstehers* of the villages, and some of the citizens of the towns, call on the inhabitants, generally of a Sunday, for some little contribution for the relief of the distressed, which, from the publicity of the thing, they are under a sort of necessity to give, and if they do not, the collector is ordered to notify it to the clergyman. The collectors bring with them a book, in which the sum given by each person is inscribed, and they, in some cases, receive a small recompence for their labour. The funds so obtained are distributed by the collectors, by the clergyman, and by the magistrates of the towns, according to the wants of each person soliciting relief. When this money is collected, the inhabitants are warned by the collectors not to give alms, and they seem to expect, that, for what they give on this occasion, they ought never to be tormented by beggars.

The agriculture of Hannover is represented as in a good state. Meat costs from two pence halfpenny to four pence per pound. Wheat or rye between four and five shillings the bushel; barley three shillings, oats one and nine pence, potatoes nine pence. The wages of men from sixpence to eightpence; of women from fourpence to sixpence. A considerable quantity of grain is exported, especially from Friesland. There is one interesting custom connected with the husbandry of this part of the world.

The first corn of every harvest which enters any town is usually conducted in triumph. The waggon which carries it is decorated with flowers, the people go out to meet it, and they accompany it into the town in a gay and joyous manner.

The manufactures are not in so prosperous a state. There is not a steam engine in the kingdom; and few modern improvements in machinery have yet found their way to Hannover. The arts, we may also notice, are also in their infancy: there is not one sculptor of any eminence, nor a single gallery of good pictures or statues in the kingdom. The only painter of the least reputation, is a Mr. Rambert, who was educated in England, and who has so singular a taste that he never could paint a female with the slightest characteristic of modesty. Literature does not stand on a high eminence.

We have only further to add, that education is general. From the age of six to fourteen all children are taught, and parents are punished if they fail to send their offspring to the schools provided for their instruction. Government contributes largely to this beneficial plan. Music is much cultivated, and besides reading, writing, and arithmetic, the lowest orders can usually play on some instrument.

The character of the population is calm, solid, and good; their morals apparently not very strict; but they are loyal, obedient, social, contented, and happy.

*The Neighbourhood; or Evenings Abroad: being Original Tales, Narratives, and Fables, &c.* Edited and arranged by

Frances Fairthought. 2 vols. 18m London, 1820.

Our Reviews very often range among the higher pursuits of the human mind, and we hope our learned readers will think we are descending too low in scale, if we introduce to their notice a little work produced for the rising generation;

"To teach the young idea how to shoot."

The title of *Evenings Abroad* would, I think, have been better than the dull name given to these tales; for we have seen nothing which for originality, fancy, amusement, and moral instruction, has come near the justly prized *Evenings at Home*. When we consider how much the character of maturity depends on the direction of fancy and culture of youth, that "as a twig is bent the tree's inclined," and that much of the misery or happiness of life depends on early impressions, we must fit that it is not beneath the consideration the most grave, what books should be put into the hands of children; and grant that the writer who creates a valuable article in this class, is worthy of a page in the *far* most records of philanthropy and literature. Without apology, therefore, we not only devote a portion of the *Literary Gazette* to the recommendation of *The Neighbourhood* to parents and instructors of youth, but select one of the tales, as an example of the ability with which the whole are contrived.

It was one fine summer's morning, I guess and her kitten were basking in the sunshine, the old cat thought it a good opportunity to give her young one a word of advice, as she was about to leave her protection and must soon shift for herself. Desiring her, therefore, to leave off playing with her tail, and listen attentively, she thus began:

"You are of an age, my dear Tibby, I understand that what I am going to tell you is for your own good: and, if you are not foolish as men and women, you may profit by the experience of another."

"I will tell you my history, which may serve you as a lesson through life. Before I begin, I must say something upon your conduct at present. You are at the moment biting and destroying the buds that carnation, as fast as you can; and assure you that nothing will sooner turn you out of a place, than doing mischief in the garden."

Just at this instant Tibby, whose attention was divided between her mother's sagacious counsel, and a gaudy butterfly, made sudden spring; and, though she did not succeed in catching it, she unluckily snatched the stalk of a beautiful tulip which grew close by. The old cat flared her tail in great anger. "I see how it is," cried she, "all my cautions will be thrown away, I vain pleasures of the world are alike pursued by men and cats. That tulip which you have so carelessly crushed, was planted by our young mistress, to whose kindness it owing that I ever came into this family."

"Indeed, mother," said the kitten, "I am very sorry for what has happened, but I promise you I will be more steady in future."

and if you will but go on with what you were saying, I will sit so still that if even a mouse were to run across the path, I would not stir."

"That, Tibby," replied her mother, "is more than I require; and, indeed, I am sorry to say, you are by no means so eager in quest of mice as I could wish to see you. Yesterday afternoon, when, for the first time in your life, you caught one, and I was watching for you in the parlour, hoping, with a mother's pride, to see you enter with it in your mouth, and shew the family you could be useful, when, after waiting a considerable time, I went to seek you, I found you peeping about under a gooseberry-bush, and you asked me if I had seen any thing of it. This morning, again, when I left you with a strict charge not to leave the hole at the pantry-door, till you had secured a mouse; on my return you had left your post, and was trying, with all your might, to get your four feet upon a ball, which, if it were possible, is certainly of no use."

The kitten now settled herself into an attentive posture, and the old cat, adjusting her whiskers, thus began: "I was brought up in a stable, along with a brother and sister: unfortunately for us, our mother was too fond of pleasure to like the confinement of the place, so we were often left for hours together with no better amusement than to bite and scratch each other. Upon our mother's return, she would fondle and pat over us, tell us how happy we were to have such a snug place; that few cats were half so well off, hoped we should always be good kittens, and stay at home, which, she assured us, was the only place for true happiness. In short, her advice was excellent, but, as she never set us the example, we did not attend to it; for, after giving us these lectures on staying at home, as soon as she thought we were fast asleep, away the woe would creep, when, scrambling over the top of the door, we saw no more of her till daylight. We were now grown strong enough to run about, and I was determined to make the most of my liberty. So one day, whilst the others were frisking about the stable-yard, I slipped out unnoticed into the fields. I shall never forget the joy I felt in scampering over the grass, and playing with every leaf which fell from the trees; all that I saw served me for sport; as for food, I thought it a trifle in comparison with my liberty, having had a good meal before I set out. Night, however, came on, and I began to think I might as well return to the stable, and get my supper; so I turned, (as I thought) right for my home, and, setting off full trot, imagined I should get there presently. But when, after crossing many fields, I saw nothing of my home, I began to be frightened, and, by this time, very hungry. For the first time, though not for the last, I repented not having followed my mother's advice. But it was now too late. I had completely lost myself, and was in danger of perishing from hunger. Quite exhausted, I sat down under a hedge, and, after mewing most piteously, thinking perhaps my mother would hear me, I fell fast asleep. I awoke

early, refreshed indeed by sleep, but as hungry as ever. Oh! how I thought of the mice that used to run about the stable, and which, at that time, I was too idle to care for, or catch. I once more thought of reaching my home, supposing that if I went on, I must arrive there at last; when after travelling a great way, I came to a wood, and, peeping about among the trees, had the good luck to find a dead bird. This was an unexpected prize. I growled over it for some time, to deter any one who might be so daring as to attempt taking it from me; I have since found this to be a very foolish notion, having very often lost a tit-bit by the very means I took to secure it. To return, having satisfied my hunger, I was in high spirits, and again began to frolic about; soon after which I discovered a nest of field-mice; my heart beat with the fear of their escaping me, but I was fortunate enough to secure a fine one; so I now thought myself quite independent, and, as there seemed no chance of finding my home again, I resolved to make myself as happy as I could. Necessity soon made me very dexterous in catching birds and mice, of which there were plenty. I slept at nights in the hollow of a tree, and upon the whole passed my time very pleasantly, being only a silly kitten, and looking no farther than the present moment. Winter, however, approached, a season of which I had not had any experience; and, as it drew on, the means of my subsistence began to fail. The birds forsook the woods, to be nearer the houses, and the mice hardly ever stirred out; a heavy fall of snow coming on, I found, if I remained there, I should be starved to death. So, one moonlight night, I left the wood, and took the first road that chance presented. After going a considerable way, I saw some cottages at a distance, and having heard from my mother that cats were very serviceable to man, I thought of course I must be a welcome guest any where. But here all was close shut, and I waited patiently till chance should give me an opportunity of entering. Day now appearing, I heard some stirring in the house, and soon after the door opened, and a girl came out with a pail in her hand; as she left the door a little open, I had an opportunity of surveying the place. A woman was sitting with a child in her lap, watching something which was boiling on the fire; not choosing to make my appearance too abruptly, I stole in, and, getting into a corner, I observed what was going on. The bread and milk which had been in preparation was now poured out, and the child given into the lap of the girl to feed it, while the mother was otherwise employed. The mess being rather too warm, and the baby very impatient, the girl placed herself with her back to the basin, that the child might not see it, till it was quite ready; and while she was attempting to quiet, or rather to drown, its noise with her own, I, who found the temptation too much, stole up behind her, and was just beginning to lap, when, at that unlucky moment, she turned round, and, aiming a blow, myself and the milk were in a moment on the ground. The mother, on hearing the noise,

came in, and, seeing what had happened, began to scold the girl, the girl to explain the cause; and, in the midst of this clatter, I contrived to make my escape. I ran a great way without stopping, but, finding no one in pursuit, I slackened my pace. It was not long before another door presented itself, towards which I crept. I had not waited long when an old woman came out, and, seeing me, did not express any thing discouraging. 'Well, puss,' said she, 'who do you belong to?' 'I looked' at her, as much as to say, 'to you, if you please.' The old woman put out her hand and stroked me; this I took for a good omen, and, being of a free disposition, I entered, and seating myself by the fire, began washing my face, hoping I had at last found a home.

"When the old woman had finished her meal, she gave me a little milk and water, which, though very poor, I was very thankful for, and resolved to behave well in this place, if I was permitted to stay.

"Presently my mistress put on her bonnet to go out, and, as I had never moved from the fire since I came in, ventured to leave me in possession of the hearth. As soon as she was gone, I began to look about me; and having a great deal of curiosity, I examined every thing in the place. The smell of the cupboard soon attracted me; and here all my good resolutions were about to fail me, and I should certainly have been imprudent enough to have helped myself, if I could have opened the door, (which was only secured by a button); I heard some one at the outer latch, and had but just time to drop from the door, and settle myself by the fire, when the old woman entered; I fancy she guessed what I had been attempting, for the first thing she did was to go and see that all was safe in her cupboard. After dinner, my mistress took up her knitting, and I composed myself to sleep; towards evening, as I still lay on the warm hearth (a luxury I thought I could never have enough of) a neighbour entered, who, observing me, said, 'Why, this is not your Toim!' 'No,' replied the old dame, 'I sold him last week to the young gentlemen belonging to the great school on the hill; it was a holiday, and they wanted to try the spirit of their dogs; as 'Toim was such a fine fierce cat, they thought he would make excellent sport.' 'What then, did you sell your poor cat to be worried by dogs? instead of which it would have been more proper to have acquainted their master.' 'Oh!' cried the old woman, 'it would have been of no use, their master has enough to do to teach them Greek and Latin; he never interferes with their amusements. To be sure I was sorry to part with poor Toim, who used to follow me about the house, and was such company for me; but they offered so handsome a price, that I thought it was a pity to disappoint such rich young gentlemen for the sake of a cat; and now, you see, I've got another.' 'Poor creature!' said the woman, 'she appears to have been nearly starved.' 'That may be,' replied the other; 'but she has had a good dinner to-day, for she cat till she left.' This was true, for she had given me nothing but bones. She farther observed,

that cats were very dainty, for Tom would never eat lobster-shells. This was enough for me; I discovered that, if I stayed here, I might serve to make sport for young gentlemen, or starve if I could not help myself.

From this time I meditated my escape, and accordingly took my departure. I had not gone far, when meeting a dog running at a great rate, at which I took fright, I made the best of my way over a wall into a garden, and hid myself under a water-but. Here I remained for some time, till at last, venturing to creep out from beneath it, was perceived by one of the servants, who attempted to lay hold of me, but I shrunk back into my hiding-place, thinking that every one I saw was an enemy. It happened, however, that this house was much infested with rats and mice, and a cat was in great request; so every means was used to entice me from my hiding-place, and I was soon persuaded no harm was intended me. In this family I shortly became a favourite, and lived in plenty and security; the house-keeper sounded my praise from the bottom to the top of the house, for she could now look up her pastry in safety, without the fear of its being nibbled. All went on well for some time, when unfortunately my master's eldest son took a fancy to keep rabbits; and I, who at that time saw little difference between them and rats, thought I could not do the family a better service than to destroy them. As I was continually upon the watch, I soon found an opportunity; the young gentleman became tired of attending to them, and left the rabbits in charge to his servants; I profited by their neglect, and soon found means of dispatching three. This was not immediately discovered, and probably never would, had not my vanity on catching a fourth, prompted me to show my exploit; so I carried up my prize, as I had been used to do, to show the family how diligent I had been. But what was my consternation on finding myself seized and buffeted about the head till I let go my hold. I was then taken to the hutch, and beaten again, which I thought would have ended my punishment; not so, for on the discovery that more were destroyed, the young gentleman made a serious proposal for having me drowned. From this fate I was saved by the pleadings of the housekeeper. They then tried to persuade the young gentleman, as he was tired of his rabbits, to send them away; but this was not to be done. The perverse boy no sooner found that he was desired to part with them, than they became of value, and the point was at last settled by putting the hutch in a more secure place. It was now summer, and I spent the greatest part of my time in the garden, watching and catching the sparrows. My master observing me, said, 'What a fine bird-catcher this cat is, she saves me the trouble of shooting them, which I must otherwise do to preserve my cherries.' So I was now in as high favour as ever; but again an unlucky circumstance brought me into disgrace. My mistress had bought a fine canary-bird, of which she appeared extremely fond, and very reasonably (as she thought) imagined, I should know

the difference between canary birds and sparrows. This, however, was above my comprehension, and one day making a spring at the cage, it fell to the ground; the noise brought in a servant, who soon rectified my mistake, by throwing a foot-stool at my head, which, missing its object, was brought in contact with a large china jar, and it was broken. This proved of more value than the canary bird, which made the mischief complete. I now found there was nothing left but to hide myself till the storm had blown over, which I did beneath the water-but, where I had at first taken shelter; here I remained till night, when, creeping out, I encountered the house-dog. We had always been very good friends, so I stopped to consult him on the nature of my situation; I learned from him, that I must leave, as death or banishment had been determined on. 'Indeed, Puss,' said Ranger, 'I pity you very much, for I have myself suffered from the inconsistency of my masters; indeed, I experience this every day, though upon the whole I have a very good place. Sometimes when I bark, I am praised for my watchfulness; at other times, I am scolded for making a noise. On my master's return I am at one time permitted to show my fondness; at another I am beat off. But it is no wonder they should behave so to us, for I have observed the same conduct towards their children; for the other day my young master was throwing stones; his father seeing him, said, 'Well done, my boy, you can hit a mark pretty well.' This morning, with no more intention of mischief, he happened to break a window, for which he was severely punished, although he pleaded in excuse, that he was only trying to hit a mark, for which his father had before commended him.' Here our conversation ended, and with much regret I took my leave, preferring my chance in banishment, to that of death. Not to tire your patience, my next place afforded me simply shelter, for as to food, my careful mistress was too conventional to regard the subsistence of animals, arguing, that mice were their proper food; of there, my vigilance and hunger soon cleared the place; so one night, after breaking into a pigeon-pie, I made my retreat, well knowing that no mercy would be shown me. At a sufficient distance from this place I was tempted to enter a house, from the carresses of some children who were playing at the door. Here I was not doomed to suffer in my own person, but, what was much worse, in those of my offspring; for animals in this family were considered only as machines, and I had the misery to see my kittens made the playthings of the children, without the power to prevent their being tormented. This family I did not, however leave; it left me, for, without any consideration for my fate, they moved off every thing but me. I took my station at the door, still lingering on the spot I had been accustomed to; and here I was found by our present mistress, who, seeing me in a most deplorable state, charitably took me under her protection, where I experience kindness without caprice; and as I have

learned to distinguish rabbits from rats, and that birds in cages are not to be eaten, I am in no danger of losing the favour of the family. The lady to whom you are going is fond of cats, but she is also fond of her flower-garden; let me therefore advise you, (as you value a good place.)— At this moment, turning round, the old cat saw that all her advice was thrown away, for little Tibby was galloping about in all directions, making wreck of whatever she came near. The mother would have given way to anger and vexation, but, feeling more inclined to go to sleep, curled herself round to take her nap, leaving Tibby and the flowers each to their fate.

While we give all credit to the playfulness, imagination, and useful tendency of these stories, we must impress on their author the necessity of a careful revision of her style, in subsequent editions. The grammatical construction is frequently imperfect, and the sentences are often too long and involved for a work of this kind. Possessing the superior qualities of invention, natural observation, and pure morality, it is to be regretted that there should be any drawback on account of verbal inaccuracies. The *Lady-bird's Nest*, *Kate Higgins*, and *The Wish*, are among the best of the other tales; but every one has something to recommend it to a favourable reception.

#### ORIGINAL CORRESPONDENCE.

##### DESCRIPTION OF THE ISLAND OF CUBA\*.

[From the letter of a Traveller, dated, *The Havannah*, May 1-19.]

You do not know what you ask: even to write a note is here a task; and you require a long letter, with an account of every thing which strikes me as remarkable in the New World. I will endeavour to give you satisfaction; but I warn you beforehand, that I shall require time. The *poco a poco* is the maxim of every hot climate. I may begin by telling you that since my arrival, about four-fifths of those who came from Europe with me have vanished before my eyes, from the effects of the *Vomito Negro*, better known under the name of the Yellow Fever. What the cause of this sickness is, and what are the remedies for it, the physicians of this country know no more than I; they prescribe very different remedies, which however have all the same effect, namely, that of sending their patients to the other world. The negroes, (which is very humiliating for science) treat the disease with much better success; and the captives who have brought them from the African coast, are able to solicit their assistance, and owe their preservation to those whom they have deprived of their country and liberty.

The Havannah is not the only seat of this dreadful disorder; it already prevails in all the ports of the island of Cuba. I hear just now, that of a hundred Frenchmen who were sent about two months ago to Nuevitas, one

\* It is stated that Cuba is about to be ceded to Great Britain—a fact which would augment the interest of the following narrative. *Ed.*

half have perished. The country is indeed more healthy, but the Vomito Negro is also felt there, though less frequently, and with less metecracy. The natives are not so entirely free from it as is generally believed. It is only on a very hard condition, that they can secure themselves against it; namely, the defer leaving the Havannah, or the other parts. Those who sail for the continent of America, or to Europe, may, even those who have lived several years in the country, do not return to their town residences without danger. I have just seen a girl ten years of age; she was born at the Havannah and educated at a few leagues distance from the city; she came thither to witness a family fit, and died. Similar examples are not rare. Perhaps you imagine that this sickness is less active during the six months of the year, when the sun leaves this part of the world zone. This is a generally received error. It is unhappily but too true, that the Vomito Negro carries off new victims every day; but in autumn and winter, the number is not so great as in spring and summer. At this moment it rages furiously; and during the latter half of April, seventy-six Frenchmen fell victims to it. The English, as well as other Europeans, suffer from it in the same manner. I am surrounded with dead and dying. When I go out I meet with hundreds of priests, who, crossing themselves, run to and fro; some carrying the Host, others singing funeral hymns, proceed from every direction to the church-yard. When I return home, twenty bells, which are constantly in motion, make a deeper impression on my soul than the scene which I have just left. It is singular, that those who are not seized with this evil do not leave this country, which is under a curse. Speculation has also its martyrdom; people will not abandon a scheme which they have begun; for this reason they stay, and every nation remains faithful to its character: the Frenchman lulls his fears by singing, and the Englishman by drinking. As I neither sing nor drink, I fly to the country, where I shall continue my letter unless the Vomito Negro pursues me thither.

I am now settled here in the middle of a poor country covered with volcanic ruins, without any prospect except a few thinly scattered trees, which afford no shade, and whose pale green does not enliven the imagination; but I will entertain you with something less melancholy than the fever. I have already told you that my voyage lasted sixty days; I was all impatience to see land, and to put my foot upon it. The first thing presented to my sight would, I thought, appear to me the most beautiful in the world; but it was quite different: notwithstanding my inclination to admire, every spot was barren, without flowers—waste without water.

The port of the Havannah is enough celebrated to merit a description. As you enter, you see a fort on your left, called Moro, under the cannons of which all ships must sail; the height on which it is built, its extent, and the threatening mouths of its cannon, impart to this fortress a majestic ap-

pearance. On a nearer approach several small country seats on the right, and a village called Salad, at a distance, are visible. This prospect is rather pleasant. In a few minutes you have passed the little canal which leads to the harbour, and suddenly discover an immense basin of an oval form, in which sometimes from a thousand to twelve hundred flags of all nations may be seen waving. The magnificent Tyre never presented a richer and more splendid sight; on the right the Havannah is hid by a massive wall, and shows only some church steeples, the heavy shape of which affords reason to suppose that bricklayers and not architects have been employed in the public buildings of this city. To the left of the basin are several houses which belong to the village La Regla, and in the back ground a number of trees,—the only ornament of this immense sheet of water. The port itself which is without doubt the largest in America, fills up every day more and more, with a rapidity which ought to attract the notice of the colony. It has been confirmed, that the canal which leads to it has within sixty-nine years become ninety-five varas (yards) narrower, being now only fifty-five varas in breadth. In 1743, it was 24 feet deep, now only 17. In the same year, by the sounding line the entrance of the port was found to be 60 feet deep, and now only 18. This evil is known, and probably the remedies are easy; but firmness and perseverance would be necessary to use them with effect, and these qualities seem to be wanting. In the harbour there is a machine for fixing the masts in ships, which is said to be very ingenious, and the admiration of all foreign mariners. It has been built above twenty years, after the plan of a Catalonian of the name of Pietro Gattel, who died unrewarded, of vexation and want, and left a widow and children in the Havannah in the greatest distress.

Now that you are acquainted with the harbour, I will introduce you to the city. On landing you perceive a narrow archway which leads to it. From the beach to this gate is ten steps, at the first of which you feel yourself sinking into the mud; and proceeding onward, through the arch, discover that to the right, left, and front, *all is mud*; a look at the straight streets shows that you will not tread dry ground till you reach the house to which you are going. The streets are not paved; the water has no drain; the land remains as God created it: these are the reasons of the continual stagnation of the water. It may be said that the Havannah is a great sewer, from which pestilential exhalations constantly arise. As soon as you enter this city, an insufferable smell assails you, and never quits you as long as you remain in it.

The streets are dirty and narrow, in dull straight lines, with low houses, the windows of which are without glass. The population of the streets increases the gloomy impressions, and thousands both of whites and negroes, most of them covered with plasters and rags, impress the stranger with most disagreeable sensations. Add to this that you have to guard your face against swarms

of mosquitoes, the sting of which is burning; and your ears against the constant ringing of eight or ten bells. There they toll for a death, here for a funeral, and in another place for divine service. At last you arrive at your lodging. An immense saloon almost as large as a barn, and nearly as empty, is the eating room; small chambers, even more empty than the saloon, serve for bedrooms, in which you are reclined between four walls, without any other furniture than a truck bed.

Full of despair, you throw yourself upon it, rather not to hear or see any thing more, than to sleep. In vain! The miserable hard mattress produces heat and intolerable restlessness; you cannot sleep, and unhappily, you cannot dream with open eyes; the groans from an adjoining chamber would depress the most lively fancy. This happened to me on the first night; I had scarcely arisen when I hastened to obtain information respecting the sick person, whose lamentations I had heard. "He is out," was the answer. This satisfied me; the next day I learnt that that he would not come back again—he had been taken away to be buried! This, my friend, is a true relation of my first day: three fourths of those just arrived have had enough of it, and immediately re-embark; the military are generally the first to run off, from which I conclude, that notwithstanding their valour, they value their life more than we imagine.

You try in vain to amuse yourself; there is no edifice worth noticing; confined and filthy places, low houses, the building of which may be classed in the infancy of art; and what is particularly surprising in so hot a climate is, there is not a single public garden, nor tree under whose shade you can refresh yourself. In short, the Havannah appears both in the whole and in detail, to be built for the inhabitants who wander about the streets. The utmost misery in our Europe does not offer a more disgusting sight than these creatures, with black and brown faces, who fill the public streets; that part of their body not clothed in dirty rags, is covered with plasters and blisters;—you are not walking in a city, but in a great hospital.

The rich seldom stir on foot; the heat and the mud oblige them to pay their visits in carriages (*polanetas*). With respect to the women, whether rich or poor, custom denies them the use of their limbs: they can only go abroad in a carriage, and there they are hid behind a curtain of cloth which almost entirely conceals them from rude curiosity. It is more worth while to look into the inside of the houses. The great room is level with the ground, and quite exposed, as the windows and doors always remain open. At first you do not know what you shall call this room, for you perceive the carriages, the toilet, and the bed, all pell-mell. Is it a coach-house, a room for company, or a bedroom? It is together; though the apartment faces the street, every thing is done there, and the women dress from the first piece of raiment put upon the body, with as much indifference as if they were concealed from all profane eyes. On the approach of evening,

you hope to make up for the loss of the forenoon? You visit your acquaintances, or persons to whom you have been recommended; and find the master of the house and his family in the most gloomy solitude. It is really an exertion to speak here: you feel yourself in a profuse perspiration, and give yourself up to the *Bouteille* in which you sit, or rather are sunk, in listless reveries. The *Bouteille* is in the shape of a half bathing-tub, as they are used in France for baths, and in the most awkward position that can be conceived. You follow the example of the master of the house, and go to sleep. When you awake, you are asked to take a glass of water: this is the signal for departing, and you take your leave, having been, according to the ideas of the colony, well received and well entertained.

In a country where polished society is still in its infancy, theatres and balls are almost unnecessary; I shall only say a word about the theatres: namely, that they still represent the mysteries of which our ancestors were so fond. I have seen the Triumph of the Ave Maria represented; this tragedy ended with the sudden appearance of a valiant knight on a real horse, displaying on the point of his lance the bloody head of an infidel. I cannot paint the disgust which this sight occasioned me, though perfectly agreeable to the audience.

But it is time that I should introduce you to the gaming and dancing rooms, which are about three quarters of a league from the city; an avenue leads to them, at the end of which stands a small statue of Charles III.; and near it lies on the ground a block of marble, on which the head of Christopher Columbus is roughly hewn.

From five to six hundred *volantes*, convey the ladies and gentlemen to the dancing rooms. These *volantes* cannot be compared to even our most ordinary post-chaises; they are drawn by two horses, driven by a negro coachman. On entering what is called the ball-room, you soon perceive that dancing is only a secondary object of the meeting. The first saloons through which you pass, are full of tables covered with gold and silver. The greatest sums are won and lost in a moment, with an indifference quite unknown in Europe. It is amusing enough to see a countess or marchioness, between a Spanish monk and a Dutch sailor, who puff the smoke of their Cigars into her face. Gambling is not stigmatized here by public opinion; the priest, the nobleman, the magistrate, and the merchant, seat themselves without reserve at the gaming table, and play with the utmost composure.

It is no disgrace to keep a bank, as is evident from the fact that the bankers belong to the most distinguished and noble families of the colony. The law and the command of the governor threaten gamblers with dreadful punishments; but those who are commissioned to proceed against the offenders, find it more advantageous to protect them; they persuade the governor that gaming is a necessary evil, and they probably support their assertion by good arguments, as they gamble with open doors, and almost in the open air.

The dancing saloon is adorned with taste and simplicity. A hundred tapers throw a brilliant light on the ladies, who form a half circle at one end: this is the most agreeable moment of illusion. Large black eyes, faces full of expression, pretty little feet, would move the most rigid stoic in any country; and here he would wonder at finding himself again possessed of feelings and senses. At the other side of the saloon sit the gentlemen during the whole ball; the sexes never join. The masters of the ceremony invite the company to dance; so much decorum prevails throughout, that you might be led to suppose that the ceremony observed was the same which the Jesuits introduced into the dances of the savages in Paraguay. The ball is opened by a minuet; it is repeated ever to satiety; and this, not because they love the dance, but because it requires rather that they should walk than move quickly, which is inconvenient in a country where the least exertion deprives them of breath and strength. As soon as the ladies quit their seats, as soon as they leave their composed attitude, they are found quite deficient in the gracefulness which they before seemed to possess; they hop as if they were lame: the tight shoes which pinch their feet, occasion them severe pain at every step—their sufferings appear on their countenances, and deform their features. Their figure is not supported by a corset—they do not know how to keep on their clothes, for the use of the French dress is of very late date in this country. Only ten years ago they used to appear in public in negligent morning dishabille. The men walk better, because their shoes are easier; but they are destitute of the noble and dignified deportment which is so necessary in the minuet. These barbarians do not hesitate to present themselves to their ladies in a great coat, and with or without a round hat. Only the whites are admitted to the ball I have just described, and you may gather that they cannot boast of having remained faithful to the origin of the minuet. This honour belongs exclusively to the free negroes. How much was I astonished to see these negroes, of a dignified easy figure, advance respectfully towards their ladies, holding the cocked hat in their hand, and then putting it on with a grace which begins to become rare in the old world. The negroes are not inferior to their partners; all their motions are noble and graceful; you can see that they do not torture their feet to deprive them of their natural form; real taste presides over their toilette; the magnificence of their dress does not detract from its simplicity, and their drapery is managed with an effect which is even acknowledged by the amateurs of your opera.

I went to a negro ball, with the intention of entertaining myself a moment at their expense; but my expectation was ill-founded—every thing I saw here was much better than what I had left; and, had any body at that moment spoken to me of the superiority of the whites over the negroes, I should have answered, "Open your eyes, and judge." The becoming liveliness of all these black

men and women, the mildness of their features, and their sociable manners, make it impossible to help feeling disposed in their favour. They are born improvisatori and musicians, and I will venture to predict, that if ever the colony should receive literature, it will be indebted for it to the blacks. "Then the whites are inferior?"—you will ask me. I will not hesitate to confess, that this is the case in the torrid zone. The blacks here retains the whole physical and moral strength which he received from the creator. The burning sun leaves to him all his energy; and, scorching as it is, is scarcely enough for him, as he always seeks an increase of warmth from his constantly burning fire. The white, on the contrary, who is removed from a mild climate to the tropical heat, visibly declines here; during ten hours of the day he is as if inanimate—it is impossible for him to exercise his body or mind. It is martyrdom to read for a quarter of an hour. If there were between the tropics an advocate of the unlimited perfectibility of the human race, he must seek for proofs of his system, not among the whites but among the blacks.

## LEARNED SOCIETIES.

### OXFORD, FEB. 26.

Saturday last the Hon. and Rev. Edward Rice, M. A. late Fellow of All Souls' College, and Prebendary of Worcester Cathedral, was admitted Bachelor and Doctor of Divinity, grand compounder; and Philip Wilson of Trinity College, was admitted Bachelor of Arts.

### CAMBRIDGE, FEB. 25.

The Hon. Berkeley Octavius Noel, of Trinity College, and the Hon. Frederick Emanuel Hippolytus Curzon, of Magdalene College, were on Wednesday last admitted Honorary Masters of Arts.—The Rev. Joseph George Brett, of Jesus College, was on the same day admitted Bachelor in Civil Law and Mr. Robert Rouppel, of Trinity College, Bachelor of Arts.

CRAVEN SCHOLARSHIP.—Mr. Alfred Olivant, of Trinity College, was on Wednesday last unanimously elected a Scholar of Lord Craven's foundation.

Richard Waterfield, Esq. B. A. of Emmanuel College, was on the 13th inst. elected Fellow of that society.

## FINE ARTS.

### BRITISH GALLERY.

No. 48. *Waterloo. Evening. The advance of the British Troops, and defeat of the French Army.*—G. Jones.

This national picture, 15 feet in height at 11 feet in width, has been painted by order of the directors of the British Institution, at the price of 500 guineas. We inspected during its progress; and now that it is finished, are rejoiced to see that it fulfils its promise of being a fair representation of the critical moment in the most glorious warlike victories; and the more so, as there has recently appeared several efforts

discompartments, recovered from their panic, and of unworthy Britons, oblivious of every patriotic feeling, to misrepresent that triumph, achieved by such a torrent of our country's blood, and adding so bright a beam to our country's glory. Mr. Jones's undertaking was an arduous one; and, in our opinion, he has given proofs of judgement and talents equal to the greatness of his subject. If the imagination is disappointed in not seeing the picturesque images of a lively fancy, it must be recollected that the artist had no wild licence to allow of his taking such excursive flights. His business was to delineate, as correctly as possible, a grand historical event—locality, fact, portrait, and real incident, circumscribed by his creative powers. He was to be instructed by competent authorities, as to the military elevations, and guided by views taken on the spot, as to the landscape of the field of battle. In these respects we are assured that the picture is eminently faithful; and our own observation convinces us, that, as a work of art, it will rise in estimation the more it is contemplated. The aerial perspective embraces an extent equal to any thing we have seen under this quality of excellence; and the eye is carried over a vast space, occupied with every variety of action; while the nearer objects are detailed with a skill and accuracy which cannot fail of producing the strongest sensations. The hero of the day is rendered finely conspicuous by the smoke of artillery, which throws a breadth of light upon the part where he is stationed; and in this the painter has happily contrived *ex fumo dare lumine*. The most distinguished British commanders are grouped, and introduced with much ability; and the several sorts of service are delineated with a soldier's as well as with an artist's tact. While we look at the many episodes introduced, all connected with the main story, we can almost believe that we are reading anecdotes of the memorable 18th of June. We think we can personate the brave Gaithness Corporal, who, when asked if he was afraid, replied, "Afraid! why, I was in a' the battles on the peninsula;" and having it explained that the question merely related to a fear of losing the day, said, "Na, na, I did na fear that: I was only afraid we sh'd be a' killed before we had time to won it." This fellow was a culled sample of the thirty-three thousand odd hundreds of British troops, the entire number (we state it from unquestionable official returns) notwithstanding the late exaggerations of the enemy, which shared the immortal honours of that tremendous conflict.

No. 190. 175. 177. 195. 221. 257. *Landscapes*.—T. C. Hoffman.

The Landscapes of Mr. Hoffman, in the present collection, display his talents to as great an advantage, and we think, under a greater variety of styles, than at any former period. The one exhibited last year at the Royal Academy, is indeed like an old friend with a new face, being placed in a light by which its merits can be better appreciated, and its cool and sequestered character better understood. 177 Is a beautiful little Moon-

light; and the others possess more of those abstract qualities which distinguish the artist and separate his genius from his execution, than almost any thing we have seen from his hand.

No. 46. *Contemplation*.—C. R. Leslie.

A lady in a grove, with the moon-light playing upon her features and form. It has some of the loveliest effects that could be imparted to a subject so circumstanced, but is not an effort of either so high or so fascinating a class as the artist's preceding pictures of Anne Page and Sir Roger de Coverley. We do not mean to state that it injures the great reputation these productions established; only that, however meritorious, it does not enhance it; and that it seems rather an exercise than a marked attempt at higher fame. It is the essence of art, that it must go on progressively rising, and cannot be permitted to be even stationary.

### THE DRAMA.

KING'S THEATRE.—We are obliged to postpone our critique on the new Opera.

DRURY LANE.—*The Hebrew*. A miserable piece, in five acts, said to be founded on, but in reality confounded from, the romance, without being acquainted with which it is utterly unintelligible, and being acquainted with which, it is unutterably tiresome. In our lives we never witnessed a sadder hotch-potch. By the most perverse ingenuity, every fine and striking feature in *Ivanhoe* is avoided during the first three acts; the main business is cleverly kept out of sight, and one dull uninteresting scene follows another in perfectly regular order. The author of *Ivanhoe* has taught even the general public to have the nicest perception of the customs and manners of the age of *Cour de Lion*, and the Drury Lane dramatist has contrived to annihilate them all. Anachronisms of startling magnitude occur every instant, and absurdities of unimaginable grossness complete the tissue of nonsense. We have Jews shaking hands, not merely with Christian knights, but hugging the commandant of the Templars, who, above all mankind, abhorred the race; we have the Jew's wife, Mrs. Isaac, of York, inhabiting a respectable tomb in Christian burial; cheek by jowl with monumental crosses in an abbey church-yard; we have beves of nuns singing *jubilate* (queer, Jew-becate) *Deus* in the halls of the knights, whose vow of chastity was so strict that it was death for any female to enter their residence—a fact distinctly before the audience, too, since Rebecca is condemned upon it; we have clocks regularly striking the hours in the eleventh century; we have nest parties, and a pretty cottage orrery; in short, we have every species of folly in scenery and in character. And this, for no other purpose but to make the Jew, (Mr. Keam) the only prominent part in the drama. He beards armed knights; he outrages every custom of the age, and every natural probability: goes mad, recovers his wits, plays *King Lear* in a Gabardine, and, we believe, dies of joy when his daughter is

rescued and married to *Ivanhoe*. Except some of Mr. Keam's acting in these passages, and which, though it extremely disappointed us, was in his usually applauded style, the performances were congenial to the piece. Mrs. West, as Rebecca, was indeed very praiseworthy; but her situations and dialogue did not allow of much display. Mr. Hamblin fretted his hour in the Templar, (a concentrated essence of all the Templars in the novel). Mr. Penley strutted and straddled like a thing of gilt gingerbread, in *Ivanhoe*. Harley, in Wamba, was a modern non-entity. Gurth, nobody. Friar Tuck, (even Oxberry,) nobody. Robin Hood, nobody—(yes, he was the leader of a band of chorus-singers). Prior Aymer, an old woman; the commandant, his sister; Cedric, the third of these antique graces; and Miss Carew, a young woman with a song. In conclusion, as if the whole were a hoax, the repetition of the play was announced, and then Mrs. Orger spoke a laboriously silly epilogue, to bespeak the favour already granted.

COVENT GARDEN.—*Ivanhoe*.—A magnificent spectacle, extracted from a portion of the novel, commencing after the tournament, and concluding with the burning of Front de Boufs castle. For the sake of dramatic unity of action, the adventures and trial of Rebecca are however introduced previous to this catastrophe. In the early parts somewhat heavy, we have only room to say, that this is a grand and well acted drama. Charles Kemble, in *Ivanhoe* (identified with King Richard), is a noble picture; Moready, in the Templar Knight, a fitting rival; Farnen, in the Jew, very effective; Linton, amusing in the Fool; Emery, in what he has to do as Friar Tuck, excellent; Mrs. Faucit's Ulrica, equal to her old Meiklebucket; Miss Foote's Rebecca, very pretty; and the musical parts with Miss Stephens, Duruset, and others, sweet and pleasing. The scenery is of the highest order, and the decorations superb. The trial scene one of extraordinary beauty.

We observe that the new Farce, *Too late for Dinner*, is by Mr. Jones, whose performances contributed so largely to its success; and not by Mr. Theodore Hook, as originally whispered about the theatre.

MR. MATHEWS AT HOME.—An entirely new and altogether extraordinary series of performances, under this well-known title, commenced at the English Opera House on Monday. It is difficult to convey an adequate notion of the variety and effect of these "Lectures on character, manners, and peculiarities," which must be seen and heard, in order to be appreciated. In a short preliminary, and generally humorous address, Mr. Mathews once more gravely laboured to establish by definition, the difference between mimicry and imitation—a mimic and an imitator. It is hardly worth while to contest such a point, and especially with a performer, who, whether mimicking or imitating, affords us so much entertainment; and who seems to attach an unequal importance to the name by which his art is called; but it does appear to us, that Mr. Mathews is a mimic in the best sense of

the word; that is, an imitator, whose copies of the acts and manners of others, irresistibly excite to laughter. An excellent imitator may be, and usually is, very dull; an excellent mimic never fails to afford amusement. Therefore the attempt to draw the same distinction between them as between the satirist and the lampooner, seems to us to be, if not an absurdity, at least a matter quite foreign to Mr. M's purposes; since, say what he will, the persons whom he copies, and the public, particularly that part of it which happens to know the individuals, will see no harm in having their peculiarities so adly dashed with a little caricature, as to render the copy infinitely more entertaining than the original; independently of the natural enjoyment which is derived from a consciousness of the talent employed in producing portraits so like, and yet so ludicrous.

The contrivance by which we are led along this novel chain of drollery, is a narrative, full of pun and point, interspersed with stories and songs; and introducing many characters, all of whom find a clever, (we should imagine, unrivalled) representative, in a single actor. The chief of these personages are "Country Cousins," who come up from Whitley in Yorkshire, to see, and are shown the "Sights of London." The most prominent of the country-folks, are, Uncle Baffin, a dealer in whale-oil and blubber; Aunt Agatha, his sister; Dolly, his daughter; and Zachary Flail, his servant: in town are Jerry, his son, a dandylawyer's clerk, eternally in motion, and designated by his fond parent for the woolstack; Dr. Prolix, a capital character, resembling the old Scotchman, in masculine attire; Sir Hubble Bubble, a city orator, like many other city orators, not very intelligible; and a grumbler, who always hails misfortunes with, "it serves me right, it will carry me to the grave—every thing serves every body right—Oh dear!" In the course of the rambles of the party, who, en passant, are joined by Monsieur de Tourville, a French traveller, who has come to "take the tower (tour) of London," and makes a multitude of grotesque blunders; they encounter (and the audience have personated) a waiter at the Chapter Coffee House, the Verger of St. Paul's, and several other oddities. They visit St. Paul's, whence a panoramic view and description of the metropolis, the Monument, the cast iron bridge, the exhibition at Somerset House, the Panorama of the North Pole, and a fashionable rout given by the Countess of Fidget. Accounts of a pugilistic mill, of Epsom Races, of the White Horse Cellar, of a Mock Auction, of an Indictment at the Sessions, &c. &c. are introduced, and given with admirable spirit. Of the fun and pun it is impossible to recollect a hundredth part, or to describe it if our memory served to recall all the subjects at which we laughed so heartily. The jests, which have the quality of antiquity, are made so new and diverting by the mode of telling them, that they are as good as if we had never heard them before; the new ones are many of them so excessively ridiculous, that

we cannot resist them on that score, while others please by being epigrammatic, quaint, and witty. The large bouquets of our helios, for example, are said to preclude all kissing, except by jackasses; we have rhyme to diastrochion; Quin's advice to a person who had suffered an indignity, to wear his nose unupped, told by Prolix and ascribed to Lord Chesterfield; and, in short, a crowd of modern follies brought under a review of the most spleen-killing kind; and mixed up with recollections of many older drolleries, in fascinating medley.

The concluding part, however, displays the abilities of Mr. Matthews, in a way still more astonishing than the two preceding. In this, by means of pasteboard figures, which are occasionally moved by springs, and which he occasionally animates by inserting himself into them without being perceived, he actually manages to have two, three, four characters upon the stage, at the same moment—in fact he acts, alone, a complete farce; and sustains to admiration the parts of Alderman Huckleback; Tabitha, an old maid; Snap, a servant; Canonetti, a singing master; Miss M. Huckleback, his pupil; Molly Magog, an old nurse (shorter than himself by the legs, for he plays this part on his knees) Methusalem, an old watchman; and Dickey Gossip, a barber. The skill and versatility evinced in this performance cannot be conceived, without being "At Home;" whither we recommend the public to hasten, if the public desires to laugh in these sad times. The only drawback we found was that our attention was demanded an hour too long—there is no moment that we could bear to be idle, and we could not help thinking the exertion too much for our merry entertainer. The law-case might perhaps be advantageously omitted.

THE NEW ARCADE ROOMS opened on Monday, with a charming musical treat, at which the principal musicians in London assisted. This is very well; but we understand that arrangements are making for French entertainments at this theatre, and for the exclusive encouragement of foreigners; which, in the present low estate of our national theatres and native performers, is, to say the least of it, a project, the humanity and justice of which is extremely problematical. We trust that our nobility and gentry will pause before they patronize a second establishment for the foreign drama, which must give a fatal blow to our already sinking theatres.

#### VARIETIES.

*Anagrams.*—Among the modern felicities of this species of literary play, may be classed the following. We find, that "Annual Parliament," confesses to "I am an unruled plant;" that "universal suffrage," shrewdly transposed, bids us "guess a fearful ruin;" that the compound essence of both these, namely, "Radical Reform," is but a "rare mad frolic;" and its mendacious advocate, "Orator Henry Hunt," perfectly described as "no one truth Harry." Let

us then get rid of these pretences and pests, and we shall find "Old England" really, as well as anagrammatically, a "Golden Land."

*Killing Animals by Carbonic Acid.*—A new method of putting animals to death, without pain, has been proposed by Dr. Thornton; in consequence of the employment of which, it is said, the meat will look better, taste better, keep better, and salt better. These desiderata are expected to be attained by means of fixed air.

*Blackwood's Magazine.*

Sir Humphrey Davy has had great success in unrolling the MSS. of Herculaneum and Pompeii. In a short time the contents and title of each roll will be made known.

*Daily Papers.*

*Dr. Paley.*—Dr. Paley was in very high spirits when he was presented to his first preferment in the church. He attended at a visitation dinner just after this event, and during the entertainment, called out jocosely, "Waiter, shut down that window at the back of my chair, and open another behind some curate." *European Magazine.*

In 1666, the Dublin people having proposed to send one hundred thousand bullocks to London 'or relief of that city, lately burnt, parliament voted the importation of Irish cattle to be a nuisance. Lord Clarendon suggested in an amendment that it might as properly be declared *adultery*. Swords were drawn in the House of Commons on the subject.—*Readon Papers.*

About the middle of the seventeenth century, persons who hired furnished lodgings in London had to find linen and pewter, or else pay dearly for their use.—*Ibid.*

#### LITERARY NOTES.

*A French Journal contains the following.*

The celebrated Lord Byron is just finishing a poem on the events of Parga. But on this occasion, the English bard will not enrich with the treasures of his poetic genius, one of those whimsical, fantastic, and unnatural inventions, which are generally presented with more vehemence than taste; which teach us less to love what is good and beautiful, than to admire what is extraordinary and original; and which now afford so much delight to the lovers of the romantic throughout England and Germany. The new subject on which Lord Byron's muse is engaged, presents a happy combination of old manners and modern customs—of heroism and simplicity—of striking contrasts and pathetic situations, which might be vainly looked for in many epic compositions of the highest order. The poet will doubtless avail himself of the advantages offered by the situation of the scene, and the glorious descent of his characters; and where shall we find a more affecting spectacle than a whole population, all descendants of the ancient Greeks, forsaking their native homes to fight and conquer; preferring death to slavery; like their forefathers, flying on the approach of the barbarians; but with this difference—that the companions of Themistocles looked forward with hope to the battle of Salamis, while

the wretched Pargamites, conquered without a battle, and irrevocably betrayed, had nothing to expect from a change of fortune. The subject presents two truly heroic pictures, equally worthy the attention of the painter and of the poet. The first is—the moment of flight:—men, women, children, old and young, all the ill-fated inhabitants of Parga, are on the shore, collecting their most valuable effects; others engaged in finishing a sacrifice; some carrying off the bones of their ancestors; others burying their arms in the bosom of the earth, or hurrying on board vessels, and sighing forth their last fare-well to their native land. The second picture is the entrance of the troops of the ferocious Ali among the ruins of Parga—the astonishment and rage of the conquerors thirsting for revenge, with torches in their hands, searching the abandoned houses, and penetrating into the deepest recesses of the tombs, without finding even the ashes of their proud enemies.

We understand that the ensuing Edinburgh Review will contain:—Iranahoe—Finance—America—Geology—Poor Laws—Abuse of Charities—Adulterated Provisions—Barry Cornwall's Poems—Taxation and the Corn Laws—The Recent Alarms—Demosthenes.

## METEOROLOGICAL JOURNAL.

FEBRUARY, 1820.

*Thursday, 24*—Thermometer from 35 to 41.  
Barometer from 29, 68 to 29, 69.  
Wind S. W.  $\frac{1}{2}$ —and North I cloudy, a drizzling rain at times.  
Rain fallen, 1 of an inch.  
*Friday, 25*—Thermometer from 35 to 39.  
Barometer from 29, 61 to 29, 87.  
Wind N. and N. E. 2, and 5.—Generally cloudy.  
Rain fallen, .075 of an inch.

Admission 1s.—Catalogue 1s.

## BOOKS PUBLISHED THIS DAY.

Handsomely printed in small 8vo, similar to Domestic Cookery, price 7s. 6d. in boards, a New Edition, greatly improved.

**THE NEW FAMILY RECEIPT-BOOK: A** Collection of more than Eight Hundred truly valuable Recipes (summing those in Medicine and Cookery) in various Branches of Domestic Economy, selected from the Works of British and Foreign Writers of unquestionable experience and authority, and from the attested Communications of Scientific Friends. Dedicated, by permission, to Dr. CHARLES TAYLOR, Secretary to the Society of Arts, Manufacturers, and Commerce; to the great assistance towards the work has been submitted, and to whom the Editor has been indebted for many Valuable Communications.

"This book is a proper and almost indispensable companion for the 'New System of Domestic Cookery;' it contains a larger quantity of truly valuable Receipts than any book of the same kind ever contained. There are few things which the reader can ask for Domestic Use, on which it will not afford most information." Printed for John Murray, Albemarle Street; sold also by every other Bookseller in England, Scotland, and Ireland, of whom may be had, lately published.

A NEW SYSTEM OF DOMESTIC COOKERY; a New Edition, small 8vo, 7s. 6d. boards.

No. 164.

SATURDAY, MARCH 11, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

### AFRICA.

*Travels to the Sources of the Senegal and Gambia.* By M. Mollien. 4to.

These African travels are on the eve of publication; and we take the opportunity afforded us, by having an early copy, to state their general outline. They bear internal evidence of being written by a Frenchman; that is to say, they differ considerably from what an Englishman would have said, had he gone over the same ground. M. Mollien was one of the persons on board the *Medusa Frigate* in 1816, the wreck of which was marked with such horrible consequences; and reached the shore in a boat, while the miserable deserted raft was left to the mercy of sea and storm, and the more dreadful scourges of famine and savage nature. In 1817 the author returned to France, in order to procure permission to visit the interior of Africa: went back to St. Louis, and in January 1818 obtained the consent of the governor, Fleuriot, to undertake the enterprise. His instructions were to discover the sources of the Senegal, Gambia, and Niger; to ascertain if any communication existed between the two former; to descend the Niger; to traverse Banbouck, and visit its gold mines; and, pursuing a few minor objects, return by way of Galam. M. Mollien was however unable to execute the more novel parts of this mission. Accompanied by a Marabout, or School-master, named Boukari, a character much respected in Africa, he set off from St. Louis on the 26th of January, and during an absence of nearly six months, crossed parts of the territories of the Joloffs, of the Bour-Joloffs, of Foutatoro, of the Poulas (Foulahs) of Bondou, of Fouta-Jallon, crossing the mountains of Tangué (Tong), to its capital Timbo, a town of 9000 inhabitants; and thence, remeasuring his steps by a partially different route, including Tenda and Kabou, to the Portuguese settlement at Geba, from Bissao to Goree by water, and from Goree to St.

\* Pawley's General Atlas, published last year, and including new discoveries, is the best work VOL. IV.

Louis by land. The travels thus commenced.

Diaï Boukari, a native of the Fouta country, was engaged as my interpreter and travelling companion, at a salary of one hundred and eighty francs per month. This man had been recommended to me for his attachment to Europeans, and for his integrity. He spoke the Arabic, Poola, and Joloff languages; his age was thirty-six years; he was a negro in colour only, for his features resembled those of a white man, and his face, though indicating a mild disposition, was not deficient in energy. He begged me to take with me his son, aged fifteen, and a young slave named Messenber, of the same age. I was afterwards obliged to send them both back to St. Louis.

Diaï Boukari having declared that the 28th of January was a lucky day, and that it was necessary to quit the colony before sunset, at about two o'clock in the afternoon I sent my horse, my ass, and my baggage to the main land, and without my friends suspecting the enterprise I had undertaken, I prepared to depart at five in the evening. Before he embarked, my Marabout traced several Arabic characters on the sand, to ascertain if he should ever again see his wife and mother: the answer of fate being favourable, he put a handful of sand into a little bag, persuaded that on the preservation of this precious bag depended that of his life.

In Foutatoro we are told of a still more unaccountable custom. On examining the environs of Canel, the author says—

I was accompanied by a man who had lost his hearing in a very singular manner. A custom not less barbarous than extraordinary prevails in Foutatoro; a slave who wishes to change his master seeks by surprise or force to cut off the ear of the man whom he fancies; if he succeeds he immediately becomes the property of that person; and his old master cannot claim him again. To this practice my fellow traveller owed his deafness; two slaves had successively cut off each an ear, close to the head, and the wound in healing had entirely closed the auditory channel. This man was certainly very unfortunate from his reputation for kindness, which gained him the good opinion of the

of the description that we know, either for general geographical reference, for use in tracing the routes of travellers, or for the instruction of the young. Correct, and beautifully engraved, except in a very few instances, where the darkness is too great, we take this opportunity of discharging our obligations to it by recommending it to that public notice which it will be found to deserve.

slaves: he must now be careful of his horses, for as he has no ears himself, it will be these animals whose ears the fugitive slaves will next attack.

We are also informed that

In Foutatoro, and among the Moors, there exists a sort of free masonry, the secret of which has never been revealed; the adept is shut up for eight days in a hut, he is allowed to eat but once a day; he sees no person excepting the slave appointed to carry him his food; and at the end of that period a number of men in masks present themselves, and employ all possible means to put his courage to the proof; if he acquits himself with honour he is admitted. The initiated pretend that at this moment they are enabled to behold all the kingdoms of the earth, that the future is unveiled to them, and that thenceforward heaven grants all their prayers. In the villages where persons of this fraternity reside, they perform the functions of conjurors, and are called *Almousseri*. One day Boukari told me, after attesting the truth of what he was about to say by the most solemn oaths, that being in a canoe with one of these men, there fell such a heavy shower of rain that he would not depart; yielding, however, to the wishes of the *Almousseri*, he set sail; "torrents of rain fell on all sides," added Boukari: "but our bark remained perfectly dry, and a favourable wind swelled our sails. I asked this *Almousseri* to explain his secret, but he answered, that if he revealed it his brethren would infallibly destroy him."

Another class of persons acts a very extraordinary part in Foutatoro; these are called *Diavandos*; they inhabit the villages of Senopale and Canel, they are the *griots* of these parts; though doomed by their profession to contempt, they have nevertheless contrived to render themselves formidable by the influence which they have gained over the public opinion, by means of eulogies or satires of which they are equally lavish. They speak with great facility, are proficient in the Arabic language, and zealous Mahometans. Their traffic in praises and invectives procures them considerable wealth. If one of these men demands a horse or a musket from the king, he dares not refuse him. "Yes," said Boukari to me, "if a *Diavando* were to require my gun, I would give it him without hesitation; for if I did not consent to make him a present of it, he would go to my friends and would injure me so much in their opinion, that I should be abandoned by them all." This proves that in the interior of Africa as well as in Europe, calumny produces the most baneful effects, and that there exist few persons who have so much confidence in

their own opinion as not to be shaken by a perfidious insinuation against their neighbour. A Poula, however, will not give his daughter in marriage to a Diavando; neither is this the only class of persons consigned to contempt; but the line of demarcation here is not so strong as in Hindostan: to appearance there are no distinctions. The *grists*, blacksmiths, weavers, shoemakers, live and eat with the other Negroes, but never connect themselves with them by marriage.

The following anecdote of the same people is interesting.

I cannot help recting a fact, which has given the Poulas of Foutatoro great celebrity in our establishments on the Senegal. Since the beginning of the present century, M. Ribet, at the head of twenty-five European soldiers, and four hundred Senegal negroes, had, by way of reprisal, plundered all the Poula villages bordering upon the river. On arriving at Gaet, one of their large towns, not a negro appeared to oppose them; the inhabitants were all concealed behind their palisades, and thus intrenched, fired upon the enemy. In the mean time two field pieces, by which M. Ribet was accompanied, made incredible havoc among the Poulas, but at the moment when he thought victory certain, a bull leaped over the palisades and furiously rushed upon his men. A divinity descending from heaven, could not have produced a more extraordinary effect. The negroes of the Senegal, persuaded that their lives depended upon that of the bull, stopped our soldiers ready to fire at him, exclaiming, if they killed the animal, all sorts of misfortunes would overwhelm them. The stratagem of the Poulas, for it was they who had let loose the bull, was completely successful. The negroes dispersed and fled in disorder towards the vessels. To run away from blacks, would have disgraced the twenty-five Europeans who accompanied M. Ribet; unsupported they sustained the fire of six thousand Poulas, and fell victims to their bravery. Such is the event which has rendered the Poula nation so famous, and which has exposed the inhabitants of the Senegal to the most sanguinary outrages from them; while we, on our part, have not hitherto attempted to put an end to those outrages, by employing a force sufficiently formidable to repress them.

In Bondou there is a fact stated, which we fancy those acquainted with natural history will be very much inclined to doubt.

The water of this place, which may be drunk by man, is poison to horses and cattle, from the vicinity of a tree called *cali*. It is one of the most beautiful trees I have met with in this part of Africa; it is very large and high, and its foliage very thick. The negroes make no use of the wood.

The following is also a doubtful statement, of the same nature.

In a wood which extended westward to bare ferruginous mountains, my guide pointed

ed out a tree called *bori*; it is small, its bark black and rugged; by boiling its leaves, the people of the country extract from them a salt, which they use in their food.

There is a great diversity of character in the natives of the different kingdoms, the population of which is mixed pagan and Mahomedan. Some are hospitable and kind, others unfeeling and ferocious. Of the latter class, a chief of the village of Ponta-Jallon is an example.

The wife of Ali, sister to Almamy, came to see me. This princess was on the wane. A blue Guinea cloth composed her dress; strings of yellow amber loaded her hair, she was constantly chewing tobacco; effrontery was imprinted on her countenance; the imperious air with which she entered my cabin, gave me a presentiment of the scene which was to ensue. A sheep followed her; without hesitation she gave it that water to drink which I had taken so much trouble to fetch in the morning, and also made it eat the rice which was to have furnished me with a dinner. Perceiving that I patiently endured these vexations, she asked for my pocket-handkerchief to cover her head, and my blanket for her to repose on. In no country can a princess endure a refusal; I obeyed, esteeming myself very happy if she limited herself to these petty depredations. I was alone, Boukari was gone in search of my horse, which had taken the road to the village where we had slept on the 24th of March. When he returned, Maria (which was the name of the princess) addressed my Marabout in the following terms: "In Fouta Jallon, wives direct the affairs of their husbands;" which was as much as to say, it is she who has stopped me; "if they make war or peace, it is according to their advice: tell thy white man that I can send him to Timbo in safety." This address eased my apprehensions, and apprized me of the motive of my detention.

I clearly saw that by means of presents I should remove all obstacles. I accordingly gave the princess Maria three grains of coral; she threw them on the ground with contempt, exclaiming, "that she was not come to receive such trifling presents, and that she would never disgrace herself so far as to wear this coral." It was really difficult to purchase the protection of so powerful a princess with so small a stock as mine. I therefore added to the three grains of coral, three grains of amber. "How trifling!" cried she, "give me coral;" I was in a critical situation. I perceived that this shrew would by degrees rob me of all my merchandize; I however gave her two more grains of coral. "This blanket," then said she, "pleases me; make me a present of it." "But I am in want of it for the night," replied I. "Thou wilt not go to Timbo then," rejoined she in an angry tone. I trembled at hearing this threat, gave my blanket to Boukari, and his to the princess; she found it so dirty that she threw it at my head with scorn, saying: "this Eu-

ropean is but a poor devil. I will return it thee the evening to know if he has reflected on his situation, and if he intends to continue to treat me in a manner so unworthy of my rank."

At four o'clock Ali sent his son, accompanied by a troop of ill-looking attendants, to receive the present which I intended for him. Boukari advised me to give him one, whilst on the other hand, one of his friends told me that Ali possessed no authority, and that I must refuse him every thing. I followed the counsel of the former, and gave ten grains of coral to the son of the Imam, to whom he would not take them without deliberating whether he durst present them to him. A messenger afterwards came to tell me that Ali was waiting for me behind the mosque. I went to him directly. His people formed a circle round him; the faces of these satellites were sufficient to excite serious alarm. "I have been to St. Louis," said Ali to me: I know that the white people are very rich, I expect a present worth of thyself and me: we are here upon the frontiers of Fouta Jallon; I am all powerful!" "What wouldst thou have?" answered I, without evincing the least discontent. One of his people, whose hideous features sufficiently displayed what part he played at court, cried: "let the white man first give thirty grains of coral." "But if I give them," I answered, "I shall have no other resource than to eat sand." Having said this, I offered him my present, which consisted of ten grains of coral. When I spread them on the ground before him, Ali's eye was inflamed, and his features, which denoted perfidy, assumed an expression of fury: "Know," said he to me; that thou canst make me such a gift, I can offer thee one a hundred times more considerable. The people of Kankunda offer me no presents but what are equal to my rank." "What dost thou demand then?" cried I angrily. "Money," replied he. "I have none." "Powder," I have no more than one charge." "Cloth," I have none of them; besides," added I, "the presents I made to Almamy of Foutatoro, and Almamy of Bondou, were very small; they accepted them and thanked me." "And what is Almamy of Foutatoro to me?" cried Ali; "for my part I insist upon having more. Thou doubtless art not ignorant that the white men pay tribute to Foutatoro and Bondou; I likewise demand one from thee on account of thy colour." "But I am no merchant." "That is nothing to me; I am now thy king; give me twenty grains of amber; ten grains of coral; a parcel of glass beads for my attendants, and eleven grains of amber for the chief of the village." Resistance to such peremptory orders would have cost me my life; for at Ali's command a hundred daggers would have been aimed at my heart. I therefore obeyed, and as I produced my grains of amber, the people who surrounded us burst into shouts of laughter. "Now," said the Imam to me,

• A village situated at Rio-Nuer, where the Europeans carry on considerable traffic.

"thou mayest depart; I will even give thee a guide."

In this country iron is wrought by a primitive process.

Most of the inhabitants are proprietors of furnaces for smelting iron; it is an employment to which the Serracolets most cheerfully apply themselves. To hammer this metal they use fragments of granite of a rounded form, encircled by a leather band; this band is fastened to leather thongs, which the workman holds in his hands. He raises the stone, and lets it fall on the iron, which is placed on a very low anvil fixed in the sand. By this rude and tedious process, they forge the iron, and form it into bars eight inches long.

We know not what credit may be given to the two following stories, which Mr. Mollien repeats upon hearsay; for our own parts, though we might be credulous enough to believe in monkey-battles, we are quite sceptical about whipped lions.

A woman going with millet and milk to a vessel from St. Louis, which had stopped before a village in the country of Galani, was attacked by a troop of apes, from three to four feet high; they first threw stones at her, on which she began to run away; they ran after her, and having caught her, they beat her with sticks until she let go what she was carrying. Bruised by the blows she had received, she returned to the village and related her adventure to the principal inhabitants, who mounted their horses, and followed by their dogs, went to the place which served as a retreat to this troop of apes; they fired at them, killed ten, and wounded others which were brought to them by their dogs; but several negroes were severely wounded in this encounter, either by the stones hurled at them by the apes, or by their bites; the females especially, were most furious in revenging the death of their young ones, which they carried in their arms.

Chamelopards are common in the country of Galani, it is even said that the Moors have herds of them; the Serracolets frequently offer their skins to travellers. Lions are numerous; the herdsmen, I am told, employ the whip alone to drive them away; thus the king of animals often runs from a child. The negroes assert, that if they had a gun in their hands, the lion would prepare for the combat, and dispute the victory in a manner worthy of his courage; several have even assured me, that they have often passed near this terrible animal, without his even deigning to cast a look at them. The forests are filled with wild boars of prodigious size.

(To be concluded in our next.)

*Valdi; or the Libertine's Son, a Poem.*

By James Kenney. London 1820.  
8vo. pp. 128.

Mr. Kenney, whose dramatic productions have been favourably received

by the public, has on a former occasion tried the flight of his muse in didactic poetry, so that the present work is, we presume, sanctioned by the success of its predecessor. It is the story of a natural child; an enthusiast from infancy upwards, and finally a maniac. Educated by peasants, his father is only found in a rival whom he combats for the sake of his love, Leola; his mother, in a wretched camp - follower, who comes to strip him among the dead and wounded in a field of battle; and the adored Leola herself turns out to be his sister. The narrative is naturally sombre and melancholy, as the tale is disastrous and romantic. We shall quote a few of the passages which please us best, to show how far the comic dramatist has succeeded in pathetic composition.

Child of the Libertine! be God thy Friend!  
No Jubilee thy coming shall attend;  
Thy mother's burthen'd womb no joy shall share,  
For woe and death are hovering round thee there;

And tho' the yearnings of the mother tame  
The desperate visitings of grief and shame,  
Yet many a sigh her struggles shall attend,  
Too early ruin of a parent's rest—  
Her guiltless offspring yet her foe confess'd!  
And as she patient toils, ah! woe the day!  
To give thee here such welcome as she may,  
Big thoughts o'er swelling nature's fond desire,  
Steep in her bitterest tears thy first attire.

Sad are thy greetings in this world of care;  
A father's scorn, a mother's worse despair!  
Obscure the eyes that should have half'd thy smiles,

Thy joyous antics, and thy nestling wiles;  
Child the devoted fancy that would wait  
Wild sounds, and deem them speech articulate:  
Too blest should innocence thy days protect  
From sudden fate, or perishing neglect,  
If even thy spells no hellish impulse stir,  
Nerving thy mother for thy murderer!

This is natural colouring; nor do we less approve a very well-expressed tribute to the genius of Shakspeare, in the exordium.

Sweet sorcerer! whose intellectual eye  
Search'd every secret of humanity,  
All ample Shakspeare! thou, whose magic lyre,  
Hearts deeper feel, as ages still expire;  
In whose bright trace unfailing truth I see,  
*And what I pass in nature learn of thee.*  
Well hast thou taught of wisdom woe hath nursed,  
Lost as we soar, recovered in the dust.  
Light of the Poet's world!

Valdi's account of the desolateness of his youth is feelingly portrayed.

No fostering love I knew whose gentle sway,  
Calls out young faculties and points their way:  
None bore my name, inspired my heart to dare,  
Loved my renown, or would my triumphs share.  
Such fond incitement ne'er my soul embraced,  
Life seemed a journey through a pathless waste:  
Whatever wish might on my fancy press,  
Whatever wrong I had that claim'd redress,  
Say could an spirit so deserted fly  
To seek relief of icy charity?

I had no other than the sufferer's part,  
And griefs lay close, and heavy at my heart.

A stifled heart my life's unceasing foe,  
Of social bearing little did I know;  
No timely respite from the book and pen  
My youth had blended with the ways of men.  
For on that day, which gave each fellow boy  
To blithe abandonment, a home of joy,  
That happy day, long-seen, and hail'd afar,  
Kiss-worn, in every striding's calendar,  
I, mid the general mirth and eager stir  
Sadly remain'd, perpetual pensioner.  
To childish ways and lonely thought inclined,  
I seem'd a schoolboy with a hermit's mind.

We confess that we do not like much to trace morbid affections, which in truth might often (out of poetical phraseology) be deemed sheer discontent, operating to poison all the springs of life and social happiness; and therefore we shall satisfy ourselves with only one further extract, apposite to the struggles of the Tyrolese (whom Valdi joins) for liberty, and to the strange perversion of mind which has led some of the admirers of that inestimable blessing to be the loudest panegyrist of its greatest foe. The sentiments are truly patriotic.

Red are the streams their mountain channels drain,  
The greensward darkens with a withering stain,  
The patriot brave have fought, and fought in vain.

Scoffer the more at humbled truth's behoast,  
Swells with a ranker pride the victor's crest:  
The nations onward must avert his frown,  
Forbear the strife, and stoop them timely down:  
Victory hath elar'd! and whom no justice rears,  
Then come ye with salutes for your chains!  
Self-deem'd of heaven, of faith his rule must be,  
And legions madden in his mystery.  
Resotted, black-lipp'd reveller in blood!—  
He bids ye bend, ye great, ye wise, and good—  
On less than worshippers be vengeance hurl'd,  
And slavery the religion of the world!—

And shall the bold enthusiast friend of man  
See levell'd thus the fabric he began—  
Bewilder'd Freedom, with apostate awe,  
Her banner yield to spread a despot's law;  
Philosophy, a bigot in his sight,  
Blind with the daunting wrong proclaim it right—  
Or for her dreams dispersed, let spleen assail  
This minion of exhausted anarchy?  
Shall the wild was-fic'd, shouting in his pride,  
Still boast the battle on aggression's aide,  
And none be found unflinching front to urge,  
Confound the scandal, and arrest the scourge?—  
Lo! it is done—the bard hath lived to see  
Man's retribution, and the nations free!  
Yes, there be those, who still the charm with-  
stood,

And shiver'd it—the talisman of blood!  
Who danger daringer, fiercer could dare,  
Nor fear'd, nor fail'd, and aid the wide despair!

Heaven-favour'd land, thro' history's troubled tide,  
Firm, steady, as thine own proud navies ride,  
The cup of peace in temperate measure taste,  
Nor put thy triumph to abuse and waste—  
Let blousing surfeit fast, for they may feed,  
Who else must perish, for thy breathless deed;  
Her graceless heaps let sorrow Avarice spread,  
Nor deem for her alone thy brave have bled:

Be not thy glories cited to thy shame,  
And tears and groans pronounce them but a  
name:—

Strike the last standard thus from faction's hand,  
And honest scorn awaits her remnant band.  
For all the heart-thorns thou hast grown for me  
Be this, an exile's blessing, still with thee:  
Wait every gale to thee good cheer and health,  
Fill'd be thy havens with thy merchant wealth.  
Thy husbandmen greet plenty in their paths,  
Peace to thy throne, thine altars, and thy hearth:  
Blest be the wave that garrisons thy strand,  
Blest thy white frontier by the wild breeze fain'd,  
God prosper thee, my own beloved land!—

We must, before we take leave of Mr. Kenney, notice, that his verse is occasionally too careless. The occurrence of the verb "to come" twice within three lines in the very first page, is an instance; the name of *Leola* (page 55) requiring in two adjoining lines to be pronounced *Leöla* and *Leöla*, is another; and the prosing couplet

Thine interest shall I ever estimate

Among the gracious moments of my fate—  
a third. We must also object to *caital* for *recital* (page 45); and question the propriety of "mind's green expansion" (31), and of such a description of himself as is put into Valdi's own mouth (page 29).

With manly port, erect ingenious air,  
My spirit, &c.

Our last fault is with lines ending in trocheicks, of which there are several; and these, we think, detract from the pathos of a tale which is altogether of an interesting order.

*The History of the Crusades, for the Recovery and Possession of the Holy Land.*  
By Charles Mills. London, 1820.  
8vo. 2 vols.

A History of the Crusades, the most important subject in the middle ages, whether regarding its connection with the religion, with the literature, with the arts, with the superstitions, with the chivalry, or with all the feelings and manners of mankind, was a great desideratum in English letters; and it is a very fortunate thing that it has been executed by so competent a person as the well-known author of the *History of Muhammedanism*. In France, Mr. Michaud has been bringing out, by volumes, a work under the same title: but without wishing to draw invidious comparisons, we must be allowed to say, that what we have seen of it is far exceeded by Mr. Mills's production, which, for intelligence, compression, arrangement, and clearness, approaches very nearly to what we consider the requisites of perfection in this species of composition. The *lucidus*

*ordo* enlivenes the interest of a narrative which is so full of adventure and anecdote as not to be readily rendered tedious; and if the romance of *Ivanhoe* has delighted, so must this romance of reality, in which nations as well as individuals occupy the fearful and blood-wasting scenes. The style is neat, forcible, and well suited to the matter; and in the matter, events are treated with candour and propriety; circumstances hold relatively their proper places; and as we do not find affairs of consequence neglected, so neither do we discover trivial incidents dwelt upon, and extended beyond their consistent limits. With this brief introduction and deserved praise, we shall proceed to our usual task of analysis; and, in this, and in the next Number of the *Literary Gazette*, confine ourselves to what occupies about one third of the work, namely,

#### THE FIRST CRUSADE.

After the accomplishment of prophecy in the destruction of the second temple, Paganism became the religion of Jerusalem, and the haunting and intolerant Romans dedicated to Venus and Jove the spots which had been hallowed by the Passion of our Saviour. But in the fourth century, the banners of the cross triumphed over polytheism, and Christian emperors erected churches on the ruins of the Heathen temples. In these God was worshipped according to the true faith, till the star of Islamism arose, and, in turn, subverted the holy city, which, for three ages, became subject in reciprocal succession to the caliphs of Bagdad, and to those of Cairo. At length the commanders of the Egyptians prevailed, and, in 969, their dominion over Palestine was finally established. The irruption of the Turks, (called the Seljuk Turks) from the borders of the Caspian, once more changed the order of things, and from about 1038 to 1092, all Persia, Arabia, and most of Syria, owned their sway. Jerusalem had several masters; and, at length, anno 1094, rested a dependency of Egypt.

Long previous to this epoch, and, indeed, from the period immediately succeeding the crucifixion, it had been the object of Christian pilgrimages, as Mecca and Medina are now visited by Moslems. Of the nature of many of these pilgrimages authors give us a very strange account, from which it appears that profligacy and dissoluteness as often entered into their motives as penitence, and a resolution to sin no more.\* Commerce had

\* The necessity of making a pilgrimage to Rome and other places, was often urged by ladies, who did not wish to be mewed in the solitary gloom of a cloister, "chaunting faint hymns to the cold fruitless moon." In the ninth century, a foreign bishop wrote to the archbishop of Canterbury, requesting, in very earnest terms, that English women of every rank and degree might be prohibited from pilgrimages

also its share in these long and dangerous journeys. But whatever led pilgrims to Palestine, both they and the remains of the Latins, resident in that country, were cruelly oppressed by the lords of the territory. Like Jews or Christian dogs in our times, in Turkey, contumely, capricious tyranny, blows, spoliation, and death, were their portions. This barbarous treatment experienced under the Fatimite Caliphs, gave rise to new feelings in the nations of the West. Every pilgrim brought home tales of public sacrifice or individual misery; and though some gloomy minds might consider afflictions as the essence of pilgrimages, and were therefore slow in separating the superfluous from the necessary pains, yet upon general considerations it was evidently a disgrace that the followers of Christ should dwell only by sufferance in the country of their master, and that pagans should be possessors of a land which his had consecrated by his presence. At the close of the tenth century, Pope Sylvester II., the ornament of his age, entreated the church universal to succour the church of Jerusalem, and to redeem a sepulchre which the prophet Isaiah had said should be a glorious one, and which the sons of the destroyer Satan were making inglorious. Pisa was the only city which was roused to arms, and all her efforts were mere predatory incursions on the Syrian coast.

In the next century, political events in the Grecian and Saracenic worlds occasioned a renewal of the endeavour to arm Christendom against Islamism. Constantine trembled for her safety, and the Emperor Manuel VII. about the year 1073, supplicated the aid of Pope Gregory VII.; expressed deep respect for his Holiness, and attachment to the Latin church. The spiritual sovereign immediately commanded the patriarch of Venice to proceed to Constantinople, and arrange the terms of friendship and reunion. An encyclical letter was sent from Rome to the states and princes of the west, acquainting them with the melancholy fact, that the pagans were overcoming the Christians. The people of Christ had been slain like sheep, and their remorseless murderers had carried their devastations even to the walls of the Imperial city. The faithful ought to lament for the misfortunes of the empire, and the miseries of their brethren: they should not, however, lament only; but, following the example of their divine master, they should give up their lives for their friends. Accordingly, 50,000 men prepared themselves to rescue the Christians of the east, and to arrest the march of Islamism.

These preparations, however, died away, and it was not till Peter the Hermit, a native of Amiens, in France, returned from a

ing to Rome. Their gallantries were notorious over all the continent: and (says Muratori, *Antiquitates Italice*) "Perpaucæ enim sunt civitates in Longobardia, vel in Francia, aut in Gallia, in qua non sit adultera vel meretrix generis Anglorum: quod scandalum est, et turpitudine totius ecclesiæ."

pilgrimage, during which he had witnessed the miseries of the Christians in the East, and by his preaching kindled the zeal of Europe, that those Holy Wars were begun, which for two centuries desolated the world. Pope Urban II. espoused the opinions of Peter, and both temporal and spiritual considerations combined at this era to render crusading not merely popular, but irresistibly contagious. A council was held at Clermont, in 1095, at which an unprecedented multitude of every class of laymen, and of every ecclesiastical order, assembled. To these Urban addressed an enthusiastic exhortation to drive the Turks and Saracens from the borders of Europe and from the Holy Land. "To those present, (said he in conclusion,) in God's name, I command this; to the absent I enjoin it. Let such as are going to fight for Christianity put the form of the cross upon their garments, that they may outwardly demonstrate the love arising from their inward faith; enjoying, by the gift of God, and the privilege of St. Peter, absolution from all their crimes: let this, in the mean time, soothe the labours of their journey; satisfied that they shall obtain, after death, the advantages of a blessed martyrdom." Part of the ensuing arguments do not appear to us to be so encouraging. "Death sets free from its filthy prison the human soul, which then takes flight for the mansions fitted for its virtues. Death accelerates their country to the good: death cuts short the wickedness of the ungodly. By means of death, then, the soul, made free, is either soothed with joyful hope, or is punished without further apprehension of torments." At the conclusion of the Pope's harangue, shouts of *Deus Vult*, *Deus lo Vult*, *Dieux el Vult*, rose unanimously from the mighty assemblage, and these words, "*Deus Vult*," were adopted for the future war cry of the crusaders.\* It was also resolved that every one should mark on his breast or back the sign of our Lord's cross, in order that the saying might be fulfilled, "He who takes up the cross and follows me is worthy of me,†." The whole assembly knelt, and the

\* This expression continued for some time the war cry of the first crusaders. All nations in all ages have used particular words for the excitement of martial ardour. The war cries of the French and Germans were excerpts from the *Bardic songs* in praise of heroes, which were recited before the battle: from, for instance, the actions of the fabulous Roland and the peers of France. Unlike most of the cries of arms, the expression *Deus vult*, or *Deus lo vult*, is affirmative. During the siege of Jerusalem, the war cry received the addition of the words, "*adjuva deus*." This clause was added on the motion of St. Andrew. *Et sit signum clamoris vestri, Deus adjuva*. Princes, barons, and knights banneret, in short, every person in command, had their war cries. In an army, therefore, there were as many cries of war as there were banners. There was a general cry also, which was usually the name of the commander, or the cry of the king.

† In imitation of Christ, who carried a cross on his shoulders to the place of execution, the cross was generally worn on the right shoulder, or on the upper part of the back; it was also

Cardinal Gregory poured forth in their name a general confession of sins. Every one smote his breast in sorrow, and the Pope, stretching forth his hands, absolved and blessed them. Adhemar, bishop of Puy, was the first person who solicited a cross from the Pope. One of red cloth was affixed to his right shoulder; and many others immediately copied this example. In accordance with the general wish, his Holiness deputed his spiritual authority to Adhemar, whose manliness had already excited the admiration of the people. At this moment the ambassadors of Raymond, count of Tholouse, arrived. This powerful prince, and a numerous band of cavaliers, had taken the cross; and he promised counsel and money to all those who should wish to enter on the sacred way. The multitude were no longer in need of a commander, and were not backward in comparing the bishop and the Count to Moses and Aaron.

The preaching of Peter, the entreaties of Alexius,—the councils of Placentia and Clermont, and the exertions of the Pope,—all these concurrent causes enkindled the elements of combustion, turned the people of the west from intestine discord to foreign war, from dull superstition to furious zeal. The military enthusiast heard the voice of Charlemagne calling the French to glory. The religious fanatic eagerly and credulously listened to tales of visions and dreams. Every wonderful event in the natural world was regarded as an indication of the divine will. Meteors and stars pointed at and fell on the road to Jerusalem. The skies were involved in perpetual storms; and the blaze and terror of anxious and disordered nature shewed the terrific harmony of heaven with the sanguinary fury of earth. Prodiges were not confined to the west. In the states of Greece a marvellous number of locusts destroyed the vineyards, but spared frequently placed on the top of the arm. Red was for a long while, even till the time of Richard I. king of England, the general colour of this cross. The materials of the cross were silk, or gold, or cloth; and the most frenzied of the crusaders cut the holy sign on the flesh itself. The pilgrims on their return to Europe generally placed the cross on the back.

Malmesbury's observations are highly curious. "The report of the council of Clermont wafted a cheering gale over the minds of Christians. There was no nation so remote, no people so retired, as did not respond to the papal wishes. This ardent love not only inspired the continental provinces, but the most distant islands and savage countries. The Welshman left his hunting; the Scotch his fellowship with vermin; the Dane his drinking party; the Norwegian his raw fish." Malmesbury, p. 416. Robert of Gloucester, after mentioning in general terms the contributions of men which France and England made to the holy war, thus curiously mixes other nations:

"Of Normandy, of Denmark, of Norway, of Bretagne,  
"Of Wales and of Ireland, of Gascony and of Spain,  
"Of Provence and of Saxony, and of Allemagne,  
"Of Scotland and of Greece, of Rome and Aquitaine."

*Cicero*, p. 333, edit. Hearne.

the corn. The discovery that the locusts were the forerunners of the Europeans was an ingenious interpretation of the sign; but the diviners, with more nationality than truth, compared the corn with the sobriety of the eastern Christians, and the vines with the licentiousness of the Saracens. Man fully responded to the supposed calls of God. The moral fabric of Europe was convulsed; the relations and charities of life were broken; society appeared to be dissolved. Persons of every age, rank, and degree, assumed the cross. The storm of public feeling was raised, and neither reason nor authority could guide its course. The prohibition of women from undertaking the journey was passed over in contemptuous silence. They separated themselves from their husbands, where men wanted faith, or resolved to follow them with their helpless infants. Monks, not waiting for the permission of their superiors, threw aside their black mourning gowns, and issued from their cloisters full of the spirit of holy warriors. They who had devoted themselves to a solitary life mistook the impulses of passion for divine revelations, and thought that Heaven had annulled their oaths of retirement. A stamp of virtue was fixed upon every one who embraced the cause; and many were urged to the semblance of religion by shame, reproach, and fashion. The numerous cases of hypocrisy attested the commanding influence of the general religious principle. They who had been visited by criminal justice were permitted to expiate, in the service of God, their sins against the world. The pretence of debtors was admitted, that the calls of heaven were of greater obligation than any claims of man. Murderers, adulterers, robbers, and pirates, quitted their iniquitous pursuits, and declared that they would wash away their sins in the blood of the Infidels\*. In short, thousands and millions of armed saints, and sinners ranged themselves to fight the battles of the Lord. All nations were enveloped in the whirlwind of superstition. It was people, and not merely armies, countries, and not only their military representatives, that thought they had received the divine command to unsheath the sword of the Almighty, and to reclaim the sepulchre of Christ.

It was in the year 1096 that the first body of European rabble, styling themselves Champions of the Cross, swept along from France to Hungary. They amounted to 20,000 foot, and only eight horse; and were led by Walter, a poor gentleman of Burgundy. These, except a few refugees, perished miserably in conflicts in Bulgaria: those who escaped, reached Constantinople, and found refuge with the Greek Emperor Alexius.

The second undisciplined division, accompanied by the Hermit himself, pursued the same route. Their atrocities roused the indignation of the people through whose territories they marched, and after the most dreadful deeds, and sanguinary actions, they were ultimately exterminated in Bithynia.

\* "A lamentable case," as Fuller says, "that the devil's blackguards should be God's soldiers."

in the exception of three or four thousand. A lofty hill was made of their bones, which remained for a number of years a warning to invading bands of crusaders.

The third division of 15,000 fiery enthusiasts, under Godeschal, a German Priest, perished in Hungary; and the fourth and last of these lawless mobs of ruffians, zealots and plunderers, met with nearly a similar fate; but as Mr. Mill's account is finely descriptive of the whole of this class of expeditions, we use his words.

"Before Europe glittered with the pomp and splendour of chivalry, another hard of wild and desperate savages scourged and devastated the world. They issued from England, France, Flanders, and Lorraine. Their avowed principle of union was the redemption of the holy sepulchre. History is silent on the subordinate modes and bands of connection, except the horrible superstition of following a goat and a goose, which they believed to be filled with the divine spirit: and if such were their religion, we cannot wonder at the brutality of their manners. Besides their fanaticism was the height of fury, for these ministers of the devouring flame nearly trebled their precursors. Their zeal was guided by envy and malignity, and they pretended that it was unjust that any foe of God should enjoy temporal prosperity. The Jews enriched the towns on the banks of the Moselle and of the Rhine, and communicated to France and Germany the products of each respective country. The city of Cologne was the first city which was stained with their blood. The sanctity of the archiepiscopal palace at Mayence, the sacred presence of the venerable metropolitain, could not shield seven hundred of the children of Israel from the swords of men; who professed a religion of mercy and love. The bishop of Spire bravely and successfully defended the Jews in his city, but the generosity of the bishops of Treves and Worms was not equally pure and meritorious, if it be true that they compelled the objects of their protection to change their religion. Many firm and noble spirits disdained apostacy. Some of them retired to a chamber of the bishop at Worms, on pretence of deliberating on the renunciation of their faith. Deliberation produced virtue, and by self-slaughter they disappointed the cruelty of their enemies. More appalling spectacles were witnessed at Treves. Mothers plunged the dagger into the breasts of their own children; fathers and sons destroyed each other, and women threw themselves into the Moselle.

"When the measure of murder and robbery was full, the infernal multitude proceeded on their journey. Two hundred thousand people, of whom only three thousand were horsemen, entered Hungary. They hurried on to the south in their usual career of carnage and rapine; but when they came to Mersbourg, their passage was opposed by an Hungarian army. Their requests to the king's general for provisions and a free passage were denied; but they forced a bridge over the Danube; and, gathering strength from the desperateness of their situation, they succeeded in making some breaches in

the wall of the town. The ruin of the Hungarian nation appeared inevitable; and the king with his nobles was prepared to fly to the south. By some strange panic which the best historians can neither explain nor describe, the besiegers deserted the assault and fled. Their cowardice was as abject as their boldness had been ferocious; and the Hungarians pursued them with such slaughter, that the waters of the Danube were for days red with their blood. But few of the rabble survived. Count Emicho, who had gained dunnatory distinction by his cruelties on the Jews, succeeded in flying into Germany. Some others escaped to the south; and in time joined the regular forces of the feudal princes of Europe.

(To be concluded in our next.)

*Lessons of Thrift, published for the General Benefit. By a Member of the Save-all Club. London, 1820. Crown 8vo. pp. 240.*

We know not how we can better describe this work, cleverly ornamented with a dozen of caricature prints, by Cruikshank, than by informing our readers, that it is the pouring out of the Common-place Book of an intelligent and humorous person, whose diligence in collecting anecdotes, jests, stories, &c. seems to entitle him pre-eminently to the character of a Member of the Save-all Club. His economy has indeed been carried very far, for many of his jokes are exceedingly ancient and well-known. But pretty general reading and observation have enabled him to vary his lucubrations with a considerable portion of novelty in matter; and in manner he has thrown a still stronger cast of freshness over his *olla podrida*. As for the lessons of thrift, they are the flimsiest of possible links to connect a volume, from which the abundance of its materials banishes all but very partial arrangement. Upon the whole, an entertaining miscellany has been produced; and for a chaise-pocket, or a breakfast-room window-seat, this will be found one of the pleasantest companions of the class to which it pertains.

We insert a few specimens; a medley, like the original. Of the Save-all Club, the following are minutes,

Thomas Sprightly is a constant frequenter of balls and assemblies, and treats the ladies, who laugh at him as a common dangler. He is admonished to refrain from this idle expense.

His remonstrance, that it is in the view of a good marriage, has been duly considered, but has made little impression on the old ones of the Club, who are rather apprehensive, from his simple manners and goodness of heart, that he will become the prey of the

very artful, cunning, and treacherous females of the present day. If, however, he get married, it shall be regarded as a sufficient punishment.

Sir Clement Cornice, baronet, not contented with having built a splendid villa, invites all the world to see it, and gives miscellaneous dinners every Sunday, so that it has become a cakehouse.

Ordered, by the President, and Committee, that he pay a fine of one guinea for every such dinner to the poor of his parish. On non-compliance, he is requested to send in his resignation as a member of the Club.

Lord Arab, who boasts of his gains in keeping a race-horse, is requested to present to the Committee an exact account of his profit and loss. N. B. No errors excepted.

Mr. Plod Furret, who is always dabbbling at sales of old and scarce books, though he can scarcely read his mother tongue in the common Roman letter, is ordered, on pain of expulsion for such useless expense, to bring his only Caxton to the Club, and to read two pages thereof aloud.

The honourable member has presented a petition, stating that his only view in such purchases is to lay by money in a very sure way, and at a great interest, as such articles always increase in value; that in this view, far from any attachment to any letter, whether black, white, brown, or yellow, he received great comfort in the conflagration of a gentleman's library, which contained five Caxtons, as thereby the value of his was greatly increased; and that he consults people of skill in his purchases.

The censure withdrawn, and the member re-instated.

Some rich are-thrifts mix cider with port wine for their servants; others choose coach-horses that match with those of a gouty neighbour, so that if a horse be sick another can be borrowed without inconvenience; for those animals are subject, if my memory serve, to one hundred and thirty diseases, and four are often necessary in reserve for a carriage drawn by two. It is a great breach of economy to have a villa near town, where friends are so happy to arrive just at dinner time. You may, however, take your bat, as running out to see a neighbour taken violently ill, or fall upon the sofa yourself in a violent fit of the cholera. If, however, you admit a friend or two, follow the maxim of Socrates to his wife, "Why increase our dinner? If the company be real friends there is enough: if not, too much."

An ingenious member has contrived, in winter, to profit by the light of his neighbour—a most innocent theft, which does harm to none. There being only a thin wall, or rather partition, between his chamber and that of a tailor, often occupied to a late hour, he contrived a hole; by which he can see to read and to go to bed. This invention saves him three or four pounds a year (generally about *St. 7s. 2d.*) and is honourably mentioned in the records of the club.

But the fashionable world is in the dream of Richard III.

A light! a light! my kingdom for a light.

Their whole life is sold by inch of candle. It is inconceivable what pleasure there can be in reversing the occupations of day and night. A fashionable lady will dine at ten at night, and go to bed at four in the morning. Her great great grandmother dined at ten in the day, and in bed by six. How different the health and complexion! But roses and lilies are now little known, except in distillation and washes; and pins are little worn, though they have been quaintly called the thorn of christian roses. Pin-money remains, and a lady generally prefers the cash to pins.

Franklin has, in his usual style of dry and homely humour, ridiculed the modern European infatuation of giving bread to wax-chandlers and candle makers, at a great expense to our purse, health, and reputation. A careful study of that useful publication, the almanac, would enable us to supply ourselves, at no expense, with the blessed and beneficial light of day. The wheel of fashion is however turning so fast, that the good ancient customs may surmount. "Happy time for old England, neighbour," said a sulky politician to a friend of mine, "when parliament met at nine in the morning. The deliberations were wise and frugal, and had the air of a grave senate and important affairs. But who ever saw a lamp in the hands of Minerva? We all know the purposes that are pursued by night and candle light. They have nothing to do with wisdom, neighbour. All the wise men are then asleep." He spoke emphatically, as he is always in bed by eight o'clock. As to his Minerva I say nothing, except what I read in my youth, that she was the goddess of wisdom, and had no mother, which seems well contrived, as wisdom has few relations on the female side.

Jesting apart (for I owe my candle-maker a bill), if the court would as usual hold *lees* on the king's rising from bed, at seven or eight in the morning, the ancient fragility of artificial light might soon revive. Opinion is the queen of the world, and Fashion is her daughter, the princess royal. A little jog of the wheel would bring us where we were, and even the novelty would be delightful. At nine (morning) all the streets would overflow with coaches. At twelve all the knockers would announce the hour of solemn dinners. Plays by day-light as in Shakspeare's time.

A schoolmaster proposing for the Latin Secretaryship of the Club, thus concludes his letter—

If thought worthy to be your Latin Secretary, I flatter myself that I could tickle up a dedication, or rub down an adversary, nay, I could now and then dash at poetry, for instance,

Aulica vita	Non est vita.
Non est vita	Ut pia vita.
Aul' est vita	

If you want a verse of very difficult construction, and nevertheless very good Latin, here it is.

Nate mea Romam filia neque suam.

The following story from D'Aubigny is a whimsical illustration of the want of thrift in gaming: it is translated, or rather abstracted from—

The Gascon dialect of the Baron de Foe-neste, who thus tells the story,—"If you must know all, I passed two years with fine fellows, serving to bring water to their mill, or, to speak plainly, to find dupes: but this scheme led to the greatest of my misfortunes. The king's attorney at Rochelle, with Barbot and Gendreau, who had been mayors of the town, having some little processes to carry on at Paris, seized this occasion to cover a pretty enterprise. They put each four thousand francs in a purse, to be employed in tricks at cards and dice, which they had practised at Rochelle, and I was chosen as an assistant, being, besides my nourishment, to receive one crown from every twenty of the gains. At Paris we lodged at the sign of the Swan, and began to do wonders in our line, when one day about ten o'clock arrived a tall coarse fellow, mounted on a dirty mare, with a clock-bag behind him, which was so heavy as to embarrass our landlady. This man, who began with chatting of his noble birth and connexions, wore an old scrubby hat, a large black clock, his sword hung with a red ribbon; his boots would have weighed any two pair, while he had only one spur, and his breeches were of yellow cloth. When the hostler led his mare to the stable, this coxcomb began to talk with six or seven wags at the gate, and I heard him say, "Ill-appointed as you see me, I return from Rome." A Breton, who seemed to gape with surprise, inquiring by what road, our man answered, "Do you take me for an idiot? By the nearest road, sure, which goes by Rouen and Morlaix." He then began to explain an important law-suit which brought him to Paris, and seemed precisely the rich simpleton we wanted. Our comrades were of course eager to offer him their best rooms, and when company came to play he would only be a spectator, saying that if they had used the common country games he might have sported a shilling, which was the highest stake he ever played. At length, with much perseverance, we taught him lansquenet, and one or two other fashionable games.

"During three days he sometimes won, sometimes lost, the stakes being so small as not to deserve notice; but one evening being so venturesome as to stake two crowns, a valet he had taken and his lawyer reproached his rashness, and he retorted in abusive terms. On the fourth day, having employed the morning with his lawyer, as he said, he returned by the street called Huchette, asking every body for his lodging, which he called the White Goose, instead of the Swan, and when he at length arrived he was hailed as 'The Gentleman of the Goose.' He began to be heated at play, and spoke of staking a hundred pistoles: one evening he lost forty-four, and in a rage challenged our Rochelle company to bring each six hundred pistoles next day, to stake against the like

sum. In the midst of this desirous game arrived on horseback his pretended solicitor, advocate, and another of his gang, and he soon won the whole stock of our company. One of us seizing a loaded dye, we took hold of the gentleman of the goose, but he was backed by all his gang, one of whom was the very Breton who first addressed him; and our respectable society not only lost their money, but received a hearty drubbing, of which to avoid my share I made only one step of the whole stair. My comrades have since been styled at Rochelle 'the Gentlemen of the White Goose.'"

We conclude with a few other miscellaneous extracts:

An old Italian, on his deathbed, left little to his widow except a fine horse and a favourite cat; desiring, however, that the horse might be sold, and the price employed in masses for his soul. The widow scolds the horse and the cat to market, with an injunction to sell the horse for a crown, but not except the purchaser also bought the cat, valued at four hundred crowns. In this way she honestly got the money for her own use.

This was at a time when, by a sacrilegious perversion, a rich man could not die without being surrounded with coreutous priests and monks begging "for our poor convent," while they were wallowing in all the wealth of a country. A rich proprietor near Lyons was on his deathbed, from a sudden attack of palsy, when his son, a tall, stout colonel of dragoons, arrived on the spur from his garrison. He finds at the bed-side a Franciscan friar and a notary. His father could not speak, but nodded, from the effect of the disease. "You leave," says the friar, "to our poor convent, your estate of —, with all the appurtenances?" A nod. "Notary, observe the consent, and write.—You leave to our poor convent your house here at Lyons, with all the plate and furniture?" A nod. "Notary, observe the consent, and write.—You leave to our poor convent your farm at —, with all the arrears?" A nod. "You leave to our poor convent —." The officer lost all patience. "My dear father, do you order me to throw this thief from the window?" A nod. "Notary, observe, and write." Said and executed, while the notary was glad to escape.

There have been rare instances of men who could sleep whenever they chose; but, in general, sleep cannot be commanded; and, as the poor negro said to his master when he fell asleep from fatigue, "Massa, massa, sleep have no massa."

I have read a few odd books, and am glad to display my little learning, as he who has only one guinea is proud to show it. I must therefore say, and relate the anecdote as curious and important, that in China, in the thirteenth and fourteenth centuries, neither gold nor silver were permitted in currency, but only paper, which was of a yellow colour, and stamped with the imperial seal. Foreign merchants were obliged to leave their coin at the custom-houses in exchange for these bank-notes.

A nobleman was accustomed to examine

bills and accounts with great rigour, even to pence and farthings, and was often ridiculed on this score by an intimate friend. But this friend falling into accidental and unmerited distress, was surprised with the receipt of two bank-notes of 1000*fr.* each in the following laconic epistle. "The farthings you have so often laughed at enable me to lend you the enclosed, which you will return at your own convenience. Yours always. THE MISER."

A Spanish archbishop having a dispute with an opulent duke, who said with scorn, "What are you? Your title and revenues are only for your life?" answered with emphatic truth, "And for how many lives does your grace hold yours?"

Such matters are thickly sprinkled over these pages; and, in our opinion, joined to the author's humorous way of putting the whole, are not too much alloyed by the staler jokes which he has adopted to illustrate his lessons.

*La Bonapartide, ou le Nouvelle Attila.*  
By J. P. Courtois.

[Reviewed from a French Journal.]

What could have induced a reasonable man, who, up to the age of fifty, has had the good sense not to turn poet, to undertake the task of versifying fifteen or twenty yearly files of the *Moniteur*? It is impossible even to laugh at such a work as the *Bonapartide*, for it is merely a mass of monotony and dullness: and where was the necessity for writing twelve cantos, to repeat in a dry and tedious style what is clearly told in all the French newspapers? Poor M. Courtois! It must certainly have been difficult to write such poetry, if we may judge by the trouble it cost us to read it. The following is a fair specimen:—

*A peine est il sacré, que ce monstre pervers,  
Médite le projet d'enahir l'univers.  
Et se fait couronner aussi Roi d'Italie.  
Sous son sceptre de plomb, comme il veut que son  
père,*

*Il sovit à Milan la Couronne de Fer,  
La place sur son front; et, soufflé par l'Enfer,  
Il profère ces mots, profanes dans sa bouche:—  
"C'est Dieu qui me la donne, et gure à qui la  
touche."*

*Et enchant son orgueil et son ambition  
Sous le voile sacré de la religion,  
Ce Singe, imitateur du puissant Charlemagne,  
Va reporter la guerre au sein d'Allemagne.*

We do not pretend to say by what power the author was *soufflé* when he wrote the above trash. There are twelve cantos, all in the same style.

ANALYSIS OF THE JOURNAL DES SAVANS,  
FOR NOVEMBER, 1819. (concluded.)

Art. IV. *Pend Naméh*, ou le Livre des  
Conseils de Ferid-eddin-Attar, traduit et  
publié par M. le B. Silvestre de Sacy.  
&c. with the Persian text and notes.

Men of letters, particularly those who are engaged in the study of the oriental languages, will greet with pleasure the publication of a new volume by Mr. de Sacy. The

pen of this illustrious writer, has always produced such useful and excellent works, that we are sure beforehand of finding in all his writings, instruction mixed with pleasure; and there is perhaps none of his preceding productions in which this double advantage is so striking as in that now before us.

Perceiving in fact, that the rigid moralist, whose excellent precepts and wise instructions he translates, would have seemed too dull to his readers, if he had not given some variety to the instructions from his other writings; M. de Sacy, by the addition of a great number of pieces all selected with taste, has changed a very dry and arid work into a charming composition, a real Persian Anthology, which will be as useful to those desirous of studying that graceful language, as the Arab *Chrestomathia* of the same learned author, has long been to those who prefer to it the austere language of the *Coran*.

The author informs the reader, that a first translation of this work, which he made in 1787, and which was to be published with the text, had been printed, in French only, and in a very inaccurate manner, in the "Mines of the East;" and that on the other hand, the text alone had been published, in a very faulty manner, at London. "Since this London edition (he adds), having occasion again to compare my translation with the original, I discovered in it a great many inadvertencies, some important mistakes in the sense, and in general much negligence; I the more readily determined to revise the whole, as I had a great many manuscripts before me, and having acquired a more accurate knowledge of the Persian language, might hope to make the work more perfect. It was natural that I should desire to make this new work useful to those who study oriental literature; and to attain this object, it was necessary to publish the text with the translation: I have done more, and to the notes which were wanted to illustrate the author, I have joined a considerable number of extracts from the works of Attar, Hafiz, Djami, Schahid, and Husain Vaez, that this volume may be considered as a sort of Persian Anthology: lastly, I have added to it the life of Ferid-eddin-Attar, extracted from the history of the Persian Poets by Danlefschah Gazi Samarkandi, and a preface, written in Persian, for which I request the indulgence of the learned."

Attar, named Mohammed, and surnamed *Nischabouri*, because he was a native of Kuku, a village in the territory of Nischabour, was born, according to the general opinion, in the year 513 of the Hegira, under the reign of the Sultan Samjar, son of Melic-schah; and died in the year 627 of the same era. He began by following the profession of his father, who carried on a great trade in spices, in which he seems to have acquired a considerable fortune: but being soon disgusted with this profession, he abandoned it, and all other worldly concerns, to give himself wholly up to a contemplative and religious life. The biographer relates the following, as the cause of his sudden change.

"One day," says Danlefschah, "when Attar was sitting before his shop with the appearance of a man of importance, and active clerks stood before him waiting for his orders, a maniac, or rather a Religious far advanced in the spiritual life, came to the door of the shop and cast inquisitive and eager looks into the warehouse; his eyes soon filled with tears, and sighs broke from his breast. The sheik, addressing the dervise said; why do you look with such wild eyes? You would do better to go your ways, Sir, said the dervise; as for me, my bundle is very light, for I have nothing besides this coat: but you with these sacks full of precious drugs, when you have to depart, how will you manage? I can leave this bazar in a moment; but you will do well to think in time of arranging your packets and your baggage: It would be prudent to reflect a little on your situation. The discourse of this *illumined* made a profound impression of grief on the mind of the sheik: his heart, by an effect of the delirium into which it had been thrown by the sophisticated thirst of temporal goods, became as cold as camphor. He abandoned his shop to pillage, and wholly renounced the affairs of this world. He retired into the monastery of the venerable sheik Roemeddin Acsa, who was then one of the most distinguished chiefs of the order of the *Contemplative*, and had attained the most perfect degree of spirituality. Under his conduct Attar changed his mode of life, and gave himself up to exercises of mortification, and to the practice of works of devotion. He passed some years among the dervises, the disciples of that holy man; he afterwards made a pilgrimage to Mecca; and having formed an acquaintance with a great number of men of God, and passed some time in their service, he dedicated seventy years of his life to the collection of a multitude of anecdotes relating to the lives of the Sheiks and the Sôfis. None of the men belonging to this order has collected so many historical traits of this kind as Ferid-eddin; nor is there any one who has penetrated more deeply than he into the meaning of the enigmatical expressions, and the mystical allegories, or who has conceived with so much perfection the most sublime and the most subtle thoughts of the spiritual doctrine."

The number of works which he has composed on these subjects is seventeen; they are in the Royal Library, in one manuscript, which bears the title of *Koutylg*, a complete collection of the works of Attar. M. de Sacy gives a list of them and their titles in Persian, in one of the highly valuable notes, which are designed to clear up some fundamental points on the obscure doctrine of the Sôfis, which follow the life of Attar. The *Pend-naméh*, which M. de Sacy has chosen, is almost the only one which is intelligible to readers not initiated in the mysteries of the spiritual doctrine; nor is this one exempt from the monotony peculiar to the style of Attar. The following is the account given by Danlefschah, of the death of this holy personage.

"Sheik Ferid-eddin was taken prisoner

by the Mongols in the troubles occasioned by the invasion of Genghis Khan, and perished in the general massacre; a Mongol, it is said, was going to kill him, when another said to him, Let that old man live; I will give you a thousand pieces of silver, as the price of his blood. The Mongol seemed inclined to spare him; Attar said to him, take care how you sell me for so small a sum; you will find people who will give more for me. At some distance from this place, the Mongol had again a mind to kill him; but another person stopped him, saying, do not kill this man, I will give you a sack of straw for his life. Sell me, said Attar, it is all I am worth. Thus the Sheikh drank the cup of martyrdom, and was raised to the rank of those who died for the faith."

After this introduction, M. Chézy proceeds to give an account of the work itself, and ventures with becoming diffidence to notice half a dozen passages in which he ventures to think that the learned translator has not exactly rendered the meaning of the original. We refrain from accompanying the reviewer in his critique, as well as from translating any of the passages which he has quoted as specimens of the work; as any translation we could give, far from affording a just idea of the Persian poetry, would doubtless remain much below the elegant prose of M. de Sacy.

Art. V. *Oeuvres complètes d'André Chénier.*

André Chénier, who was born in 1762, unhappily perished in 1794 on the scaffold, during the revolution: his father had applied to literature with success. André was born at Constantinople, as well as his younger brother Joseph Marie, whose enemies have with persevering and cruel injustice reproached him for not having saved his brother from the revolutionary axe; a calumny which has been long since refuted in the opinion of all well thinking persons, and against which the editor of A. Chéniers has completely justified Joseph Marie.

Some of A. Chénier's pieces published during his life, and others which have appeared since his death, have excited much regret for the loss of a poet whose talents seemed to promise that he would be distinguished by fertility of invention and brilliant originality. The author has composed elegies, odes, epistles, idyls, and other pieces; but Mr. Raynouard thinks that he has shewn the greatest talent and originality in the idyl, and mentions as instances that called *Liberty*, and that called *Le Malade*. With respect to Chénier's style, he has ventured several innovations on the usual forms of French versification; in which, in the opinion of his reviewer, he has in general failed, though there are sometimes very fine effects of harmony in his compositions.

Art. VI. Supplement to the Chinese and Latin Dictionary of P. Basile de Glemona. Published by order of his Majesty Frederick William III., King of Prussia, by Julius Kloppe. No. 1.

When Mr. Duguignes was commissioned, in 1808, to have the Dictionary of P. Basile printed, there was nobody in Europe able to

point out to the editor the amelioration of which it was susceptible. It was indeed considered as a perfect work in its kind, and the editor was enjoined to make no change in it. But the Chinese language having been since more extensively studied, it became evident, that a more complete dictionary was wanting; and this has led M. Kloppe to compose a Supplement, of which he now publishes the first number. We shall notice it again when the review is concluded.

#### JUVENILE REVIEW.

[Notes of Books for the Young.]

*Letters from a Mother to a Daughter, or at going to School, pointing out her Duties, &c.* By Mrs. J. A. Sargent.

This is a very well-meant publication; the principles it enforces are of the purest kind; and it is a book, which, put into the hands of the young, is well calculated to render them useful and virtuous members of society. We have rather an indifferent opinion of many of the seminaries for the education of females—and yet how much depends upon them! Mrs. Sargent's earnest and maternal exhortations, will be a valuable companion to all whose instruction is confided to strangers; and those governesses, who most ably and conscientiously discharge their important duties, will be glad of so pure an assistant.

*Instructions for the Management of the Blow-pipe, Chemical Tests, &c. &c.*

By J. Mawc. 1820.

Of this little treatise, many thousand copies are, we believe, in circulation. Young chemists and mineralogists, will find it particularly useful in aiding their investigations.

*The Scholar's Remembrancer, containing Tables, Arithmetical, Historical, Geographical, &c.* By M. Seaman.

A very small work, but one likely to promote great economy, and lighten the expense of school books. It contains, besides, a great deal of useful matter in the least possible compass.

#### ORIGINAL CORRESPONDENCE.

##### CHINESE LITERATURE: BUDDAISM.

See Tang kung kei, i. e. "public proofs from the West." Respecting this book, which contains the common evidences of the religion of Füh or Buddha, we find some curious notices in the Asiatic Journal. It was compiled by Shin-sing-chin, and Chan-yuen-chin, who were believers in the doctrines of Füh; the preface by Sha-hung, a priest of Füh. Published in the 13th year of Keen-lung, about 1748.

This work is a compilation of miscellanies, with thirty plates; some of the essays are supposed to be very old. Of the plates, seventeen represent the Peach Garden of Paradise; one represents the world, twenty stories high, widening towards the top, like an inverted pyramid, and resting on a lotus-

flower, beneath which is the sea of fragrant waters, over whose surface the winds of the metempsychosis blow; another, the universe divided into four islands, in the midst of which is the lofty mountain See-ee, rising up above the height of the sun and moon; others, the most felicitous part of Paradise, the seven palisade fences, the seven canopies of net-work, the seven rows of trees, the turrets, the seven pearl and lotus pools, the floors of the palace paved with square tiles of gold, the birds of paradise, perching on the trees, and singing stanzas from the sacred books; the people of the six quarters N. S. E. W. Above, and Below, praising Füh, &c. &c. &c. The price in China is about 2s. but the copies are distributed gratis by the religious: they are small octavos, of 33 pages.

The 6th division is a prayer or charm for the removal of all evil, wholly unintelligible to the Chinese, as it is the hare sounds of Indian words in Chinese characters, but without any explanation. The seventh contains the ten repetitions, that is, to continue the words, "O-ne-to Füh" as long as possible without drawing breath. This is called a *neen*, or repetition. The ninth consists of nine plates of the various forms of Füh; together with the forms of the superior, middle, and lower classes of beings produced in Paradise from the lotus flower. These persons all sit cross legged on the lotus, and are encircled with six lines of small dots, rising from it at the bottom, and which, assuming a pear shape, terminate in a point at the top. The fifteenth is a deboration from the dread of the death. The seventeenth is against the taking away of animal life. The eighteenth is Yun-lee, on the monthly and annual fasts. In every month there are six fasts, viz: on the 8th, 14th, 15th, 23d, 29th, and 30th. Besides these, there are three full months of fasts in every year, namely the first, third, and ninth; so that this sect has one hundred and sixty two fasts every year. To both the monthly and annual fasts are affixed six small circular plates, with thirty dots in each, and the word "Füh" in the centre; for the purpose of designating the lowest number of repetitions in one fast.

The style is what the Chinese call *Ching-tang-che-ien*, "middle class composition." The Christian missionary should not be unacquainted with the book; though from the number of foreign phrases untranslated, references to the metempsychosis, and technicals peculiar to the sect of Füh, it is obscure to those unacquainted with the Pali and Sanskrit. We copy a few passages. On the plate representing the world like an inverted pyramid, it is written, "there are infinite and innumerable worlds, such as this: this is but a single specimen, selected out of myriads of myriads;"—"each single seed of the world produces twenty worlds." As if worlds were propagated like beans!

\* This is a style with which we reviewers are well acquainted, and we are glad to get so good a name for it. We shall not forget Ching-tang-che-wan, in haste.

again, on human nature : " A man's body is totally void of any nature that is good ; yet, who is there that is not deceived by it ! Its bones, which exceed not seven feet in length, must be bound together by tendons : its fleshy parts must be covered over with skin : its nine apertures are constantly pouring out that which is impure : its six senses are blindly indulged : its hair, and nails, and teeth collect heaps of dust, . . . worms are assembled in crowds within, and its outside often becomes food for flies, which eat into the flesh. A single disease puts an end to its life."

Every morning after dressing turn your face to the west ; stand upright ; clasp your hands, and with a continued sound, say O-ne-to Füh. The sound should neither be high nor low, neither slow nor quick, but modulated to the due medium.

O-ne-to Füh, thy body is the colour of gold ! Thy countenance is lovely, bright, and without compare !

Thy snow-white locks wave around the Wo-see-mu hill.

A glance of thy scarlet eyes renders transparent the four seas.

The ten advantages enjoyed by the man who repeats the name of Füh are. 1. All the powerful gods of heaven will secretly and always protect him. 2. All the demigods will constantly follow and keep him. 3. All the Fühs will day and night protect and think of him. O-ne-to Füh will constantly keep him within the circle of his resplendent light. 4. No devil can harm him ; neither serpents, dragons, nor poison can touch him. 5. He shall neither be hurt by fire nor water, by thieves nor swords, by arrows nor poisons, by an untimely death, nor by a suffering life. 6. All his former crimes shall melt away ; and he shall be delivered even from the guilt of murder. 7. His dreams will be all right and pleasant. 8. His heart will be always glad ; his countenance shining ; and his strength abundant. 9. He will be always respected by the people of the world, who will liberally give to him, and worship him as they worship Füh. 10. When he comes to die, his heart will be without fear, his thoughts will be regular ; he will see O-ne-to Füh, with all the sacred ones, who will introduce him to the pure land. " In the dynasty Sung, in the district of Tan, Mr. Hwang, a blacksmith, at every moving of the tongue, and every stroke of the hammer, used with his full force to repeat the name of Füh. One day, while in good health, he called a neighbour to write the following verse for him :—

Ting ting tang tang,  
The iron oft refined, becomes steel at length:  
Peace is near!  
I am bound to the west.\*

Having uttered these words, he was instantly transformed (i. e. died). This verse spread far ; and many people of Hoonan province became followers of Füh."

It is rather curious, that the Roman Catholic religion is mentioned as one of the

\* How perfect a picture of religious fanaticism, whether of Buddha or any other sect :—Ed.

corrupt sects that must be avoided by the Buddhists : for further information on the subject of whose antiquity, doctrines, &c. our readers may refer to Col. Fitz-Clarence's very ingenious and sensible remarks, in his *Journal of Travels from India, &c.*

#### " THE PARADISE OF FÜH."

From the See fang kung kuen of a Chinese Author, above noticed.

An Exhortation to worship Füh, and seek to live in the Land of Joy, situated in the West.—Good friends ! In the world there are a thousand, yea, ten thousand roads. Why do we then exhort men to fix the thoughts on Füh only ? Because the heaviest consequences are connected with the thoughts of men. That which drags the soul, lends the spirit, renders false favourable, and life secure, all proceeds from this source. If the thoughts are good, you ascend to heaven ; if bad, you descend to hell. One straight thought will [after death] make you a man ; one cross thought will cause you to become a beast. Why are there [in hades] hungry ghosts ? Solely because of wrong thoughts. Think of the devil and you will become a devil. Think of Füh, and you will become a Füh. We did you prevent the six ways [of the transmigration] ? there is no other method than to think of Füh. If you will not think of Füh, you will lose a human body, and for ten thousand future ages, not again be able to obtain the same. Therefore, Shih-koa, and Yu-lae, the two sacred ones, advised men to think of Füh. The master of doctrines, Yuen-kung, also advised men to think of Füh. To think of Füh, and yet not be delivered from alternate births and deaths ? [There is no such thing.] For would Füh deceive men ? If men pray to Füh, and yet not become Fühs, the error is not in Füh. It is because the mouth prays, and not the mind. Though one prays thus, it is as if he prayed not. Though he repeat it a whole life, it is not equal to one single sound [from one who worships with the mind]. The word *Yeen*, i. e. to recite, is derived from *Sin*, the heart, and not from *K'or*, the mouth. But, when the heart is alive, the mouth naturally utters a voice, just as the suckling naturally cries when it remembers its mother. We must have Füh in the mind, and Füh in the mouth—neither of these can be dispensed with.

But, it may be said, seeing there are thousands and myriads of Fühs, why call upon men to recite the name of O-ne-to Füh only ? [Answer:] because, among the forty-eight vows which he made, and swore to save the living multitude of all quarters, one runs thus :—In all the ten quarters of the world, in the midst of the living multitude, if but one of those who repeat my name, shall fail to attain life in my kingdom, then I swear that I shall no longer be a god."

The land of this kingdom is yellow gold. Its gardens, groves, houses, and palaces are all elegantly adorned with seven orders of gems. It is encircled with seven rows of trees, seven borders of elegant net-work, and seven fences of palliades. In the midst there are the seven turrets and towers of

gems, the seven flights of pearl stairs, the seven bridges of pearl, the seven pools of pearl, the eight kinds of virtue-producing waters,\* and the nine classes of the lotus. There are also lovely doves, peacocks, parrots, birds of sparkling plumage, and of exquisite notes. The great and unmeasured god *O-lo-han*, the famous disciples of Füh, the relatives of the demigods, the goddess *Kuan-yin*, the most powerful deliverer, the most pure gods of the vast ocean, the unnumbered renovating Fühs, the unnumbered deliverers, all the demi-gods of past, present, and future ages ; and all the sages, whether produced in heaven, or among men ; all will be assembled on the sacred spot. But in that kingdom there are no women ; the women who will live in that country are first changed into men. The inhabitants have the lotus for their father and mother, from whom their persons are produced. (There are three general classes, each of which is subdivided into three.) There are born of the superior, middle, and lower orders of the first class ; of the superior, middle, and lower orders of the second class ; and of the superior, middle, and lower orders of the third class : these differences among the multitude of animated beings, are the consequences of the various degrees of depth or shallowness, diligence or sluggishness, in the desires and active energies. The bodies of the persons produced by the lotus, are pure and fragrant ; their countenances fair and well-formed, their hearts full of wisdom, and without vexation. They dress not, and yet are not cold ; they dress, and yet are not made hot. They eat not, and yet are not hungry ; they eat, and yet are not filled. They are without pain, without itching, without sickness, and they become not old. Enjoying themselves at ease, they follow Füh, gaily frisk about, and are without trouble. After every meal they walk about with the demi-gods, as their companions, on the stairs and walks of that palace. Their noses inhale the most delightful fragrance, their ears are filled with the most harmonious music ; the birds of paradise singing all around. They behold the lotus flowers and trees of gems, delightfully waving, like the motion of a vast sheet of embroidered silk. On looking upwards, they see the firmament full of the to-lo flowers, falling in beautiful confusion, like the rain. The felicity of that kingdom may be justly called superlative, and the age of its inhabitants is without measure. This is the place called the Paradise (or joyful world) of the west. Alas ! the riches and honours of men, after an hundred years, all revert to emptiness. The elegance and glory of heaven itself, after a thousand years, will cease.

But when we enter the Paradise of the west, we shall obtain an unlimited age ; and the means of obtaining it are most simple, depending solely on the one sentence, " Ne-

\* Eight kinds of water : 1, purifying ; 2, cooling ; 3, sweet to the taste ; 4, softening ; 5, moistening ; 6, conferring rest ; 7, removing hunger and thirst ; 8, nourishing the root of virtue.

14." Yet the world will not be at the trouble to seek this good, so easily obtained: but, on the contrary, put on their iron boots, and go asking for the road.

I advise you speedily to swear and vow to this effect: "If I do not both now and henceforth repeat the name of Fuh, and seek to live in that western world of joy; then let me become an evil demon, fall down for ever to the northern part of Hades, to the metropolis of hell. Alas! Alas!"

Give up the three *tedgas* and all books for others to sag at, and the fourteen thousand roads for others to walk in. Beyond the one sentence, "O-ne-to-Fuh," you need not use a single word. Let each seek a retired room, and sweep it clean; place therein an image of Fuh; every day burn a pot of pure incense; place a cup of clear water; and, when evening comes, light a lamp [before the image]. whether painted on paper, or carved in wood, the figure is just the same as the true Fuh: [let us] love it as [our] father and mother; venerate it as [our] prince and ruler.\* Morning and evening, let us worship it with sincerity and reverence; fall prostrate [before it], like the tumbling down of a mountain, and rise up with dignity, like the ascent of the clouds. On going out, let us inform it; returning, let us report the same; whether we travel to the distance of five or ten le (miles) let us set as in the presence of our Fuh. Eating or drinking, let us first offer it up for [Fuh's] nourishment. Raising the eye, or moving the lips, all is [from] Fuh. Let not our rosary ever leave our hands, or the sentence "Ne-to" depart from our mouth. Let us repeat it with a loud voice and with a low voice; repeat it in lines of six words, and of four words; repeat it quickly and slowly; repeat it audibly and silently; repeat it with clasped hands, and with a low voice on our bended knees; repeat it before Fuh, and with our faces towards the west; repeat it, and strike the wooden tablet, and beat the wooden Fuh; † repeat it, while fingering the beads of the rosary, and while walking in the road; repeat it when worshipping, and when alone; repeat it also in the midst of a crowd; let us repeat it in our own houses, and when abroad; repeat it when at leisure, and when in a bustle; repeat it while travelling, and while dwelling at home; repeat it sitting and lying, and let us repeat it even in our dreams; this is the true way of repeating. Thus to repeat, will make our hearts sour † and our

\* This is as literal as possible. It will be difficult for those who maintain, that the heathens do not worship idols as gods, but only the spirit that is supposed to reside in them, to put a fair and unforced meaning on this passage (and there are hundreds of similar passages in Chinese books) without shaking the foundation of their own opinion. The writer of this paper does not seem to have been an ignorant man. The style of the original shows him to have been acquainted with letters, so that, to worship the work of one's own hands as a God, is not confined to the vulgar only.

† Instruments used in worship in the Temple.

‡ Phrase used to denote the meeting of the feelings.

tears to drop; thus to repeat, will cause the fires to extinguish, and the ashes to become cold; thus to repeat, will inspire the celestial gods with awe, and the terrestrial demons with reverence; thus to repeat, will make heaven to rejoice, and the gods be glad! At the sound of Fuh's name, the palace of the king of devils moves and shakes! At the sound of Fuh's name, the wood of swords and the mountain of knives, will be beaten small as dust! At the sound of Fuh's name, a hundred miseries, multiplying into thousands, will all melt away! At the sound of Fuh's name, the road to pay the debt of gratitude to princes, parents, superiors, and the benevolent, and to obtain the three desirable things, ‡ will instantly be opened. Thus, the man who would squeeze out the oil, must cause the sound of the pressing bodies to grind the more forcibly. Thus also the mariner, when his barge meets the swelling of the wave, must ply the oar more vigorously. Having behind us the boiling cauldron, and before us the lotus-pools, were thousand, and myriads of men to prevent our repeating, yet all their efforts would be vain.

## ARTS AND SCIENCES.

### SIDEROGRAPHY\*.

"Among the improvements of the day, not one appears to attract more notice than the Siderographic Art, which has been introduced into this country, by Messrs. Perkins and Fairman.

"The principal object to which this invention has been applied, is to secure Paper Currencies from forgery; and, we believe, the most sanguine expectations of the inventors have been realized, as in no one instance has a successful attempt been made, to counterfeit their most simple notes. A short account of the invention will illustrate the value which is attached to it, and the advantages that will result from its introduction into this country. The chief merit of this invention consists in its power to multiply engravings of the most exquisite, as well as those of inferior kinds, and substituting steel in place of copper plates, in certain cases. This process of stereotyping the Fine Arts, is simple, and easily understood, and is effected in the following manner. Steel blocks or plates are prepared in a peculiar way, of sufficient softness to receive the tool of the engraver, who is able to produce upon them, even better and sharper work than upon copper. This block or plate is then

‡ Perhaps happiness, office, and age.

\* Taken from THE ARCADE, a new monthly work which has just started, and is so called from its being published under the Burlington Arcade. It is poetical, political, satirical, theatrical, and displays a degree of talent for irony and flattery, sufficient to get its makers into hot water, if no better encouragement. We mention it for the sake of quoting a short article on a subject we have for some time intended to bring before the public, and do not desire to borrow from a contemporary without an acknowledgment.

hardened by a new process, without injury to the most delicate lines. A cylinder of steel, of proper diameter and width, is then prepared to receive the impression on its periphery in relief; this is effected by being applied to a singularly constructed press, invented expressly for the purpose. The cylinder is then hardened, and fac-similes may be produced upon steel or copper plates *ad infinitum*; and in this way, Bank Note plates may have the talents of the most eminent artists in England transferred to them. The great advantage of this invention, as applied to secure Bank Notes from forgery, is, that it produces *perfect identity* in all the notes, and admits of a *test*, whereby each note may be *identified*, as all the notes may be perfectly alike except the denomination; and every individual who will take the trouble to furnish himself with an original impression from any one of the *test* dies, may, by comparison, determine whether the note is genuine or not.

"This invention appears capable of putting an entire stop to the forgery of all paper securities, of whatever description.

"We understand with pleasure, that the proprietors of this Patent have formed a connexion with Mr. Charles Heath, an eminent Engraver of this metropolis, and intend to have an extensive and permanent establishment in London, for the purpose of executing work for public or private Banking Institutions, and also all engravings of which a great number of impressions are required.

"Messrs. Perkins and Fairman, it was generally expected, would have had the contract with the Bank of England for furnishing their new notes. Their plan has received the approbation of the most eminent artists of this country, who have signed as testimonial of its excellence and its capability of answering the end proposed. The Report, however, from the Commissioners appointed by his Majesty, precludes that hope for the present."

We inspected this invention in October last, and can bear testimony to its excellence. We never saw any thing so minute and so beautiful as the engravings from the steel. By it the Charter of the Bank might be inserted five hundred times, in miniature, on every note. We understood, however, that the plan adopted by the Bank Directors, previous to the introduction of this American invention, had proceeded too far to admit of their rejection and its adoption, even were that step deemed advisable. We hope and trust, however, that all ingenious men have fair play allowed them in these competitions, and that no authority (no matter how highly patronized) is allowed to interpose between them and the service of the State, as well as the reward of their labours. We say so much; because we have heard this evil complained of; and if it be well founded, this public notice will do no harm.

## LEARNED SOCIETIES.

### CAMBRIDGE, MARCH 3.

MEMBERS' PRIZES.—The subjects for the present year are, for the

## SENIOR BACHELORS,

*Quantum momenti, ad studium rei Theologicae promovendum, habet literarum humaniorum cultus.*

## MIDDLE BACHELORS,

*In GEORGIUM TERTIUM, τοῦ μακρίτου, Oratio Fanebris.*

On Monday the 21st ult. the Members of the Cambridge Philosophical Society held their first general meeting for the present year, in the great lecture room of the Physical Schools, in the Botanic Garden; when the following communications were read, viz. a paper, by the President, upon Isometric Perspective, a paper, by Dr. Thackeray, upon a remarkable mineralized organic body, found at Scarborough; a paper, communicated to the secretary, from Captain Fairfax, upon a new method of taking the soundings at sea. Dr. E. D. Clarke also gave notice of his discovery of Calumina in the Derbyshire Silicates, and other English ores of Zinc. Many other communications were announced; the reading of which was unavoidably postponed until the next meeting of the society.

William Blackstone Rennell, Esq. Fellow of King's College, was last week admitted Bachelor of Arts.

## FINE ARTS.

## BRITISH GALLERY.

No. 277. *Alpine Pastors re-animating a distressed Traveller.*—Edwin Landseer.

From the contemplation of men destroyed each other, with which we began the review of this gallery in our last, we turn to the very opposite picture, of brutes engaged in a work of humanity: what a contrast between the rational and irrational creation! The dogs of St. Bernard, of an uncommonly large breed, rare, it is well known, sent forth in couples during the most inclement seasons, trained to rescue travellers from the perils of avalanche, perishing with cold, or lying buried in snow. One of the two animals in this piece, has a keg of brandy suspended to his collar, the other carries warm woollen drapery: and, thus furnished with the means of aiding the unfortunate, their sagacity in finding, and their attention and skill in relieving, have produced conduct almost too wonderful for belief. We have so often seen the faithful and useful creatures of this species exhibited in acts of ferocious violence—in tearing and being torn, that we deem it a lecture on good feeling to show them in the advantageous light of their nature, and in an employment suitable to the noblest end for which their kind could have been formed. Mr. Landseer is a very young artist, and has acquitted himself ably of his task. One of the dogs is baying for further assistance, and the monks of St. Bernard are visible in the distance, hastening to answer the call; the other is licking into warmth a traveller whom they have discovered among the ice and snow. The dogs are finely painted, and very judiciously contrasted, both in form and colour. Perhaps the mark of colouring interferes

with the rounding of their members. The scenery is wild and picturesque, and in a style of grandeur which gives great character to the subject; while the rich tone of the animals and their appendages is opposed to the snow-covered ground, from which the head and hands of the man appear. We could certainly have wished that the latter had been less prominent, or that if made so, that the hues given to his face should have borne some resemblance to nature, and not been a traditional copy of death, from ancient masters, who thought it was most perfectly imitated by a half-tint resembling a bullock's hide just drawn from a tan-pit. This is the blemish of an otherwise exceedingly clever performance.

No. 3. 111. 200. 214. 223. 259.—B. West, P. R. A.

Among these are the Sketch for the White Horse and his legions, &c. Elisha raising the Shunammite's Son, Elijah raising the Widow's Son, and other pictures by the venerable president, which have been long before the eyes of the public. We doubt whether their exhibition in such numbers is consistent with the declared objects of the Institution; but the Directors probably reconciled to their minds the rejection of the works of young and emulous artists to make room for these pieces, by the consideration that, being among the foremost productions of Mr. West's pallet, they would be attractive to the public, and thus augment the funds for the encouragement of rising merit. We need not go into any critical remarks on these able pictures, the spirit of some of which, and the graceful composition of all, render them worthy of being closely studied.

No. 212. *Devotion, a Study from Nature, at Florence.* No. 219. *A Female in a Roman costume.*—J. Jackson, R. A.

To which last might have been added, 'a study from nature at home'; for we are informed that it is a likeness of the artist's wife. It is the finest female head we have seen from his very forcible pencil. A singular costume serves to set off a face of much beauty and expression, and gives value to some of the richest tints that could be employed, happily stopping short of the artificial. The hues are indeed so delightfully harmonious, that we could not be content with their influence at a due distance, but went close, to examine the means. Here, we are compelled to say, we discovered that, after all, the colour is not that of flesh. The black blotches and scumming which many old pictures acquire from time and cleaning and varnishing, are not allowable in a painting fresh from the easel; and, however we may admire the general effect, it is impossible not to feel that it is produced by a process at variance with truth and nature. The difference between the tone of hands and face, in this portrait, will strike the most heedless eye. "Devotion" is no less vigorous and brilliant, but appears to be too compact, and to occupy too small a space for the ground on which it is painted. If Mr. Chantrey could nourish his beard to the fit length, and look wondrous devout, we think this might pass for

his resemblance. It looks like that eminent sculptor disguised.

No. 235. 241.—M. A. Shree, R. A.

These also are portraits, under the titles of "A Student," and "Design;" the design being to give generic names to individual subjects, in order to render them eligible to a gallery which excludes portraiture. Nothing can be purer than the colouring, nothing more elegant than the forms, nothing more pleasing than the expression of these creations of Mr. Shree's art. But how unlike the glow of real life is this lady ("Design," whom we have, by the way, seen before—we do not mean seen before by the way) —a figure of pure design charmingly coloured, so as almost to look like nature.

No. 267. *Rural Breakfast.*—W. M. Craig.

If the whole business of life were to eat, this would be full of life's business. We never witnessed so much stuffing in so small a compass: man, woman, child, babies at breasts, dogs, cats, all animate nature at relentless feed. It occurs to us as an odd thing, that all this artist's pictures which we remember, are devoted to gastronomy—apoplexy, cook-shops, &c. as if inspired by his stomach instead of his brain. In this instance, the frame is as full of figures as the frames of the figures are full of meat; there is no empty place in either "to be let." The story is overloaded rather than well told.

No. 4. *A Country Girl.* No. 173. *The finding of Oedipus.*—W. Ross.

We pass over the Country Girl, as an improvement on some of the former works of this young and promising artist, to remark, that on glancing at No. 173, our attention was arrested, and we examined the picture for a considerable time, recognizing qualities in art of no ordinary kind; such as the grace of the antique in the turn and form of the figures; a cleanness of colouring, and a vigorous style of penciling; a suitable tone of back ground, with other accessories, well calculated to contrast and give effect to the whole. We now turned to the catalogue for further information, not indeed expecting to find the name of so youthful a painter: from which it may be inferred, that our surprise went along with our approbation, and that, from this specimen, we augur more certainly than we did last year, that Mr. Ross will become an ornament to the British school of design. When such a work is produced at an early age, and after only a few years' study, nothing is wanting but perseverance to become eminent.

No. 42. *Hercules killing the Man of Calydon, &c.*—W. Etty.

The talents which distinguished this artist's performance in the Manlius of last year, has been carried still further in the present exhibition. We have, in this picture, a greater variety of tint and colour, contrasting each other with fine effect. Much has been done in throwing down the barrier between ancient and modern art; more especially in what regards the texture or mechanism of their works; and, allowing for the operation of time upon what has been now produced, we have no reason to think that any great disparity would appear between it

and elder productions in the highest esteem. In this instance, as well as in many others, the choice of subject has been made in order to display the peculiar skill of the painter, and to exhibit his powers under a form similar to those of the old masters; but in which his practice and his admirers are but too likely to be limited in extent and numbers. A modern pugilist or pugilists might have insured the attention of the fancy; as it is, the British School of Design alone, we fear, will appreciate his services, and consider him as having contributed to its improvement and celebrity.

No. 253.—*View of Snowdon, from Mount Gwynant, Caernarvonshire.*—Copley Fielding.

We select this from several very clever performances, to express the gratification we always feel at the exalted style with which Mr. Fielding clothes the scenery of his native land.

In effect and execution, the view of Snowdon exhibits the sublime and classic of art, in which the locality of the scene unites with the poetry of the imagination.

No. 262. *Grove Scene.*—J. Stark.

Turning from the sublime to the natural, we are equally touched by the character of truth and simplicity which appears in this well-chosen scene. The observer of nature and the admirer of art will feel all that belongs to the talents of Mr. Stark, as much as could be expected by any eulogiums to point out his merit.

No. 238. *Lear and the Fool.*—J. Boden.

It is difficult even for the experienced eye to judge of pictures placed in certain situations, more especially when elevated and near the light: the lot, however, of this incongruity must, notwithstanding their merit, fall to some; and, as if the artist had calculated upon this lottery-chance being his, he has painted up to the tone of his elevation; and, we may add, in a style and character we have seldom seen equalled, either for boldness of pencil, harmony of colour, or strength of expression. This work reminds us of the powers of Carravaggio, without his blackness; and we think we may (though it is not always safe to anticipate the success of a rising artist) congratulate Mr. Boden upon his performance, and express our conviction that he will one day find the level he deserves. The place assigned to his Richard Cour de Lion, No. 55, shows what effect might have been expected from the Lear, in a similar situation.

## ORIGINAL POETRY.

### MIDSUMMER MADNESS.

Now would I that I might cast me in the sea  
And perish not!—Great Neptune! I would be  
Advanced to the freedom of the main,  
And stand before your vast creation's plain,  
And roam your watery kingdom thro' and thro',  
And see your branching woods and palace built,  
Spar built and domed with crystal, oh! and view  
The bedded wonders of the lonely deep,  
And where on coral banks the Sea-maidens sleep,

Children of ancient Nereus, and behold  
Their streaming dance about their father old  
Beneath the blue Ægean, where he late  
Wedded to prophecy, and full of fate:  
Or rather as Arion harped, indeed,  
Would I go floating on my dolphin-steed  
Over the billows, and, triumphing there,  
Call the white Siren from her cave, to share  
My joy, and kiss her willing forehead fair.

I would be free, Oh! thou fine element,  
That with thy thousand ears art round me bent,  
To listen and reply—Immortal air!  
Viewless and now unfelt, I would be hurled  
Almost at will about your kingdom wide,  
And mount aloft and mangle in my pride  
With the great spirits of your purer world;  
And with the music of your winds sublime,  
Commune, and see those shadows (for this earth  
Too buoyant) and exelling shapes, which Time  
Has lifted us to a diviner birth,  
Amongst the steepest stars. Away, away,  
For in the fountains high, whence streams the  
day,

Now will I plunge, and bathe my brain therein,  
And cleanse me of all dull poetic sin.

It may not be. No wings have I to scale  
The heights which the great poets pass along:  
On earth must I still chaunt an earthly song:  
But I may hear, in forests seldom trod,  
Love's knightly martyr, the lost nightingale,  
Voice her complaint, and when the shadows fall  
See the white stag glance swiftly o'er the sod  
Afrighted, like a dusky spectre pale.  
This is enough for me, and I can see  
That female—fair—(the world's) divinity,  
Brighter than Naiad who by rivers cold  
Once wept away her life, as poets told,  
And fair as those transcendent queens who drank  
The rich nectarean juice in heaven above,  
Full in the incomparable smile of Jove,  
And saw his lightning eyes, and never sank  
Away before him. 'Tis enough for me,  
That I can bask in woman's star-like eyes,  
A slave in that love-haunted paradise,  
Without a wish ever to wander free.

J.

### [By Correspondents.]

#### ROME.

Oh! how thou art changed, thou proud daughter  
Of fame,  
Since that hour of ripe glory, when empire was  
thine,  
When earth's purple rulers, kings, quailed at  
thy name,  
And thy capitol worshipped as Liberty's shrine.  
In the day of thy pride, when thy crest was un-  
tamed,  
And the red star of conquest was bright on thy  
path,  
When the meteor of death thy stern falchion's  
edge flamed,  
And earth trembled when burst the dark storm  
of thy wrath.

But Rome thou art fallen! the memory of yore,  
Only serves to reproach thee with what thou art  
now:

The joy of thy triumph for ever is o'er,  
And sorrow and shame set their seal on thy brow.  
Like the wind shaken reed, thy degenerate race,  
The children of those once the brave and the free—  
Ah, who can the page of thy history trace,  
Nor blush, thou lost city, blush deeply for thee!

Could the graves yield their dead, and thy war-  
riors arise,  
And see thy blades rusted, thy war banners furled,  
And

Would they know the proud eagle that soared  
thro' the skies,  
Whose glance lightened over a terror struck  
world?

Yet 'ere in disgrace, in thy sadness and gloom,  
An halo of splendour is over thee cast;  
It is but the death-light that reddens the tomb,  
And calls to remembrance the glories long past.

### LINES.

"Pommi ovr! sol occhio i fiori, e l'erba,  
O dove vinco lu! l'giaccio, e la Nere,  
Sarò qual ful."

Petrarch.

Yes thine, still thine—  
Tho' nature wren and withering,  
Her pale shroud round her gathering,  
Drearly pine:

Free memory,  
Tho' rigors bind the earth and air;  
And flood and field are bleak and bare—  
Aye glows for thee!

Below—above,  
Seems every thing inanimate,  
And every creature desolate,  
Yet still I love.

Shall time or tide  
The heart-warm stream of love arrest,  
And freeze its fountain in the breast,  
While life abides!

Who hath not tried  
To clasp some cherish'd happiness,  
Secure from Fortune's fickleness,  
'Till death betide?

Alas—in vain;  
Thro' frost and flake—thro' sun and show'r—  
For ever roams the blighting power  
Whose breath is pain.

Yet if the light,  
Now quiv'ring from thy dark-lash'd eye,  
Shine on the hours of misery,  
I'll deem them bright!

Fb. 22d.

C.

### THE VICES.

[These lines (with a few corrections) are written  
by a boy not fourteen years of age, at the school  
designated by his signature. Ed.]

Once on a time, in solemn state,  
The Vices held a grand debate,  
To choose a Ruler of their race  
Who of them all was found most base.  
The day arrived, and in the Hall  
Of Meeting now was silence all:  
Ambition started from his seat,  
And raised himself upon his feet;  
His giant form was seen on high,  
Vast, as if meant 't invade the sky;

His voice like the dread whirlwind broke  
On the stunn'd ear, and thus he spoke—

"If any rival dared contend  
With me the palm, now let him bend  
Before me, and in this dread hour  
Acknowledge my superior power.  
It would be vain to enumerate

The services I've done the state;  
How from the lowest stage of need,  
To gladdy height, frail man I lead;  
And thence, amidst visions fleeting, bright,  
Dash him to pieces in my might!"

He ceased—their exclamations rend  
The roof, and to the heavens ascend.

Emy from the crowd now stalk'd—  
The firm ground trembled as she walk'd;  
Pale was her face, and her grey hair  
Streaks'd loosely in the troubled air;

Her step was solemn, cautious, wild,  
Her visage one that never smil'd;  
No one dared meet her piercing eye,  
That gleam'd in maddening misery.

"Hear me," she cried; "my dreadful dart  
Lies fostering in each human heart;  
Woe's not for me, mankind would know  
All happiness where now is woe:

Woe's not for me, to meet them pain,  
Your toils and snares were urged in vain;  
Therefore on me confer the bay,  
And all the honours of the day."

She spoke.—Impatient from his seat  
Malice arose with diabolical heat;

He cast around his eager eye,  
And seem'd to seek a rival nigh—  
As if no timid Vice durst brook  
The triumph of that horrid looke.—

With scowling glance that flash'd with fire,  
And countenance replete with ire,  
Revenge leapt up—immediate to his place  
Malice retir'd, assum'd of his disgrace.

"I thought that when was heard my name,  
My station felt, and glorious fame,  
Thou'ldst grant without a moment's pause,  
To me this prize, and thy applause.

Remark ye how the human race  
Their hopes must yield before my face?  
What is a thing unless 'tis done?  
'Tis I complete what Emy has begun!"

"Twere tedious to relate the names  
Of Vices, and their various claims,  
Who tried to gain the laurel green;  
For deeds of blood, or acts obscene:

But last of all, in thoughtful mood,  
Uprose that wretch, *Ingratitude*.  
Blasphemy, and *envy* too,  
Blush'd as his features met their view.—

"Aye since this earthly ball was made,  
It has been cur'd with my foul shade;  
I enter'd first the human breast;  
And since then ever did I rest?

I fill the world with ev'ry ill;  
'Twas I first taught fierce Man to kill,  
Now appeal to all of you—  
What harm, without me, could you do?"

The Vices then, without delay,  
Grant him the sceptre, crown, and bay.  
*Christ's Hospital.* J. F. H.

SONG.

A lightsome heart, and a sparkling eye,  
To light my steps where'er I rove,  
And a friendly cup, and a cloudless sky,  
Are what I love—are what I love.

Then let the sage old boar,  
Laurel fresh to gather;  
But what can he wish more,  
Who has all these together?

Then key my pretty lassie, O!  
Hear, my pretty lassie, O!

Whene'er to thee

I drink, you see,

I fill my deepest glassie, O!

My heart with joy, and my cup with wine,

Brimsful as Jupiter's bowl above,

With a glance to give it a hue divine,

From her I love—from her I love.

Then let the sage one soar, &c.

## BIOGRAPHY.

MR. JOSEPH RITCHIE.—This gentleman, who was engaged in a scientific mission into the interior of Africa, died, we regret to hear, at Mourzuk, about 400 miles to the southward of Tripoli. He was a young man, and possessed of all the qualities requisite to bring the prosecution of his arduous undertaking to a successful result; being well-informed, zealous, patient, and enterprising. Had he been able to penetrate to Timbuctoo, there can be no doubt that the geography and customs of Africa would have received much new illustration. Mr. Ritchie was a native of Otley, and had, we understand, been for a considerable period in the service, and inured to a hot climate, but unhappily appears to have been unable to resist the mortal influence of the scorching climate to which he had travelled.

## SKETCHES OF SOCIETY.

### PANTHON MIGNERIE.

It is said that the celebrated author of the *Miseries of Human Life*, who has discovered above fifteen hundred intolerable vexations in human existence, being at present in Paris, proposes to publish a new edition of his work, and to add to it the following *Miseries*—

To go to a ball where there is no dancing, though the ball takes place in the Opera, in the very Temple of Terpsichore.

To be defeated all night by thirty or forty musicians, who, though the company decline dancing, torment you for eight hours with quadrilles, or country dances, and who perform with nearly as much taste and correctness as their brethren of the Theatre Francaise.

To work your way through a thick crowd, inhaling a suffocating atmosphere, to make unceasing attempts to proceed from the stage to the pit, and from the pit to the stage, and to walk by moving three steps forward, and two backward, like the unfortunate pilgrim, whom Catherine de Medicis, in the days of her penitence, vowed to send to Jerusalem.

To find all the ladies wrapped up in black cloaks and hoods, sitting past you like shadows, or silently listening on their partners' arms.

To observe that many of the gentlemen are in boots, and coloured cravats, and that it is not customary to take more pains to dress for a masked ball than to join a hunting party; to find that you are dressed better than any body else, and that you look sin-

gularly gay with silk stockings and dress shoes.

If you are tired, to be unable to find a seat, all the benches being occupied by gentlemen sound asleep.

If you are hungry, to contend for two hours at the side-board to obtain a few scraps, for which you pay as dearly as for a good dinner at Beauvilliers.

To hear only the buzz of insipid gossip, and confused exclamations of, *I know you; How do you do? I know where you live*; and to see people yawning while they are endeavouring to amuse themselves.

Towards the end of the ball, to be accosted for the first time by a little female mask, who informs you that you sometimes walk on the Boulevard; this rouses your curiosity—you question her eagerly—you play the gallant; the fair *incognita* interests you more and more; you offer her your arm, and entreat that she will tell you who she is; she consents to receive you for a moment in her box; good fortune awaits you; the mask falls, and what is your disappointment, to behold one of those mercenary graces who are so numerous in all places of public resort.

Finally, at six in the morning, fatigued, mortified, hoarse, and shivering with cold, you resolve to go home; you have lost the number which was given you in exchange for your mantle; in vain you dispute to obtain it; the officer of the guard begs you will depart; you go out; it is a wet night; there is no *fiacre* to be got, and you are obliged to walk home, accompanied by a pelted shower of rain to your very door.

## THE DRAMA.

### KING'S THEATRE.—*Gustave e Bejardo*.

This new opera, founded on the chivalry of the knight without fear and without stain, so well known in French history, is the production of Signor Stefano Vestris, the score by Signor Liverati. The chevalier Bayard surrenders his mistress to his companion, and makes a sacrifice of love on the altar of friendship. The dialogue is far superior to the generality of Italian operas, the action more chaste, the poetry more elegant. In detail, there are no faults to be found; but as a whole, perhaps, a degree of languor is the prevailing defect. A little more spirit infused into a piece, possessing so large a share of taste, would have enhanced its effect, and rendered it incomparably the best modern work of the kind, brought forward in this country. The music also is appropriate, and of great merit, though the pure Italian style seems to have been merged in the invention of difficulties, requiring the highest instrumental power and execution; we are consequently rather pleased by a display of skill, than charmed by a pouring out of melody. A simple air delights more ears than a concerted combination, giving business to the entire orchestra; and we are such Goths as to prefer a song to a chorus ever so well composed. A Signor Bianchi, of considerable celebrity on the

boards in several Italian cities, made his *débüt*. He is an admirable musician, and possesses a fine compass of tenor voice. His reception was very flattering, and his qualifications bid fair to render him a lasting favourite with the British public. Some of the scenes are pretty, and one, of an armory, magnificent. We observed nothing worthy of particular remark in the performances, or in the performers, whose talents are known. The political events of the day are not auspicious to the King's Theatre; but we hope in a few weeks to see it in greater splendour.

**DURY LANE.**—The Hebrew drags on; and COVENT GARDEN.—Invahoe goes off.

**ORATORIOS.**—Sir George Smart provides so delectable a treat, that his Wednesdays make full houses. Mrs. Salmon has enchanted us, and Brahmin, reserving his astonishing powers for the noblest efforts, sets native art far above the range of any foreign singer with whose achievements we are acquainted. Ambrogetti does not shine in oratorio.

## VARIETIES.

Canova is employed in executing a statue of Jean Jacques Rousseau, for a public building in Geneva.

It is not generally known, that cloth may be manufactured from the fruit of the Ananas. The fine and strong fibres of this delicious fruit, on being spun, produce a shirting cloth of very good quality. The Ananas cloth is easily bleached in Brazil; and indeed it is only there that the cloth can be successfully manufactured, for in that fertile climate the Ananas grows abundantly in the open air, particularly in those parts where the soil is mixed with clay.

**ANAGRAMS.**—To the curious transpositions inserted in our last, we are requested to add the following; some of which, however, must be familiar to the amateurs in this sort of ingenuity.

Gulcheries	.....	All great sin.
Encyclopaedia	.....	A nice cold pie.
Breakfast	.....	For bakers.
Telegraphs	.....	Great helps.
Astronomers	.....	Moon-stares.
Lawyers	.....	No more stars.
Penitentiary	.....	Sly wars.
Democrasical	.....	May I repent it.
Revolution	.....	Comical trade.
Government	.....	To love ruin.
Paintment	.....	The ye powers.
	.....	Nice thoughts.

Letters from Rome, more recent than those we last alluded to, state that Sir Humphrey Davy has perfectly succeeded in unravelling the manuscripts of Pompeii and Herculaneum. This operation now requires but little time; but unfortunately, most of the MSS. are entirely spoiled and illegible.

Two interesting *mémoires* have lately been sent to the French Academy of Inscriptions and Belles-lettres. One is by M. Duchesneil, relative to the antiquities of Cherbourg and Valognes. The other is by M. Gerville, concerning some medals found in the Département of La Manche.

In Hungary the cold has been excessive during the present winter. On the 16th of January, a detachment of an Austrian battalion proceeding from Leopoldstadt to Nadass, was overtaken by a dreadful hurricane. About twenty-four of the men were blown down. The news of this circumstance did not reach the village of Spaeza till the following day. Assistance was immediately dispatched to the sufferers, but the chief part were frozen to death; only a very few were saved.

**Indian cure for the ear-ache.**—Take a piece of the lean of mutton, about the size of a large walnut, put it into the fire and burn it for some time till it becomes reduced almost to a cinder; then put it into a piece of clean rag, and squeeze it until some moisture is expressed, which must be dropped into the ear as hot as the patient can bear it. This has been tried in a family at Madras, in more than one instance, and gave immediate relief, after laudanum and other medicines had been ineffectually applied.

## Asiatic Journal.

**Scottish National Monument.**—The Scots Magazine for February contains a letter addressed to the Lord Advocate of Scotland, ably written, and earnestly recommending the erection of a building on the Calton Hill, similar to the Parthenon, as the national monument for which a subscription has been entered into in that country. The arguments appear to us to be very cogent, if not unanswerable; and we feel assured that if so grand a design were undertaken, the patriotic hearts of Caledonians all over the world, would warm to promote its splendid completion. We are decidedly of opinion, that the true character of such works is perverted by the erection of churches. Let us in these matters, as in others, remember the divine precept—render unto Caesar that which is Caesar's, and unto God that which is God's. A place in which to worship our Creator ought by no means to be confounded with a place to do honour to our fellow mortals.

A very remarkable surgical operation has recently been performed by M. Gubian of Lyons. A little girl, eight years of age, was holding in her mouth a pebble, about the size of a bean, when it accidentally fell into the trachea. This substance, coming in contact with the delicate membrane which lines the trachea, speedily produced a violent inflammation in the organ of respiration. The inflammation abated in a few days; but it was succeeded by every symptom of pulmonary phthisis. Six weeks elapsed, and the state of the patient became daily more alarming, when she was taken to Dr. Gubian, who made an incision in the throat, and succeeded in reaching the trachea, and extracting the pebble. This operation, which is so difficult, on account of the moveable nature of the larynx, and the rapid flowing of the blood in the trachea, was executed with a degree of confidence and dexterity surpassing all praise. The wound is already cicatrized. Many years ago Dr. Caron performed the same cure, with equal success, in Paris.

Dr. Paricet, who was sent by the French government to Calif, to make observations on the fever which some time ago raged in that city and its vicinity, has returned to Paris. He is of opinion that the disease differed but little from the yellow fever of America, and that the germ, which had been for some time in the country, was developed by local circumstances.

The late Musical Festival at Edinburgh netted 1279*l.* which has been distributed among the charitable institutions of that city and neighbourhood.

Duke Ho, with whom the accounts of Lord Amherst's late embassy made us so well acquainted, has since been promoted to the presidency over the Western Tartar dominions of China. It seems that the sovereign of the Celestial Empire has not considered his negotiations with the British in an unfavourable light, as, besides the Government, he has granted his Empress's brother permission to wear *yellow cloths*!

## LITERARY NOTICES.

A life of the late Marshal Ney is announced at Paris, by his brother-in-law, Mr. Gamot.

An authentic history of Ireland (certainly a work much wanted) for the last three thousand and odd years, is said to be in preparation!!

A Susskrit and English Dictionary has been completed by Mr. Wilson, at Madras, and was to be published in September or October last.

The French papers state that Chateaubriand has been required to write the memoirs of the Duke of Berri, and that the necessary documents are to be furnished by the royal family.

## METEOROLOGICAL JOURNAL.

MARCH, 1820.

Thursday, 2—	Thermometer from 31 to 40. Barometer from 29, 09 to 29, 51. Wind W. and N. W. 6 and 4—Generally cloudy, sunshine at times. A little snow in the morning.
Friday, 3—	Rain fallen, 1 of an inch. Thermometer from 26 to 36. Barometer from 29, 63 to 30, 10. Wind N. 4 and 2—Generally clear, clouds passing.
Saturday, 4—	Thermometer from 25 to 37. Barometer, from 30, 14 to 30, 29. Wind N. and N. E. $\frac{1}{2}$ —Middle of the day cloudy, with a little snow, the rest generally clear.
Sunday, 5—	Thermometer from 24 to 34. Barometer from 30, 35 to 30, 41. Wind N. E. 1 and 3—Generally clear.
Monday, 6—	Thermometer from 24 to 35. Barometer from 30, 35 to 30, 37. Wind N. E. 1—Clouds generally passing, clear at times.
Tuesday, 7—	Thermometer from 23 to 38. Barometer from 30, 36 to 30, 26. Wind N. b. W. $\frac{1}{2}$ and N. 2—Generally cloudy.
Wednesday, 8—	Thermometer from 31 to 42. Barometer from 30, 41 to 30, 44. Wind N. E. $\frac{1}{2}$ —Generally clear.

Edmonton, Middlesex. JOHN ADAMS.

### Miscellaneous Advertisements, (Connected with Literature and the Arts.)

*British Gallery, Pall Mall.*

**THIS GALLERY**, for the Exhibition and Sale of the Works of Modern Artists, is open daily, from ten in the morning until five in the afternoon.

JOHN YOUNG, Keeper.  
Admission 1s.—Catalogue 1s.

### BOOKS PUBLISHED THIS DAY.

Handsome printed in small 8vo, with Ten Plates, price 7s. 6d. A New Edition of

**A NEW SYSTEM OF DOMESTIC COOKERY**, formed upon PRINCIPLES OF ECONOMY, and adapted to the Use of Private Families. Comprising also the ART of CARVING. Observations on the Management of the DAIRY, and FLOUR YARD, Instructions for HOME BREWERY, WINES, &c. COOKERY for the RICH, and for the POOR; many very useful MISCELLANEOUS RECEIPTS, and DIRECTIONS proper to be given to SERVANTS both in Town and Country. To which is prefixed an ESSAY on DOMESTIC ECONOMY and HOUSEHOLD MANAGEMENT, comprising many Observations which will be found particularly useful to the Mistress of a Family. BY A LADY.

"This is really one of the most practically useful books of any which we have seen on the subject. The Lady who has written it, has not studied how to form expensive articles for luxurious tables, but to combine elegance with economy, she has given her directions in a plain sensible manner, that every body can understand; and these are not confined merely to cooking; but are extended to a variety of objects in use in families; by which means the utility of the book is very much increased."

Printed for John Murray, Albemarle Street; sold also by every other Bookseller in England, Scotland, and Ireland, of whom may be had, lately published,

**THE NEW FAMILY RECEIPT BOOK**, a New Edition, greatly improved, handsomely printed in small 8vo, price 7s. 6d. in boards.

*Life of the King.*

In 2 vols. 8vo, embellished with 18 portraits, price 2s.

**GEORGE THE THIRD; his COURT and FAMILY.** This interesting work, which has been long since prepared for the press, will be found to contain a richer collection of original Anecdotes of illustrious and distinguished persons than has ever yet been submitted to the curiosity of the public, and it abounds in relations of those peculiar traits of character for which his Majesty was so distinguished during his long and eventful reign, and which have rendered his personal history so remarkably attractive. Printed for Henry Colburn and Co. Conduit Street.

In 1 vol. 12mo, price 7s. boards.

**TERENCE'S ANDRIAN**, a Comedy, in five acts; and Suetonius's Life of Terence, translated into English Prose, with numerous critical and explanatory Notes. By W. R. GOODLUCK, Junr. Printed for Longman, Hurst, Rees, Orme, and Brown, Paternoster Row.

*Stories from the History of Greece.*

**STORIES** selected from the HISTORY of GREECE. By MISS LAWRENCE, of Gloucester, price 2s. 6d. bound. London: Printed for Booby and Sons, Broad Street, Exchange. Where may be had, Questions adapted to the Goldsmith's Abridged History of Greece, designed for the Use of Schools, and particularly applicable from the minuteness of their subdivision, to those Schools in which the Pupils are arranged in Classes, according to the National Plan of Instruction. Price 2s. 6d. bound.

*Education.*

**LETTERS** from a MOTHER to her DAUGHTER at going to School. Pointing out the Duties towards her Maker, her Governors, her School-fellows, and herself. By Mrs. J. A. SARGANT. Dedicated, by permission, to Mrs. Bashington, of Whitehalls House, King's Road, Chelsea. Price 3s. in box and gilt edges, or bound. With this small volume is given a Presentation Leaf.

In 2 vols. 8vo, a new edition, embellished with Portraits, 11s. 6s. boards.

**THE LIVES OF BRITISH STATESMEN.** BY JOHN MACDIARMID, Esq. Containing the Lives of Sir Thomas More; Cecil, Lord Burleigh; Wentworth, Earl of Stafford; and Hyde, Earl of Clarendon. The Influence which the Conduct of our Statesmen has had on our National Character, renders their Biography an important and attractive subject. The Plan of this Work is to unfold the private History and Character of the man, to explain his political views, and record his public actions. The contemporary History, the delineation of Manners, and the state of Knowledge, are introduced as far as was requisite to illustrate the Biographical Picture. London: Printed for Longman, Hurst, Rees, Orme, and Brown. A continuation of the work in press.

In 8vo, price 12s. bound, a new edition of  
**QUINTI HORATII FLACCORUM** Interpretation et Notis Illustravit LUDOVICUS DESPREZ, Cardinalis Sacrae ac Rhetorice emeritus, suum Christianissimi Regis, in suum emeritum Delphin, ac serenissimum principum Burgundiae, Andium, et Bituricum. Huius editionis accesserit viae Horatii cum Daceti notis, quidem chronologia Horationis, et praefatio de Satira Romana. Editio vigesima secunda, prioribus longe emendatior. Impensis F. C. et J. Longman; Scattered at Co., Lackington et Co., L. Kingston et Co., Godel et Harvis; W. Gieger, J. Richardson; J. M. Richardson; J. Mawman; Harris et al.; Booby et al.; E. Williams; Baldwin et Co.; G. et W. B. Whitaker; Sherwood et Co.; J. Robinson; Ogle et Co.; Simpkin et Co.; et R. Saunders.

*Handman on Typhus Fever.*

8vo, boards, price 6s. second edition.

**A SUCCINCT ACCOUNT OF THE TYPHUS, or CONTAGIOUS FEVER**, of this country, exemplified in the Epidemic which prevailed in the Neapolitan in 1817 and 1818; with the appropriate method of treatment, as practised in the House of Recovery. To which are added, Observations on the nature and properties of this contagion, tending to correct the popular notions of this subject, and pointing out the means of prevention. By THOMAS WATMAN, M.D., F.R.S. London: Printed for Longman, Hurst, Rees, Orme, and Brown. Of whom may be had, by the same author, Reports on the Diseases of London, and the State of the Weather, from 1804 to 1816, in 8vo. 8s. boards.

A Practical Synopsis of Cutaneous Diseases, the 5th edition, in 8vo. 12s. boards.

Delineations of Cutaneous Diseases, in 4to, with upwards of 70 coloured plates, 12s. 12s. boards.

In 3 vols. 12mo, price 11s. 1s. boards.

**DOMESTIC SCENES. A NOVEL**, BY LADY HUMDRUM, author of more works than bear her name.

Should an approving smile be excited—a tear of sympathy be dropped—or a right feeling be strengthened in the perusal of these pages, the author will be satisfied that the time bestowed upon them has not been wholly unprofitable.—Dedicated.

Printed for Longman, Hurst, Rees, Orme, and Brown, London.

Price 7s. 6d. bound, a new and corrected edition of

**D. R. GREY'S MEMORIA TECHNICA**, or Method of Artificial Memory, applicable to and exemplified in Astronomy, History, Geography, and Chronology. Also, Jewish, Grecian, and Roman Coins, Weights, Measures, &c. To which are subjoined, Lowry's Mnemonics delineated, in various branches of Literature and Science. Oxford: Printed for J. Vincent, near Brasenose College; F. C. and J. Rivington; Longman and Co.; Baldwin and Co.; G. and W. B. Whitaker; J. Nunn; Sherwood and Co.; Lackington and Co.; and W. Lowndes, London.

**MEMOIR on the FORMATION and CONNECTIONS of the CRURAL ARCH**, and other Parts concerned in Inguinal and Femoral Hernia. In 4to. price 7s. BY ROBERT LISTON, Member of the Royal Colleges of Surgeons, of London and Edinburgh, Lecturer on Anatomy, &c. Printed for Peter Hill and Co. Edinburgh; Baldwin, Cradock, and Joy, London; and Hodges and M'Arthur, Dublin.

On Wednesday next will be published, No. 24, price 2d of **THE INDICATOR**.—The following are the heads of the principal subjects that have appeared in this work. A mistake of Mr. Thomas Paine on Learning; The Brain Mised, and what happened to him at Brighton; To any one whom bad Weather depresses; Social Genealogy; Ludicrous Exaggeration; Mists and Fog; To the Larks on the Commencement of Fates; Gilbert! Gilbert! Fatal Mistake of Nervous Disorders for Insanity; Anglers; Literary Recollections of London; Charles Brandon and Mary Queen of France; On the Household Gods of the Ancients; The Shoemaker of Yveroy; More news of Cyprus; Far Countries; A Fair for a Chimney-corner; Thiers, ancient and modern; A few Thoughts on Sleep; The Fair Revenge; Getting up on Cold Mornings; All London or No London, a tale; Character of an Old Gentleman; Description of Philadelphia by the Poets. An Account of the Origin and Meaning of Christian Names, as well as of the Significations of various Greek and Latin Names; Ronald of the Perfect Hand; Huts, new and ancient; Hercules and the Serpents, &c.

"As this little work is now the only remaining two penny publication; and it continues, because the subject-matter has no reference to Politics, Religion, or temporary occurrences. For the same reason, it can be forwarded to the country Subscribers through the medium of the Booksellers' monthly parcels, without any loss of interest arising from the delay. Sets may now be had complete, as there shall be a fresh Edition of the 1st Number, and the 2d, 3d, and 4th Numbers have been reprinted. Orders received by the Booksellers, News-men, and by the Publishers, J. Appleyard, 19, Catherine-street, Strand."

In 8vo, second edition, price 6s.

**ILLUSTRATIONS on the POWER of EMETIC TARTAR**, in the Cure of Fever, Inflammation, and Asthma, and in preventing Consumption and Apoplexy. BY WILLIAM BALFOUR, M.D. Printed for Peter Hill and Co. Edinburgh; Longman and Co. London; and Hodges and M'Arthur, Dublin.

**THE EDINBURGH ANNUAL REGISTER** for 1816. Vol. 15. Parts 1 and 2. In 8vo. 11s. 1s. Printed for A. Constable and Co. Edinburgh; Longman, Hurst, Rees, Orme, and Brown; and Hurst, Robinson and Co. London. Of whom may be had, Vol. 1. to VIII. bds. 9s. 3s.

In 8vo, second edition, price 12s. boards.

**HISTORICAL DISSERTATIONS on the LAW and PRACTICE of GREAT BRITAIN**, particularly of Scotland, with regard to the Poor, on the Bonds of Charity, and on the Means of promoting the Improvement of the People, together with a Selection of Facts and Documents, and Miscellaneous Enquiries, illustrative of the Management of the Poor in Scotland, and in various parts of the Continent of Europe, &c. By the Rev. ROBERT BURNS, one of the Ministers of Paisley. Edinburgh. Printed for Peter Hill and Co.; and Longman and Co. London.

In 2 vols. 8vo, price 11s. 1s. boards, with a portrait engraved by Fittler, the 2d Edition of the

**LIFE of WILLIAM, LORD RUSSELL**, with some Account of the Times in which he lived. By LORD JOHN RUSSELL. Praised for Longman, Hurst, Rees, Orme, and Brown; and J. Ridgway, London. Also just published, in 8vo, price 12s. The Life of Lady Russell, by the Editor of Madame du Deffand's Letters, with Letters from Lady Russell to her Husband, Lord Russell; some miscellaneous Letters to and from Lady Russell, &c. &c. from the originals in the possession of the Duke of Devonshire.

In 12mo, price 4s. 6d.

**THE MOTHER'S MEDICAL ASSISTANT**; containing Instructions for the Prevention and Treatment of the Diseases of Infants and Children. By Sir ARTHUR CLARKE, M.D. &c. &c. author of an Essay on Stings. Printed for Henry Colburn and Co. Conduit-Street.

London: Printed for the Proprietors, by W. POPE, 67, Chancery Lane: Published every Saturday, by G. A. SCRIPPA, at the Literary Gazette Office, 30, 2, (Exeter Change) Strand; where Communications, (post paid) are requested to be addressed to the Editor.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

## REVIEW OF NEW BOOKS.

### THE HUNTINGDON PEERAGE.

*Comprising a detailed Account of the Evidence and Proceedings connected with the recent Restoration of the Earldom; together with the Report of the Attorney General, on that Occasion. To which is prefixed, a Genealogical and Biographical History of the illustrious House of Hastings, including a Memoir of the present Earl and his Family. Interperated with original Letters, Anecdotes, &c. By Henry Nugent Bell, Student of the Inner Temple. London. 4to. pp. 403.*

Haring been favoured with a perusal of this work, which only stays for the finishing of its plates to appear before the public, we avail ourselves of our admission, as it were, to the rehearsal, to state some particulars of a volume, the contents of which are as likely to excite a strong and peculiar interest as those of any which has issued from the press for a number of years. It is divided into two very distinct parts: the *first*, embracing the early history of the renowned family of Huntingdon; the *second*, recounting the measures, (or rather the adventures) of the author, in recovering the title of his ancestors for the present Earl; whom he, by his extraordinary exertions, has elevated from the rank of Ordnance-Storekeeper at Enniskillen to the dignity of the third Earl in the British Peerage. So attracted have we been to these parts in succession, that, like the priest in the caricature, we have not known to which side to turn. The memoirs of the House of Hastings, from Robert de Hastings, Portreeve of Hastings in Sussex, Lord of Fillingley in Warwickshire, and Dispensator or Steward to William the Conqueror, through a long and illustrious race, (including ten Earls from the year 1529) to the date at which the present (eleventh) Earl claimed the dormant honours, so far from being a dry genealogy, is full of singular anecdotes, of new views of men intimately connected with English history, and of the details of ancient customs "long since forgotten;" but the revival of which can hardly fail of delighting every reader, from the antiquarian to the gossip. The investigation of the claim forms the concluding moiety of this most entertaining quarto, and is the most perfect romance of real life that ever we encountered. It is quite refreshing to dash along with the author, and quite impossible not to be infected with his honest enthusiasm. Mr. Bell narrates the circumstances which led him, at his own risk, to

undertake the cause of his friend, Mr. Hastings; and nothing but his own relation can afford any adequate idea of the zeal and perseverance, the difficulties and fears, the fortunes and final triumph, of his course. Never did we see the finer characteristics of his country more nobly exemplified. No fatigue could weary, no disappointments dishearten, no obstacles defeat the Irishman who had set his profession, his all, upon the cast, and determined to establish the right, or fall in the attempt; who lost the puny tie of client in the more powerful bond of friendship, and devoted himself to the charge with as much genuine ardour as if the crown of Britain were to be the reward of his successful labours. It is really honourable, not merely to the individual, but to his country, to notice these things; and we take pleasure in rendering this tribute to a gentleman unknown to us, except by his conduct in this interesting cause.

We shall for the present content ourselves with a very few extracts from the earlier history. Lady Hastings, the mother of the first Earl of Huntingdon, (about the beginning of the 16th century)—

"Legally provided for the appropriation of her manor and lordship of Aller with the More, during the term of seven years next after her decease, to procure the fulfilment of the following curious articles:

"First, Whensoever she should fortune to depart this life, that her body should be buried in the church there, and not to be kept unburied above twenty-four hours after her death, nor any great dinner made for her.

"Item, That immediately after her decease, forty trentals be done for her soul, as also a thousand masses with *Placebo* and *Dirige*, and every priest to have 6d.

"Item, That as shortly as could be after, the grant she had of the house of Charterhouse to be sold forth; and that the said house have 16l.

"Item, That fifty-one masses be done for her at the altars of *Scala Coeli* in England.

"Item, That there should be 21l. given to bed-ridden persons, prisoners, and leazar-houses, within one year after her decease.

"Item, That sixty trentals be said and done for Mr. Kell's soul, three for the soul of Roger Whittington, and that there be offered to our Lady of Walsingham, for the said Roger, 5s.

"Item, That a priest do daily sing before the rood of Garrardon, County of Leicester, seven years after her decease.

"Item, That the sum of one hundred marks be paid to the University of Oxford for the space of twenty years."

This lady's son—

"Shortly after his father's decease, and being then a Knight, petitioned the King

"That he might have the benefit of his own marriage, and marry at his own liberty; and also to have special livery of the manors of Ashby de la Zouch, and Barrow upon Soar, the Stewardships and Bailiwicks of the town of Leicester, and all those belonging to it, within the county, together with all the offices of the Forest and Chace of Leicester," binding himself to pay four thousand marks to his Majesty. He had, accordingly, without making proof of his use, a special livery of all the lands of which his father did possessed, amongst which were the aforesaid manors, and a teneament called Hastings-place, in Thames-street, London."

Sir Francis Hastings, the fifth son of the second Earl, published, in 1598, a religious tract which involved him in polemical controversy. He was also a lover of literature, and the annexed stanzas from an epitaph of nearly one hundred lines on the tomb of his wife in North Cadbury Church, may be quoted as evidence of his cultivation of the muse.

This lady's bed, that here you see thus made,  
Hath to itself received a sweete guest,  
Her life is spent, whiche doth like flower fade,  
Freede from all storms, and here shee lyes at rest,  
Till soul and body join'd againe are one,  
Then, farwell grave! from hence shee must be gone.

This ladye was well born and eke well bred,  
Her virgin's time she spent with worldly praise,  
When choice of friends brought her to marriage bed,

With just renown she passed there her days;  
And though her youth were tyde to age far spent,  
Yet without spot she lived, and was content.

Her second match she made by her own choice,  
Pleasing herself, who others pleased before,  
Her ears she stopped from all diswaider voice,  
Who did her tender wealth and goods great store,

With honour greate, whiche bothe shee did re-  
fuse,  
And one of meaneer state herself did chuse.

With this her choice full twenty years and nine  
Shee did remain, with joy and comfort greate,  
He liveth not that ever went betweene

These two, to move a peace, or to intreate;  
God made the matche, and God the knot hee  
tyde,  
Who in his frare did both their hearts still guide,

The poore shee still was willing to relieve,  
With heart and hand not seeking worlde  
praise,  
For few or none should know what shee did  
give,

This course to keepe shee was alwaies;  
Both rich and poore they tasted of her love.  
More ready she to give than they to move.

If any one of these her help did neede,  
By being sicke or sore of any sorte,  
Let them but send, they were most sure to  
speede,

Of what she had that might yield them com-  
forte,

And yeare by yeare she sought such thynges to  
make,

To serve such turne as might be fitt to take.

In government of those that did her serve,

Most wise, most stout, most kind, shee ever  
was,

Most kind to such as sought well to deserve,

Most stout to those who did neglect their  
place;

She wisely could correct the faults of these,

And those encourage that would seek to please.

Henry, the third Earl, was the keeper of the unfortunate Mary, Queen of Scots. Mr. Bell has given us some curious particulars of this period, when his Lordship, by his subserviency to the views of Elizabeth, removed that jealousy which she entertained of him on account of his royal descent, both on the paternal and maternal side, from Edward III. About 1564 "his title to the crown of England, by descent from the Duke of Clarence, was a subject of much conversation and surmise in political circles, as well as a source of great private uneasiness to himself, inasmuch as he had received, it was said, some marks of displeasure from the Queen, whose jealousy about the succession is well known. On that occasion his lordship addressed, to his brother-in-law the Earl of Leicester, the annexed letter, which throws some light on Elizabeth's feelings, and in which he disclaims all ambitious pretensions to so decided a tone, and accompanied with such sentiments as are equally honourable to his character as a loyal subject and an excellent and amiable man:

"My honourable good lord; I am sorry that my present disease is such, that there are left me but those two remedies, eyther to swallow up those bitter pills lately received, or to make you a partner of my griefes, thereby something to ease a wounded heart. At my wife's last being at court to doe her duty as became her, it pleased her Majesty to give her a privy alippe, especially concerning myselfe, whereby I perceive she hath some jealous conceipt of me, and, as I can imagine, of late digested. How farr I have been awaye from conceyting any greatness of myselfe, nay, how ready I have been alwayes to shunne applauses, both by my continual lowe saile and my carriage, I doe assure myselfe is best knowne to your lordship and the rest of my nearest friends; if not myne owne conscience shall best cleare me from any such folly. Alas! what could I hope to effect in the greatest hopes I might imagine to have in the obteyning the least likelihood of that height? Will a whole commonwealth deprive themselves of soe many blessings presently enjoyed, for a future hope uncertaine? Inferiour to many others, both in degree, and any princely quality fitt for a prince; for a prince both for excellent qualities and rare vertues of nature; of great hopes; of an inestimable blessing by her princely issue, in reason of her youth; for a poore subject in years,

and without any greates hope of issue? Noe, I see; I cannot be perswaded they would, if I should be so foolishly wicked to desire it, or that my minde were so ambitiously inclined. I hope her Majesty will be perswaded of better thynges in me, and cast this conceipt behinde her; and that a foolish booke, foolishly written, shall not be able to possess her princely inclination with soe badde a conceipt of her faithful servant, who desires not to lyve but to see her happye. What griefe it hath congealed within my poore heart (but ever true), let your lordship judge, whose prince's favour was alwayes more deare unto me than all other worldly felicityes whatsoever. This I am bold to make knowne to your lordship; humbly desiring the same, when you see your opportunity to frame a new heart in her Majesty's princely brest, whose power I know is not little in effecting of farr greater matters than this: for never shall there be a truer heart in any subject than I will carry to her Majesty soe longe as I breathe. And soe I rest your poore servant and brother,

H. HUNTINGDON."

That he succeeded in removing the queen's suspicions may be surmised from her entrusting him with the custody of her dreaded rival; whereof the following letter is a curious proof:—

"To our right trusty and right well beloved cosin the Erie of Huntingdon.

"Elizabeth R. By the Queene.

"Right trusty and right well beloved cosin we grete you well. Whereas we understand that our cosin of Shrousbury is much troubled with sickness, and like to fall further into the same in such sort as he neither presently is able, nor shall be to continue in the charge which he hath to kepe the Queene of Scots. We have, for a present remedy and to avoyd the danger that might ensue, made choice of you to take the charge of the custody of hir, until we shall otherwise order. And, therefore, we earnestly require you with all speed to repaire to our cosin of Shrousbury, with some of your owne trusty servants, and there to take the charge of the said Queene; wherewith our said cosin will be so well content, as we dowte not but you shall have all that he can command to be servicable unto you. And though this direction of you may seme presently soleyne and strange, for you to take charge of hir in any other person's house than your owne; yet the infirmity of our said cosin, with the mistrust he hath of a greater, and the request he hath made unto us to have some help in this cause, with other causes that we have to dowte of some escape of the said Queene, moveth us to use this speedily order; meaning as soone as occasion may further permit to devise wither shortly to deliver that she shall be removed to some other more place where you may have the wholl commandment. We wold have you also, after conference with our said cosin of Shrousbury, to devise how the number of the Queene of Scots's trayne might be diminished and reduced only to thirty persons of all sorts, as was ordered, but, as we perceive, to be much enlarged of late time. You

shall also, jointly with the Erie of Shrousbury, give order that no such common resort be to the Queene as hath ben; nor that shee have such liberty to send posts as she hath don, to the great burden of our poore subjects. And if she shall have any speciall cause to send to us, then you shall so permit her servant with the warrant of your hand, and none to come otherwise. And if you shall think of any meter place to kepe hir, we requier you to advertise us thereof, so that we may take order for the same. We have written to our cosin of Shrousbury, whom we have willed to impart to you the contents of our lettre. And so we will have you to do these; *trusting that you will so consider hereof, as the cause requirerth for our honour and quietnes, without respect of any person.* Gyven under our signet, at the manour of the Vyne, the XXIIInd of September, 1569, the XIth yere of our reigne."

"Pt. script.

[Verte.]

"After we had considered of some part of the premises, we thought in this sort to alter some part thereof: We will that no person shall be suffered to come from the Queene of Scots with any message or lettre. But if she will write to us, you shall offer to send the same by one of your yours. And so we will you to do; for our meaning is, that for a season, she shall neither send nor receive any message or lettres without our knowledge."

This is a true woman's postscript—of far greater importance than the whole letter. An accompanying epistle from the politic Cecil, Lord Burghley (30th October, 1569) contains a passage truly indicative of that wily statesman:—he says—

"And thus I am bold to impart many things, praying your lordship to use them well, and as you see cause to impart any thyng of your mynd, as you will have me use it faithfully and honestly towards you, for so I am resolved to be towards your lordship. I also in secret send you a copy of the Queene's Majesties letters. Your lordship shall doo well to contynue your good opinion of me, but not to utter it, as I perceive you doo, whereby percase by some insyking I may fynd some lack to doo as I wold doo. And so I end with my humble compliments."

This lord died December 14, 1595, and "was interred at Ashby De-la-Zouch, on the 28th of April following; his funeral, by express command of her Majesty, being solemnized with all pomp and honour becoming his high rank and consequence. On this occasion, the expences amounted to nearly 1,400l. sterling, as appears by the following curious account of particulars preserved:—

	£.	s.	d.
Blacks at York . . .	109	0	7
Blacks at Coventry . . .	273	12	4
Blacks at London . . .	109	0	8
Blacks at Leicester . . .	19	11	6
Allowance to the Officers at Arms	162	5	8
For hire of blacks, waste, and carriage thereof to and fro . . .	20	0	0
For embalming the corpse . . .	28	4	1

The charges of his household servants at York, and expences in

covering the body from York to Ashby.	29	18	10
Household expenses for the diet and riding charges	333	11	0
Livres to sixty poor men	60	0	0
In alms to the poor of divers parishes	26	13	4
Laid out by the Bailiff of Ashby, as appraiser	71	0	9
More in my Lord's riding charges in the burial of his brother	10	0	0
To obtaining the administration The Sheriff's charges, and other of the Jury, four times	4	10	0
For exhibiting and engrossing the inventories double	13	6	8
For passing the account and expenses of his servants in that time	4	0	0
Expenses of my Lord's servants riding into the north and other places to get accounts	5	0	0
Charges about the vendition of my Lord's goods in the County of Bucks	5	0	0
	8	0	0

James I. was so frequent a visitor to the next Earl at Ashby, "that it was even insinuated that his majesty's covert and ungenerous purpose, in thus conferring the expensive honour of his company, was to involve, by this means, the circumstances of his noble host in embarrassment, in order thereby to disable him from all attempt, and quell all ambition, after the Crown. However this may be, it is certain that James and his whole court, were frequently quartered on his Lordship for many days together, during which, such was the more than princely splendour of Ashby Castle, the dinner was always served up by thirty poor knights, dressed in velvet gowns and gold chains. On these festive occasions, it was customary for the nobility, residing within several miles round of Ashby, to repair thither, in order to pay their respects to the King. This homage, according to a traditional anecdote, was omitted by Lord Stanhope, of Harrington, who was somewhat flighty and eccentric, and his Majesty, offended at this neglect, sent for him, and reproved him for lack of duty; "but," concluded the King, "I excuse you, for the people say that you are mad."—"I may be mad, my liege sovereign," replied Lord Stanhope, "but I am not half so mad as my Lord Harrington here, who suffers himself to be worried by such a pack of bloodhounds."

The foregoing extracts, however inadequate to give an idea of the first part of the volume before us, will serve as specimens of the materials of which it is composed: by general readers, the second part, to which we must now shortly address ourselves, will be still more relished, as it involves many modern interests, and affects in an especial degree living characters of high rank and station. Mr. Bell, after describing his habits of intimacy with Captain Hastings, thus details the singular circumstances which led to his prosecuting his claim to a title which had been in abeyance thirty years, and to estates held by another, the Most Noble the Marquis of Hastings.

"Of the study of heraldry, and more par-

ticularly the concomitant branch of pedigree, I have ever been peculiarly fond. Indulging this sort of penchant, I acquired a pretty general knowledge of every family of distinction in my native country; and a casual conversation, arising out of a trivial circumstance, first suggested the idea of claiming the dormant Earldom of Huntingdon for my friend. As the story, from its consequences, may not be deemed uninteresting, I will relate it here, and with the more gratification, as it affords me an opportunity to rectify an erroneous impression, which had for some time existed in the minds of no small number of Lord Huntingdon's acquaintances. In the spring of the year 1817, it was whispered in the town and vicinity of Enniskillen, that some very serious altercation had occurred between his Lordship and a neighbouring nobleman, at whose princely mansion, and hospitable board, he was ever a welcome guest. This unpleasant fracas, it was said, arose from the circumstance of my Lord Huntingdon having hunted down a favourite dog belonging to that personage, contrary to his wish, and without his permission. Incensed at this liberty, the noble owner made use of such unwarrantable language, as Lord Huntingdon could not listen to without resenting as a soldier and a gentleman. A meeting, according to report, was therefore demanded, but refused by the noble party, on the ground that the challenger was a commoner. To this objection the latter indignantly retorted, that he was his opponent's superior in point of family descent, being eldest lineal male descendant of the House of Hastings, and entitled to the Earldom of Huntingdon, though he had not thought proper to assume that dignity. This assurance was satisfactory on the point of etiquette, and the time and place appointed for a meeting. By the seasonable interference of friends, however, a most cordial reconciliation was effected, and so the affair ended."

This brought on a conversation on the subject of the claim, which Mr. Bell consequently resolved to prosecute, and which he did prosecute, as we have stated, with a degree of firmness, skill, intrepidity, and talent, worthy of the result. We lament that it is out of our power to follow his steps; his midnight visits to churches, tombs, and registers; his indefatigable inquiries among living witnesses; his irresistible appeals by which he overcame the forms of the highest authorities, and swept the coldest beings, old women, sextons, inn-keepers, counsellors, attorney-generals, peers, lords chancellors, and finally princes, into the contagious vortex of his own whirling rapidity and intense interest: these constitute the charm of his narrative, and render his work as decidedly characteristic of its author's temperament as it is in its incidents marvellous and entertaining. His first visit on the business, to a solicitor near Donnington, the seat of the family, affords an example of his manner.

"We had a letter of introduction from my noble client, and, on our arrival at the Turk's Head Inn, at two o'clock, we walked up to Mr. Dalby's snug little cottage, where

we found the legal owner about to sit down to dinner. Salutations being passed, I presented my credentials, which he read with elaborate attention, at least I suppose so, as the operation occupied him full a quarter of an hour, though the letter did not contain more than six lines, the substance of which was, that the object of our journey into Leicestershire was to investigate his Lordship's claim to the Earldom of Huntingdon; and that he should feel obliged if Mr. D. would lend us all practicable assistance, which, from being so long concerned for himself and his family connexions, he expected Mr. D. would be found inclined and qualified to do. Mr. Dalby, who is a cautious man, after taking up the aforesaid space of time to read, re-read, and counter-read his Lordship's letter, as if it had been composed of hieroglyphics, at length, putting his face on the defensive, observed, that indeed he had no papers which could assist us; heard some foolish talk about the claim of his Lordship's family, but knew nothing further of the matter: after he had dined, however, would do himself the pleasure of waiting on us at our inn, and, before he came down, would look out some papers which he feared could do us little service, but such as they were, if he could find them, we should have them, and welcome. This qualified declaration put an end to the interview, and almost to our hopes from that quarter."

"Shortly after we had dined, Mr. Dalby, according to promise, made his appearance, taking care first, as I afterwards learned, to make a call at Donnington Park, where the Marchioness of Hastings then was, attended by Sir Charles Hastings, the natural son of the late Earl, and the Rev. Mr. Dalby, brother of our Solicitor. Thus doubly prepared, having swallowed both his dinner and his cue, he appeared quite a new man, the logical *chevaux de frise* of his features relaxing into somewhat of a negotiating attitude, and lighted up by a well-coinced smile. Being seated, he proceeded with much circumspection and solemnity to draw forth from his pocket a paper, which he handled with so much apparent caution before it was exposed to our vision, that a by-stander might have fairly suspected it to be a packet of that species of chemical powder which ignites by friction or exposure to the air. At length, when we half expected a detonation, this monstrous birth saw the world's light, and we beheld a fragment of greasy paper, with some half score of names scrawled on it in the likeness of a pedigree, which, we were forthwith informed with appropriate gravity, was a Genealogical Table prepared by the late Mr. Blunt, a professional gentleman, who, during his life time, practised in that town, with considerable success. Well, the production might possibly have been a pedigree, but, by some awkward fatality, it wanted the generic signs of a head and a tail. The ingenious compiler, like the strolling manager who once advertised the tragedy of Hamlet for representation, with the trifling omission of the young prince's character, completely left out his Lordship, his father,

his grandfather, and great grandfather, four very important personages, as the reader will be inclined to acknowledge. This mutilated thing, however, in the then early stage of the proceedings, might, we deemed, prove of some value to us, and we were converting it in imagination to our own use, and had begun to return our thanks for the favour, when we found we were reckoning without our host, as Mr. D. dexterously re-deposited the document in the bottom of his pocket, drily observing, that he had no right whatever to part with the same."

Forcing his facts, from unwilling as well as willing witnesses, from perfect as well as from strangely mutilated records, Mr. Bell is stopped in full career by an apparently insurmountable difficulty; his client desponds and he himself almost despairs; but a last resource strikes him—he may be able to show the necessary extinction of the branch which intercepts his golden hope by finding it mentioned in certain collateral documents.

"Somewhat relieved by this gleam of comfort, I pursued the idea, and quickly found that Lady Elizabeth Hastings, sister of Theophilus the ninth Earl, had died a maiden, and had made a will. My impatience to inspect this will was so great, that I passed the remainder of the night in sleepless anxiety; and next morning, as soon as the Prerogative Office was open, I rushed to the desk with a heaving avidity not very compatible with grave official forms. I searched, and, to my unspeakable gratification, found the precious instrument. It bequeathed a bond, value 100*l*. to Ferdinando Hastings, of Long Alley, Shoreditch, Gent, late of Kensington. By the help of this new light, I soon discovered the will of this Ferdinando also, and thanked God when I found he had an only child, a daughter, named Deborah, to whom in a codicil he leaves the aforesaid bond, bequeathed to him by Lady Elizabeth Hastings his relative, together with all the rest of his real and personal estate. My search was then renewed for the will of Theophilus, Ferdinando's brother. I knew, if I succeeded in discovering it, and that it should prove the decree without is no of Theophilus, that all the imps of darkness could not prevent my ultimate success. I therefore sought the document with a correspondent degree of anxiety. Every thing now seemed to rest on this single point *dramatic*; and when at length I discovered the will of a Theophilus Hastings, which was proved in 1755, my feelings were wound up to such a pitch of interest, that, for some moments, I vainly endeavoured to read, that which lay under my eyes. Having recalled my faculties I with difficulty read the first lines, which began, 'I Theophilus Hastings, of Long Alley, in the parish of Shoreditch, Gent, being well stricken in years, &c.' Here my agitation became excessive. On the tenor of this instrument my own earthly happiness, my hopes of honest fame, and, what I valued still more, the prosperity of my noble friend and client, might be said to depend; and those only, who have laboured as I did, and pined in tedious suspense for the treasure which was to confirm, or perhaps blast, their

prospects, can sufficiently estimate what I felt at that moment. At last I mustered courage to proceed, and all my trepidation vanished when I found that the testator died a bachelor, bequeathing 'all his estate, real and personal, to the four children of his niece, Deborah, the daughter and only child of his brother Ferdinando.' I was, I confess, sick with exultation. Not the philosopher of antiquity, sallying from the bath, shouted 'Eureka!' with more enthusiastic delight than I did. I flung down the books, nearly ran over the clerks, jesting every one I met, and, rushing from the Commons with an impetuosity, of which, under any other circumstances, I might have been ashamed, threw myself into a coach, and ordered the coachman to gallop to Lord Huntingdon's residence in Monague Place."

Such an agent was not to be withstood in a cause which might adopt the Huntingdon motto, *In veritate victoria*; for truth wants only an advocate like Mr. Bell, to be victorious. Other claimants were set up, delays were interposed, every effort was tried to disconcert and defeat the claimant; but within twelve months the Earl of Huntingdon took his seat in the house of peers. Of this consummation the author gives us a feeling and manly description. It may be prefaced with a very noble trait of royal justice.

"Previous to the sending in of the Report, and after Mr. Hastings' departure for Ireland, it was whispered about in a particular circle, that a personal application had been made by a Lady of high rank to the Prince Regent, requesting him to issue orders to the Law Officers of the Crown, to postpone the further hearing of the pending claim to the Huntingdon Peerage, until the return of a certain nobleman to this country; or at least, till such time as that person should be apprized of the proceedings which had already taken place, and should seal his advice and instructions on the subject. To this request his Royal Highness replied with becoming complaisance and dignity, concluding with the following most princely sentiments.—'But, let me assure you, Madam, that the rights of one subject are as sacred in my eyes, and as dear to my heart, as those of another; and if it appears that the claimant in this case has a just right to the title in question, God forbid that any act of mine should prevent his accession to, and enjoyment of it, even for a moment. Were I to act otherwise, I should disgrace the station I fill, and abuse that high trust confided to me for the happiness of my people, and the maintenance of the laws. I stand here, Madam, to direct and impel the pure and impartial administration of public justice, not to obstruct the exercise of it.'"

The report of the Attorney General, (Shepherd) was followed by a Royal Warrant for issuing a Writ of Summons, commanding the Earl of Huntingdon's attendance in Parliament, to meet on the 14th of January, 1819. Mr. Bell proceeds—

"Early on the morning of the 14th, I waited on Mr. Peacock, Messenger to the Great Seal, and we proceeded together to the

residence of the Lord Chancellor, where I obtained the Writ of Summons, and had the very flattering honour deputed to me of delivering it to Lord Huntingdon with my own hands. 'This most grateful duty I accordingly performed, with a due observance of etiquette, before 12 o'clock at noon, in the presence of his Lordship's assembled family and my own. The interesting scene which followed will be more easily imagined than described. Suffice it to say, that our mutual congratulations were warm and sincere, and our triumph complete and heartfelt, reflected back, as it was, from the affectionate eyes of the endearing circle which surrounded us, and "coming mended" through that tender medium. At two o'clock Lord Huntingdon, accompanied by his uncle, Thomas Fowler, Esq. and myself, called on the Marquis of Ely, who had been on terms of the most friendly intimacy with his Lordship, for some years before, and who now politely consented to introduce the new Peer to the House.'—"In a few moments after, I had the satisfaction of seeing my noble client duly sworn a Peer of the Imperial Parliament, and sign the roll as such. Then, indeed, and not till then, could I venture, like another faithful *Achates*, to exclaim 'Italiam! Italiam!' I then had the honour and felicity of congratulating his Lordship as third Earl of the kingdom, in good earnest; and it will ever be a question with me, which was the more pleased of the two, on the fortunate accession to his high ancestral dignities. The bells of Westminster announced the joyful event; and the happy party who met at his Lordship's hospitable board that evening, celebrated it in something more than words. In fact, it was, to parody the Poet,

Turning the lawful art  
From sounds to things, from fancy to the heart."

The only remaining measure of any importance, was to fulfil the legal form of "making Entry" on the estates in order to support the future pretensions of the Earl to the domains of his illustrious progenitors.

On Monday, the 8th of March, our party proceeded to the ruins of Ashley-de-la-Zouch Castle, to make entry on that spot so memorable in English history. To this venerated scene, consecrated by so many family recollections, his Lordship was accompanied by proper witnesses, and an immense concourse of spectators, anxious to see his person, and he present at the legal ceremony. At the gate leading into the field in which the Castle stood, we were met by Mr. Leonard Piddock, Solicitor, who was deputed to forbid his Lordship's entry\*. After he had done so, in the usual manner, he mixed with the others; and it is due to this gentleman to observe, that his conduct throughout was decorous and respectful, unmingled with any asperity; and must have been highly satisfactory to all parties interested. When his Lordship had reached the proper spot, the

\* It was his Lordship's earnest wish that no should be present except Mr. Piddock and the necessary witnesses, but he found it impossible to leave the inn even for a moment without being surrounded by crowds.

pressure of the crowd became so great, that it was impossible to make the entry in the sight and hearing of the appointed witnesses, unless the people would give place. Under, or rather in the middle of these circumstances, his Lordship jocularly called out, 'Gentlemen, make a ring, and let me have fair play!' This kind of *milling* appeal, though his Lordship is by no means connected with the *Fancy*, had the desired effect. The crowd made a centrifugal motion, leaving sufficient space for our operations, and settling at once into the stillness of attention. We then proceeded with the necessary ceremony, which was finished in a few minutes, and seconded by spontaneous and unanimous acclamation. Every part of the old Castle rains, on which it was possible to perch, or cling to, was literally alive with spectators, whose cheers must have been heard at a considerable distance. The noble Lord having intimated his intention to speak to the people, silence was again obtained, and he then addressed them with the animation naturally excited by such a scene. 'He came not there, he said, to deprive any man of his property, but merely to seek the recovery of that, which he was advised, and which he believed, was his hereditary right. The present ceremony was nothing more than a mere form of law, for the execution of which, he was aware, he left himself open to an action of trespass, but it was a necessary step on his part in order to anticipate certain statutes, within the operation of which the lapse of time had nearly brought him. That the land, on which he stood, was his, he would not presume to say, but he believed it to be his lawful inheritance, and as such made entry on it. If he should prove successful in the further prosecution of his rights, he begged them to believe his intentions and feelings towards them, as friends and tenants, would be suitable to so interesting a connexion, and such as a well disposed landlord might cherish and avow. His predecessors, he said, whose remains lay in yonder cemetery, (pointing to the contiguous chapel of St. Helen's, where many of the Earls are buried,) had been their lords for centuries past, and had always carried with them to their graves the prayers and regrets of their people. It would be his highest ambition to imitate their example. His maxim would be, 'Live and let live;' for nothing should give a landlord greater gratification than to see a happy and flourishing tenantry around him. As for the boys here, if it please God that I recover these possessions, I promise to keep a pack of the best dogs in the country for their amusement; and as for the girls, they shall all have husbands, without hunting for them. Now, my friends, I entreat you to return to your several homes, and take with you my warmest thanks for this early manifestation of your good disposition towards me, and my best wishes for your prosperity and happiness! God bless you all!' His Lordship concluded under evident emotions of sympathy honourable to his heart, and amidst the applause and blessings of the multitude. Tears of delight ran down the furrowed cheeks of many of the old peo-

ple present, and the joy of the junior classes amounted to enthusiasm. The walls of old Ashly, whose echoes had long slept in the silence of ruin, once more reverberated to the voice of triumph and jubilee, while the church bells from the village, peal on peal, merrily joined the chorus of acclamation."

We must conclude abruptly.—Our review, though long, is very imperfect; but our readers will not readily be satisfied with any thing short of the work itself, which, to the rare excellence of almost every sort of interest, antiquarian, adventurous, romantic, humorous, adds the unusual concomitants of real character, truth, and authenticity.

*An Account of the Arctic Regions, with a History and Description of the Northern Whale Fishery.* By W. Scoresby, Jun. F. R. S. E. Illustrated by Twenty-four Engravings. Edinburgh, 1829. 8vo. 2 vols.

This work is so copious, that we feel the impossibility, with our limits, of offering more than a very partial account of it to the public. The author, an enlightened and practical observer, who, during seventeen voyages on the Greenland or Spitzbergen Whale-fishery, has added personal experience to the information derived from reading the best authors, gives us a complete view of his subject; and leaves nothing to be desired either respecting the progress of discovery in the Arctic regions, and the natural history of Spitzbergen and the Greenland Sea, to which his first volume is devoted; or respecting the whale fisheries in all their details, to which he has appropriated his second.

On the great problem which involves the geography of the north, we remark that Mr. Scoresby ranges himself on the side of those who think that a north-west passage exists; but he does not go the length of the most sanguine, in supposing that it can ever be of much advantage in a commercial point of consideration. On the contrary, he is of opinion, that if there really be a communication, near the parallel of 70°, between the southern part of Baffin's Bay, or the northern part of Hudson's Bay and Behring's Strait, it would only be open at intervals of years, and then for no more than eight or ten weeks in a season. Hence, as affording a navigation to the Pacific Ocean, the discovery of the passage could be of no service. With regard to the vessels to be employed in pursuing the exploration of the Polar Seas, Mr. Scoresby coincides with what we stated twelve months ago, that ships of from one to two hundred tons are best adapted for that purpose; and it is a pleasant matter, at this pe-

riod, when every feeling heart is so deeply interested in the fate of the expedition in that quarter, to know that a navigator of the author's skill and intelligence, declares, that there is little or no risk in wintering in the northern parts of Baffin's Bay; and indeed, that such is the most expedient course to be pursued in the prosecution of any voyage of discovery. He, however, seems to rely more certainly on journeys by land for the accomplishment of the object in contemplation.

Men there are, (he alleges) who, being long used to travel upon snow in the service of the Hudson's Bay Company, would readily undertake the journey from the interior lakes of North America, to the Frozen Ocean, or, in case of a continuity of land being found, to the very pole itself; of whose success, we should certainly have a reasonable ground of hope. The practicability of this mode of making discoveries, has been fully proved by the journeys of Mackenzie and Hearne.

The author describes the mode of travelling over the snow, the state of the tribes who inhabit these frozen regions, &c.; but in conclusion, leads us to anticipate that ice and not land is to be found for a considerable extent, round the pole. Over this ice, he contends, it would be quite possible to travel from Spitzbergen; and he treats the idea of there being an open sea there, as quite chimerical. So far from being approachable by ships, he thinks that no vessel has ever yet penetrated beyond eighty-one and half degrees; and the following is the only modification of his hypothesis—

Should there be land near the Pole, portions of open water, or perhaps even considerable seas, might be produced by the action of the current sweeping away the ice from one side of it almost as fast as it could be formed; and vacancies in such a case might also be produced on the leeward side of the land during any powerful and continued winds; but the existence of land only, in imagination, can encourage an expectation of any of the sea northward of Spitzbergen being annually free from ice.

Having, in his first chapter, discussed this celebrated question, of the sea-communication between the Atlantic and Pacific, by the north, and compressed the accounts of discoveries in the northern regions, Mr. Scoresby proceeds to lay before us a description of some of the polar countries, from his own observations. Of these, Spitzbergen, Jan Mayen Island, and Moffen, Low, Hope, and Cherie Islands, are the chief. We quote a few passages. He mentions, a little to the northward of Horn Sound, Spitzbergen, the largest iceberg which he ever saw,

It occupies eleven miles in length, of the seacoast. The highest part of the precipitous front, adjoining the sea, is, by measurement, 402 feet, and it extends backward toward the summit of the mountain, to about four times that elevation. Its surface forms a beautiful inclined plane of smooth snow; the edge is uneven and perpendicular. At the distance of fifteen miles, the front-edge, subtended an angle of ten minutes of a degree. Near the South Cape lies another iceberg, nearly as extensive as this. It occupies the space between two lateral ridges of hills, and reaches the very summit of the mountain, in the back-ground, on which it rests.

It is not easy to form an adequate conception of these truly wonderful productions of nature. Their magnitude, their beauty, and the contrast they form with the gloomy rocks around, produce sensations of lively interest. Their upper surfaces are generally concave; the higher parts are always covered with snow, and have a beautiful appearance; but the lower parts, in the latter end of every summer, present a bare surface of ice. The front of each, which varies in height from the level of the ocean, to 400 or 500 feet above it, lies parallel with the shore, and is generally washed by the sea. This part, resting on the strand, is undisturbed to such an extent by the sea, when in any way turbulent, that immense masses, loosened by the freezing of water lodged in the recesses in winter, or by the effect of streams of water running over its surface and through its chasms in summer, break asunder, and with a thundering noise fall into the sea. But as the water is in most places shallow in front of these icebergs, the masses which are dislodged are commonly reduced into fragments before they can be floated away into the main sea. This fact seems to account for the rarity of icebergs in the Spitzbergen sea.

The front surface of icebergs is glistening and uneven. Wherever a part has recently broken off, the colour of the fresh fracture is a beautiful greenish-blue, approaching to emerald-green; but such parts as have long been exposed to the air, are of a greenish-grey colour, and at a distance sometimes exhibit the appearance of cliffs of whitish marble. In all cases, the effect of the iceberg is to form a pleasing variety in prospect, with the magnificence of the encompassing snow-clad mountains, which, as they recede from the eye, seem to "rise crag above crag," in endless perspective.

On an excursion to one of the Seven Icebergs, in July 1818, I was particularly fortunate in witnessing one of the grandest effects which these polar glaciers ever present. A strong north-westerly swell having for some hours been beating on the shore, had loosened a number of fragments attached to the iceberg, and various heaps of broken ice denoted recent shoofs of the seaward edge. As we rowed towards it with a view of proceeding close to its base, I observed a few little pieces fall from the top, and while my eye was fixed upon the place, an immense column, probably fifty feet square, and one

hundred and fifty feet high, began to leave the parent ice at the top, and leaning majestically forward with an accelerated velocity, fell with an awful crash into the sea. The water into which it plunged was converted into an appearance of vapour or smoke, like that from a furious cannonading. The noise was equal to that of thunder, which it nearly resembled. The column which fell was nearly square, and in magnitude resembled a church. It broke into thousands of pieces.

As we shall have occasion in a week or two to return to this excellent publication, of which this may be received as an announcement, we shall for the present break away from its science, and turning to the more popular subject of the whale, only add to our extracts a few anecdotes of these mighty creatures, illustrative of the fishery.

*Surprising vigour of a Whale.*—On the 25th of June 1812, one of the harpooners belonging to the Resolution of Whitty, under my command, struck a whale by the edge of a small floe of ice. Assistance being promptly afforded, a second boat's lines were attached to those of the *fast-boat*, in a few minutes after the harpoon was discharged. The remainder of the boats proceeded at some distance, in the direction the fish seemed to have taken. In about a quarter of an hour the *fast-boat*, to my surprise, again made a signal for lines. As the ship was then within five minutes sail, we instantly steered towards the boat, with the view of affording assistance, by means of a spare boat we still retained on board. Before we reached the place, however, we observed four oars displayed in signal order, which, by their number, indicated a most urgent necessity for assistance. Two or three men were at the same time seen seated close by the stern, which was considerably elevated, for the purpose of keeping it down,—while the bow of the boat, by the force of the line, was drawn down to the level of the sea,—and the harpooner, by the friction of the line round the bollard, was enveloped in smoky obscurity. At length, when the ship was scarcely 100 yards distant, we perceived preparations for quitting the boat. The sailors' pea-jackets were cast upon the adjoining ice,—the oars were thrown down,—the crew leaped overboard,—the bow of the boat was buried in the water,—the stern rose perpendicular, and then majestically disappeared. The harpooner having caused the end of the line to be fastened to the ironing at the boat's stern, was the means of its loss;—and a tongue of the ice, on which was a depth of several feet of water, kept the boat, by the pressure of the line against it, at such a considerable distance as prevented the crew from leaping upon the floe. Some of them were, therefore, put to the

• "Giving a whale the boat," as the voluntary sacrifice of a boat is termed, is a scheme not unfrequently practised by the fisher when in want of line. By submitting to this risk, he expects to gain the fish, and still has the chance of recovering his boat and its materials. It is only practised in open ice or at fields.

necessity of swimming for their preservation, but all of them succeeded in scrambling upon the ice, and were taken on board of the ship in a few minutes afterwards.

I may here observe, that it is an uncommon circumstance for a fish to require more than two boats' lines in such a situation; none of our harpooners, therefore, had any scruple in leaving the *fast-boat*, never suspecting, after it had received the assistance of one boat with six lines or upward, that it would need any more.

Several ships being about us, there was a possibility that some person might attack and make a prize of the whale, when it had so far escaped us, that we no longer retained any hold of it; as such, we set all the sail the ship could safely sustain, and worked through several narrow and intricate channels in the ice, in the direction I observed the fish had retreated. After a little time, it was descried by the people in the boats, at a considerable distance to the eastward; a general chase immediately commenced, and within the space of an hour three harpooners were struck. We now imagined the fish was secure, but our expectations were premature. The whale resolutely pushed beneath a large floe that had been recently broken to pieces, by the swell, and soon drew all the lines out of the second fast-boat; the officer of which, not being able to get any assistance, tied the end of his line to a hummock of ice and broke it. Soon afterwards, the other two boats, still *fast*, were dragged against the broken floe, when one of the harpooners drew out. The lines of only one boat, therefore, remained fast to the fish, and this with six or eight lines out, was dragged forward into the shattered floe with astonishing force. Pieces of ice, each of which was sufficiently large to have answered the purpose of a mooring for a ship, were wheeled about by the strength of the whale; and such was the tension and elasticity of the line, that whenever it slipped clear of any mass of ice, after turning it round, into the space between any two adjoining pieces, the boat and its crew flew forward through the crack, with the velocity of an arrow, and never failed to launch several feet upon the first mass of ice that it encountered.

While we scoured the sea around the broken floe with the ship, and while the ice was attempted in vain by the boats, the whale continued to press forward in an easterly direction towards the sea. At length, when 14 lines (about 1680 fathoms) were drawn from the fourth *fast-boat*, a slight entanglement of the line, broke it at the stem. The fish then again made its escape, taking along with it a boat and 28 lines. The united length of the lines was 6720 yards, or upwards of 3½ English miles; value, with the boat, above 1500 sterling.

The obstruction of the sunken boat, to the progress of the fish, must have been immense; and that of the lines likewise considerable; the weight of lines alone, being 35 hundred weight.

So long as the fourth *fast-boat*, through the medium of its lines, retained its hold of the fish, we searched the adjoining sea with the

ship in vain; but, in a short time after the line was divided, we got sight of the object of pursuit, at the distance of near two miles to the eastward of the ice and boats, in the open sea. One boat only with lines, and two empty boats, were reserved by the ship. Having, however, fortunately fine weather, and a fresh breeze of wind, we immediately gave chase under all sails; though, it must be confessed, with the insignificant force by us, the distance of the fish, and the rapidity of its flight considered, we had but very small hopes of success. At length, after pursuing it five or six miles, being at least nine miles from the place where it was struck, we came up with it, and it seemed inclined to rest after its extraordinary exertions. The two dismantled or empty boats having been furnished with two lines each, (a very inadequate supply,) they, together with the one in a good state of equipment, now made an attack upon the whale. One of the harpooners made a blunder; the fish saw the boat, took the alarm, and again fled. I now supposed it would be seen no more; nevertheless, we chased nearly a mile in the direction I imagined it had taken, and placed the boats, to the best of my judgment, in the most advantageous situations. In this case we were extremely fortunate. The fish rose near one of the boats, and was immediately harpooned. In a few minutes two more harpoons entered its back, and lances were piled against it with vigour and success. Exhausted by its amazing exertions to escape, it yielded itself at length to its fate, received the piercing wounds of the lances without resistance, and finally died without a struggle. Thus terminated with success, an attack upon a whale, which exhibited the most uncommon determination to escape from its pursuers, seconded by the most amazing strength of any individual whose capture I ever witnessed. After all, it may seem surprising, that it was not a particularly large individual; the largest lamina of whalebone only measuring 9 feet 6 inches, while those affording 12 feet bone are not uncommon. The quantity of line withdrawn from the different boats engaged in the capture, was singularly great. It amounted, altogether, to 10,440 yards, or nearly six English miles. Of these, 13 new lines were lost, together with the sunken boat; the harpoon connecting them to the fish having broken out before the whale was killed.

*Fishes thrown overboard, by the jerking or sudden heaving of the Boats, in consequence of blows from Whales.*—On the 3d of June 1811, a boat from the ship *Resolution*, commanded at the time by myself, got off in pursuit of a whale, and was rowed upon its back. At the moment that it was harpooned, it struck the side of the boat a violent blow with its tail, the shock of which threw the boat-steeper to some distance into the water. A repetition of the blow projected the harpooner and line-manager in a si-

milar way, and completely drenched the part of the crew remaining in the boat, with the sprays. One of the men regained the boat, but as the fish immediately sunk, and drew the boat away from the place, his two companions in misfortune were soon left far beyond the reach of assistance. The harpooner, though a practised swimmer, felt himself so bruised and enervated by a blow he had received on the chest, that he was totally incapacitated from giving the least support to his fellow sufferer. The ship being happily near, a boat which had been lowered on the first alarm, arrived to their succour, at the moment when the line-manager, who was unacquainted with the art of swimming, was on the point of sinking, to rise no more. Both the line-manager and harpooner were preserved; and the fish, after a few hours close pursuit, was subdued.

A large whale, harpooned from a boat belonging to the same ship, became the subject of a general chase on the 23d of June 1809. Being myself in the first boat which approached the fish, I struck my harpoon at arm's length, by which we fortunately evaded a blow that appeared to be aimed at the boat. Another boat then advanced, and another harpoon was struck, but not with the same result; for the stroke was immediately returned by a tremendous blow from the fish's tail. The boat was sunk by the shock; and, at the same time, whirled round with such velocity, that the boat-steeper was precipitated into the water, on the side next to the fish, and was accidentally carried down to a considerable depth by its tail. After a minute or so, he arose to the surface of the water and was taken up, along with his companions, into my boat. A similar attack was made on the next boat which came up; but the harpooner being warned of the prior conduct of the fish, used such precautions, that the blow, though equal in strength, took effect only in an inferior degree. The boat was slightly stove. The activity and skill of the lancers soon overcame this designing whale, accomplished its capture, and added its produce to the cargo of the ship. Such intentional mischief on the part of a whale, it must be observed, is an occurrence which is somewhat rare.

*Boats sunk, stove, or upset, by blows from Whales.*—The *Ainwell* of Whitby, while cruising the Greenland seas, in the year 1810, had boats in chase of whales on the 26th of May. One of them was harpooned. But instead of sinking immediately on receiving the wound, as is the most usual manner of the whale, this individual only dived for a moment, and then rose again beneath the boat, struck it in the most vicious manner with its fins and tail, stove it, upset it, and then disappeared. The crew, seven in number, got on the bottom of the boat; but the unequal action of the lines, which for some time remained entangled with the boat, rolled it occasionally over, and thus plunged the crew repeatedly into the water. Four of them, after each immersion, recovered themselves and clung to the boat; but the other three, one of whom

was the only person acquainted with the art of swimming, were drowned before assistance could arrive. The four men on the boat being rescued and conveyed to the ship, the attack on the whale was continued, and two more harpoons struck. But the whale irritated, instead of being enervated by its wounds, recommenced its furious conduct. The sea, was in a foam. Its tail and fins were in awful play; and in a short time, harpoon after harpoon drew out, the fish was loosened from its entanglements, and escaped.

In the fishery of 1812, the *Henrietta* of Whitby suffered a similar loss. A fish which was struck very near the ship, by a blow of its tail, stove a small hole in the boat's bow. Every individual shrinking from the side on which the blow was impressed, aided the influence of the stroke, and upset the boat. They all clung to it while it was bottom up; but the line having got entangled among the thwarts, suddenly drew the boat under water, and with it part of the crew. Excessive anxiety among the people in the ship, occasioned delay in sending assistance; so that when the first boat arrived at the spot, two survivors only out of six men were found.

During a fresh gale of wind in the season of 1809, one of the *Resolution's* harpooners struck a sucking whale. Its mother being near, all the other boats were disposed around, with the hope of entangling it. The old whale pursued a circular route round its cub, and was followed by the boats; but its velocity was so considerable, that they were unable to keep pace with it. Being in the capacity of harpooner on this occasion myself, I proceeded to the chase, after having carefully marked the proceedings of the fish. I selected a situation, in which I conceived the whale would make its appearance, and was in the act of directing my crew to ceasing rowing, when a terrible blow was struck on the boat. The whale I never saw, but the effect of the blow was too important to be overlooked. About 15 square feet of the bottom of the boat were driven in; it filled, sunk, and upset in a moment. Assistance was providentially at hand, so that we were all taken up without injury, after being but a few minutes in the water. The whale escaped; the boat's lines fell out and were lost, but the boat was recovered.

A remarkable instance of the power which the whale possesses in its tail, was exhibited within my own observation, in the year 1807. On the 29th of May, a whale was harpooned by an officer belonging to the *Resolution*. It descended a considerable depth; and, on its re-appearance, evinced an uncommon degree of irritation. It made such a display of its fins and tail, that few of the crew were hardly enough to approach it. The captain, (my Father,) observing their timidity, called a boat, and himself struck a second harpoon. Another boat immediately followed, and unfortunately advanced too far. The tail was again reared into the air, in a terrific attitude,—the impending blow was evident,—the harpooner, who was directly underneath, leaped overboard,—and the next moment the threatened stroke was impressed

† It has been frequently observed, that whales of this size are the most active of the species; and that those of very large growth are, generally, captured with less trouble.

on the centre of the boat, which buried it in the water. Happily no one was injured. The harpooner who leaped overboard, escaped certain death by the act,—the tail having struck the very spot on which he stood. The effects of the blow were astonishing. The keel was broken,—the gunwales, and every plank, excepting two, were cut through,—and it was evident that the boat would have been completely divided, had not the tail struck directly upon a coil of lines. The boat was rendered useless.

Instances of disasters of this kind, occasioned by blows from the whale, could be adduced in great numbers,—cases of boats being destroyed by a single stroke of the tail, are not unknown,—instances of boats having been stove or upset, and their crews wholly or in part drowned, are not infrequent,—and several cases of whales having made a regular attack upon every boat which came near them, dashed some in pieces, and killed or drowned some of the people in them, have occurred within a few years, even under my own observation.

*Boats, together with their crews and apparatus, projected into the air.*—The Dutch ship *Gort-Moolen*, commanded by Cornelius Gerard Onwekas, with a cargo of seven fish, was anchored in Greenland in the year 1660. The captain, perceiving a whale ahead of his ship, beckoned his attendants, and threw himself into a boat. He was the first to approach the whale; and was fortunate enough to harpoon it before the arrival of the second boat, which was on the advance. Jacques Vienkes, who had the direction of it, joined his captain immediately afterwards, and prepared to make a second attack on the fish, when it should remount again to the surface. At the moment of its ascension, the boat of Vienkes happening unfortunately to be perpendicularly above it, was so suddenly and forcibly lifted up by a stroke of the head of the whale, that it was dashed to pieces before the harpooner could discharge his weapon. Vienkes flew along with the pieces of the boat, and fell upon the back of the animal. This intrepid seaman, who still retained his weapon in his grasp, harpooned the whale on which he stood; and, by means of the harpoon and the line, which he never abandoned, he steadied himself firmly upon the fish, notwithstanding his hazardous situation, and regardless of a considerable wound that he received in his leg, in his fall along with the fragments of the boat. All the efforts of the other boats to approach the whale, and deliver the harpooner, were futile. The captain, not seeing any other method of saving his unfortunate companion, who was in some way entangled with the line, called to him to cut it with his knife, and bade him to swim. Vienkes, embarrassed and disconcerted as he was, tried in vain to follow this counsel. His knife was in the pocket of his drawers; and, being unable to support himself with one hand, he could not get it out. The whale, mean while, continued advancing along the surface of the water with great rapidity, but fortunately never attempted to dive. While his comrades despaired of his life, the harpooner

by which he held, at length disengaged itself from the body of the whale. Vienkes being then liberated, did not fail to take advantage of this circumstance; he cast himself into the sea, and, by swimming, endeavoured to regain the boat which continued the pursuit of the whale. When his shipmates perceived him struggling with the waves, they redoubled their exertions. They reached him just as his strength was exhausted, and had the happiness of rescuing this adventurous harpooner from his perilous situation.

In one of my earliest voyages to the whale-fishery, I observed a circumstance which excited my highest astonishment. One of our harpooners had struck a whale, it dived, and all the assisting boats had collected round the fast-bow, before it arose to the surface. The first boat which approached it advanced incautiously upon it. It rose with unexpected violence beneath the boat, and projected it and all its crew, to the height of some yards in the air. It fell on its side, upset, and cast all the men into the water. One man received a severe blow in his fall, and appeared to be dangerously injured; but soon after his arrival on board of the ship, he recovered from the effects of the accident. The rest of the boat's crew escaped without any hurt.

Captain Lyons of the *Raith* of Leith, while prosecuting the whale-fishery on the Labrador coast, in the season of 1802, discovered a large whale at a short distance from the ship. Four boats were dispatched in pursuit, and two of them succeeded in approaching it so closely together, that two harpoons were struck at the same moment. The fish descended a few fathoms in the direction of another of the boats, which was on the advance, rose accidentally beneath it, struck it with its head; and threw the boat, men and apparatus, about fifteen feet into the air. It was inverted by the stroke, and fell into the water with its keel upwards. All the people were picked up alive by the fourth boat, which was just at hand, excepting one man, who having got entangled in the boat, fell beneath it, and was unfortunately drowned. The fish was soon afterwards killed.

(To be resumed.)

#### AFRICA.

*Travels to the Sources of the Senegal and Gambia.* By M. Mollien, 4to.

(Concluded.)

The addition to science and African geography made by Mr. Mollien is of some importance: we select what appears to us most worthy of notice.

He states the sources of the Gambia and Rio Grande to be distinct, though only about 1300 paces distant, near the mountains of Badet, a part of the Tong

range. The following is his account, on arriving at the summit of one of these heights.

It was entirely bare, so that we could discover below us, two thickets, the one concealing from view the sources of the Gambia, (in Poula, Diman,) the other those of the Rio Grande, (in Poula, Comba). The joy I felt at this sight could not be disturbed by the reflection of Ali, (his guide,) who the moment we perceived the two rivers said to me: "I fear they will murder thee, if they learn that thou art going to the sources; nevertheless, since thou wilt have it so, we will proceed towards them as if we were hunting, and Boukari on his side shall go to the neighbouring village." The Poulas of Fouta Jallon call this village, *the Sources*.—Continuing in a western direction, we rapidly descended the ferruginous mountain, the summit of which we had been traversing since sun-rise, and arrived in a beautiful valley. On the right and left appeared small villages; the ground was covered with high and thick dry grass, not a stone was to be seen on it; two thickets, which shaded the sources, the objects of my research, rose in the midst of this plain, which drought had despoiled of its verdure. When I entered that which covers the source of the Rio Grande, I was seized with a feeling of awe, as if I was approaching one of the sacred springs where Paganism placed the residence of its divinities. Trees, coeval with the river, render it invisible to the eyes of those who do not penetrate into this wood; its source gushes from the bosom of the earth, and runs north, north-east, passing over rocks. At the moment when I saw the Rio Grande, it slowly rolled along its turbid waters; at about three hundred paces from the source they were clearer, and fit to drink. Ali informed me, that in the rainy season two rivines hollowed in the neighbouring hill, but then dry, and which terminate at the source, conduct thither two torrents which increase its current; at some leagues distance from the place where it springs from the ground, and beyond the valley, the Rio Grande changes the direction of its course, and runs to the west.

Proceeding south-south-east in the same meadow, Ali suddenly stamped upon the ground, and the earth echoed in a frightful manner. "Underneath," said he, "are the reservoirs of the two rivers; the noise thou hearest proceeds from their being empty." After walking about thirteen hundred paces, we reached the wood which concealed the source of the Gambia. I forced my way through the thorny bushes which grew between the trees, and obtained a sight of it. This spring, like the other, was not abundant; it issues from beneath a kind of arch in the middle of the wood, and forms two branches; one running south-south-west stops at a little distance, on account of the equality of the ground which does not allow it to go any further, even in the rainy season; the other runs down a gentle declivity, and takes a south-south-east direction. At its exit from the wood, and even six hundred

† I give this anecdote on the authority of the author of the *Histoire des Pêches*, who translated it from the Dutch. Part of the story bears the marks of truth; but some of it, it must be acknowledged, borders on the marvellous.

paces farther, it is only three feet broad. After ascertaining so important a point as the relative position of the sources of the Gambra and Rio Grande, at so short a distance from each other, I hastened to rejoin Boukari, who awaited us with an impatience mingled with uneasiness; we rejoined together at not having met with any unpleasant adventure; in fact, we had only seen a number of oxen wading without herdsmen, in the meadows contiguous to the sources of these two rivers.

The valley in which they are situated, forms a kind of funnel, having no other outlets than the two defiles by which the rivers run off; man has never dared to use the axe in the woods which overshadow these two springs, because the natives believe them to be inhabited by spirits; their respect for these places is carried to such a pitch, that they are careful not to enter them, and if any one had seen me penetrate within them, I should infallibly have been put to death. From the situation of these two sources, in a basin, between high mountains, covered with ferruginous stones and cluders, and almost entirely destitute of verdure, I am led to conjecture that they occupy the crater of an extinct volcano. The ground which resounded under my feet, probably covers one of the slopes whence the fiery eruptions issued.

The sources of the Falemé, called Thené by the Poullas, is in the same range, and was visited by the author on the 17th.

It is situated, like the sources of the Gambra and Rio Grande, in a basin surrounded by mountains. The Falemé rises at the foot of a hillock situated to the west in an open spot; it runs to the south, and at a very short distance enters an extremely thick wood; nine hundred paces lower it receives the river Boié, then making a curve it turns northward and enters Dentilia. At the distance of two gun-shots from the source to the west, we saw the village of Kebali, and that of Timbouria to the south-west. The mountains which encircle the funnel whence it issues contain iron-mines, and the neighbouring villages carry on a great trade in that metal. Some of these mountains, like those in the neighbourhood of the Gambra, are bare and composed of ferruginous rocks; ashes of the same kind appear in the cavities of their summits, and clumps of trees are seen at intervals.

After residing some days at Timbo, Mr. Mollien explored the head of the Senegal, of which he gives the annexed description.

Agreeably to the instructions we had received from the inhabitants of Dalaba, we proceeded to the north; after traversing a fertile plain watered by the Senegal, we crossed this river, the shallow current of which flowed over a bed of sand and silt; we then began to climb a very steep mountain. We were still far from the summit when Ali suddenly stopping shewed us on our left at a little distance from our track, a thicket of tufted trees, which concealed the sources

from our view. Boukari and I stole along the mountain, reached this thick wood, into which the rays of the sun had never penetrated, and crossed the Senegal, which could not be so much as four feet broad. Ascending the stream I perceived two basins, one above the other, from which the water gushed forth, and still higher a third, which was only humid, as well as the channel that led to the basin immediately below it. The Negroes consider the upper basin as the principal source of the river. These three springs were situated about the middle of the side of the mountain. In the rainy season two ponds, at equal distances above the upper source, supply it with water by two deep channels. On the opposite side of the mountain is a village called Toukan.

The Senegal, called Baleo (black river) in the Poula language, Bafing in Mandingo, which has the same signification, or Foura, which means simply the river, runs at first from north to south, then passes at a little distance to the south of Timbo, and afterwards pursues a western direction. On one of the trees near its sources, I engraved the date of the year in which I made this discovery.

Respecting the Niger, the information picked up by the author is very scanty. At a Poula village he is assured by a Marabout who had performed a pilgrimage to Mecca,

That on this side of the river and beyond Tombuctoo, there are countries entirely peopled by Poullas; that the Dyalliba discharges itself into the Nile, and that its waters, after mingling with those of the river of Egypt, pursue their course to the sea:

And in Fouta Jallon, among the geographical reports which he collected, and which we copy, it is mentioned,

To the north-east are situated,—Dentilia, a country traversed by the Falemé, and inhabited by Mandingoes, who are Pagans.

Diallon, Sangala, Kooronia, mountainous countries inhabited by Djalonkés.

To the east lie:—Balia, eight days' journey from Timbo, a flat country inhabited by Djalonkés.

Kankan, fifteen days' journey from Timbo, a flat country inhabited by Mahommedan Mandingoes. On the frontiers of this empire we find the village of Bourré, which possesses more gold than all Bondou and Bambouk together. The Negroes dig deep to find the metal, and make very long subterraneous galleries.

A great number of Serracolets are met with in Kankan, a country, as rich in its own productions as by the commerce that it carries on with Sego and Tombuctoo, which derive from it the wealth they are known to possess.

Tangarari, ten days' journey from Timbo, a flat country inhabited by Pagan Poullas. The English have there placed the sources of the Niger or Diallila. This river, however, is two gun-shots wide in the place where they assert that it rises.

To the south-east are:—Firia, ten days'

journey from Timbo, a mountainous country inhabited by Djalonkés; in the woods which separate Firia from Fouta Diallon, is the source of the Cala, supposed to be the river of Sierra Leone.

Soulinan, a mountainous country inhabited by Djalonkés, is ten days' journey from Timbo.

Kouranko, eight days' journey from Timbo, is a mountainous country inhabited by Tomakés and Kourankos. The source of the Niger or Diallila is situated in the woods which separate Soulinan from Kouranko, eleven days' journey to the south-east of the source of the Senegal.

Liban is eight days' journey to the south of Timbo; it is a mountainous country, inhabited by Libankés; the rainy season there lasts but three months; the corn harvest is in June. The king of this country has had a very narrow door constructed in front of the fort which he occupies, and has placed a very large stone behind it; such of his subjects, as in passing, touch the door-way or tread on the stone, become slaves. When a merchant goes to the king of Liban, this prince takes all his merchandize, sends for his subjects, and those who have touched the door-way or the stone, are delivered to the merchant.

A month's march to the east of Fouta Diallon lies Maniana, the capital of which is Tokoro; the way to it passes through Balia, Kankan, Toro, and Fabana. The Negroes of Maniana are cannibals, according to the statement of Mungo Park.

When an inhabitant of this country is ill, they kill him and sell his flesh for gold, which is said to be abundant; they also eat the old men; traders, nevertheless, visit these parts, but in numerous caravans. When a stranger dies they purchase his corpse for the purpose of eating it. The people of Maniana also eat spiders, and beetles; they are tall, well proportioned, and have good features; they are said to worship fire. The difficulty of keeping up any communication with so barbarous a nation, renders European merchandize exorbitantly dear there; they pay a hundred slaves for a gun. When the king wishes to purchase an expensive article, he goes to the villages, and orders the slaves who form his guard to put the man or woman whom he points out, in irons; and in this manner he frequently carries away all the inhabitants of a village. A negro from Sego, whom I saw at Geba, assured me, that his king had entirely destroyed this nation of cannibals.

Mr. Mollien erroneously places the kingdom of Massina to the East, instead of the West of Timbuctoo; and his statement respecting our unfortunate countryman Mungo Park, shows that he was ill informed on a subject with which a Traveller in Africa ought to have been well acquainted.

Two Poullas (he says) who had been to this last city, gave me an account of the route they had followed. On quitting Fouta Diallon, they first entered Balia, where

they embarked on the Niger to proceed to Mourré, the gold of which is of a very red colour, and more valued than that of Ouasselon, which is paler; they then crossed the Mandingo country to Sego; the journey occupied from three to four months. These travellers furnished me with some details respecting Mungo Park, of whom they had heard, but their contradictory reports were far from satisfying me: for one of them assured me that this celebrated traveller quitted Tombuctoo with a caravan; and the other declared, on the contrary, that two of the five persons whom he took with him to Sego, had perished there, and that he, with his three companions, had constructed a canoe, of which no tidings had since been heard. This last statement coincides the more closely of the two, with that of the Negro sent by the English to ascertain the fate of their unfortunate countryman. My two travellers agreed better on the course of the Niger, for they both declared that this great river takes its rise between Kouanko and Soliman; that in the season when the water is low they could not descend it further than Marabout, where a ridge of rocks obstructs the navigation; they added, that after passing through Sego, it forms at a great distance from that city, an immense lake, communicating with the Nile, which they called the great river of Egypt. The magnificent description which they gave me of Tombuctoo and Sego did not deceive me, as to the population or extent of these two cities. Very brilliant accounts had also been given me of Timbo, the inhabitants of which were rated at forty thousand, while in reality there are only about nine thousand; the palaces which were spoken of in such high terms, are merely straw cottages.

Sego and Tombuctoo are but the marts for the commerce of the people of northern Africa with Kankan and Ouasselon, the richest countries of the interior of this continent, in slaves and gold.

For a multitude of adventures with lions, alligators, &c.; cruel accounts of starvation, and other matters of personal import, we must refer to the volume of Mr. Mollin, whose narrative, as we have observed, is strongly tinged with Gallie effect. It does not appear exactly how far he penetrated from the coast;—probably about 100 or 120 miles, while his extreme distance from Fort Louis (as the crow flies) might be from 250 to 300. Timbo, the place furthest to the south which he reached, has been frequently visited by Englishmen; among others, by Messrs. Watt and Winterbottom from Sierra Leone. The son of an Englishman, who resided and married there, is stated to have turned Mahummedan, and live at present in the environs. The publication is ornamented with seven plates, and is edited by Mr. Bowdich, so well known by his own travels in Africa. A

vocabulary of various languages is given in the Appendix.

*A Geological Primer in Verse; with a Poetical Geognosy, and sundry right pleasant Poems, &c.* 8vo. pp. 68.

This is a jeu d'esprit, of the same nature as *King Coal's Lxxce*, and displays no inconsiderable share of humour. We shall allow it, however, to speak for itself, and literally confine ourselves to extracts!

The external part or crust of the globe, wherever it has been extensively examined, is composed of different rocks, generally arranged in beds or layers over each other; and these beds appear to have been consolidated at different epochs. Many of the beds contain remains of extinct genera or species of animals; and certain species are often peculiar to certain beds, above or below which they are never observed. Now it is evident that the animals whose remains are imbedded in the lower rocks, could not have been contemporaneous with those found in the upper, by which they are covered; hence the different ages of these rocks are proved.

The lowest rocks that we are acquainted with contain few or no remains of organic life; but from their position it is inferred that they have been formed at different periods: the lowest are supposed, with certain limitations, to be the oldest. It is also well deserving attention, that the animal remains in the lower rocks belong exclusively to the simplest forms of organic life; namely, to molluscous animals and annelids; and that the remains of vertebrated animals, or such as possessed a brain and spinal marrow, never occur in or below the regular coal strata.

It has been further observed, that in the order in which rocks are placed over each other, there is an approximation to a regular succession in every part of the globe, with the exception of certain rocks supposed like the volcanic, to be formed by subterranean fire, and which cover other rocks without any regular order. Though the whole series of rock formations enumerated, may never have been observed together in any one situation, yet wherever they do occur, the rocks placed at the top of the series, are never found under any of the others. Chalk, or green sand, sometimes rests immediately on his limestone, or red sandstone, without the intervention of the oolites, but we never find the oolites above chalk. Some of the rock formations do not extend to every part of the globe: thus chalk and oolite are not found in Wales or the north-west part of England; and, according to Humboldt, they are entirely wanting over a great part of South America. It still remains true, that wherever different formations are observed over each other, there is an approximation to a regular order of succession:—to trace this suc-

\* This position has been recently objected to; but the author is of opinion that its truth has not yet been invalidated. He is also fully convinced that all the writers who have hitherto attempted to apply Werner's arrangement to the Geology of England, have made the most important mistakes; mistakes which have introduced much confusion, and prevented the Geologists on the Continent from understanding the description given of the geology of this country. He trusts he shall make this apparent in a work he is preparing for publication.

cession is the most important part of the science denominated Geology.

The author thought it might be useful to describe the order of succession of the principal rocks, in an amusing form, divested of all unnecessary technicality, that the subject might be more easily understood and remembered. This is the utmost merit to which the Poetical Geognosy lays claim.

The Geological Cookery is intended to impress on the memory of the student the structure of aggregated rocks.

Neptune entertains the rocks, of which the earth's crust is formed, in the following order.

First Granite \* sat down, and then beckon'd his queen,

But Gneiss † step'd in rudely, and elbow'd between,

Pushing Mica-slate ‡ further; when she with a frown

Cried, "You crusty, distorted, and bump-back'd Cretaceous §!"

But this was all sham,—for to tell you the truth, They had been the most intimate friends from her youth,

But let scandal cease. See the whole tribe of Slates

All eager and ready to rush to their plates; Oh hear'm! how the family pour in by dozens, Of brothers, and sisters, and nephews, and cousins §!

The elder-born Limestones ran in between these;—

They were very well known to be fond of a squeeze.

Now, before we proceed with our story, it meet

That we hint at th' amours of Calcium and The-tis:

But the tale shall be short. 'Tis agreed by the sages,

Hence sprang all the limestones of different ages: The oldest look'd white; and no wonder she should,

She had never once dined upon animal food. Ere these rocks were all seated, the loud sound-

ing call Of "Our places! Our places!" rang shrill thro' the hall.

On hearing the noise, the Muse turn'd round her head,

And saw Porphyry ¶ and Euriite—their faces were red.

Then Greenstone \*\* and Sienite †† follow'd behind—

\* See Granitogony and Geological Cookery.

† Gneiss.—This rock is composed of the same minerals as granite, but it has a slaty structure; its beds are often much distorted, and intermixed with Mica-slate.

‡ Mica-slate.—A shining whitish rock, composed principally of Mica and Quartz.

§ Among Slate Rocks we may enumerate, as the principal, Clay slate, or Chlorite slate; Hornblende slate; Flinty slate; Drawing slate; Whetstone slate; Porphyritic slate; and Alum slate.

¶ The oldest Limestone, or White Stagnary Marble, contains no remains whatever of marine or other animals.

§ For the composition of Porphyry, see Geological Cookery.—Euriite, see Primer.

\*\* Greenstone; see Diabase, Primer.

†† Sienite.—A rock similar to Granite, but containing a mixture of a dark mineral called Hornblende.

Their seats were bespoke (they said) time out of mind.

Great Neptune rose up, and then swore in a rage That each rock should be seated according to age:

"But let those (where the register cannot be found

Either under the water or on the dry ground) Not presume to take regular seats at the table; But change places with others whenever they're able."

Thus the last mentioned rocks were obliged to retire, Though their ages were book'd in the office of fire: (This they said,) but no soul would go thither to inquire.

Leaning over old Gneiss and the Slate rocks they stood, Or else press'd between them, whenever they could.

Gay Serpentine  $\frac{1}{2}$ , clad in a livery of green, At Mica slate's feet during dinner was seen; Among the first class it was publicly said, He had often been found fast asleep in her bed. When these rocks were thus settled, and quiet restored,

The others more orderly march'd to the board. Say, Muse, who is he that is just walking in? Oh! his name is as harsh and as rough as his skin,

He's a cousin of Slate, but he looks wild and cracky,

And he is known as the far-famed illustrious Gran-Waef  $\frac{1}{2}$ .

Younger Slate rocks, with Sand stone, then came side by side,

And he, the Great Limestone, of limestones the pride,

Who has caves with wild echoes resounding and vocal,

And is call'd by the masons *grey marble entrecôte*. The next was a grave looking set on the whole, Who came in a group to accompany Coal.

Coarse grit stones, with sand stones, and clay-binds, and shale,

Some were hard, some were soft, some were dingy, some pale;

They oft proved deceitful when thought very sound,

For they had many faults  $\frac{1}{2}$ , which they hid under ground.

Red Sandstone came after, and licking his lips, He brought in the Salt, on a salver of Gyps.

Two sister limestones he had a strong bias, The one was Magnesian  $\frac{1}{2}$ , the other was Lias,

$\frac{1}{2}$  Serpentine, the prevailing colour of this rock is green. It often occurs imbedded in Mica slate.

$\frac{1}{2}$  Slate appears to pass by gradation into coarse grit stone, by the mixture and increase of Quartz or sandy particles, and is then called *Grauwacke*. The French Geologists class *Grauwacke* and many of the Sandstones together, under the name of *Psammite*, and more recently under that of *Traumite*. These terms are no improvement either in sense or sound.

$\frac{1}{2}$  Faults or Dislocations—frequent in coal strata, and occasion much inconvenience to miners.

$\frac{1}{2}$  Magnesian Limestone, and Lias Limestone.—Magnesian Limestone, generally of a yellow colour, sometimes contains remains of fish. Lias Limestone occurs in flat and nearly horizontal strata, some of which abound with remains of oviparous quadrupeds, Lizards of enormous size, together with remains of scaly fish, Ammonites, Gryphites, and Pterocrinites.

Though the former look'd sallow, he press'd the dear charmer

So close, his attentions did sometimes alarm her: But Lias was *fat*, and seem'd sombre and dull, For with shell-fish and lizards her stomach was full.

Then Oolite  $\frac{1}{2}$ , with sand-stones, and sand red and green

In a crowd, near the top of the table were seen. The last that were seated were Chalk-marl and Chalk.

They were placed close to Neptune, to keep him in talk.

Now the God gave him orders, "If more guests should come,

Let them dine with the Lakes in a separate room. As for Gravels, and Black-earth, and other gross

livers, They may feast out of doors by the side of the rivers.

Kill Aurochs  $\frac{1}{2}$  and Mammoths, not heeding their groans,

But let them take care of the tooth and the bone."

Their food is described, and the breaking up of the feast by an earthquake, which illustrates the fire theory.

The following is the GEOLOGICAL PRIMER...

A was an Agate as round as a Ball.

B was Basalt in the cave of Efigal.

C was King Coal, of Oxford the pride.

D Doubtful Diabase, close by his side.

E was Eucrite called White-stone, the natural brother

F of Felspar; and much they resembled each other.

G stands for Granite, as old as my granny.

H for rough Hornblende, as blind as a Zany.

I was Iron-stone very dull looking and sad.

J was Jasper, in red and striped ivory cluck.

K was Killian, an old Cornish cousin of slate.

L was Limestone, reclined on a mountain in slale.

M was Mica, a shining elastic bright blazer.

N Novaculite, ready to sharpen your razor.

O was Oolite or Roe-stone, with little round eyes.

P was Porphyry in masses, that reach'd to the skies.

Q was Quartz, whose clear crystals like diamonds shine.

R was Rock-salt from Cheshire, fresh out of the mine.

S was Slate-rock all covered with shivery matter.

T Trap play'd with fire though his mother was water.

V Variclite, covered with little white spots.

W Wacker, all disfigured with freckles and blot.

X stands for Cross-stone, so pearly and white;

A very near cousin of Z, Zeolite  $\frac{1}{2}$ .

From the "sundry right pleasant poems" we copy two as examples...

$\frac{1}{2}$  Oolite, or Roe-stone.—Portland stone, Bath stone, and Rotten stone, are Oolites, or Roe-stones.

$\frac{1}{2}$  Aurochs and Mammoth. Aurochs a species of ox, whose bones are found in gravel and alluvial soil. Mammoth, the fossil elephant:—the teeth and bones are frequently found in gravel and alluvial soil in England, and are very common in Siberia.

$\frac{1}{2}$  Y does not form a letter in the Geological Alphabet; but the Mineralogist who delights in travelling may find it at Y terby in Sweden.

*Physical Geography, or Simon Glumb's Nose.*

If alpine scenes can charm thee, hither come. And view the matchless Nose of Simon Glumb. What varied outline!—here carbonaceous rise, And lift their purple heads amid the skies: There many a sudorous torrent springs, and glides

In deep ravines adown its furrow'd sides. Oh, if such scenes allure thee, hither come, And contemplate the Nose of Simon Glumb.

Perhaps some pensive animalcule roves Along those vales, and seeks the stream it loves;

Or climbs the steep, and views with wild surprise Alps over Alps, on mountains, mountains rise;

Sees lava bursting from volcanic pimple; Or craters, now extinct, that look mere dimples;

Midst scenes like these enjoys sublime repose; And leads a life of bliss on Simon's Nose.

If such there be—then let us not complain, Or say the nose and man were made in vain.

On reading the *Memoirs* of Madame de Maintenon

My soul is delighted, *enchante* alors, *Quand je lis du Siècle de Louis Quatorze*;

Qu'il est difficile à voir a whole nation Making love à la mode, for each other's salvation.

To the Saints and to Cupid, the Virgin and Venus Said—*que tout court Français soit divided between us.*

Ces Moines Jésuites, et ces Frères Jemites, Ces Dames si dévotés avec l'air hypocrite,

Sont tous occupés, with such Christian-like labour, Converting the husbands and wives of their neighbours.

Victez Grand Roi tout rempli de dévotion! With prayers, yrics, and mistresses, what a commotion!

It was intrigue and interest and artifice all, A l'eglise, à la cour, at a sermon or ball,

Quelle pitié de voir! quelle vertueuse grimace! On déposait au Diable en chantant de grâce.

## THE FIRST CRUSADE.

[From *Mill's History of the Crusades*: continued.]

To the horrible and flagitious attempts of the fanatics detailed in our last Number, succeeded the more regular Crusades, which,

though more orderly, were not less bloody. The principal commanders of the earliest

columns were the celebrated Godfrey of Bouillon, the Counts of Vermandois, Blois;

and Planters, Robert Curthose, Duke of Normandy, Bohemond Prince of Tarentum;

and Raymond Count of Toulouse. Most of these leaders, after various hardships and

adventures, united at Constantinople, where the Emperor Alexius got them generally to

swear fealty to him. The political trimming of this Machiavelian monarch had, during

his whole life, a great effect in the proceedings of the crusades; and was the cause of

much of their distress. In truth, he appears to have feared his Christian allies, as

much as his pagan enemies, and no feelings of remorse and justice qualified the measures

of craft and cruelty with which he endeavoured to secure himself, and hold them in even

balance. At this period the bones of 250,000 of the vagabonds who had formed the

four rabble expeditions within the year (1006) were whitening on the plains of Nice,

or putrifying in the marshes of Hungary. In May 1097 the holy legions, amounting to

6 or 700,000 souls, commenced their progress through Asia Minor. The siege of

Nice was their first great exploit, and its capture was made nugatory by the treachery of Alexius, who, as the head of the league, claimed and obtained the city. The latter and victory of Doryleum followed; and as this bears a striking resemblance to hundreds of subsequent actions, we briefly note its details. "The Christians were reposing on the banks of a river in the valley of Gorgon, when the alarming rumour reached them of the rapid approach of the foe. Bohemond gave his camp to the charge of the infantry, and, with his cavalry, prepared himself for the impetuous shock of the Moslem savages. The sultan left about one half of his army in the mountains; with the other he descended into the plain; and his soldiers make the air ring with such shouts and yells, that the enemy, unused to clamour, were filled with astonishment and alarm.\* The heroes of Asia discharged their feathered artillery before the Christians could fight with their swords and lances. Few of the Turkish arrows fell without effect; for though the coat of mail defended the men, the horses were completely exposed. A brother of Tancred, and Robert of Paris, severally attempted to charge the Turks, and to press them to close combat. But they constantly evaded the onset, and their pointed weapons checked their furious foe. Both the gallant Italian and the haughty Frenchman were slain; and the remains of their forces were compelled to retreat. Tancred himself fought as a soldier rather than as a general; but the prudent Bohemond drew him from increasing dangers. The Turks pursued their success, and pressed forward to the camp of the Crusaders, where, laying aside their bows, they used their swords with equal execution. Mothers and their children were killed; and neither priests nor old men were spared.† The cries of the dying reached the ears of Bohemond, who, leaving the command to Robert of Normandy, rushed towards the tents, and scattered the enemy. The Christians, weary, thirsty, and oppressed with labour and heat, would have sunk into despair; if the women of the camp had not revived their courage, and brought them water from the stream. The combat was renewed with tenfold vigour. The Norman chieftain fought with all the valour which emboldened his family. He rallied the alarmed troops by his vociferations of those words of courage *Deus id vult*, and, with his standard in his hand, he darted into the midst of the Moslems. When he was joined by Bohemond, all the Christians returned to their duty; despair gave birth to fierceness, and

death was preferred to flight. But their fate was averted by the consequences of the early prudence of Bohemond. Immediately on the appearance of the Turks he had sent messengers to Godfrey and the other leaders, who, at the head of forty thousand soldiers, hastened to assist their brethren. The duke of Lorraine and the count of Vermandois were the first that reached the field of battle; and Adhemar and Raymond soon increased the force. The Turks were paid struck at this unexpected event. In the breasts of the holy warriors revenge and emulation inflamed the ardour of conquest; and the holy flame burnt with double violence when, by the exhortations of the clergy, their minds were recalled to the nature of the cause for which they were in arms. Amidst the animating shouts of prayers and benedictions, the standard of the cross was unfurled, and every soldier swore to tell his devotion with reverent deeds on the helmets of his foes. The heavy charge of the Latins was irresistible. The quivers of the Turks were exhausted; and in close combat the long and pointed swords of the Franks were more deadly than the Turkish sabres. The Moslems fled on every side, and abandoned their camp in the mountains to the enemy. The Christians pursued them for three miles, and then, as devout as joyful, returned to their old positions singing hymns to God. Four thousand of the lower orders of the Franks, and three thousand commanders of the Turks, fell in this first great action between holy and infidel warriors. The Turkish spoils amply repaid the fatigues of the day."—At other times prodigies were resorted to, in order to inspire the crosses when the tide of battle ran against them; and these holy tricks seldom failed to produce the desired effect, whether they consisted of the appearance of St. George or any other Saint, coming towards the army, of miracles, or of the finding of sacred relics of prodigious efficacy.

Some time after the battle of Doryleum, Babilvin, the second in command to Godfrey, separated from his companions, and founded a Christian government at Edessa, in Mesopotamia, the remains of which exist at the present day. The main force undertook the siege of Antioch, a place of monstrous strength in times when gunpowder was unknown, though being four miles in circumference, the capital of Syria would have been able to make but a short defence against the engines of modern warfare. The investment was long, and the contest sanguinary; famine and war alternately ravaged the forces on both sides; desertion also thinned the Christian ranks; but, at last, Antioch fell by treachery. "The banner of Bohemond was hoisted on a principal eminence; the trumpets brayed the triumph of the Christians; and with the affirmation, *Deus id vult*, they commenced their butchery of the sleeping inhabitants. For some time the Greeks and Armenians were equally exposed, with the Musselmans; but when a pause was given to murder, and the Christians became distinguished from the infidels, a mark was put on the dwellings of the for-

mer; and their edifices were regarded as sacred. The dignity of age, the helplessness of youth, and the beauty of the weaker sex, were disregarded by the Latin savages. Houses were no sanctuaries; and the sight of a mosque added new virulence to cruelty. If the fortune of any Moslem guided him safely through the streets, the country without the walls afforded no retreat, for the plains were scoured by the Franks. The citadel alone was neglected by the conquerors; and in that place many of their foes secured themselves before the idea was entertained of the importance of subjugating it. The number of Turks massacred on this night was at least ten thousand. The fate of Baghasian, (the Emir, and a grandson of Malek Shah) was melancholy and unmerited. He escaped with a few friends through the Crusaders' camp, and reached the mountains. Fatigue, disappointment, and the loss of blood from the opening of an old wound, caused a giddiness in his head, and he fell from his horse. His attendants raised him; but he was helpless, and again became stretched on the ground. They fancied, or heard the approach of the enemy; and, as in the moments of extremity the primary law of nature is paramount, they left their master to his fate. His groans caught the ear of a Syrian Christian in the forest, and he advanced to the poor old man. The appeal to humanity was made in vain; and the wretch struck off the head of his prostrate foe, and carried it in triumph to the Franks.

The attendants and followers of the camp pillaged the houses of Antioch as soon as the gates had been thrown open; but the soldiers did not for awhile suffer their rapacity to check their thirst for blood. When, however, every species of habitation, from the marble palace to the meanest hovel, had been converted into a scene of slaughter, when the narrow streets and the spacious squares were all alike disfigured with human gore, and crowded with mangled carcasses, then the assassins turned robbers, and became as mercenary as they had been merciless."

The Emperor of Persia now marched against the Crusaders, the enemies of the prophet, who were abandoned by Alexius, deserted by many of their brethren, shut up in Antioch, and again exposed to all the miseries of famine. Superstitious frauds were resorted to, to restore their discipline and courage; and not in vain. Inspired prophets announced success: a Lombard clerk presaged the entry of Jerusalem in triumph after three years of hardship; and "before the effects of this tale had worn away another priest swore on the gospels, that while he was at prayers, Jesus Christ, accompanied by his mother and Saint Peter, appeared to him, and said, "Knowest thou me?" The priest answered, "No." A cross was then displayed on the head of the Saviour, and the astonished priest acknowledged his Lord. The son of man exclaimed, "I made you masters of Nice, I opened to you the gates of Antioch; and in return for these benefits, you have lost your religious name in infamous debaucheries with Pagan

\* Agreeably to the fashion of the times, the devil was supposed to be the author of this clamour. The words *diabolical sonus*, and *demoniac vox*, occur within two lines of each other in the *Gesta Francorum*, p. 6.

† Some of the matrons and damsels of quality preferred Turkish slavery and its accompaniments to a glorious death. They dressed themselves in their most sumptuous robes, exhibited all their charms, and threw themselves at the feet of the conquerors. Albert, p. 212.

women."\* At these words the holy virgin and St. Peter threw themselves at the feet of Jesus, and besought him to have mercy on his votaries. He then said to Peter, "Go tell my people, that if they will return to me, I will turn to them; and in five days will give them the help which they want." The presbyter offered to verify his story by a fiery ordeal; but as the merit of faith rises in proportion to the weakness of testimony, the bishop of Puy required merely a simple oath. Bohemond, Raymond, Godfrey, Hugh, and the two Roberts, swore that they would never desert each other, or fly from the sacred cause; and Tancred shewed his fanaticism or courage in the expression, that he would not abandon the siege of the citadel, or the journey to Jerusalem, so long as sixty soldiers were in his train. The succours of heaven were not withheld from any want of devotion in the people. The temples were crowded, and the streets resounded with psalms and hymns. A priest and a secular man were arrested in their flight; the one by his brother's ghost, the other by Jesus Christ himself. Heavenly promises were mixed with reproaches, and the spectre of the mortal man declared, that the disembodied souls of the slain Christians would assist their friends in the day of battle. When superstition was at its height, a Provençal or Lombard clerk, named Peter Barthelemy, assured the chiefs, that St. Andrew had appeared to him in a vision, had carried him through the air to the church of St. Peter, and had shewn him the very lance which had pierced the side of Christ. The saint commanded him to tell the army, that that weapon would ward off all attacks of the enemy, and that the Count of Tholouse should support it. He had not at first obeyed the commands of the saint, for he dreaded the charges of fraud and imposture; but at last the threats of heavenly vengeance had overcome his modesty, and he resolved to communicate the important secret. Expressions of joy and thankfulness from the chiefs rewarded the holy man, and superstition or policy bowed conviction to the tale. This appears to have been a holy cheat invented by the Count of Tholouse; it, however, answered the purpose for which it was invented, for the lance was found, and contributed largely to the triumph over the infidels, which crowned the ensuing desperate battle. The crosses thus inflated, "polished their shields, and sharpened their swords. What few provisions they had left, they freely gave to each other: and their horses, (only two hundred) were allowed a double portion of provender. Temporal cares did not possess them wholly. They sung hymns, they prayed, made religious processions, confessed one to another, and in receiving the sacrament of the holy sup-

per, they felt their anger kindled against the impious despisers of the efficacy of the death of Christ. The clergy were seen in every church, and among each band of soldiers, promising forgiveness of sins to those who fought bravely. The leaders of the army, the bishops, and particularly the pious Adhemar, poured out their blessings only, but largesses of money and provisions; and now these people, who had seemed just before pale, wan, and spirit-broken, appeared with a bold and martial front, anticipating nothing but victory. Religion had changed all. Every one felt that he was the man of God, and that assisted by the lance of his Saviour, he should discomfit his foes."

The next day (28th of June, 1098,) was the day of battle, and the religious courage of the army was animated by the circumstance that it was the festival of the church for St. Peter and St. Paul. All the troops, except the count of Tholouse, and a few of his Provencals, who were left to watch the citadel, quitted Antioch, and formed in battle array on the plain before the city. The van was preceded by the priests, and monks with crucifixes in their hands, praying aloud for the protection of heaven, and exclaiming in the language of the Psalmist, 'Be thou a tower of defence to those who put their trust in thee.' Every event was turned into a favourable omen, and even the morning dew scented with the perfume of roses, was supposed to be a special favour from heaven. The army marched in twelve divisions, in honour of the twelve apostles. To Hugh rout of Vermandois, as the bearer of the papal standard, was assigned the distinction of leading the van. Robert of Flanders commanded the second division; Robert of Normandy, and his noble kinsman, Stephen earl of Albe-marle, the third. The bishop of Puy led the fourth, and this division was the most honourable of the twelve, for it carried the head of the sacred lance. The fifth, sixth, ninth, tenth, and eleventh divisions were conducted by brave and celebrated generals; the seventh and eighth were led by Godfrey and Tancred; and the division of reserve was under the command of Bohemond. The bishop of Puy, clothed in armour, and bearing the lance in his right hand, advanced from the ranks, and exhorted the champions of the cross to fight that day as brothers in Christ, as the sons of God. 'Heaven,' he continued, 'has pardoned you for your sins, and no misfortune can happen to you. He who dies here will live hereafter, because he seeks eternal glory. Be brave of heart, for the Lord will send you legions of saints. Go then before your enemies, who are more prepared for flight than for combat; as in the name of the Lord Jesus Christ to battle, and the Lord God Almighty will be with you.' The army shouted their approbation and assent. They then pressed forwards to the plain on the other side of the Orontes. Two thousand Turks, the guardians of the iron bridge, were annihilated by the three first divisions, and the whole army formed in two lines between the mountains and the river. Hugh was at the right of the

line, and Godfrey on the left. Kerbogah had expected the Christians as suppliants, and he learnt only by the destruction of his corps of observation, that they marched as warriors. His movements were directed by skill; he bent his attacks against a part only of the enemy, the division of Godfrey and Hugh; and the sultan of Nice, after having made a circuitous route, fell upon the rear of Bohemond. The Christians opposed no stratagem to the manœuvre of the Turks, but the battle was fought man to man, lance to lance. Tancred hung the event in suspense by rescuing the prince of Tarentum; but at last the Franks contended for safety, not for victory, and the Saracenic cavalry was mowing away their ranks. In this perilous moment some human figures, clad in white armour, and riding on white horses, appeared on the summit of the neighbouring hills, and the people distinguished the martyrs St. George, Maurice, and Theodore. The superstitions, or politic Adhemar, ran through the ranks, exclaiming, 'Behold, soldiers, the saviour which God has promised you.' The men answered him with the cry, Deus id vult, their martial energies revived at this animating shout, and, not waiting for the bright squadron of their celestial allies, they closed their battalions, and bore down upon the Saracens; who, terrified at this unexpected vigour, threw away their arms, and fled. So closely did the Christians pursue the steps of Kerbogah, that the valiant emir could not rally the troops, or save the Turkish women and children from murder, or his camp from spoliation. The booty was so great, that every one of the conquerors became in a moment far richer than when he assumed the cross; and there fell to the share of Bohemond the splendid tent of Kerbogah, which, like the one sent by Harun al Raschid to Charlemagne, could (it is said) contain two thousand men, was divided into streets like a town, and fortified with towers. One thousand five hundred camels were found in the camp, and the cavalry mounted themselves on Arabian horses. The citadel of Antioch followed the fate of the covering army, and surrendered."

[We find that the siege and sacking of Jerusalem, without which we cannot conclude the history of this interesting Crusade, will occupy more than a page of our Gazette, and must therefore, in the pressure of other matter, be postponed.]

## ARTS AND SCIENCES.

### VACCINATION IN INDIA.

The Board of the National Vaccine Establishment have lately received from Seringapatam a curious and important memoir on Vaccination in that part of India, by the Rev. I. A. Dubois, Missionary in the Mysore, author of a Description of the Character, &c. of the people of India, and long a most ardent and zealous promoter of the Vaccine.

M. Dubois states, that Vaccination was introduced into Hindoostan in the year 1802, and was warmly encouraged by the British

\* Strange morality, indeed, as Mr. Ellis observes, is ascribed to the Supreme Being, who declares himself offended, not by the unnecessary cruelty of the crusaders, but by the general profligacy of their manners, so much as by the reflection, that Pagan women were partners of their amours. Specimens of the Early English Poets, i. 99.

Government; but the natives displayed a violent aversion to it from several causes:—the first proceeded from a hatred to all innovation. 3dly. A rumour arose, that this was a design of the English to affix an indelible mark on certain persons; and that all the males so impressed were, when they grew up, to be forced into the military service, and the females to be concubines. 3dly. The Hindoos had always considered the small-pox as a dispensation from a Goddess named Mahy Umna; or rather, that the disease was an incarnation of this Deity into the person infected. They endeavoured to propitiate this Goddess with offerings and sacrifices; but should the patient die, the relatives dared not weep, lest the Goddess should overwhelm them with greater calamities.

From these causes Vaccination was at first submitted to only by Christians.

M. Dubois exerted his influence to overcome the prejudices of the natives, and though at first much confusion arose, and some failures occurred in consequence of other practitioners mistaking a spurious disease for the true Vaccine; the opposition gradually declined, in consequence of the complete success which attended the regular Vaccine, and the natives became persuaded that the Goddess Mahy had chosen this mild mode of manifesting herself to her votaries, and might be meritoriously worshipped under this new shape.

M. Dubois solemnly declares, that he and his assistants have vaccinated nearly a Lac, or one hundred thousand persons; and that he has not heard of one case proving fatal, nor a single well-authenticated instance among this large number, of the Small Pox occurring after the regular Vaccine.

*Calcutta Journal.*

## LEARNED SOCIETIES.

### OXFORD, MARCH 11.

On the 1st, the Hon. Morton Eden, and the Rev. Charles Webber, B. A. Students of Christ Church, were admitted Masters of Arts; and Charles George Venables Vernon, Student of Christ Church, was admitted B. A. On Monday last the Rev. Philip Ward, of Trinity College, and George Trevelyan, of Balliol College, were admitted Masters of Arts; and John Clement Wallington, of St. John's College, was admitted B. A. On Thursday Richard Bethell, B. A. Scholar of Wadham College, was unanimously elected Vinerian Scholar in Common Law.

### CAMBRIDGE, MARCH 10.

William Blackstone Rennel, Esq. B. A. Fellow of King's College, is elected into one of the Travelling Fellowships founded by the late William Worts, Esq.

CHANCELLOR'S MEDALISTS.—The gold medals given annually by the Chancellor of this university, to two commencing Bachelors of Arts, who acquit themselves best in classical learning, were adjudged to Messrs. Horatio Waddington and Thomas Pell Platt.

*Sir William Browne's Medals.*—The sub-

jects for the present year are, FOR THE GREEK ONE: *Μηροπολις*.

FOR THE LATIN ONE: *Ad Georgium Quartum, Augustissimum Principem, Scripta Paterna accipiente.*

FOR THE GREEK EPIGRAM: *Inscriptio, In Venum Aquæ ex imis visceribus Terræ Arte educatæ.*

FOR THE LATIN EPIGRAM: *Impræpari disquirite.*

On Monday evening the members of the Cambridge Philosophical Society held their second general meeting for the present year, in the great lecture room of the Physical Schools in the Botanic Garden; when the President finished the reading of his paper on Isometrical Perspective; a communication was then read by the Secretary, from the Rev. J. Hallstone, respecting a mineralized organic body, found in the cliff near Scarborough; a paper, by Mr. Herschell, jun. was afterwards read, on the reduction of certain classes of functional equations to equations of finite differences; also a paper by Mr. J. Oken, upon the fossil remains of the beaver found in the peat earth near the bed of the old West Water at Chatteris.

## ORIGINAL POETRY.

[By Correspondents.]

### THE MICHAELMAS DAISY.

Last smile of the departing year,  
Thy sister sweets are flown;  
Thy pensive wreath is far more dear,  
From blooming thus alone.  
Thy tender blush, thy simple frame,  
Unnoticed might have past;  
But now thou comest with softer claim,  
The loveliest and the last.  
Sweet are the charms in thee we find,  
Emblem of hope's gay wing;  
'Tis thine to call past bloom to mind,  
To promise future spring.

L.

### DUET.

1.  
O, Mary! are your eyelids shut,  
Or are you of love dreaming yet?  
2.  
No, I awoke when day-light broke,  
The visions bright at nought I set.  
1.  
Why did you wake! Why did you break  
The charm which is so sweet to see?  
2.  
O! I awoke: the spell I broke  
To think on love's reality.  
BOTH.  
Sweet is love's illusive dream,  
But sweeter still his waking theme;  
Sweet are the visions bright we see  
Before young lovers' sleeping eyes;  
But sweeter still the magic power  
Which glads them in their waking hour.

## BIOGRAPHY.

### BENJAMIN WEST.

Benjamin West, Esq. the President of the Royal Academy, died at his house in Newman-street, on the night of Friday the 10th instant, at the advanced age of 82. He had

been for a long time in declining health, and finally dropped easily in the ripeness of years. The grave must be closed over him for a space, before his character as a painter and a man can be impartially and fully discussed; but it may even now be said, that few beings have ever died leaving so little doubt upon their immorties, either in regard to the estimable qualities of social life, or to the employment of the gifts of nature, as this venerable individual. He was assuredly a character free from offence in those actions which serve to distinguish worth from vice; and the marked predominance of good in his disposition, far more than counterbalanced the frailties of humanity, of which, in common with his fellow-creatures, he participated. As an artist, his eminence is unquestioned; and though perhaps there may be a difference of opinion upon the degree of his rank, there can be none as to its being highly elevated, and to his professional pursuits being, without one exception, of the noblest kind.

Mr. West, the tenth child of John West and Sarah Pearson, was born near Springfield, County Chester, Pennsylvania, on the 10th of November, 1738. His family were quakers; but on the paternal side, whether truly or not is of no consequence, claimed noble descent from Lord Delawarre, of the era of Edward III. It was in 1667 that his ancestors changed their religious persuasion, and in 1669 that they emigrated to America. Mr. Galt, who has published an account of the youth of Mr. West, states, that his appearance in this busy world was accelerated by the powerful effect produced on his mother by one of the inspired preachers of the sect to which she belonged; and very oddly infers from this untoward circumstance, that the child was born for great future destinies! So absurd a proposition throws much suspicion over the other facts detailed in the work, and we repeat them without vouching for their perfect credibility. It is said that not only without previous practice, but without having ever seen a picture or engraving, Benjamin, in his seventh year, drew the likeness of a sleeping infant, so accurately as to be readily cognisable. Encouraged by this wonderful commencement, he resolutely followed the bent of his genius, and at school continued to make drawings with pen and ink, till some Indians, who visited Springfield, taught him the use of the red and yellow, with which they painted their ornaments; and his mother adding indigo, he ventured on a wider field with his three prismatic colours. There being no camel's-hair pencils in Pennsylvania, the young artist made for himself, and substituted an imitation from the fur of his father's favourite black cat, whose tail and back witnessed to his depredations.

When about eight years old, a friend at Philadelphia made him a present of a box of colours, and some engravings; from two of the latter he composed a piece, and, such is the partiality of our age for the exploits of our youth, the President of the Royal Academy is reported by his biographer to have declared thirty-seven years after, that "there

were inventive touches in his first and juvenile essay which, with all his subsequent knowledge and experience, he had not been able to surpass." The next step in advance of young West was the reading of Richardson and Trevelyan. Inspired by their writings, he painted his first historical subject, the Death of Socrates. Pursuing his studies at Philadelphia, he made such progress, that the body to whose tenets he adhered, departed from their doctrine of hatred to what was merely ornamental and worldly, and, at a public meeting, authorised his devoting himself to the fine arts. He was at this period sixteen years of age, and for some time painted portraits at Philadelphia, at two guineas and a half for a head, and five guineas for a half length, saving as much money as he could for a voyage to Europe. He also resided about eleven months at New-York; till in 1780, opportunity and auspicious circumstances combining, he sailed for Italy. An artist in that day, springing from a sect inimical to the arts, and from a new country, was a curiosity, and Mr. West reaped many advantages from his situation. He was speedily patronised, and liberally assisted. On the 10th of July, in the year we have mentioned, he arrived at Rome. Mr. Robinson (afterwards Lord Grantham), took him by the hand, and he became acquainted with persons of rank in society, as well as with Gavin Hamilton, Mings, and other painters of celebrity. It is stated that Raphael did not at first interest him, and that Michael Angelo, neither at first, nor on further study, appeared to be so great as common fame allows. He painted a picture of Cliton and Iphigenia, preparatory to taking his degree among the Roman students; and subsequently, another of Angelica and Madro. The academies of Florence, Bologna, and Parma, elected him a member; and he set out with an increase of knowledge and reputation for England, whither he travelled through France.

Thus far Mr. Galt's publication carries us. It seems to indicate that Mr. West's ambition was as much directed towards being thought a marvellous child, as what we consider much more desirable, a distinguished man.

In August, 1763, Mr. West arrived in London; and after visiting several of the finest collections of pictures at various palaces and noble residences, determined to settle in this country, and married a Miss Shavell, from Philadelphia. He accordingly, in the ensuing spring, exhibited at the Great Room in Spring Gardens three of his best works; and, on the incorporation of the artists in 1765, was chosen a member, and appointed one of the directors. He drew at their Academy in St. Martin's Lane; and, in 1768, was one of the four who submitted the plan of the Royal Academy for his Majesty's approbation.

With the King himself, to whom he was recommended by the Archbishop of York, (Drummond,) he soon after became a favorite; and continued to grow in fame and prosperity under royal patronage, and the public favour obtained through the regular

annual exhibition of excellent pictures. His first performance, exhibited in 1769, at the Royal Academy, was *Regulus*. At present we have not a fit opportunity for detailing his progress minutely, nor for relating any of the multitude of anecdotes about him which are in circulation. His "Death of Wolfe," and "William Penn forming a Treaty with the Indians," are widely known; and in later years, his "Christ healing the Sick," "Death on the pale Horse," and other works, have borne testimony to the unimpaired vigour of his faculties. In 1802, Mr. West went to Paris, and was received with great honours. He was historical painter to his Majesty (1772), and surveyor of royal pictures (1799); President of the Royal Academy (1791); member of the Dilettanti Society, Society of Arts, Royal Institution, Antiquarian Society, and a governor of the Foundling Hospital in England. Abroad he was also honoured with marks of distinction. As President of the Royal Academy, succeeding so enlightened a man as Sir Joshua Reynolds, we are not aware that Mr. West, by his lectures, did so much for the British School as his great predecessor; nor do we know that some of the duties of this important office have not fallen into disrepute. Whoever may be elected to the vacant chair, whether Slue, Lawrence, or Fuseli, will therefore do well to consider that some of the vigour of a young Institution may be most usefully infused into one which has shown somewhat of the listlessness and apathy of abundance and age. It is a high place, and he who fills it may do a great deal for the arts.

Mr. West has left two sons, with, we are informed, small fortune, except his princely collection of pictures, which is valued at a large sum. It is probable that his funeral will be public, like that of his celebrated predecessor.

## THE DRAMA.

There are no novelties this week in the theatrical world. Mr. Harris is gone to Dublin to complete the purchase of the theatre in that city, which will thus become an appendage to Covent Garden, as Ireland is to England;—we hope both will be well managed. Mr. Mathews has adjourned his house over the Easter Holidays. Signior Ambrogetti, Mademoiselle Corri, Pearman, and one or two other respectable performers, have been exhibiting among numerous groups of wonderfully ragged chorus-rovers at the Cohourg, and the audiences have added rows to the discordance already too great upon the stage. The Hebrew is dying by inches, and Kean is announced for *Lear*. Mr. Howard Payne, the author of *Brutus*, has we hear taken Sadlers Wells, and is preparing to open the Aqueous Campaign. Madame Mara, as we anticipated, from newspapers so repeatedly stating that she had refused every invitation to sing notwithstanding the immense temptations offered, had "a night" at the King's Theatre on Thursday.

## VARIETIES.

M. de Kermellée who some time ago departed from France on a scientific mission, arrived at Saint-Denis in the Isle of Bourbon, in October 1819. He is engaged in forming collections of plants and seeds; and in a private letter he states his intention of transmitting several packages of curiosities for the Jardin du Roi, in Paris.

The Academy of Belles Lettres at Stockholm, has elected Lord Strangford and Baron Suhtelen (the Russian Ambassador) Foreign Members.

A gentleman of Rouen of the name of Louvel, has applied for leave to change it; and, instead of that of an assassin, to assume his maternal name, "Delaplanche."

There is an English Journal called *The Telegraph*, published at Boulogne, so much has this place become a British settlement.

The steam brig, *Le Voyageur*, which sailed from l'Orient for Senegal, on the 18th of October, has arrived safely at the place of its destination, after a voyage of 16 days. This is the first steam vessel that has sailed from a French port on a voyage of any length.

## METEOROLOGICAL JOURNAL.

MARCH, 1820.

Thursday, 9.—Thermometer from 25 to 48.

Barometer from 30, 38 to 30, 23.

Wind N. E.  $\frac{1}{2}$  and S. W.  $\frac{1}{2}$ .—Generally clear.

Friday, 10.—Thermometer from 27 to 43.

Barometer from 30, 07 to 29, 90.

Wind S. b. W. and S. E.  $\frac{1}{2}$ .—Morning cloudy, the rest of the day generally clear.

Saturday, 11.—Thermometer from 24 to 52.

Barometer, from 29, 85 to 29, 78.

Wind S. E. 1.—A foggy morning, the rest of the day generally clear.

Sunday, 12.—Thermometer from 28 to 48.

Barometer from 29, 70 to 29, 63.

Wind E. b. S.  $\frac{1}{2}$ .—Morning and noon clear, the rest of the day cloudy, with a little rain in the evening.

Monday, 13.—Thermometer from 31 to 37.

Barometer from 29, 74 to 30, 05.

Wind W. b. S. 2 and  $\frac{1}{2}$ .—Morning cloudy, the rest of the day generally clear.

Rain fallen, .625 of an inch.

Tuesday, 14.—Thermometer from 30 to 55.

Barometer from 30, 24 to 30, 28.

Wind S. W.  $\frac{1}{2}$ .—Generally cloudy, sunshine at times.

Wednesday, 15.—Thermometer from 45 to 60.

Barometer from 30, 41 to 30, 47.

Wind N. W.  $\frac{1}{2}$ .—Generally cloudy.

Edmonton, Middlesex. JOHN ADAMS.

## TO CORRESPONDENTS.

Many articles are unavoidably postponed, and must also stand over next week, when we shall have the pleasure of occupying nearly our whole Number with the analyses of *Three New Works*, of great literary interest, which will then be on the eve of publication: viz. *The Monastery*, by the Author of *Waverley*. *The Life of Wesley*, and *History of Methodism*, by Southey; and *Wordsworth's new Poem*.

# Miscellaneous Abvertisements, (Connected with Literature and the Arts.)

British Gallery, Pall Mall.

**THIS GALLERY**, for the Exhibition and Sale of the Works of Modern Artists, is open daily, from ten in the morning until five in the afternoon.

JOHN YOUNG, Keeper.

Admission 1s.—Catalogue 1s.

## PUBLIC LIBRARY CONDUIT STREET.—

On the Publication of their NEW CATALOGUE, Messrs. COLBURN and Co. beg leave most respectfully to present their grateful acknowledgements to their numerous Subscribers for the very distinguished patronage with which this Establishment has been constantly honoured, and to assure them that the Proprietors' exertions shall be spared in order to render it still more worthy of that peculiar favour which has hitherto been bestowed upon it. With the view of devoting their attention more particularly to this object, they have recently transferred their Miscellaneous Retail Business to another house; and have established such new regulations for the circulation of books, as they deem for the press, as most unquestionably tend to afford to their Subscribers a very superior degree of accommodation. The Catalogue now presented will be found to contain, besides the more valuable Standard Works, every interesting modern publication, to the present day; to which will be regularly added, at the discretion of the Proprietors, every production that merits general interest that may appear. The Proprietors have, also, the pleasure to state, that the entire Library has been recently most carefully inspected, deficiencies supplied, important works added, and the whole re-arranged, in neat and uniform binding. In conclusion, the Proprietors beg to observe, that as it will be their constant aim to render their collection both at home and abroad, as well as their own exclusive concern, a Publishers, subservient to the interests of this establishment, they confidently hope that their Subscribers will do them the favour to co-operate with them in their intentions, by the earliest possible return of books, and a due regard to all the regulations, which they beg it to be understood, can in no respect be dispensed with.

Conduit Street, March 1825.

## TERMS OF SUBSCRIPTION TO COLBURN

and Co.'s BRITISH and FOREIGN PUBLICATIONS.

Class I.—Subscribers paying 5s. 3s. the year, 3s. 3s. the half year, or 1s. 6s. per quarter, are allowed 12 volumes in town, or 21 in the country, and are entitled to the newest and most expensive works in the Library.

Class II.—Subscribers paying 4s. 4s. the year, 2s. 12s. 6d. the half year, or 1s. 14s. 6d. per quarter, are entitled to 8 volumes in town, or 16 in the country, including new Publications in the octavo and duodecimo sizes.

Class III.—Subscribers paying 3s. 3s. the year, 2s. 2s. the half year, or 1s. 5s. per quarter, are allowed 6 volumes, but are not entitled to the perusal of new works.

Extra Class.—Subscribers paying 10s. 10s. the year, 6s. 6s. the half year, or 3s. 13s. 6d. per quarter, are allowed 15 volumes in town, or 30 in the country, and are entitled to the immediate perusal of every new work desired, (the proprietors engaging to provide an extra quantity of books for this class, in order to ensure the strict fulfilment of this stipulation), and to have purchased for them any work of general interest, that may be already have been added to the Library.

Books sent to Subscribers to all parts of the United Kingdom, or the Continent, and in any quantity, by paying a proportionate subscription.

Colburn and Co. most respectfully assure those Ladies and Gentlemen who may honour them with their names, as Subscribers, that the greatest attention shall be paid to their wishes, and that they trust that by the arrangements they have adopted for an immediate and abundant supply of all new and interesting works, British and Foreign, that they shall afford them more than ordinary satisfaction.

New Poetical Music, by Clementi and Co. 26, Chancery.

**HAIL GEORGE THE FOURTH!** a new Patriotic Song: the words by W. F. Colford; the Music by F. Kalkbrenner, price 1s. 6d. "The Emblem

of Love," a much admired Song, by Mrs O'Moran; the Piano-Forte Accompaniment by J. Wilkins, price 1s. 6d. "If Music be the Food of Love;" a favourite Canonet (the words from Shakespeare) by J. Clifton, price 1s. 6d. "The second Number of British Melodians will shortly be ready for delivery. The Poetry by J. F. M. Davison, Esq. A. M. the Music by Mr. Clifton, price 1s.

## BOOKS PUBLISHED THIS DAY.

In a few days will be published, the second Volume, (Poetry) of

## CHEFS-D'ŒUVRE OF FRENCH LITERATURE.

THIS, consisting of interesting Extracts from the Classic French Writers, in Prose and Verse, with Biographical and Critical Remarks on the Authors and their Works. In 2 Vols.

\* *Quid sit pulchrum, quid tergo, quid utile, quid non. Hor.*

Printed for Longman, Hurst, Kees, Orme, and Brown; A. B. Dalou and Co.; and Isaacson and Sons.

*Encyclopædia Britannica*.—New Edition.

On Wednesday, the 1st March was published, handsomely printed in 4to. with new engravings, price 16s. in boards, Volume First, Part First, of

## THE ENCYCLOPÆDIA BRITANNICA,

a Dictionary of Arts, Sciences, and Miscellaneous Literature. Sixth edition, revised, corrected, and improved. Edinburgh: Printed for Archibald Constable and Co. Edinburgh, and Hurst, Robinson, and Co. 30, Chesapeake, London, and sold by all booksellers.

1) The Sixth Edition of the *Encyclopædia Britannica*, now offered to the public, has been much improved, particularly by adapting the geographical and statistical Articles to the present state of the world. References have also been made, where necessary, to the new and important Articles in the Supplement, now in course of publication; so that the whole will form the most complete repository of general knowledge that has yet been given to the public.

Condition 1. The work will consist of twenty volumes, handsomely printed, with nearly six hundred Engravings, executed in a superior manner; each volume containing one hundred sheets letter-press, or 800 pages.—2. To meet the convenience of every class of purchasers, it will be published in Parts or Half Volumes, each containing fifty sheets letter-press, and at an average, fifteen plates.—3. The Second Part of volume first will be published on the 1st April next; and a Part or Half Volume will be regularly published on the first day of each month, till the whole is completed; and as the printing of the whole is already considerably advanced, purchasers may depend on the most rapid publication of the publication.

## Life of the King.

In 2 vols. 8vo. embellished with 18 portraits, price 25s.

**GEORGE the THIRD; his COURT and FAMILY.** This interesting work, which has been long since prepared for the press, will be found to contain a rich collection of original Anecdotes of illustrious and distinguished persons than has ever yet been submitted to the curiosity of the public, and it abounds in relations of those peculiar traits of character for which his Majesty was so distinguished during his long and eventful reign, and which have rendered his personal history so remarkably attractive. Printed for Henry Colburn and Co. Conduit Street.

## Miss Harpur's New Novel.

The second edition, in 3 vols. 20s.

## COUNTRY NEIGHBOURS, and THE SHEEP.

WRECK! Tales of Fancy. By Miss BURNBY.

Printed for Henry Colburn and Co. Conduit Street, of whom may be had, by the same author, new editions of 1. *Claretine*, 3 vols. 21s. 2. *Traits of Nature*, 4 vols. 24s.

In 12mo. price 4s. 6d.

## THE MOTHER'S MEDICAL ASSISTANT;

containing Instructions for the Prevention and Treatment of the Diseases of Infants and Children. By Sir ARTHUR R. CLARKE, M. D. &c. &c. author of an Essay on Bathing. Printed for Henry Colburn and Co. Conduit Street.

Printed uniformly with Park's Travels, in 4to. and illustrated with a Map, and numerous Plates, price 25s. in boards.

## TRAVELS in the INTERIOR of AFRICA to

the SOURCES of the SENEGAL and GAMBIA, undertaken by order of the French Government, and performed in 1818, by M. G. MOLLIER. Edited by T. F. EDWARDS, Esq. Conductor of a Mission to Ashantee. Printed for Henry Colburn and Co. Conduit Street.

## MEMOIR on the FORMATION and CON-

SECTIONS of the CRISTAL ARCH, and other Parts concerned in Internal and External History.

Paris, price 7s. By ROBERT LISTON, Member of the Royal College of Surgeons, of London and Edinburgh, Lecturer on Anatomy, &c. Printed for Peter Hill and Co. Edinburgh; Baldwin, Cradock, and Joy, London; and Hodges and McArthur, Dublin.

In 8vo. second edition, price 12s. boards.

## HISTORICAL DISSERTATIONS on the

LAW and PRACTICE of GREAT BRITAIN, particularly of Scotland, with regard to the Poor, on the Modes of Charity, and on the Means of promoting the Improvement of the People, together with a Selection of Facts and Documents, and Miscellaneous Enquiries, illustrative of the Management of the Poor in Scotland, and in various parts of the Continent of Europe, &c. By the Rev. ROBERT BURNS, one of the Ministers of Paisley. Edinburgh. Printed for Peter Hill and Co.; and Longman and Co. London.

Beautifully printed by Ballantyne and Co. price 14s. 6d.

## MISCELLANEOUS POEMS. BY WALTER

SCOTT, Esq.

1) This volume contains the Bridal of Triermann, Harold's Ransoms, "William and Helen," imitated from the "Lemon" of Rufford, and all the smaller Pieces, collected for the first time in the recent edition of the Author's Poems. It is printed uniformly with the octavo editions, in order to accommodate purchasers of sets of Mr. Scott's Poetry in that size, which this volume will complete.

Printed by Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. Chesapeake, London. Of whom may be had, Sir Tristram, a metrical Romance of the Thirteenth Century. By Thomas of Rhyndelme, called the Rhymer. Edited from the Auchinleck MS. by Walter Scott, Esq. Fourth edition. Octavo. 12s. boards. New editions of the Lady of the Lake, Roderick, also Mr. Scott's other Poems, uniformly printed in octavo.

London: Printed for the Proprietors, by W. POPE, 47, Chancery Lane: Published every Saturday, by W. A. CHAPMAN, at the Literary Gazette Office, 36, (East) Chancery Strand, where Communications, (post paid), are requested to be addressed to the Editor.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom; but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 166.

SATURDAY, MARCH 25, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

### THE MONASTERY.

*The Monastery; a Romance.* By the Author of *Waverley*. 3 vols. London. 1820.

We know not in what measure the critics will allow the *nullum in tegit quod non ornabit* to the author of these volumes: certain it is, that he has here adopted a machinery different from any of his preceding prose works; and, in so far as we can call to mind, only paralleled among his poems by the spectral encounter in *Marmion*. He has now for the first time thrown down the apple of discord without an attempt at explanation, and by mixing supernatural agency with human action, departed essentially from the great line which he has hitherto pursued as a painter of manners and of portraits according to truth. We confess that we are sorry for this departure. The effects of mere superstition seem to us to be fully sufficient for all the purposes even of pure Romance; and to go beyond that sphere into absolute fairy land, in order to influence human beings, alter character, and produce real events, is to push fiction farther than its proper limit, and destroy the verisimilitude of the tale however otherwise admirably constructed. All the subsequent deeds of a man who has been killed in duel, but revived by a "White Maid," go for nothing; and, however just and accurately drawn his likeness may be, the illusion of identity is annihilated, and every affair in which he mingles loses the quality of probability. Indeed we are not sure that the offence does not grieve us the more, in proportion to the excellence and consistency of the other parts: we can relish a group of witches flying through the air on broomsticks, or of elves dancing in circles on the sward; of wraiths, apparitions, and fiends, which in the end turn out to be but the ideal forms of a morbid imagination; and we can even advance another step, and allow their direct influence in productions altogether fabulous and fanciful: but when the grand merit of a book is, by an unbecoming incident in the shape of pleasing narrative, to represent a particular age and country, individual manners and general history, it may be alleged that it is much deteriorated by the introduction and actual employment of ghosts, spectres, and spirits which never had existence. The author of the *Monastery* is no doubt armed with many forcible arguments in favour of his plan: we only submit our opinion upon the frame-work, and venture to suggest that the idea of the bible being preserved and the sacred light of the gospel spread by

means of a fairy, is rather extravagant for the nineteenth century, as a picture of the sixteenth.

Having said thus much upon the outline of the *Monastery* and its superhuman features, we shall not deprive our readers of any of the surprise of the denouement, by detailing the result. In performances more entirely graphic, this may be done without injury to an author or reader; but where a good deal depends on unexpected catastrophe, it is a drawback upon the conjectural pleasures derived from speculation. We shall however preface our extracts with a notice of the leading characters, and of an introductory epistle of considerable length and humour.

This epistle is from Captain Clutterbuck to the author of *Waverley*, and contains a whimsical description of the writer, and an interesting account of matters which led to the discovery of the papers, the ground-work of the *Monastery*. Captain Clutterbuck's auto-biography is amusing. He says,

"I never could conceive what influenced me, when a boy, in the choice of a profession. Military zeal and ardour it was not, which made me stand out for a commission in the Scots Fusiliers, when my tutors and curators wished to bind me apprentice to old David Stiles, Clerk to his Majesty's Signet. I say, military zeal it was not: for I was no fighting boy in my own person, and cared not a penny to read the history of the heroes who turned the world upside down in former ages. As for courage, I had, as I have since discovered, just as much of it as served my turn, and not one grain of surplus. I soon found out, indeed, that in action there was more danger in running away than in standing; and besides, I could not afford to lose my commission, which was my chief means of support. But as for that over-boiling valour, which I have heard many of our talk of, though I seldom observed that it influenced them in the actual affair—that exuberant zeal, which courts Danger as a bride, truly my courage was of a complexion much less ecstatical.

"Again, the love of a red coat, which, in default of all other aptitudes to the profession has made many a bad soldier and some good ones, was an utter stranger to my disposition. I cared not a 'boddy' for the company of the misses: nay, though there was a boarding-school in the village, and though we used to meet with its fair inmates at Simon Lightfoot's weekly Practising, I cannot recollect any strong emotions being excited on these occasions, excepting the infinite regret with which I went through the polite ceremonial of presenting my partner with an orange, thrust into my pocket by my aunt for this special purpose, but

which, had I dared, I certainly would have secreted for my own personal use. As for vanity, or love of finery for itself, I was such a stranger to it, that the difficulty was great to make me brush my coat, and appear in proper trim upon parade. I shall never forget the rebuke of my old Colonel, on a morning when the King reviewed a brigade of which we made part. 'I am no friend to extravagance, Ensign Clutterbuck,' said he; 'but, on the day when we are to pass before the Sovereign of the kingdom, in the name of God I would have at least shewn him an inch of clean linen.'

"Thus, a stranger to all the ordinary motives which lead young men to make the army their choice, and without the least desire to become either a hero or a dandy, I really do not know what determined my thoughts that way, unless it were the happy state of half-pay indolence enjoyed by Captain Doolittle, who had set up his staff of rest in my native village. Every other person had, or seemed to have, something to do, less or more. They did not indeed precisely go to school and learn tasks, that last of evils in my estimation; but it did not escape my boyish observation, that they were all bothered with something or other like duty or labour—all but the happy Captain Doolittle. The minister had his parish to visit, and his preaching to prepare, though perhaps he made more fuss than he needed about both. The laird had his farming and improving operations to superintend; and, besides, he had to attend trustee-meetings, and lieutenant-meetings, and head-courts, and meetings of justices, and what not—was as early up, (that I always detested,) and as much in the open air, wet and dry, as his own grieve. The shop-keeper (the village boasted but one of eminence) stood indeed pretty much at his ease behind his counter, for his custom was by no means over-burthened; but still he enjoyed his *status*, as the Bailie calls it, upon condition of tumbling all the wars in his booth over and over, when any one chose to want a yard of muslin, a mouse-trap, an ounce of curraway, a paper of pins, the Sermons of Mr. Peden, or the Life of Jack the Giant Killer, (not Killer, as usually erroneously written and pronounced.—See my Essay on the true history of this worthy, where real facts have in a peculiar degree been obscured by fable.) In short, all in the village were under the necessity of doing something which they would rather have left undone, excepting Captain Doolittle, who walked every morning in the open street, which formed the high-mall of our village, in a blue coat with a red neck, and played at whist the whole evening, when he could make up a party. This happy vacuity of all employment appeared

to me so delicious, that it became the primary hint, which, according to the system of Helvetius, as the minister says, determined my infant talents towards the profession I was destined to illustrate.

"But who, alas, can form a just estimate of their future prospects in this desolate world! I was not long engaged in my new profession, before I discovered, that if the independent indolence of half-pay was a paradise, the officer must pass through the purgatory of duty and service in order to gain admission to it. Captain Doolittle might brush his blue coat with the red neck, or leave it unbrushed, at his pleasure; but Ensign Clutterbuck had no such option. Captain Doolittle might go to bed at ten o'clock, if he had a mind; but the Ensign must make the rounds in his turn. What was worse, the Captain might repose under the tester of his tent-bed until noon, if he was so pleased; but the Ensign, God help him, had to appear upon parade at peep of day. As for duty, I made that as easy as I could, had the sergeant to whisper to me the words of command, and bustled through as other folks did. Of service, I saw enough for an indolent man—was buffeted up and down the world, and visited both the East and West Indies, Egypt, and other distant places, which my youth had scarce dreamt of. The French I saw, and felt too; witness two fingers of my right hand, which one of their cursed hussars took off with his sabre as neatly as an hospital surgeon. At length the death of an old aunt, who left me some fifteen hundred pounds, singly vested in the three per cent., gave me the long-wished-for opportunity of retiring, with the prospect of enjoying a clean shirt and a guinea four times a week.

"For the purpose of commencing my new way of life, I selected for my residence the village of Kennahquair, in the south of Scotland, celebrated for the ruins of its magnificent Monastery, intending there to lead my future life in the *otium cum dignitate* of half-pay and annuity. I was not long, however, in making the grand discovery, that in order to enjoy leisure, it is absolutely necessary it should be preceded by occupation. For some time, it was delightful to wake at day-break, dreaming of the reveille—then to recollect my happy emancipation from the slavery that doomed me to start at a piece of clattering parchment, turn on my other side, damn the parade, and go to sleep again. But even this enjoyment had its termination; and time, when it became a stock entirely at my own disposal, began to hang heavy on my hand.

"I tangled for two days, during which time I lost twenty hounds, and several scores of yards of gut and-line, and caught not even a minnow. Hunting was out of the question, for the stomach of a horse by no means agrees with the half-pay establishment. When I shot, the shepherds and ploughmen, and my very dog, quizzed me every time that I missed, which was, generally speaking, every time I fired. Besides, the country gentlemen in this quarter like their game, and began to talk of prosecutions and interdicts. I did

not give up fighting the French to commence a domestic war with the "pleasant men of Teriotdale," as the song calls them; so I even spent three days (very pleasantly) in cleaning my gun, and disposing it upon two hooks over my chimney-piece.

"The success of this accidental experiment set me on trying my skill in the mechanical arts. Accordingly I took down and cleaned my landlady's cuckoo-clock, and in so doing, silenced that companion of the spring for ever and a day. I mounted a turning lathe, and, in attempting to use it, I very nearly crilled off, with an inch-and-half former, one of the fingers which the hussar had left me.

"Books I tried, both those of the little circulating library, and of the more rational subscription collection maintained by this intellectual people. But neither the light reading of the one, nor the heavy artillery of the other, suited my purpose. I always fell asleep at the fourth or fifth page of history or disquisition, and it took me a month's hard reading to wade through a half-bound trashy novel, during which I was pestered with applications to return the volumes by every half-bred milliner's miss about town. In short, during the hours when all the town besides had something to do, I had nothing for it, but to walk in the churchyard, and whistle till it was dinner-time.

"During these promenades, the Ruins necessarily forced themselves on my attention, and, by degrees, I found myself engaged in studying the more minute ornaments, and at length the general plan, of this noble structure. The old sexton aided my labours, and gave me his portion of traditional lore. Every day added something to my stock of knowledge respecting the ancient state of the building; and at length I made discoveries concerning the purpose of several detached and very ruinous portions of the building, the use of which had hitherto been either unknown altogether, or erroneously explained.

"The knowledge which I thus acquired I had frequent opportunities of retailing to those visitors whom the progress of a Scottish tour brought to visit this celebrated spot. Without encroaching on the privilege of my friend the sexton, I became gradually an assistant Cicerone in the task of description and explanation, and often (seeing a fresh party of visitors arrive) has he turned over to me those to whom he had told half his story, with the flattering observation, "What needs I say any more about it? There's the Captain kens mair anent it than I do, or any man in the town." Then would I salute the strangers courteously, and expatiate to their astonished minds upon crypts and chancels, and naves, arches, Gothic and Saxon architraves, mullions and flying buttresses. It not unfrequently happened, that an acquaintance which commenced in the abbey concluded in the inn, which served to relieve the solitude as well as the monotony of my landlady's shoulder of mutton, whether hot, cold, or hashed."

Thus embarked in the deep investigation and exposition of local antiquities, our citizen captain is invited by a traveller, of

uncommon intelligence, to aid him in his search for a relic deposited in the Monastery, and in acquittance of his kindness presents to him the MS. whence this story is derived. This stranger is a Benedictine monk, whom the revolution has driven from his peaceful abode in France, and he seeks to regain the heart of an ancestor inurned in Kennahquair, before he finally settles in another religious retirement. He tells the Captain "There is among the ruins of the western end of the Abbey church, a sort of recess or chapel beneath a broken arch, in the side wall of which is a large carved stone, bearing a coat of arms, on the dexter side those of Glendinning, being a cross parted by a cross indented and countercharged of the same; and on the sinister three spur-rowels for those of Arnel: two ancient families, now almost extinct in this country. In this recess, marked by the armorial bearings, lies buried a treasure, and it is in order to remove it, that I have undertaken my present journey." "A treasure!" echoed I, in astonishment. "Yes," replied the Monk, "an inestimable treasure, for those who know how to use it rightly." I own my ears did tingle a little at the word treasure, and that a handsome tiliary, with a neat groom in blue and scarlet livery, having a smart cockade on his glazed hat, seemed as it were to glide across the room before my eyes, while a voice, as of a cher, pronounced in my ear, "Captain Clutterbuck's tiliary—drive up." But I resisted the devil, and he fled from me.

"I believe," said I, "all hidden treasures belong either to the king or the lord of the soil; and as I have served his majesty, I cannot concern myself in any adventure which may have an end in the Court of Exchequer."

"The treasure I seek," said the stranger, smiling, "will not be envied by princes or nobles,—it is simply the heart of an upright man." "Ah! I understand you," I answered, "some relic, forgotten in the confusion of the Reformation. I know the value which men of your persuasion put upon the bodies and limbs of saints. I have seen the three Kings of Cologne." "The relics which I seek, however," said the Benedictine, "are not precisely of that nature. The excellent relative whom I have already mentioned, amused his leisure hours with putting into form the traditions of his family, particularly some remarkable circumstances which took place about the first breaking out of the schism of the Church in Scotland. He became so much interested in his own labours, that at length he resolved that the heart of one individual, the hero of his tale, should rest no longer in a land of heresy, now deserted by all his kindred. As he knew where it was deposited, he formed the resolution to visit his native country, for the purpose of recovering this valued relic. But age, and at length disease, interfered with his resolution, and it was on his death-bed that he charged me to undertake the task in his stead. The various important events which have crowded upon each other, our ruin and our exile, have for many years obliged me to postpone this delegated duty. Why, indeed, transfer the relics of a holy and worthy man to a

country, where religion and virtue are become the mockery of the scorner! I have now a home, which I trust may be permanent, if any thing in this earth can be termed so. Thither will I transport the heart of the good father, and beside the shrine which it shall occupy, I will construct my own grave." "On the ensuing morning I made it my business to see the sexton, who, for a small gratuity, readily granted permission of search, on condition, however, that he should be present himself, to see that the stranger removed nothing of intrinsic value.

"To bones, and skulls, and hearts, if he can find any, he shall be welcome," said this guardian of the ruined Monastery, "there's plenty a' about, an' he's curious of them; but if there be any piets (meaning perhaps *pyes*) or chalishes, or the like of such Popish vessels of gold and silver, de'il hae me an I connieve at their being removed." The sexton also stipulated, that our researches should take place at night, being unwilling to excite observation, or give rise to scandal."

They dig for and find the relic.—

"The object of the Benedictine's visit to the land of his forefathers being now accomplished, he announced his intention of departing early in the ensuing day, but requested my company to breakfast with him before his departure. I came accordingly, and when we had finished our morning's meal, the priest took me apart, and pulling from his pocket a large bundle of papers, he put them into my hands. "These," said he, Captain Clutterbuck, are genuine Memoirs of the Sixteenth Century, and exhibit in a singular, and as I think, an interesting point of view, the manners of that period. I am induced to believe that their publication will not be an unacceptable present to the British public; and I willingly make over to you any profit that may accrue from such a transaction."

The captain, like a wise man, though no scholar, seeks literary assistance in bringing his banishing into the world, and, for that purpose, addresses the renowned author of *Waverley*; who undertakes the task of editor, and replies to him with a dryness worthy of Cervantes.

"Dear Captain,—Do not admire, that, notwithstanding the distance and ceremony of your address, I return an answer in the terms of familiarity. The truth is, your origin and native country are better known to me than even to yourself. You derive your respectable parentage, if I am not greatly mistaken, from a land which has afforded much pleasure, as well as profit, to those who have traded to it successfully. I mean that part of the *terra incognita* which is called the province of Utopia. Its productions, though censured by many, (and some who use tea and tobacco without scruple) as idle and unsubstantial luxuries, have nevertheless, like many other luxuries, a general acceptance, and are secretly enjoyed even by those who express the greatest scorn and dislike of them in public. The dram-drinker is often the first to be shocked at the smell of spirits—it is usual to hear

old maiden-ladies declaim against scandal—the private book-cases of some grave-seeming men would not brook decent eyes—and many, I say not of the wise nor learned, but of those most anxious to seem such, when the spring-lock of their library is drawn, their velvet cap pulled over their ears, their steps insinuated into their turkey slippers, are to be found, were their retreats suddenly intruded upon, busily engaged with the last new novel.

"Having told you your country, I must next, my dear Captain Clutterbuck, make free to mention to you your own immediate descent. You are not to suppose your land of prodigies so little known to us as your careful concealment of your origin would seem to imply. But you have it in common with many of your country, studiously and anxiously to hide your connexion with it. There is this difference, indeed, betwixt your countrymen and those of our more material world, that many of the most estimable of yours, such as an old Highland gentleman called Ossian, a monk of Bristol called Rowley, and others, are inclined to pass themselves as denizens of the land of reality, whereas most of our fellow-citizens who deny their country are such as that country would be very willing to disclaim. The especial circumstances you mention relating to your life and services, impose not upon us. We know the versatility of the unsubstantial species to which you belong permits them to assume all manner of disguises; we have seen them apparelled in the caftan of a Persian, and the silken robe of a Chinese, and are prepared to suspect their real character under every disguise.

"I wander from my purpose, which was to assure you, that I know you as well as the mother who did not bear you, for Mac-Duff's peculiarity sticks to your whole race. You are not born of woman, unless, indeed, in that figurative sense, in which the celebrated Maria Edgeworth may be termed mother of the finest family in England. You belong, sir, to the Editors of the land of Utopia, a sort of persons for whom I have the highest esteem. How is it possible it should be otherwise, when you reckon among your corporation the sage Cid Hamet Benengeli, the short-faced president of the Spectator's club, poor Ben Siltou, and many others, who have acted as gentlemen ushers to works which have chased our heaviest, and added wings to our lightest hours.

"What I have remarked as peculiar to Editors of the class in which I venture to enrol you, is the happy combination of fortuitous circumstances which usually put you in possession of the works which you have the goodness to bring into public notice. One walks on the sea-shore, and a wave casts on land a small cylindrical trunk or casket, containing a manuscript much damaged with sea water, which is with difficulty deciphered, and so forth. Another steps into a chandler's shop to purchase a pound of butter, and behold! the waste paper on which it is laid is the manuscript of a cabalist. A third is so fortunate as to obtain from a woman who lets lodgings, the curious contents

of an antique bureau, the property of a deceased lodger. All these are certainly possible occurrences; and I know not how, they seldom occur to any Editors save those of your country. At least I can answer for myself, that in my solitary walks by the sea I never saw it cast ashore any thing but dulse and tangle, and now and then a deceased star-fish; my landlady never presented me with any manuscript save her cursed bill; and the most interesting of my discoveries in the way of waste-paper, was finding a favourite passage of one of my own novels wrapt round an ounce of snuff. No, Captain, the funds from which I have drawn my power of amusing the public, have been bought otherwise than by fortuitous adventure. I have buried myself in libraries, to extract from the nonsense of ancient days new nonsense of my own. I have turned over volumes, which, from the post-hooks I was obliged to decipher, might have been the cabalistic manuscripts of Cornelius Agrippa, although I "never saw the door open and the devil come in." But all the domestic inhabitants of the libraries were disturbed by the vehemence of my studies—

From my research the boldest spider fled,  
And moths, retreating, trembled as I read.

"From this learned sepulchre I emerged like the Magician in the Persian Tales from his twelvemonth's residence in the mountain, not like him to soar over the heads of the multitude, but to mingle in their crowd, and to elbow amongst the throng, making my way from the highest society to the lowest, undergoing the scorn, or, what is harder to brook, the patronizing condescension of the one, and enduring the vulgar familiarity of the other,—and all, you will say, for what?—to collect materials for one of those manuscripts with which mere chance so often accumulates your countrymen; in other words, to write a successful novel.—"O, Athenians, how hard to labour to deserve your praise!"

We now come to the Benedictine's MS. The Monastery brings us acquainted with the families of Avenel and Glendinning. The former consists of Julian Avenel, a border Baron, dark and unprincipled, who on his brother's death usurps his possessions to the prejudice of his widow and infant daughter, an infant born on Halloween and consequently gifted with the power of seeing the invisible world. The mother and child, accompanied by two faithful adherents, old Martin and Tib Tucket, seek refuge with the widow Glendinning of Glendeng, whose husband was slain at Pinkie, and whose two sons Hubert and Edward are of years to be companions to Mary Avenel. They are Kirk-rassals of the monastery of St. Mary, whose Abbot Boniface, and Sub-Prior Eustace, are prominent personages in the romance. The other leading characters are Sir Peirce Shafton, an Euphuist, who has fled from the court of Elizabeth, and carries the fantastic language of Lilly and the dandyism of that period into the wilds of Scotland. Christie of Clint-hill, a Border ruler of an inferior degree to William of Deloraine, and even to the Red

Reiver of Western-flat. Myrie Happer the miller's daughter, is also a conspicuous figure; and the Miller himself, the Earls of Murray and Morton, Warden the reformed preacher, Monks, Hostellers, Freebooters, &c., fill up the scene. But the most important being of all is "The White Maid of Avenel," a species of Baneshee, who takes an active part on all the great emergencies which befall the family whose name she bears. These are the dramatic persons. The landscape of the chief seat of the romance is worthy of Walter Scott.

"Glendearg was a lonely tower of small dimensions, yet larger than those which occurred in the village, as intimating that, in case of assault, the proprietor would have to rely upon his own unassisted strength. Two or three miserable huts, at the foot of the fortalice, held the bondsmen and tenants of the fœuar. The site was a beautiful green knoll, which started up suddenly in the very throat of a wild and narrow glen, and which, being surrounded, save on one side, by the winding of a small stream, afforded a position of considerable strength. But the great security of Glendearg, for so the place was called, lay in its secluded and hidden situation. To come at the Tower, it was necessary to travel three miles up the glen, crossing about twenty times the little stream which, winding through the narrow valley, encountered at every hundred yards the opposition of a rock or precipitous bank on the one side, which altered its direction, and caused it to shoot off in an oblique direction to the other. The hills which ascend on each side of this glen are very steep, and rise boldly over the stream, which is thus imprisoned within their barriers. The sides of the glen are impracticable for horse, and are only to be traversed by means of the sheep paths which lie along their sides. It would be difficult to suppose that a road so hopeless and so difficult could lead to any habitation more important than the summer shealing of a shepherd. Yet the glen, though lonely and difficult of access and sterile, was not then absolutely void of beauty. The turf which occupied the little plain ground on the sides of the stream, was as close and verdant as if it had occupied the scythes of a hundred gardeners once a fortnight; and it was garnished with an embroidery of daisies and wild flowers, which the scythes would certainly have destroyed. The little brook, now confined betwixt closer limits, now left at large to chase its course through the narrow valley, danced carelessly on from stream to pool, light and unobscured, as that better class of spirits who pass their way through life, yielding to insurmountable obstacles, but as far from being subdued by them as the sailor who meets by chance with an unfavourable wind, and shapes his course so as to be driven back as little as possible.

"The mountains, as they would have been called in England, *Scottic* the deep *braes*, rose abruptly over the little glen, here presenting the grey face of a rock, from which the turf had been peeled by the torrents, and there displaying little patches of wood and copse, which had escaped the waste of

the cattle and the sheep and the fœuars, and which, feathering naturally up the beds of empty torrents, or occupying the concave recesses of the bank, gave at once beauty and variety to the landscape. Above these scattered woods rose the hill, in barren, but purple majesty; the dark rich hue, particularly in autumn, contrasting beautifully with the thickets of oak and birch, the mountain ashes and thorns, the alders and quivering aspens, which chequered and varied the descent, and not less with the dark-green and velvet turf, which composed the level part of the narrow glen. Yet, though thus embellished, the scene could neither be strictly termed sublime or beautiful, and scarcely even picturesque or striking. But its extreme solitude pressed on the heart; the traveller felt that uncertainty whether he was going, or in what so wild a path was to terminate, which, at times, strikes more on the imagination than the grand features of a show-scene, when you know the exact distance of the inn where your dinner is bespoke, and at the moment preparing.

"As our Glendearg did not abound in mortal visitants, superstition, that it might not be absolutely destitute of inhabitants, had peopled its recesses with beings belonging to another world. The savage and capricious Brown Man of the Moors, a being which seems the genuine descendant of the northern dwarfs, was supposed to be seen there frequently, especially after the autumnal equinox, when the fogs were thick, and objects not easily distinguished. The Scottish fairies, too, a whimsical, irritable, and mischievous tribe, who, though at times capriciously benevolent, were more frequently adverse to mortals, were also supposed to have formed a residence in a particularly wild recess of the glen, of which the real name was, in allusion to that circumstance, *Corrie nan Khian*, which, in corrupted Celtic, signifies the Hollow of the Fairies. But the neighbours were more cautious in speaking about this place, and avoided giving it a name, from an idea common then through all the British and Celtic provinces of Scotland, and still retained in many places, that to speak either good or ill of this suspicious race of supernatural beings, is to provoke their resentment, and that secrecy and silence is what they chiefly desire from those who may intrude upon their revels, or discover their haunts. A mysterious terror was thus attached to the little dale, which afforded access from the broad valley of the Tweed, up the little glen we have described, to the fortalice called the Tower of Glendearg. Beyond the knoll, where, as we have said, the little tower was situated, the hills grew more steep, and narrowed on the slender brook, so as scarce to leave a foot-path; and there the glen terminated in a wild water-fall, where a slender thread of water dashed in a precipitous line of foam over two or three precipices."

The lady of Avenel, on the fall of her fortunes, seeks refuge with the widow Glendinning. She is secretly of the reformed religion, but dies before her daughter is old enough to be instructed in the sacred truths

unfolded by the Bible, a copy of which is however left as an heir-loom; though the possession of the scriptures in the vulgar tongue, was in these days a heinous offence in the eyes of the church. Accordingly, one of the monks of St. Mary's having discovered this secret volume, declaims on the impiety of keeping it, and carries it from Glendearg to the Monastery. His adventures on the road are thus related—

"Notwithstanding the haste which the Monk as well as his mule made to return to better quarters than they had left at the head of Glendearg; notwithstanding the eager desire Father Philip had to be the very first who should acquaint the Abbot that a copy of the book they most dreaded had been found within the Haldome, or patrimony of the Abbey; notwithstanding, moreover, certain feelings which induced him to hurry as fast as possible through the gloomy and evil-reputed glen, still the difficulties of the road, and the rider's want of habitude of quick motion were such, that twilight came upon him ere he had nearly cleared the narrow valley.

"It was indeed a gloomy ride. The two sides of the valley were so near, that at every double of the river the shadows from the western sky fell upon, and totally obscured, the eastern bank; the thickets of copsewood seemed to wave with a portentous agitation of boughs and leaves, and the very scrags and scurs seemed higher and grimmer than they had appeared to the Monk while he was travelling in day-light, and in company. Father Philip was heartily rejoiced when, emerging from the narrow glen, he gained the open valley of the Tweed, which held on its majestic course from current to pool, and from pool stretched away to other currents, with a dignity peculiar to itself amongst the Scottish rivers.

"The Monk, insensible to beauties which the age had not regarded as deserving of notice, was nevertheless, like a prudent general, pleased to find himself out of the narrow glen in which the enemy might have stolen upon him unperceived. He drew up his bridle, reduced his mule to her natural and luxurious amble, instead of the agitating and broken trot at which, to his no small inconvenience, she had hitherto proceeded, and, wiping his brow, gazed forth at leisure on the broad moon, which, now mingling with the lights of evening, was rifling over field and forest, village and fortalice, and, above all, over the stately Monastery, seen far and dim amid the yellow light.

"The worst part of this magnificent view, in the Monk's apprehension, was that the Monastery stood on the opposite side of the river, and that of the many fine bridges which have since been built across that classical stream, not one then existed." There was, however, a drawbridge: but the bridge-keeper is hostile to the Abbey, and will not let it down for the Monk, who, obliged to ride lower down in order to cross the stream, finds a female in distress at the ford.

"To express himself by signs, the common language of all nations, the cautious Sacristan first pointed to the river,

then to his mule's crupper, and then made, as gracefully as he could, a sign to induce the fair solitary to mount behind him. She seemed to understand his meaning, for she rose up as if to accept his offer, and while the good Monk, who, as we have hinted, was no great cavalier, laboured, with the pressure of the right leg and the use of the left rein, to place his mule with her side to the bank in such a position that the lady might mount with ease, she rose from the ground with rather portentous activity, and at one bound sat behind the Monk upon the animal, much the firmer rider of the two. The mule by no means seemed to approve of this double burthen; she bounded, bolted, and would soon have thrown Father Philip over her head, had not the maiden with a firm hand detained him in the saddle.

"At length the restive brute changed her humour; and, from refusing to budge off the spot, suddenly stretched her nose forward, and dashed into the ford as fast as she could scamper. A new terror now invaded the Monk's mind—the ford seemed unusually deep, the water eddied off in strong ripple from the counter of the mule, and began to rise upon her side. Philip lost his presence of mind, which was at no time his most ready attribute, the mule yielded to the weight of the current, and as the rider was not attentive to keep her head turned up the river, she drifted downward, lost the ford and her footing at once, and began to swim with her head down the stream. And what was sufficiently strange, at the same moment, notwithstanding the extreme peril, the damsel began to sing, thereby increasing, if any thing could increase, the bodily fear of the worthy Sacristan.

## 1.

Merrily swim we, the moon shines bright,  
Both current and ripple are dancing in light.  
We have roused the night raven, I heard him  
Creak,

As we glided along beneath the oak

That flags its broad branches so far and so  
Wide,

Their shadows are dancing in midst of the tide.  
"Who wakens my nestlings," the raven he  
Said,

"My black shawl ere morn in his blood be red,  
For a blue swollen corpse is a dainty meal,  
And I'll have my share with the pike and the  
eel."

## 2.

Merrily swim we, the moon shines bright,  
There's a golden gleam on the distant height;  
There's a silver shower on the alders dark,  
And the drooping willows that wave on the bank.  
I see the Abbey, both turret and tower,  
It is all astir for the vesper hour;

The Monks for the chapel are leaving each cell,  
But where's Father Philip, should toll the bell?

## 3.

Merrily swim we, the moon shines bright,  
Downward we drift through shadow and light,  
Under yon rock the eddies sleep,  
Calm and silent, dark and deep.

The Kelpy has risen from the fathomless pool,  
He has lighted his candle of death and of dool:  
Look, Father, look, and you'll laugh to see  
How he gazes and glares with his eyes on thee!

## 4.

Good luck to your fishing, whom watch ye to  
night?

A man of mean or a man of might?

Is it layman or priest that must float in your  
cove,

Or lover who crosses to visit his love?

Hark! heard ye the Kelpy reply as we passed,—  
"God's blessing on the warder, he lock'd the  
bridge fast!

All that come to my cove are sunk;  
Priest or layman, lover or monk."

"How long the damsel might have continued to sing, or where the terrified Monk's journey might have ended, is uncertain. As she sung the last stanza, they arrived at, or rather in, a broad tranquil sheet of water, caused by a strong wrier or dam head, running across the river, which dashed in a broad cataract over the barrier. The mule, whether from choice, or influenced by the suction of the current, made towards the cut intended to supply the convent mills, and entered it half swimming half wading, and pitching the unlucky Monk to and fro in the saddle at a fearful rate.

"As his person flew hither and thither, his garment became loose, and in an effort to retain it, his hand lighted on the volume of the Lady of Avenel which was in his bosom. No sooner had he grasped it, than his companion pitched him out of the saddle into the stream, where, still keeping her hand on his collar, she gave him two or three good souses in the watery fluid, so as to ensure that every part of him had its share of wetting, and then quitted her hold when he was so near the side that by a slight effort (of a great one he was incapable), he might scramble on shore. This accordingly he accomplished, and turning his eyes to see what had become of his extraordinary companion, she was no where to be seen, but still he heard as if from the surface of the river, and mixing with the noise of the water breaking over the dam head, a fragment of her wild song, which seemed to run thus:

Landed—landed! the black book hath won;  
Else had you seen Berwick with morning sun!

Sain ye, and save ye, and blythe mot ye be,  
For seldom they land that go swimming with  
me.

"The ecstasy of the Monk's terror could be endured no longer; his head grew dizzy, and, after staggering a few steps onward and running himself against a wall, he sunk down in a state of insensibility."

This is a fair specimen of the romance, and will convey to our readers a perfect idea of its character—the whole being a mixed description of the manners of the times, (delineated with a master hand) and of supernatural interference, unexplained in the sequel by any reference to human action. The bible is reconveyed by magic to Glendearg. There is much drollery in the poor Monk's behaviour when carried before his Abbot—

"What betwixt cold and fright the afflicted Sacristan stood before his Superior, propped on the friendly arm of the convent miller, drenched with water, and scarce able to utter a syllable.

After various attempts to speak, the first words he uttered were,

"Swim we merrily—the moon shines bright."

"Swim we merrily!" retorted the Abbot indignantly, "a merry night have ye chosen for swimming, and a becoming salutation to your Superior!"

"Our brother is bewildered," said Eustace, "speak, Father Philip, how is it with you?"

"Good luck to your fishing,"—

continued the Sacristan, with a most dolorous attempt at the tune of his strange companion.

"Good luck to your fishing!" repeated the Abbot, still more surprised and displeased; "by my halldome he is drunken with wine, and comes to our presence with his jolly catches in his throat. If bread and water can cure this folly!"—

"With your pardon, venerable father," said the Sub-Prior, "of water our brother has had enough; and methinks, the confusion of his eye is rather that of terror, than of aught unbefitting his profession. Where didst thou find him, Hob Miller?"

"An it please your reverence, I did go but to shut the sluice of the mill—and as I was going to shut the sluice, I heard something groan near to me—but judging it was one of Giles Fletcher's hogs, for so please you, he never shuts his gate, I caught up my lever, and was about—Saint Mary forgive me!—to strike where I heard the sound, when, as the saints would have it, I heard the second groan just like that of a living man. So I called up my knives, and found the Father Sacristan lying wet and senseless under the wall of our kiln. So soon as we brought him to himself a bit, he prayed to be brought to your reverence, but I doubt me, his wits have gone a bell-wavering by the road. It was but now that he spoke in somewhat better form."

"Well!" said Brother Eustace, "thou hast done well Hob Miller; only become now, and remember a second time, to pause, ere you strike in the dark."

"Please your reverence, it shall be a lesson to me," said the miller; "not to mistake a holy man for a hog again, so long as I live." And making a bow with profound humility, the miller withdrew.

"And now that this churl is gone, Father Philip," said Eustace, "will thou tell our venerable Superior what ails thee? I set thou *vino grato*, man? if so, we will have thee to thy cell. "Water! water! not wine," muttered the exhausted Sacristan. "Nay," said the Monk, "if that thy complaint, wine may perhaps cure thee;" and he reached him a cup, which the patient drank off to his great benefit. "And now," said the Abbot, "let his garments be changed, or rather let him be carried to the infirmary; for it will prejudice our health, should we hear his narrative while he stands there, steaming like a rising hour-frost." \* \* \*

"I wish him no worse lesson," said the Sacristan, "than to go swimming merrily down the river with a ghost behind, and Kelpie's night-crows and und-eels all waiting to have a snatch at him.

Merrily swim we, the moon shines bright!  
Good luck to your fishing, whom watch ye to-night?"

"Brother Philip," said the Abbot, "we exhort thee to say thy prayers, compose thyself, and banish that foolish chaff from the mind:—it is but a deception of the devil's." "I will essay, reverend father," said the Sacristan, "but the tune lings by my memory like a burr in a beggar's rage; it mingles with the Psalter—the very bells of the convent seem to repeat the words, and jingle to the tune; and were you to put me to death at this very moment, it is my belief I should die singing it!—Now swim we merrily!"—it is as if it were a spell upon me." He then again began to warble

"Good luck to your fishing."

And checking himself in the strain with difficulty, he exclaimed, "It is too certain—I am but a lost priest! Swim we merrily—I will sing it at the very mass—Voe is me. I shall sing all the remainder of my life, and yet never be able to change the tune!" The monest Abbot replied, "he knew many a good fellow in the same condition," and concluded the remark with "ho! ho! ho!" for his reverence, as the reader may purely have observed, was one of those dull folks who have a quiet joke.

The Sacristan, well acquainted with his Superior's humour, endeavoured to join in the laugh, but his unfortunate cantic came again across his imagination, and interrupted the hilarity of his customary echo. "By the rood, Brother Philip," said the Abbot much moved, "you become altogether intolerable! and I am convinced that such a spell could not subsist over a person of religion, and in a religious house, unless he were under mortal sin. Wherefore, say the seven penitency psalms—make diligent use of thy scourge and hair-cloth—refrain for three days from all food, save bread and water—I myself will shrieve thee, and we will see if this singing devil may be driven out of thee; at least I think Father Eustace himself could devise no better exorcism." The Sacristan sighed deeply, but knew remonstrance was vain. He retired therefore to his cell, to try how far psalmody might be able to drive off the sounds of the syren tune which haunted his memory."

Leaving the Abbey, and passing over a long space of time, we must conduct our readers to the period when the children, now young men and women, are pictured as attached to each other by the strongest ties of affection. Those of Halbert Glendinning, who is a martial character, and Mary Arvel, are of mutual love; those of Edward Glendinning, who is studious and peaceful, are of love on his side, and sisterly regard on that of the maiden: those of the Brothers truly fraternal. Halbert, to secure the object of his love, enters into communication with the *Being* whose attributes are more fully developed in the following extract.

"He arrived at length in a narrow and secluded *clough*, or deep ravine, which ran down into the valley, and contributed a scanty rivulet to the supply of the brook with which Glendearg is watered. Up this he sped with the same precipitate haste which had marked his departure from the tower, nor did he pause and look around, until he

had reached the fountain from which the rivulet had its rise.

"Here Halbert stopped short, and cast a gloomy, and almost a frightened glance around him. A huge rock rose in front, from a cleft of which grew a wild holly-tree, whose dark green branches rustled over the spring which arose beneath. The banks on either hand rose so high, and approached each other so closely, that it was only when the sun was in its meridian height, and during the summer solstice, that its rays could reach the bottom of the chasm in which he now stood. But it was now summer, and the hour was noon, so that the unwonted reflection of the sun was dancing in the pellucid fountain.

"It is the season and the hour," said Halbert to himself; "and now I—I might now become wiser than Edward with all his pains! Mary should see whether he alone is fit to be consulted, and to sit by her side, and hang over her as she reads, and point out every word and every letter. And she loves me better than him—I am sure she does—for she comes of noble blood, and scorns sloth and cowardice.—And do I myself not stand here slothful and cowardly as any priest of their all?—Why should I fear to call upon this form—this shape?—Already have I endured the vision, and why not again?—What can it do to me, who am a man of lith and limb, and have by my side my father's sword? Does my heart beat—do my hairs bristle, at the thought of calling up a painted shadow, and how should I face a band of Southron in flesh and blood? By the soul of the first Glendinning I will make proof of the charm!"

"He cast the leathern brogue or buskin from his right foot, planted himself in a firm posture, unsheathed his sword, and first looking around to collect his resolution, he bowed three times deliberately towards the hollow-tree, and as often to the little fountain, repeating at the same time, with a determined voice, the following rhyme:

"Thrice to the holly brake—  
Thrice to the well:—  
I bid thee awake,  
White Maid of Avenel!  
Noon gleams on the Lake—  
Noon glows on the fell—  
Wake thee, O wake,  
White Maid of Avenel."

"These lines were hardly uttered, when there stood the figure of a female clothed in white, within three steps of Halbert Glendinning.

"His terror for the moment overcame his natural courage, as well as the strong resolution which he had formed, that the figure which he had now twice seen should not a third time daunt him. But it would seem there is something thrilling and abhorrent to flesh and blood, in the consciousness that we stand in presence of a being in form like to ourselves, but so different in faculties and nature, that we can neither understand its purposes, nor calculate its means of pursuing them.

Halbert stood silent and gasped for breath, his hairs erecting themselves on his head—

his mouth opening—his eyes fixed—and, as the sole remaining sign of his late determined purpose, his sword pointed towards the apparition. At length, with a voice of ineffable sweetness, the White Lady, for by that name we shall distinguish this being, sung, or rather chanted, the following lines:—

"Youth of the dark eye, wherefore didst thou call me?"

Wherefore art thou here, if terrors can appal thee?"

He that seeks to deal with us must know our fear, nor failing;  
To coward and churl our speech is dark, our gifts are unavailing.

The breeze that brought me hither now, must sweep Egyptian ground,

The fleecy cloud on which I ride for Araby is bound;

The fleecy cloud is drifting by, the breeze sighs for my stay,

For I must sail a thousand miles before the close of day."

"The astonishment of Halbert began once more to give way to his resolution, and he gained voice enough to say, though with a faltering accent, "In the name of God, what art thou?" The answer was in melody of a different tone and measure.

"What I am I must not show—  
What I am thou could'st not know—  
Something betwixt heaven and hell—  
Something that neither stood nor fell—  
Something that though thy wit or will  
May work thee good—may work thee ill.  
Neither substance quite, nor shadow,  
Haunting lonely moor and meadow,  
Dancing by the haunted spring,  
Riding on the whirlwind's wing;  
Aping in fantastic fashion  
Every change of human passion,  
While o'er our frozen minds they pass,  
Like shadows from the mirror'd glass.  
Wayward, fickle as our mood,  
Hovering betwixt bad and good,  
Happier than brief-dated man,  
Living ten times o'er his span;  
Far less happy, for we have  
Help nor hope beyond the grave!  
Man awakes to joy or sorrow;  
Ours the sleep that knows no morrow.  
This is all that I can show—  
This is all that thou may'st know."

"The White Lady paused, and seemed to await an answer; but, as Halbert hesitated how to frame his speech, the vision seemed gradually to fade, and become more and more incorporeal. Justly guessing this to be a symptom of her disappearance, Halbert compelled himself to say,—"Lady, when I saw you in the glen, and when you brought back the black book of Mary of Arvel, thou didst say I should one day learn to read it."

"The White Lady replied,  
"Ay! and I taught thee the word and the spell,

To waken me here by the Fairies' Well.  
But thou hast loved the heron and hawk,  
More than to seek my haunted walk;  
And thou hast loved the lance and the sword,  
More than good text and holy word;  
And thou hast loved the deer to track,  
More than the lines and the letters black;  
And thou art a ranger of moss and wood,  
And scornest the nurture of gentle blood."

"I will do so no longer, fair maiden," said Halbert; "I desire to learn; and thou shalt promise me, that when I do so desire, thou wilt be my helper: I am no longer afraid of thy presence, and I am no longer regardless of instruction." As he uttered these words the figure of the White Maiden grew gradually as distinct as it had been at first; and what had well nigh faded into an ill-defined and colourless shadow, again assumed an appearance at least of corporeal consistency, although the hues were less rich, and the outline of the figure less distinct and defined,—so at least it seemed to Halbert,—than those of an ordinary inhabitant of the earth. "Wilt thou grant my request," he said, "fair Lady, and give to my keeping the holy book which Mary of Avenel has so often wept for?"

"The White Lady replied,  
"Thy craven fear may truth accused,  
Thine idlehood my trust abused;  
He that draws to harbour late,  
Nest sleep without, or burst the gate.  
There is a star for thee which burn'd,  
In influence wanes, its course is turn'd;  
Valor and constancy alone  
Fare thee back the chance that's flown."

"If I have been a loiterer, Lady," answered young Glendinning, "thou shalt now find me willing to press forward with double speed. Other thoughts have filled my mind, other thoughts have engaged my heart within a brief period—and by heaven, other occupations shall henceforward fill up my time. I have lived in this space of years—I come hither a boy—I will return a man—a man, such as may converse not only with his own kind, but with whatever God permits to be visible to him. I will learn the contents of that mysterious volume—I will learn why the Lady of Avenel loved it—why the priests feared, and would have stolen it—why thou didst twice recover it from their hands.—What mystery is wrapt in it?—Speak, I conjure thee." The Lady assumed an air peculiarly sad and solemn, as, drooping her head, and folding her arms on her bosom, she replied:

"Within that awful volume lies  
The mystery of mysteries!  
Happiest they of human race,  
To whom God has granted grace  
To read, to fear, to hope, to pray,  
To lift the latch, and force the way:  
And better had they ne'er been born,  
Who read to doubt, or read to scorn."

"Give me the volume, Lady," said young Glendinning. "They call me idle—they call me dull—in this pursuit my industry shall not fail; nor, with God's blessing, shall my understanding. Give me the volume." The apparition again replied:

"Many a fathom dark and deep  
I have laid the book to sleep;  
Ethereal fire around it glowing—  
Ethereal music ever flowing—  
The sacred pledge of Heaven  
All things revere,  
Each in his sphere,  
Save man for whom 'twas giv'n:  
Lend thy hand, and thou shalt spy,  
Things ne'er seen by mortal eye."

"Halbert Glendinning boldly reached his hand to the White Lady.

"Fearst thou to go with me?" she said, as his hand trembled at the soft and cold touch of her twin—

"Fearst thou to go with me?  
Still it is free to thee

A peasant to dwell;  
Thou may'st drive the dull steer,  
And chase the king's deer,  
But never more come near  
This haunted well."

"If what thou sayest be true," said the undaunted boy, "my destinies are higher than thine own. There shall be neither well nor wood which I dare not visit. No fear of aught, natural or supernatural, shall bar my path through my native valley."

"He had scarce uttered the words when they both descended through the earth, with a rapidity which took away Halbert's breath and every other sensation, saying that of being hurried on with the utmost velocity. At length they stopped with a shock so sudden, that the mortal journeyer through this unknown space must have been thrown down with violence, had he not been upheld by his supernatural companion.

"It was more than a minute, ere, looking around him, he beheld a grotto, or natural cavern, composed of the most splendid spars and crystals, which returned in a thousand prismatic hues the light of a brilliant flame that glowed on an altar of alabaster. This altar, with its fire, formed the central point of the grotto, which was of a round form, and very high in the roof, resembling in some respects the dome of a cathedral. Corresponding to the four points of the compass, there went off four long galleries or arcades, constructed of the same brilliant materials with the dome itself, and the termination of which was lost in darkness.

"No human imagination can conceive, or words suffice to describe, the glorious radiance, which shot fiercely forth by the flame, was returned from so many hundred thousand points of reflection, afforded by the sparry pillars and their numerous angular crystals. The fire itself did not remain steadily and unmoved, but rose and fell, sometimes ascending in a brilliant pyramid of condensed flame half way up the lofty expanse, and again falling into a softer and more rosy hue, and hovering as it were on the surface of the altar to collect its strength for another brilliant exertion. There was no visible fuel by which it was fed, nor did it emit either smoke or vapour of any kind. What was of all the most remarkable, the black volume so often mentioned lay not only unconsumed, but untouched in the slightest degree amid this intensity of fire, which, while it seemed to be of force sufficient to melt adamant, had no effect whatever on the sacred book thus subjected to its utmost influence.

"The White Lady, having paused long enough to let young Glendinning take a complete survey of what was around him, now said, in her usual chaunt,—  
"Here lies the volume thou boldly hast sought;  
Touch it and take it, 'twill dearly be bought."

"Familiarized in some degree with marvels, and desperately desirous of shewing the courage he had boasted, Halbert plunged his hand, without hesitation, into the flame, trusting to the rapidity of the motion, to snatch out the volume before the fire could greatly affect him. But he was greatly disappointed. The flame instantly caught upon his sleeve, and though he withdrew his hand immediately, yet his arm was so dreadfully scorched, that he had well nigh screamed with pain. He suppressed the natural expression of anguish, however, and only intimated the agony which he felt by a contortion and a muttered groan. The White Lady passed her cold hand over his arm, and, ere she had finished the following metrical chaunt, his pain had entirely gone, and no mark of the scorching was visible:

"Rash thy deed,  
Mortal weed  
To immortal flames applying;  
Rasher trust  
Has thy doing,  
On his own weak worth relying:  
Strip thee of such fences vain,  
Strip, and prove thy luck again."

"Obedient to what he understood to be the meaning of his conductress, Halbert bared his arm to the shoulder, throwing down the remains of his sleeve, which no sooner touched the floor on which he stood than it collected itself together, shrivelled itself up, and was without any visible fire reduced to light tinder, which a sudden breath of wind dispersed into empty space. The White Lady, observing the surprise of the youth, immediately repeated—

"Mortal warp and mortal woof,  
Cannot break this charmed roof;  
All that mortal art hath wrought,  
In our cell returns to nought.  
The molten gold returns to clay,  
The polish'd diamond melts away;  
All is alter'd, all is flown,  
Nought stands fast but truth alone.  
Not for that thy quest give o'er,  
Courage! prove thy chance once more."

"Emboldened by her words, Halbert Glendinning made a second effort, and, plunging his bare arm into the flame, took out the sacred volume without feeling either heat or inconvenience of any kind. Astonished, and almost terrified at his own success, he beheld the flame collect itself, and shoot up into one long and final stream, which seemed as if it would ascend to the very roof of the cavern, and then, sinking as suddenly, became totally extinguished. The deepest darkness ensued; but Halbert had no time to consider his situation, for the White Lady had already caught his hand, and they ascended to upper air with the same velocity with which they had sunk into the earth.

"They stood by the fountain in the Corinn-shian when they emerged from the bowels of the earth, but on casting a bewildered glance around him, the youth was surprised to observe, that the shadows had fallen far to the east, and that the day was well nigh spent. He gazed on his conductress for explanation, but her figure began to fade before his eyes—her cheeks grew

paler, her features less distinct, her form became shadowy, and blended itself with the mist which was ascending the hollow ravine. What had late the symmetry of form, and the delicate, yet clear hues of feminine beauty, now resembled the flitting and pale ghost of some maiden who has died for love, as it is seen indistinctly and by moon-light, by her perjured lover."

This produces a great change in the character of Halbert: but we must introduce to our readers the Miller and his daughter, and Sir Piercie Shafton, who at this era arrive at Glendearg.—

The object of the Miller's visit to the tower of Glendearg was like the purpose of those embellishes which potentates send to each other's courts, partly ostensible, partly politic. In outward show, Hob came to visit his friends of the Halidome, and share the festivity common among country folks, after the barn-yard has been filled, and to renew old intimacies by new conviviality. But in very truth he also came to have an eye upon the contents of each stack, and to obtain such information respecting the extent of the crop reaped and gathered in by each farmer, as might prevent the possibility of abstracted cultures. . . . .

"Dame Elspeth assisted to disembarrass the damsel of her hood, mantle, and the rest of her riding gear, giving her to appear as besemmed the buxom daughter of the wealthy Miller, gay and goodly, in a white kirtle, the seams of which were embroidered with green silken lace or fringe, entwined with some silver thread. An anxious glance did Elspeth cast upon the good humoured face, which was now more fully shewn to her, and was only obscured by a quantity of raven black hair, which the maid of the mill had restrained by a snood of green silk, embroidered with silver, corresponding to the trimmings of her kirtle. The countenance itself was exceedingly comely—the eyes black, large, and regally good humoured—the mouth was small—the lips well formed, though somewhat full—the teeth were pearly white—and the chin had a very seducing dimple in it. The form belonging to this joyous face was full and round, and firm and fair. It might become coarse and masculine some years hence, which is the common fault of Scottish beauty; but in Mysie's sixteenth year she had the shape of an Hebe."

The maid of the Mill is hardly welcomed when another visitor makes his appearance. Christie of the Clint-hill arrives, attended on the present occasion by a very gay and gallant cavalier, who from the nobleness of his countenance and manner, his rich and handsome dress, and the shewy appearance of his horse and furniture, must be a person of some consequence. This coxcomb, Sir Piercie Shafton, of the good days of Queen Bess, is the most original character in the romance; but our limits forbid our giving more than a few traits. "Sir Piercie Shafton condescended to speak to no one but to Mary Avenel, and on her he conferred exactly the same familiar and compassionate, though somewhat scornful sort of atten-

tion, which a petty fellow of these days will sometimes descend to bestow on a country miss, when there is no prettier or more fashionable woman present. The manner indeed was different, for the etiquette of those times did not permit Sir Piercie Shafton to pick his teeth or to yawn, or to gabble like the beggar whose tongue (as he says) was cut out by the Turks, or to affect deafness or blindness, or any other infirmity of the organs. But though the embroidery of his conversation was different, the groundwork was the same, and the high-flown and ornate compliments with which the gallant knight of the sixteenth century interlarded his conversation, were as much the offspring of egotism and self-conceit, as the jargon of the coxcombs of our own days.

"It was about this time that the 'only rare poet of his time, the witty, comical, facetiously quick, and quickly-facetious John Lyly—he that sat at Apollo's table, and to whom Theobald gave a wreath of his own bays without snatching'—he, in short, who wrote that singularly comical work, called *Euphues and his England*, was in the very zenith of his absurdity and reputation. The quaint, forced, and unnatural style which he introduced by his 'Anatomy of Wit,' had a fashion as rapid as it was momentary—all the court ladies were his scholars, and to *parler Euphuisme*, was as necessary a qualification to a courtly gallant, as those of understanding how to use his rapier, or to dance a measure.

"It was no wonder that the Maid of the Mill was soon as effectually blinded by the intricacies of this erudite and courtly style of conversation, as she had ever been by the dust of her father's own meal-sacks. But there she sat with her mouth and eyes as open as the mill-door and the two windows, shewing teeth as white as her father's bolted flour, and endeavouring to secure a word or two for her own future use out of the pearls of rhetoric which Sir Piercie Shafton scattered around him with such bounteous profusion. For the male part of the company, Edward felt ashamed of his own manner and slowness of speech, when he observed the handsome young courtier, with an ease and volubility of which he had no conception, run over all the common-place topics of high-flown gallantry. It is true, the good sense and natural taste of young Glendinning soon informed him that the gallant cavalier was speaking nonsense. But, alas! where is the man of modest merit, and real talent, who has not suffered from being outshone in conversation, and outstripped in the race of life, by men of less reserve, and of qualities more showy, though less substantial; and well constituted must the mind be, that can yield up the prize without envy to competitors more unworthy than himself. A little specimen of the conversation may not be

\* Such and yet more extravagant are the compliments paid to this author by his Editor Blount. Notwithstanding all exaggeration, Lyly was really a man of wit and imagination, though both were deformed by the most unnatural affectation that ever disgraced a printed page.

out of place, were it but to shew young ladies what fine things they have lost by living when Euphuism is out of fashion.

"'Credit me, fairest lady,' said the knight, 'that such is the cunning of our English courtiers of the bodicoral strain, that, as they have infinitely refined upon the plain and rustical discourse of our fathers, which, as I may say, more besemmed the mouths of court roistersers in a May-game than that of courtly gallants in a galliard, so I hold it ineffably and unutterably improbable, that those who may succeed us in that garden of wit and courtesy shall alter or amend it. Venus delicteth but in the language of Mercury, Bucephalus will stoop to none but Alexander, no one can sound Apollo's pipe but Orpheus.'

"'Valiant sir,' said Mary, 'who could scarce help laughing, 'we have but to rejoice in the chance which hath honoured this solitude with a glimpse of the sun of courtesy, though it rather blinds than enlightens us.' 'Pretty and quaint, fairest lady,' answered the Euphuist. 'Ah that I had with me my Anatomy of Wit—that all-to-be-unparalleled volume—that quintessence of human wit—that treasury of quaint invention—that exquisitely-pleasant-to-read, and inevitably-necessary-to-be-remembered manual of all that is worthy to be known—which indoctrines the rude in civility, the dull in intellectuality, the heavy in jocosity, the blunt in gentility, the vulgar in nobility, and all of them in that unutterable perfection of human utterance, that eloquence which no other eloquence is sufficient to praise, that art which, when we call it by its own name of Euphuism, we bestow on it its richest panegyric.'

We have not room to trace the events in detail. Halbert and Sir Piercie fight a duel, and, through the strange interference of the "White Maid of Avenel," are involved in a wonderful mystery; each being suspected of the murder of the other, and both being alive. Halbert flies to Julian Avenel's castle; Sir Piercie towards Edinburgh with the Maid of the Mill, who contrives his escape, and saves him from the feud or revenge of the Glendinnings. Halbert's fortunes conduct him to distinction in the service of the Regent Murray. Sir John Foster enters the Scottish territories to levy contributions on the halidome of St. Mary, and seize Shafton. The church arms its vassals, and a battle ensues, in which Julian and Christie are slain. Murray arrives with his forces, and a compromise takes place. The Monastery is plundered, Halbert is united to Mary, and Sir Piercie to Mysie. Edward assumes the cowl, and the romance concludes with the final disappearance of the spirit attendant on the house of Avenel.

#### WORDSWORTH'S NEW POEMS.

*The River Duddon; A Series of Sonnets; and other Poems, &c.* By W. Wordsworth. 8vo.

This volume will be published next week; and we are called upon to give

our opinion upon it, as far and as correctly as one person admits. Under such circumstances, it is a very gratifying relief to our minds to have a report almost unimpairedly favourable to make. We consider these poems to be by much the least mannered and most beautiful of any that this distinguished individual has ever written. There is a tenderness which runs through them of the truest nature; their pathos is genuine and affecting; many of their images bear the impress of genius, and touches of soul are thickly sown over them; and, to those who are familiar with our sentiments respecting the mis-called simplicities of Peter Bells, Waggoners, Duffodils, &c., it will not seem a slight recommendation of the forthcoming work, that it is almost entirely unstained with similar puerilities. We might perhaps instance two or three pretty conceits; but they are in a very minor degree objectionable, when compared with what of the same kind have preceded them; while the noble thoughts clothed in fine language are infinitely more abundant. Some of the adjectives and epithets may be questioned, as quaint or inapplicable; but others are happily chosen and eminently appropriate. In short, the blemishes are trifling in themselves and thinly scattered; the excellencies great and numerous.

"The River Duddon," is a composition consisting of thirty-three Sonnets, suggested by various views of that stream, and reflections arising out of them. The second, an address to the river which flows from Wrynose Fell, at first through a mountain district, and thence through a more cultivated tract, for twenty-five miles, and enters the Irish sea, is highly poetical,

Child of the clouds! remote from every taint  
Of sordid industry thy lot is cast;  
Thine are the honours of the lofty waste;  
Not seldom, when with heat the valleys faint,  
Thy hand-maid Frost with spangled tresses quaint  
Thy cradle decks;—to chaunt thy birth, thou hast

No meaner Poet than the whistling Blast,  
And Desolation is thy Patron-saint!  
She guards thee, ruthless Power! who would  
Not spare

Those mighty forests, once the bison's screen,  
Where stalk'd the huge deer to his shaggy lair—  
Through paths and alleys roofed with sombre  
green,  
Thousand of years before the silent air  
Was pierced by whizzing shaft of hunter keen!

The third is rather formal in its rhymes; yet the fourth does not meet our ideas so strikingly as that which follows it.

\* The deer alluded to is the Leigh, a gigantic species long since extinct.

Sole listener, Duddon! to the breeze that play'd  
With thy clear voice, I caught the fitful sound  
Wafted o'er sullen moors and craggy mound,  
Unfruitful solitudes, that seem'd to upbraid  
The sun in heaven!—but now, to form a shade  
For thee, green alders have together wound  
Their foliage; ashes flung their arms around;  
And birch-trees risen in silver colonnades.  
And thou hast also tempted here to rise,  
Mid sheltering pines, this Cottage rude and grey;  
Whose ruddy children, by the mother's eyes  
Carelessly watch'd, sport through the summer  
day.

Thy pleasant associates!—light as endless May  
On infant bosoms lonely Nature lies.

The "Sullen Moss" is exquisite, coupled as it is with the transmission of sound; nor will the lovers of poetry fail to notice either the original thought of the "Unfruitful solitudes," that seem to upbraid the sun in heaven, or the concluding image, which is as sweet as lovely. It is not our intention to canvas each separate sonnet, but we shall briefly mention and quote what occurs to us as most remarkable. The seventh is simple, but we are not aware why the wren is styled "darkling." The eleventh, entitled "The Fairy Chasm," claims a place for its fancy.

No fiction was it of the antique age:  
A sky-blue stone, within this sunless cleft,  
Is of the very foot-marks unobtrus'd  
Which tiny Elves impress'd;—on that smooth  
stage

Dancing with all their brilliant equipment  
In secret revels—happily after theft  
Of some sweet babe, flower stolen, and coarse  
weed left,

For the distracted mother to amuse  
Her grief with, as she might!—But, where, oh  
where

Is traceable a vestige of the notes  
That ruled those dances, wild in character?  
—Deep underground?—Or in the upper air,  
On the shrill wind of midnight? or where floats  
O'er twilight fields the autumnal gossamer?

The fifteenth is grandly descriptive—  
From this deep chasm—where quivering sun-  
beams play

Upon its loftiest crags—mine eyes behold  
A gloomy NICHES, capacious, blank, and cold;  
A concave free from shrubs and mosses grey;  
In semblance fresh, as if, with dire affray,  
Some Statue, placed amid these regions old  
For tutelary service, thence had rolled,  
Startling the flight of timid Yesterday!

Was it by mortals sculptur'd?—weary slaves  
Of slow endeavour! or abruptly cast  
Into rude shape by fire, with roaring blast  
Temporarily let loose from central caves,  
Or fashioned by the turbulence of waves,  
Then, when o'er highest hills the Deluge past?

The following, the 21st, possesses a most interesting tenderness and flush of imagination, and is, if at all, very little inferior to the best of the series.

Whence that low voice?—A whisper from the  
heart

That told of days long past when here I roved  
With friends and kindred tenderly beloved;  
Some who had early mandates to depart,  
Yet are allowed to steal my path athwart  
By Duddon's side; once more do we unite,  
Once more beneath the kind Earth's tranquil  
light;

And smother'd joys into new being start.

From her unworthy seat, the cloudy stall  
Of Time, breaks forth triumphant Memory;  
Her glistering tresses bound, yet light and free  
As golden locks of birch, that rise and fall  
On gales that breathe too gently to recall  
Anght of the fading year's inclemency!

In the 23d, we dislike "innocent despoles of barking dogs." In the next, "the Fancy, too indolgent *Elfy*," and the "silly mask" of "Idleless;" and in the 26th, "while men are growing out of boys." These expressions appear to us to be rather mean than natural, and rather far-fetched than applicable. And worse may well be said of "dancing insects forged upon his (the Duddon's) breast," in Sonnet 27. The 28th and 29th, are of a purer class.

No record tells of lance opposed to lance,  
Horse charging horse mid these retired domains;  
Nor that their turf dark purple from the veins  
Of heroes fall'n, or struggling to advance,  
Till doubtful combat issued in a trance  
Of victory, that struck through heart and reins,  
Even to the inmost seat of mortal pains.  
And lightened o'er the pallid countenance.  
Yet, to the loyal and the brave, who lie  
In the blank earth, neglected and forgotten,  
The passing Winds memorial tribute pay;  
The Torrents chaunt their praise, inspiring scorn  
Of power usurp'd;—with proclamation high,  
And glad acknowledgment of lawful sway.

Who swerves from innocence, who makes divorce  
Of that serene companion—a good name,  
Receives not his loss; but walks with shame,  
With doubt, with fear, and haply with remorse.  
And oft-times he, who, yielding to the force  
Of chance-temptation, ere his journey end,  
From chosen comrade turns, or faithful friend,  
In vain shall rue the broken intercourse.  
Not so with such as loosely wear the chain  
That binds them, pleasant River! to thy side:—  
Through the rough cope woe! Thou with hasty  
stride,

I choose to saunter o'er the grassy plain,  
Sure, when the separation has been tried,  
That we, who part in love, shall meet again.

The same poetic vein runs through the last three of the series, and we make no excuse for copying them entirely.

Not hurried precipitous from steep to steep;  
Lingering no more mid flower-enamelled lands  
And blooming thickets; nor by rocky bands  
Held;—but in radiant progress tow'rd the Deep  
Where mightiest rivers into powerless sleep  
Sink, and forget their nature;—now expands  
Majestic Duddon, over smooth salt sands,  
Gilding in silence with unfettered sweep!  
Beneath an ampler sky a region wide  
Is opened round him;—hamlets, towers, and  
towns,

And blue-top'd hills, behold him from afar;  
In stately mien to sovereign Thames allied,  
Spreading his bosom under Kentish downs,  
With Commerce freighted or triumphant War.

But here no cannon thunders to the gale;  
Upon the wave no haughty pendents cast  
A crimson splendour; lowly is the mast  
That rises here, and humbly spread the sail;  
While less disturbed than in the narrow Vale  
Through which with strange vicinities he  
passe'd,

The Wanderer seeks that receptacle vast  
Where all his unambitious functions fall.  
And may thy Poet, cloud-born Stream! be free,  
The sweets of earth contentedly resigned,  
And each tumultuous working left behind

At seemly distance, to advance like Thee,  
Prepared, in peace of being, in calm of mind  
And soul, to mingle with Eternity!

I thought of Thee, my partner and my guide,  
As being past away.—Vain sympathies!  
For, *bookworm*, Dudson! As I cast my eyes,  
I see what was, and is, and will abide;  
Still glides the Stream, and shall for ever glide;  
The Form remains, the Function never dies;  
While, *ay*, the brave, the mighty, and the wise,  
Whom, in our morn of youth defied  
The elements, must vanish—*—be it so!*  
Enough, if something from our hands have power  
To live, and act, and serve the future hour;  
And if, as tow'r'd the silent tomb we go,  
Thro' love, thro' hope, and faith's transcendent  
doer,

We feel that we are greater than we know.

To this poem of strung Sonnets, is appended a few notes and a biographical memoir of a Mr. Walker, a lowly but eminent virtuous clergyman. Then follows Vaudracour and Julia, a tale of lawless and hapless love. Its opening is charming—  
O happy time of youthful lovers, (thus  
My story may begin) O balmy time,  
In which a love-knot on a lady's brow  
Is fairer than the fairest star in heaven!  
To such inheritance of blessed fancy  
(Fancy that sports more desperately with minds  
Than ever fortune hath been known to do)  
The high-born Vaudracour was brought by years  
Whose progress had a little overstepped  
His striding prime. A town of small repute,  
Among the vine-clad mountains of Auvergne,  
Was the Youth's birth-place. There he woo'd a  
Maid

Who heard the heart-felt music of his suit  
With answering vows. Plebeian was the stock,  
Plebeian, though ingenious, the stock,  
From which her graces and her honours sprung;  
And hence the father of the enamour'd Youth,  
With haughty indignation, spurn'd the thought  
Of such alliance.—From their cradles up,  
With but a step between their several homes,  
Twins had they been in pleasure; after strife  
And petty quarrels, had grown fond again;  
Each other's advocate, each other's stay;  
And strangers to content if long apart,  
Or more divided than a sportive pair  
Of sea-fowl, conscious both that they are hovering

ing  
Within the eddy of a common blast,  
Or hidden only by the concave depth  
Of neighbouring billows from each other's sight.

Thus, not without concurrence of an age  
Unknown to memory, was an earnest given,  
His ready nature, for a life of love,  
For endless constancy and placid truth;  
But whatso'er of such rare treasure lay  
Reserved, had fate permitted, for support  
Of their mature years, his present mind  
Was under fascination;—he beheld  
A vision, and adored the thing he saw.  
Arabian fiction never filled the world  
With half the wonders that were wrought for  
him.

Earth breathed in one great presence of the  
spring:

Life turn'd the meanness of her implements,  
Before his eyes, to price above all gold;  
The house she dwelt in was a sainted shrine;  
Her chamber window did surpass in glory  
The portals of the dawn; all paradise  
Could, by the simple opening of a door,  
Let itself in upon her; pathos, walks,  
Sweeten'd with enchantment, till his spirit sank  
Surcharged within him, ..overlost to more

Beneath a sun that wakes a weary world  
To its dull round of ordinary cares:  
A man too happy for mortality!

We confess that we know no parallel to this in the whole range of English amatory poetry. The picture is full of living grace, and every heart must feel its magical power. The sequent misfortunes of the lovers gives augmented force and beauty to the delightful simile of the sea fowl sporting unconscious amid blast or billow. Julia becomes a mother ere a wife. Violence separates her from Vaudracour; and a content encloses her griefs, while imbecile apathy deadens the fiercer sorrows of her beloved. We refrain from dwelling more at length upon the story, in order to find space for examples of the shorter productions, which we can transplant whole into our page. The "Lament of Mary Queen of Scots on the eve of a New Year," is apt for this purpose.

"Smile of the moon!—for so I name  
That silent greeting from above;  
A gentle flash of light that came  
From Her whom drooping Cupids love;  
Or art thou of still higher birth?  
Thou that didst part the clouds of earth,  
My torpor to reprove!  
"Bright boon of pitying Heaven—alas,  
I may not trust thy placid cheer!  
Pondering that Time to-night will pass  
The threshold of another year;  
For years to me are sad and dull;  
My very moments are too full  
Of hopelessness and fear.

"—And yet, the soul-awakening gleam,  
That struck perchance the farthest cone  
Of Scotland's rocky wilds, did seem  
To visit me, and mine alone;  
Me, unapproach'd by any friend,  
Save those who to my sorrows lend  
Tears due unto their own.

"To-night, the church-tower bells shall ring,  
Through those wide realms, a festive peal;  
To the new year a welcoming;  
A tuneful offering for the weal  
Of happy millions lulled in sleep;  
While I am forced to watch and weep,  
By wounds that may not heal.  
Born all too high, by wedlock raised  
Still higher—to be cast thus low!  
Would that mine eyes had never gazed  
On sight of more ambitious show!  
Than the sweet flow'rets of the fields!  
—It is my royal state that yields  
This bitterness of woe.

"Yet how?—for I, if there be truth  
In the world's voice, was passing fair;  
And beauty, for confiding youth,  
Those shocks of passion can prepare  
That kill the bloom before its time,  
And blanch, without the Owner's crime,  
The most resplendent hair.

"Unbless distinctions! showered on me  
To bind a lingering life in chains;  
All that could quit my grasp or flee,  
Is gone;—but not the subtle stains  
Fixed in the spirit!—for even here  
Can I be proud that jealous fear  
Of what I was remains.

"A woman rules my prison's key;  
A sister *Dusee*, against the bent  
Of law and holiest sympathy,  
Detains me—doubtful of the event;  
Great God, who feel'st for my distress,

My thoughts are all that I possess,  
O keep them innocent!

"Farewell for ever human aid,  
Which abject mortals vainly court;  
If friends deceived, by foes betrayed,  
Oft fears the prey, of hopes the sport,  
Nought but the world-redeeming Cross  
Is able to supply my loss,  
My burthen to support.

"Hark! the death-note of the year,  
Sounded by the castle clock!"  
From her sunk eyes a stagnant tear  
Stole forth, unsettled by the shock;  
But oft the woods renewed their error,  
Ere the tir'd head of Scotland's Queen  
Repos'd upon the block!

The pathetic tone and elegant verification of this lament need no comment. From an ode to Lycoris we select a passage worthy of being its companion.

In youth we love the darksome lawn  
Brush'd by the owl's wing;  
Then, Twilight is preferred to Dawn,  
And Autumn to the Spring.  
Soul fancies do we then affect,  
In luxury of disrespect  
To our own prodigal excess  
Of too familiar happiness.  
Lycoris (if such name befit  
Thee, thee my life's celestial sign!)  
When Nature marks the year's decline  
Be ours to welcome it:  
Pleased with the soil's required cares;  
Pleased with the blue that other wears;  
Pleased while the sylvan world displays  
Its ripeness to the feeding gaze;  
Pleased when the sudden winds rouse the knell  
Of the resplendent miracle.

Rat something whispers to my heart  
That, as we downward tend,  
Lycoris! life requires an art  
To which our souls must acquiesce  
A skill—do balance and supply;  
And, ere the flowing fount be dry,  
As soon it must, a scuse to sip,  
Or drink, with no fastidious lip.  
Frank greeting, then, to that by the Guest  
Diffusing smiles o'er land and sea,  
To aid the vernal Deity  
Whose house is in the breast!  
May pensive autumn ne'er present  
A claim to her disparagement!  
While blossoms and the budding spray  
Inspire us in our own decay;  
Still, as we nearer draw to life's dark goal,  
Be hopeful Spring the favourite of the soul!

The model of *L'Allegro* is not far forgotten here; nor in the following felicitous allusions to Ambition, notwithstanding a somewhat of ruggedness in the verse, are we disposed to find a less flattering comparison for the poet.

Enough of climbing toil!—Ambition treads  
Here, as in busier scenes, grounds steep and  
rough,  
Oft perilous, always tiresome; and each step,  
As we for most uncertain gain ascend  
Toward the clouds, dwarfing the world below,  
Induces, for its old familiar sights,  
Unacceptable feelings of contempt,  
With wonder mixed—that Man could e'er be tied,  
In anxious bondage, to such nice array  
And formal fellowship of petty things!  
Oh, 'tis the *Awe* that magnifies this life,  
Making a truth and beauty of her own!  
And moss-grown alley, Circumscribing shades,

And gurgling rills, assist her in the work  
More effusively than rills outspread,  
As in a map, before the adventurer's gaze,  
Ocean and earth contending for regard;  
Lo! there a dim Egerian grotto fringed  
With ivy-twine profusely from its brows  
Dependant,—enter without further aim;  
And let me see thee sink into a mood  
Of quiet thought,—protracted till thine eye  
Be calm as water when the winds are gone  
And no one can tell whither. Dearest Friend;  
We two have known such happy hours together  
That, were power granted to replace them  
(fetched)

From out the pensile shadows where they lie  
In the first warmth of their original sunshine,  
Loth should I be to use it; passing sweet  
Are the domains of tender memory!

The "Brownie's Cell" is of a mingled  
character, of much that is good and a little  
that is indifferent. For example, we cannot  
appreciate

—Him whose *solitude*  
*Shed lightning* through this lonely isle.

But neither can we be blind to the surpassing  
sweetness of a scene where

—flowers delight,  
And all is lovely to the sight.  
Spring finds not here a melancholy breast,  
When she applies her annual test  
To dead and living; when her breath  
Quickens, as now, the wither'd heath;—  
Nor flaunting summer,—when he throws  
His soul into the briar-rose;  
Or calls the lily from her sleep  
Prolong'd beneath the bordering deep;  
Nor Autumn, when the vineless wren  
Is warbling near the BROWNIE'S DEN.

The poem written in sight of Wallace's  
Tower, at Cora Linn, cannot be passed in  
silence. It speaks in the grandest voice of  
inspiration.

Lord of the Vale! astounding flood!  
The dulcet leaf, in this thick wood,  
Quakes—conscious of thy power;  
The caves reply with hollow moan;  
And vibrates, to its central stone,  
Yon time-cemented Tower!  
And yet how fair the rural scene!  
For thou, O Clyde, hast ever been  
Beneficent and strong;  
Pleas'd in refreshing dews to steep  
The little trembling fountains that peep  
Thy shelving rocks among.  
Hence all who love their country, love  
To look on thee—delight to rove  
Where they thy voice can hear;  
And, to the patriot warrior's Shade,  
Lord of the Vale! to Heroes laid  
In dust, that voice is dear!  
Along thy banks, at dead of night,  
Sweeps visibly the Wallace Whig;  
Or stands, in warlike vest,  
Aloft, beneath the moon's pale beam,  
A champion worthy of the stream,  
Yon grey tower's living crest!  
But clouds and envious darkness hide  
A form not doubtfully desired:—  
Their transient mission o'er,  
O way to what blind regions flee  
These Shapes of awful fantasy?  
To what untroubled shore?  
Less than divine command they spurn;  
But this we from the mountains learn,  
And this the valleys show,

That never will they deign to hold  
Communion where the heart is cold  
To human weal and woe.

The man of subject soul in vain  
Shall walk the Marathonian Plain;  
Or trid the shadowy gloom,  
That still invests the guardian Pass,  
Where stood sublime Leonidas,  
Deroted to the tomb.

Nor deem that it can aught avail  
For such to glide with oar or sail  
Beneath the piny wood,  
Where Tell once drew, by Uri's lake,  
His vengeful shafts—prepared to slake  
Their thirst in Tyrant's blood!

Largely as we have rifled Mr. Words-  
worth of his "honièd sweets," and pleased  
as we are to dwell on the praises of a bard  
who has sometimes offended our taste, and  
never delighted us so highly before; we must  
yet, ere we take our leave, request atten-  
tion to the verses addressed by him to his  
brother, as a dedication of this volume.  
They display so amiable a mind, that in  
them we learn to admire the man, as well  
as the poet, who has drawn so much music  
from a rustic custom.

The Minstrels played their Christmas tune  
To-night beneath my cottage eaves:  
While, smitten by a lofty moon,  
The encircling Laurels, thick with leaves,  
Gave back a rich and dazzling green,  
That overpowered their natural green.

Through hill and valley every breeze  
Had suak to rest with folded wings;  
Keen was the air, but could not freeze  
Nor check the music of the strings;  
So stout and hardy were the hand  
That scrap'd the chords with strenuous hands.  
And who but listen'd?—till was paid  
Respond to every inmate's claim;  
The greeting given, the music played  
In honour of each household name,  
Only pronounce'd with lusty call,  
O "merry Christmas" wished to all!

O Brother! I reverse the choice  
That took thee from thy native hills;  
And it is given thee to rejoice:  
Though public care full often tills  
(Heaven only witness of the toil)  
A barren and ungrateful soil.

Yet, would that thou, with me and mine,  
Hastad seen this never-failing rite;  
And seen on other faces shine  
A true revival of the light;  
Which Nature, and these rustic Powers,  
In simple childhood spread through ours!  
For pleasure hath not ceased to wait  
On these expected annual rounds,  
Whether the rich man's sumptuous gate  
Call forth the unelaborate sounds,  
Or they are offered at the door  
That guards the lowliest of the poor.

How touching, when, at midnight, sweep  
Snow-muffled winds, and all is dark,  
To hear—and sink again to sleep:  
Or, at an earlier call, to mark,  
By blazing fire, the still suspense  
Of self-complacent innocence;  
The mutual nod—the grave disguise  
Of hearts with gladness brimming o'er;  
And some unbidden tears that rise  
For names once heard, and heard no more;  
Tears brighten'd by the serenade  
For infant in the cradle laid!

Ah! not for emerald fields alone,  
With ambient streams more pure and bright  
Than fabled Cytherea's zone  
Glittering before the Thunderer's sight,  
Is to my heart of hearts endeared,  
The ground where we were born and rear'd!  
Hail, ancient Manners! sure defence,  
Where they survive, of wholesome laws;  
Remnants of love, whose modest sense  
Thus into narrow room withdraws;  
Hail, Usages of pristine mould;  
And ye, that guard them, Mountains o'd!  
Bear with me, Brother, quench the thought,  
That alights this passion, or condemns;  
If thee fond Fancy ever brought  
From the proud margin of the Thames,  
And Lambeth's venerable towers,  
To lumber streams, and greener bowers.

Yes they can make, who fail to find,  
Short leisure even in busiest days;  
Moments—to cast a look behind,  
And profit by those kindly rays  
That through the clouds do sometimes steal,  
And all the far-off past reveal.

Hence, while the Imperial City's din  
Beats frequent on thy satiate ear,  
A pleas'd attention I may win  
To agitations less severe,  
That neither overwhelm nor cloy,  
But fill the hollow wake with joy!

We have little to add, but that besides  
what we have related or noticed, the lovers  
of the muse will find much to admire in  
this truly charming volume.

In addition to what we have noticed, a  
praise description of the country of the lakes  
will be found a very agreeable performance;  
and other poems, entitled Dion, The Pil-  
grim's Dream, Aetgeal and Eldred—a fact  
and imagination, The Priores's Tale from  
Chaucer, September, Odes, Inscriptions,  
Sonnets, &c. which we can only name, would  
of themselves form a volume conferring im-  
mortality, and ranking their author, even  
with those hitherto most sceptical of his  
powers, among the foremost bards of the age.

SOUTHEY'S LIFE OF JOHN WESLEY. 2  
vols. 8vo.

This work, so full of peculiar inter-  
est to a very numerous sect, cannot  
fail to be almost equally acceptable to  
serious readers of every class. It will  
be published in a few days; and it is our  
good fortune to be enabled to give a  
digest and taste of its contents thus  
early in point of time. Of Mr. Southey's  
talent for the able execution of such a  
work nothing need be said: no man  
ever united genius and industry in a  
greater degree, and genius and industry  
are the prime requisites for producing  
what is excellent in every species of li-  
terature. To these he has added im-  
partiality and candour; and we have no  
doubt that his publication will prove  
as little the subject of polemical con-  
troversy as any thing of the kind that  
was ever written.

Benjamin Wesley the great grandfather of  
the founder of the Methodists, studied phy-

sic as well as divinity at the university, a practice not unusual at that time: he was ejected by the act of nonconformity from the living of Allington, in Dorsetshire; and the ineffectual knowledge which he had acquired from motives of charity, became then the means of his support. John, his son, was educated at New Inn Hall, Oxford, in the time of the Commonwealth; and was distinguished for his acquaintance with oriental languages, as well as for his diligence and piety. Had the Cromwell family retained its power he would have risen to great distinction; but the contrary befalling, he also was ejected from the living of Blandford for non-conformity; four times imprisoned for preaching; and when he died in the village of Preston, denied burial in the Church by the vicar. His premature fate brought the grey hairs of his aged father with sorrow to the grave. By his wife, a niece of Thomas Fuller the church historian, he left two sons, the younger of whom, Samuel, was eight or nine years old when he lost his parent. "The circumstances of the father's life and sufferings, which have given him a place among the confessors of the non-conformists, were likely to influence the opinions of the son; but happening to fall in with bigotted and ferocious men, he saw the worst part of the dissenting character. Their defence of the execution of King Charles offended him, and he was at once shocked and disgusted by their calf's head club; so much so, that he separated from them, and, because of their intolerance, joined the church which had persecuted his father. This conduct, which was the result of feeling, was approved by his ripe judgment, and Samuel Wesley continued through life a zealous churchman. The feeling which urged him to this step must have been very powerful, and no common spirit was required to bear him through the difficulties which he brought upon himself; for by withdrawing from the academy at which he had been placed, he so far offended his friends, that they lent him no further support, and in the latter years of Charles II. there was little disposition to encourage proselytes who joined a church which the reigning family were labouring to subvert. But Samuel Wesley was made of good mould: he knew and could depend upon himself; he walked to Oxford, entered himself at Exeter College as a poor scholar, and began his studies there with no larger a fund than two pounds sixteen shillings, and no prospect of any future supply. From that time, till he graduated, a single crown was all he received from his friends. He composed exercises for those who had more money than learning; and he gave instructions to those who wished to profit by his lessons; and thus by great industry, and great frugality, he not only supported himself, but had accumulated the sum of ten pounds fifteen shillings, when he went to London to be ordained. Having served a curacy there one year, and as chaplain during another on board a king's ship, he settled upon a curacy in the metropolis, and married Susannah, daughter of Dr. Annesley, one of the ejected ministers.

No man was ever more suitably matched than the elder Wesley. The wife whom he chose was, like himself, the child of a man eminent among the non-conformists, and, like himself, in early youth she had chosen her own path: she had examined the controversies between the Dissenters and the Church of England with conscientious diligence, and satisfied herself that the schismatics were in the wrong. The dispute, it must be remembered, related wholly to discipline; but her enquiries had not stopt there, and she had reasoned herself into Socinianism, from which she was reclaimed by her husband. She was an admirable woman, of highly improved mind, and of a strong and masculine understanding, an obedient wife, an exemplary mother, a fervent Christian. The marriage was blessed in all its circumstances: it was contracted in the prime of their youth: it was fruitful; and death did not divide them till they were both full of days. They had no less than nineteen children; but only three sons and three daughters seem to have grown up; and it is probably to the loss of the others that the father refers in one of his letters, where he says, that he had suffered things more grievous than death. The manner in which these children were taught to read is remarkable: the mother never began with them till they were five years old, and then she made them learn the alphabet perfectly in one day: on the next they were put to spell and to read one line, and then a verse, never leaving it till they were perfect in the lesson."

From Queen Mary, Mr. Wesley received the living of Epworth, in Lincolnshire, for his defence of the revolution; and in the reign of Queen Anne, was rewarded with the chaplaincy of a regiment, for a poem on the battle of Blenheim. He was, however, persecuted by the dissenters, who could not forgive his abandoning them.

John, his second son, the subject of this memoir, was born at Epworth on the 17th of June, 1703. At six years of age he narrowly escaped being burnt to death when his father's house was destroyed by the flames, and he "remembered this providential deliverance through life with the deepest gratitude. In reference to it he had a house in flames engraved as an emblem under one of his portraits, with these words for the motto, 'Is not this a brand plucked out of the burning?'" The third son, Charles, the zealous and able associate of his brother in his future labours, was at this time scarcely two months old."

From their mother the Wesleys inherited the principles of Jacobitism, and also a devotional temperament which seems to have been common to them all. John was a favourite at the Charter-house, where he was educated, and at the age of seventeen, carried habits of quiet and regularity to Christchurch, Oxford, where he pursued his studies with all diligence. In his youth he was an expert versifier, but he forbore to cultivate this talent, and his brother Charles became the "sweet singer of methodism."

While he was an undergraduate, his manners were free and cheerful; and that acti-

vity of disposition which bore him afterwards through such uninterrupted labour, displayed itself in wit and vivacity. But when the time of life arrived at which he might have taken orders, he, who was not a man to act lightly upon any occasion, and least of all upon so solemn a one, began to reflect seriously upon the importance of the priestly office, and to feel some scruples concerning the motives by which the person ought to be influenced who determines to take upon himself so awful a charge. These scruples he communicated to his father, who answered them sensibly; but agreed with him in not liking "a callow clergyman;" and hinting that he thought it too soon for him to be ordained, exhorted him to work while he could. The letter was written with a trembling pen: "You see," said the old man, "Time has shaken me by the hand, and Death is but a little way behind him. My eyes and heart are now almost all I have left, and I bless God for them." The mother, however, was of opinion that the sooner he entered into deacon's orders the better, because it might be an inducement to greater application in the study of practical divinity. "And now," said she, "in good earnest resolve to make religion the business of your life: for, after all, that is the one thing that, strictly speaking, is necessary: all things beside are comparatively little to the purposes of life."

His theological studies, including the Treatise de Imitatione Christi, and Jeremy Taylor's Rules of Holy Living and Dying, produced a great change in young Wesley's frame of mind and conduct. He began a new course of life, communicated every week, and prayed much: thus prepared he was, in the autumn of 1725, ordained by Dr. Potter, bishop of Oxford. In March, 1726, he was elected a Fellow of Lincoln College. From this period he kept a diary, which contains a lively picture of his eventful life. In 1727, he was appointed Greek lecturer, and moderator of the classes, from which his powers of reasoning acquired much strength, while his other studies generally enriched his mind. Mondays and Tuesdays were allotted to the classics; Wednesdays to logic and ethics; Thursdays to Hebrew and Arabic; Fridays to metaphysics and natural philosophy; Saturdays to oratory and poetry, but chiefly to composition in those arts; and the Sabbath to Divinity. He also gave great attention to mathematics. To this course of general attainment succeeded that religious enthusiasm which soon engrossed him entirely, and caused him to sacrifice all the rest to "spiritual things." He went to Wroote, and officiated as curate to his father for two years, during which he obtained priest's orders. His next movement was a return to Lincoln College, where he became a tutor. His brother Charles had, by this time, been entered of Christchurch, and formed an association with some other undergraduates, for the purpose of religious improvement. They lived by rule, and speedily attracting notice, did not escape the decision of a lax era. They were called the Sacramentarians, from taking the sacrament

usky; Bible-bogots, Bible-moths, the holy or the godly club; and one person, with less irreverence and more learning, observed, in reference to their methodical manner of life, that a new sect of *Methodists* was sprung up, alluding to the ancient school of physicians, known by that name. This appellation fastened upon them, and became the appropriate designation of the sect of which J. Wesley was the founder, though it was to Charles and his friends that it was first given. When John returned to Oxford, the society gladly put themselves under the direction of one of such character and standing, and master of so much erudition and eloquence. Mr. Morgan, one of the members, died young, a victim to the austerities which they practised. Hervey, the author of the *Meditations*, was another of their body; and the celebrated Whitfield, born in Gloucester in 1714, a third. His early talent for elocution had almost directed him to the stage, and several years of his youth were passed as a common drawer in the public-house kept by his mother. At eighteen, however, he was admitted a Servitor at Oxford, joined the Methodists, then about fifteen in number, and thence rose to distinction in the pulpit. The rest went now regularly visited the prisoners and sick, fasted on Wednesdays and Fridays, the days on which Christ was betrayed and crucified; and drew up a scheme of self-examination, which, except that it speaks of obeying the laws of the Church of England, might fitly be appended to the spiritual exercises of Loyola. William Law about this period helped much to confirm Wesley in his enthusiasm and longing after perfectibility. John Wesley and his associates running fast towards fanaticism, the seniors of Christ Church set themselves to check the evil which had sprung up; and discussions rather than events fill the time from 1728 to 1735. In the April of the latter year old Mr. Wesley died, and John having refused to accept his church preferment, even if it could be obtained, was induced to undertake a mission to preach the gospel in Georgia. He was accompanied by his brother Charles, who went in the capacity of secretary to Mr. Oglethorpe, the founder of the colony; Charles Delamotte, the son of a London merchant; and Benjamin Ingham, one of the little community at Oxford. In the same vessel a party of Moravians sailed; and from the connexion with these brethren, much of the economy of the Methodists was derived. The singularities which had been in some degree restrained while in England, were now unlimitedly indulged, and the ascetic principles of the sect were put in full practice. Vegetables and rice and biscuit became at first the sole food of the missionaries—they abstained from supper—they lay on the floor—their classic studies were declared to be reprehend-

sible, and at length they lived on bread alone.—

"From four in the morning till five they used private prayer: from five till seven they read the Bible together, carefully comparing it with the writings of the earliest ages, that they might not lean to their own understandings. At seven they breakfasted, and and they had public prayers at eight. From nine till twelve John Wesley was employed in learning German, Delamotte pursued his Greek studies, Charles wrote sermons, and Ingham instructed the children: and at twelve they met to give an account to one another of what they had done since their last meeting, and of what they intended to do before their next. They dined about one, and from dinner till four the time was spent in reading to those of whom each had taken especial charge, or in exhorting them severally, as the case might require. There were evening prayers at four, when the second lesson was explained, or the children were catechised and instructed before the congregation. From six to seven each read in his cabin to a few of the passengers. At seven Wesley joined with the Germans in their public service, and Ingham read between the decks to as many as desired to hear. At eight they met again to instruct and exhort. By this time they were pretty well wearied with exhortations and instruction; and between nine and ten they went to bed, where, as Wesley says, neither the waving of the sea, nor the motion of the ship, could take away the refreshing sleep which God gave them.

"It was a rough season, their passage was tempestuous; and, during the storm, Wesley felt that he was unfit, because he was unwilling to die. Ashamed of this unwillingness, he reproached himself as if he had no faith, and he admired the impassible tranquillity to which the Moravians had attained."

On the 5th of February, 1736, they anchored in the Savannah river, in the country belonging to the Creek Indians, and possessing a population of about 25,000 souls. We cannot minutely follow the thread of the mission in Georgia: suffice it to say that it was hardly successful, and removed but few of the prejudices which caused the Chief Tomochichi to exclaim, "*Christian much drunk! Christian beat men! Christian tell lies! Devil Christian! Me no Christian!*"

But Wesley's insisting on intolerant discipline, on immersion in baptism, and on other severities, hindered the good work. The preacher also began to depart more and more from the practices of the church. At Frederica too, whither Charles Wesley had gone, great confusion arose out of his attempts at reform, and injudicious zeal. In 1737 Charles returned to England. John refrained from marrying Sophia Auston, the niece of the chief magistrate, in deference, it is said, to the decision of the Moravian brethren, to whom he proposed the question, whether he should or should not unite himself to that young lady. Other accounts state that the match was broken off by Miss C. in consequence of his eccentric-

ities; and she soon after became the wife of a Mr. Williamson. Wesley seems at this period of his life to have been both intolerant and untractable. For some cause or other he repelled Mrs. Williamson from the communion table. For this and for scandal he was indicted. The prosecution, however, was not promptly followed up, and after waiting several months for trial, he quitted the scene of his distress. His passage homeward from Charlestown was tempestuous, and spent in strict self-examination: he landed at Deal, after an absence of two years and four months. It is curious, that Whitfield sailed from the Downs for Georgia only a few hours before the vessel in which Wesley was, cast anchor; the ships passed in sight, but neither knew that his friend was on the deck of that at which he gazed.

"But when Wesley landed he learned that his coadjutor was on board the vessel in the offing: it was still possible to communicate with him; and Whitfield was not a little surprised at receiving a letter which contained these words: 'When I saw God by the wind which was carrying you out brought me in, I asked counsel of God. His answer you have inclosed.' The inclosure was a slip of paper, with this sentence, 'Let him return to London.' Wesley doubting, from his own experience, whether his friend could be so usefully employed in America as in England, had referred the question to chance, in which at that time he trusted implicitly; and this was the lot which he had drawn."

Whitfield had, during the absence of Wesley, made many proselytes in England. He began his preachings at Gloucester, and preached afterwards to enthusiastic multitudes in London, Bristol, and other places; but he left all for America.

"It is therefore apparent, that though the Wesleys should never have existed, Whitfield would have given birth to Methodism—and now when Whitfield, having excited this powerful sensation in London, had departed for Georgia, to the joy of those who dreaded the excesses of his zeal, no sooner had he left the metropolis, than Wesley arrived there, to deepen and widen the impression which Whitfield had made. Had their measures been concerted, they could not more entirely have accorded. The first sermon which Wesley preached was upon these strong words: 'If any man be in Christ, he is a new creature'; and though he himself had not yet reached the same stage in his progress as his more ardent coadjutor, the discourse was so high strained, that he was informed he was not to preach again in that pulpit."

"This was on the second day after his arrival in London. On the next Sunday he preached at St. Andrew's, Holborn, and there also was informed that he was to preach no more. In the course of the week he went to Oxford, whither Peter Boehler

"This remarkable instance of Wesley's predilection for the practice of sorority, was not noticed by either of his biographers. Whitfield himself relates it, in a letter published at the time of their separation.

\* This Charles refused to accompany a gentleman to Ireland, with the view of being made his heir; and the consequence was, that he adopted another namesake, to whom he left his fortune, and this was no other than *Wesley*, the first Earl of Mornington, the father of the Duke of Wellington.

accompanied him, and where he found only one of the little Society which he had formed there; the rest having been called to their several stations in the world. During these days he conversed much with the Moravian, but says, that he understood him not; and least of all when he said, *Me frater, me frater, excoquenda est ista tua Philosophia*. Ere long, being with his mother at Salisbury, and preparing for a journey to his brother Samuel, at Tiverton, he was recalled to Oxford by a message that Charles was dying there of a pleurisy: setting off immediately upon this mournful summons, he found him recovering, and Peter Boehler with him. Boehler possessed one kind of philosophy in a higher degree than his friend: the singularity of their appearance and manner excited some mockery from the under graduates, and the German, who perceived that Wesley was annoyed by it chiefly on his account, said, with a smile, '*Me frater non adhaeret rebus*,'—'it does not even stick to our clothes.' This man, a person of no ordinary powers of mind, became Wesley's teacher: it is no slight proof of his commanding intellect, that he was listened to as such; and by him, 'in the hands of the great God,' says Wesley, 'I was clearly convinced of unbelief,—of the want of that faith whereby alone we are saved.' A scruple immediately occurred to him, whether he ought not to leave off preaching,—for how could he preach to others who had not faith himself? Boehler was consulted whether he should leave it off, and answered, 'By no means.' 'But what can I preach?' said Wesley. The Moravian replied, 'Preach faith till you have it; and then, because you have it, you will preach faith.' Accordingly he began to preach this doctrine, though, he says, his soul started back from the work.

"He had a little before resolved, and written down the resolution as a covenant with himself, that he would use absolute openness and unreserve towards all whom he should converse with; that he would labour after continual seriousness, not willingly indulging in any the least levity of behaviour, nor in laughter, no, not for a moment; and that he would speak no word, and take no pleasure, which did not tend to the glory of God. In this spirit he began to exhort the hostess or the servants at an inn, the chance company with whom he was set at meat, and the traveller with whom he fell in on the road; if a passing salutation was exchanged, a word of religious exhortation was added." [We are sorry we cannot conclude this paper, as we intended, in our present Number.]

## ORIGINAL CORRESPONDENCE.

### BUONAPARTE.

[Our Readers will, according to their various opinions, draw conclusions as to the authenticity and real purport of the annexed Letter.]

St. Helena, Oct. 2, 1819.

I have seen General Buonaparte several times. I dare not call that man any thing else who but lately had two-thirds of Europe

under his command; for his physician, Dr. Stokes, who, in his private letters, called him Napoleon, has, in consequence, been condemned and punished by a Court Martial. I have spoken to him, and he has answered with frankness, at least as I believe, questions to which, as it seemed, he himself led the conversation. On these occasions, I probably felt sensations similar to those experienced by the philosopher Euerates, when Sylla laid open to him the inmost recesses of his heart. The health of General Buonaparte has been rather impaired; but his activity of mind is still always the same, nay, it seems to have been increased, by the difficulty of exercising it. The transactions on the theatre of the world, in which he has acted so great a part, cannot be regarded by him with indifference. He observes from a distance, sometimes blaming, sometimes approving, those who now perform their part. Nothing can give him greater pleasure than to receive periodical publications, the contents of which he as it were devours. He is indeed suffered to see only ministerial papers; but his penetrating mind quickly comprehends the real facts, stripped of all the fallacious accessories which are added by the journalists in the interests of those who pay them. Hope gains access every where, and has even found its way to Longwood, to lessen the affliction of the inhabitants of this dreary abode. General Buonaparte's hope is principally placed on the state of England. It is but a short time ago that he said to me: "Your government has received a mortal wound; the heart is struck; I count its pulse and know when it must stop. The expiring struggle will be terrible. You Opposition men in vain flatter yourselves with preventing these convulsions; you will always remain impotent; the result of the elections will always be unfavourable to you. The system of your elections resembles these instruments which produce only one note. The English nation is well aware of this, and therefore when you preach patience and bid them look to the future, they answer—We are starving and cannot wait any longer. And the ministers?—they indeed would prefer putting all those out of the world who are without bread, and demand it. . . . But then the chains of the English people will be broken,—and perhaps also mine."

Though General Buonaparte has nothing more to hope for from France, yet his conversation most frequently turns upon it. "I have always loved France," said he to me, "and I was well acquainted with it. Had it really obtained liberty before the 18th Brumaire, I should have regarded its destruction as a crime. But no liberty existed; it could not exist where the country was covered with scaffolds, where the elective assemblies massacred each other, where the directory sent the representatives of the people to Sinamari to devote them to death, either there, or on board the vessels appointed to convey them thither. Thus, as Fontane said to me, I destroyed not liberty but anarchy. When I left Fontainebleau in the year 1814, to repair to the rock to which the decision of my enemies banished me, I said to

those who accompanied me in my misfortune: 'If the Bourbons will govern as the 8th Dynasty, they will succeed; but if they think to continue the third, they are ruined; and I was not mistaken.' When I received the Moniteur containing the speech in which Ferrand made the strange comparison between the strait and crooked lines, I went in to Bertrand's room, exclaiming: 'Bertrand! the King's ministers call us back to France,—and my resolution to return was immediately taken. Before my departure I was advised to begin with assuring myself of the sentiments of several important persons of the government and in the army. No, I replied; if the hearts of the people and the soldiers are still disposed towards me as they were, the inclinations of individuals must yield to this general will; but if I have lost the former, nothing is to be hoped from the influence of individuals. The mass hurries individuals along with it, but individuals do not draw the mass after them. I never deceived myself about France; but, added he, "I had been mistaken respecting the sentiments of foreign countries. The Princes forgot what I had left them, and recollected only that which I had taken from them. I ought to have foreseen this. Even after the events of 1814, I was not entirely freed from the delusion. When I saw Russia take the grand Duchy of Warsaw, and Prussia half of Saxony, I said, Austria slumbers; it will awake as soon as I return to France. This conviction, added to the reasons I have mentioned above, decided my departure from Elba."

Buonaparte's conversation, when he speaks of passing events, is still more interesting. When he sees the name of De Cazes continually repeated in the newspapers, he cannot suppress his ill humour. The thought that his influence in France has in some measure succeeded to his own, is humiliating to him. "De Cazes," said he to me one day, "was formerly secretary to my mother, or one of my sisters, I really do not know which. In the year 1813, I saw him at Mentz, whither he came to request me to decide in the affair of his father-in-law Mûraire; he is insignificant.—And besides," continued he, "how can you believe that he and the other ministers will ever succeed in establishing any thing permanent? Their only occupation is to build up and pull down again. As they attack both parties by turns, they are continually under the fear with which one or other of the parties inspires them. After the hundred days they judged quite right that the democratic party must be favoured, to dispel the fear which had seized the nation,—and a royal ordinance modified the charter in the interest of this party. But they were soon alarmed at their own work; and making use of the influence which circumstances, and all Europe under arms gave them, they supported the other party by means of that extempore legislation in favour of the aristocratic party. The Chamber, though composed of the elements formed by themselves, terrified them soon after its origin. Immediately an ordinance appears, dissolving the

Chamber, and a law which calls a greater number of citizens to the electoral assemblies. This law procures them a momentary popularity; however, if I am not very much mistaken, new fears will check the effect of the law before it is entirely put in practice."

At no time does he feel his imprisonment more painful than when he has thus indulged in contemplations on the present state of France. He then cannot think without shuddering on the barriers with which Longwood is surrounded, and on Sir Hudson Lowe, who guards his door; he then resembles a prisoner who violently shakes his chains, and falls into a rage at being unable to break them. [Translated from the *Bibliothèque Historique*.]

## FINE ARTS.

## BRITISH GALLERY.

No. 285. *Cattle in a Landscape*.—Reinagle, A. R. A.

The landscapes of this painter are too well known, and their variety and truth too well understood, to need a particular notice. We select the above for the sake of observing, that the artist has done himself and his cattle an injury by the introduction of the tree. It is our opinion, that if the cattle, so beautifully painted and so correct in their drawing, had been opposed to a simple and clear sky, the picture would have wanted little but age to rank it with a Cyp or a Potter.

No. 149. G. Sannet.

In like manner, we select from the works of Mr. Sannet this view of London from Hampstead Heath, as a fine specimen of his clear and brilliant pencil. The positive colour by which the figures are distinguished gives great value to the aerial tint and distance. His foliage also is peculiarly light and beautiful.

No. 274. *Music*.—No. 276. *Sketching*.—Graham.

These, with several others by the same artist, are pictures of promise. There is a carefulness of pencil, and a tolerable tone of colour, which a little freedom and variety would improve. By freedom we do not mean slovenliness, against which this painter, whose debut is so favourably marked, must equally guard.

No. 304. *An Interior*.—Frederick Nash.

Every thing which can captivate the eye in subjects of gothic form and grandeur, is brought together in this Interior, whether it regards the solemn effect of light or the brilliancy of colour: the figures are also introduced with great truth and character.

No. 248. *King's College and Clare Hall, Cambridge*.—W. Westall, A. R. A.

To those acquainted with the scene, this view of Hall and College, with all its classic associations, must appear doubly welcome, from the masterly and interesting way in which it is treated by the pencil of Mr. Westall.

No. 256. *The Repose*.—Composition.—A. Aglio.

There is a fine character of air-thrust thrown over this composition, and the forms in ge-

neral are grand and appropriate. A little too much of individuality appears in the objects of the foreground, both in colour and form; a thistle looks too much like a separate study of a plant, the bright green colour of which, as well as the trees on the right, are out of harmony.

No. 125. *View of Portsmouth from Portdown Hill*.—G. Arnold, A. R. A.

Mr. Arnold has given great interest to a scene not otherwise very picturesque; but such are the qualities of art, in justly representing a single effect of atmosphere, light, or colour, that a value is given to the most monotonous forms in nature. We have seldom seen the silvery tone of a cool and misty distance better expressed. The foreground is inferior.

## THE SPANISH INQUISITION.

A red-hot piece of canvas, designated as above, is on exhibition in Pall Mall; and many as have been the sights of London which we have visited, we must say that this excels them all, for the grossness of its imposition. A miserable, indecent, and offensive daub, as a work of art not superior to the pictures which one sees for a half-penny by looking through the magnifying glass of a peep-show, is placed in a darkened room, and by the paltry trick of lighting it from below, made to look like a bad transparency. And for a view of this hoax, honest Mr. Bull is charged a shilling, besides the purchase of a pamphlet descriptive of the allegory—as if it were pleasant to pay for the particulars of the cheat practised upon his credulity.

We cannot sufficiently reprobate the effrontery of the parties, whoever they are, venturing to affront the public by so impudent an attempt to levy money under false pretences.

## THE DRAMA.

No novelty of any sort this week. A new Hamlet, of fair expectations, comes out the week after next, at Drury Lane.

## VARIETIES.

*Fine Arts in France*.—The prize of 4,000 francs, which was this year offered for the best picture at the French exhibition of 1819, in one of the secondary classes, has been assigned to M. Horace Vernet.

M. M. Bridan and Cortot share between them the prize of 6,000 francs, for the best work in sculpture.

Several large medals, and medals of encouragement, were also awarded for the other distinguished paintings, statues, engravings, &c.

At the sitting of the *Athénée* on the 2d instant, some extracts were read from M. Viennet's *Dithyrambick, on the Events of Parga*.—*Paris Paper*.

Belzoni.—Our scientific and antiquarian readers will, we are sure, rejoice to learn that the enterprising Signor Belzoni, whose death was so currently reported, and believed

to have mentioned his arrival in Italy, is now safe and well in London.

A cod-fish weighing seventy pounds was sold last week in London. It was caught on the Dogger Bank.

It is declared by a Swedish mathematician, that he has succeeded in solving the problem for the quadrature of the circle by geometry.

On Wednesday, the 29th of March, the Moon will be eclipsed, partly visible at Greenwich.

Beginning of the eclipse (Clock time)	<i>h.</i>	<i>m.</i>	<i>sec.</i>
Moon rises eclipsed	6	21	37
Middle of eclipse	6	42	41
Elliptic opposition	6	51	2
End of the eclipse	8	3	41

Digits eclipsed, 6<sup>1</sup>/<sub>2</sub>' from the south side of the earth's shadow, or on the moon's northern limb &c.

The directors of the British Institution, with a liberality becoming their station as patrons of the Native School of Arts, and with a just sense, as it appears to us, of the deserts of the Artist, have presented Mr. Jones with a hundred pounds, in addition to the sum of 500 guineas, for which he was commissioned to paint the picture of the battle of Waterloo.

*Qui pro quo*.—A lady at the Exhibition the other day, looking at No. 136, a subject of still-life, with plates, dishes, a coffee-mill, nutmeg-grater, &c., asked the gentleman who accompanied her to look in the catalogue and tell her what it was. He replied, 'A study.'—'Good gracious,' said she, 'I took it for a kitchen.'

## LITERARY NOTICES.

Messrs. Longman and Co. have given Mrs. Joanna Baillie a thousand pounds for a series of poems celebrating the actions of famous persons. The work is entitled *MYSTICAL LEGENDS*, and will, we take it for granted, soon be presented to the public.

For the gratification of laying before our readers in one Number the first accounts of three very interesting works, we have this week made a great sacrifice of our miscellaneous features: we trust that the pleasure of perusing so much from pens among the most popular and distinguished of the age, will be our sufficient apology for postponing the insertion of other articles. The first Quarterly Part of the *Literary Gazette*, concluded by this sheet, will be ready for delivery by Tuesday, and may be ordered of all Booksellers and News-vendors.

••• As so many of our friends are particular in binding their *Literary Gazette*, we submit to their notice, that passing an iron moderately heated over the sheet to dry it, fits it almost equal to hot pressing for that purpose.

ERRATA.—In our last Number, *Biography of Mr. Frost*, p. 191. col. 1. l. 6, for *Tremay* r. *Fremay*. l. 33, for *Mings* r. *Mings*. l. 56, for *Shewell* r. *Shewell*.

In the *Latin lines* inserted in the *Literary Gazette* for March 11, pro "milla delatum" lege *mutis delatum*. 4th line: "Vult, Antaeo" Ut *Antaeo dictur*, &c. 5th line.

To Correspondents, &c. in our next.

• Our usual Meteorological Table in our next.

### Miscellaneous Advertisements, (Connected with Literature and the Arts.)

*British Gallery, Pall Mall.*

**THIS GALLERY**, for the Exhibition and Sale of the Works of Modern Artists, is open daily, from ten in the morning until five in the afternoon.

JOHN YOUNG, Keeper.  
Admission 1s.—Catalogue 1s.

### BOOKS PUBLISHED THIS DAY.

*Life of the King.*

In 2 vols. 8vo. embellished with 18 portraits, price 25s.  
**GEORGE the THIRD; his COURT and FAMILY.** This interesting work, which has been long since prepared for the press, will be found to contain a richer collection of original Anecdotes of illustrious and distinguished persons than has ever yet been submitted to the curiosity of the public. It abounds in relations of those peculiar traits of character for which his Majesty was so distinguished during his long and eventful reign, and which have rendered his personal history so remarkably attractive. Printed for Henry Colburn and Co. Conduit Street.

In 12mo. price 4s. 6d.

**THE MOTHER'S MEDICAL ASSISTANT;** containing Instructions for the Prevention and Treatment of the Diseases of Infants and Children, by **ARTHUR CLARKE, M. D.** &c. author of an Essay on Rething. Printed for Henry Colburn and Co. Conduit Street.

Printed uniformly with Park's Travels, in 4to, and illustrated with a Map, and numerous plates, price 2l. 2s. in boards.

**TRAVELS IN THE INTERIOR OF AFRICA to the SOURCES of the SENEGAL and GAMBA, undertaken by order of the French Government, and performed in 1818, by M. G. MOLLIN.** Edited by T. B. BOWDICH, Esq. Conductor of a Mission to Ashantee. Printed for Henry Colburn and Co. Conduit Street.

**IMPORTANT TRAVELS** recently published by Henry Colburn and Co. Conduit Street; and sold by Bell and Bradfoot, Edinburgh; and John Cumming, Dublin.

1. *A Voyage to the Azorian Islands, and North West Coast of America; and Return by Land over the North-East parts of the Continent, Siberia to Petterburgh, a route never before performed.* By G. Von Langsdorff, the Russian Consul General for the Brazils. In 4to, with several engravings. Price 1l. 17s. 6d. bds.

"This is a valuable and entertaining work. It is the production of an individual highly accomplished in his profession." *British Critic.*

"This volume communicates much new information; particularly respecting the North-West Coast of America." *Monthly Review.*

2. *Travels to Morocco (through France and Spain).* By Maurice Kestring, Esq. Comprising a Narrative of the Author's Residence in that Empire, with an Account of the British Embassy to the Court of Morocco, and the late George Payne, Esq. Consul General. Second Edition. In 1 vol. 4to, illustrated with thirty-four plates of Scenery, Antiquities, and Costume, from Drawings made on the spot by the Author. 3l. 5s. bds.

3. *Narrative of a Residence in Ireland.* By Anne Plumptre, author of *Narrative of a Three Years Residence in France*, &c. In 1 vol. 4to, embellished with a portrait of the author, and 12 engravings of remarkable Scenery. Price 2s. 6d. bds.

"God has done every thing for this country, man nothing."—*Lord Chesterfield.*

4. *France.* By Lady Morgan. The 4th edition, in 2 vols. 8vo, with additional Notes, price 1l. 4s.

5. *Rome, Naples, and Florence.* This work will be found to exhibit a lively picture of the present state of Society and Manners, the Arts, Literature, &c. of these celebrated cities. By the Count de Sismak. In 1 vol. 8vo. 10s. 6d. Ditto French, &c.

6. *Voyage to Africa, comprising an Account of the Shipwreck of the Medusa Frigate, the sufferings of the Crew, and the various Occurrences on board the Raft, in the Desert of Zaara, and at Senegal.* By J. B. Henry Savigny d'Alger. Illustrated in 1 vol. 8vo, embellished with a portrait of Rufus Zaidé, and a plan of the Raft. 10s. 6d.

"The subterranean scenes of Ann Radcliffe, and all the imaginary horrors of our melo-dramas and our tragedies, shrink to nothing before the real horrors of this dreadful catastrophe."—*Quarterly Review.*

7. *Reisen durch Asien, Europa, und Nordamerika.* By F. A. de Chateaubriand, Author of *Atlas, Travels in Greece and Palestine*, &c. 2 vols. 8vo. 18s. Ditto in French.

8. *Travels in the Caucasus and Georgia, performed by command of the Prussian Government.* By Julius von Klaproth, Member of the Imperial Academy of Sciences at St. Petersburg, &c. 4to. 3s. 2s. in board America.

"The result of M. Klaproth's labours is a volume containing a very considerable stock of new information." *Monthly Review, October.*

9. *Travels in the Morea, Albania, and other parts of the Ottoman Empire.* By P. C. Pouqueville, M. D. Member of the Commission of Arts and Sciences, and French Consul at Jassy. With engravings of Scenery and Costume. 2l. 2s. boards.

"Dr. Pouqueville's volume on the Morea, being collected by himself during a long residence in the country, and being the last account written on the subject, is deserving of every attention."—*Hobhouse's Travels*, p. 218.

10. *Travels in Southern Africa.* By Professor Liechtenstein. 4to, or concluding volume, comprising among other excursions, a Journey into the Countries of the Boesmans, the Corans, and the Bertrijans, a people never before visited by Europeans; illustrated with a valuable map and several engravings. 3s. boards.

11. *Voyages and Travels to Brazil, the South Sea, Kamchatka, and Japan, during the years 1800, 4, 5, 6, and 7.* By G. Von Langsdorff, Asiat. Counsellor in his Majesty the Emperor of Russia, Consul General at the Brazils, &c. In 1 vol. 4to, illustrated with engravings by the first artist. 2l. 12s. 6d. boards.

12. *Travels through Norway and Lapland.* By Leopold von Buch, Member of the Royal Academy of Sciences at Berlin. With Notes, &c. by Professor Jansson. 4to msp. 1l. 16s. boards.

**MEMOIR ON THE FORMATION AND CONNECTIONS OF THE CRURAL ARCH,** and other Parts concerned in Ligament and Femoral Hernia. In 4to. price 7s. By ROBERT LISTON, Member of the Royal Colleges of Surgeons, of London and Edinburgh, Surgeon to the Anatomy, &c. Printed for Walter H. and Co. Edinburgh; Baring, Cradock, and Joy, London; and Hodges and McArthur, Dublin.

In 8vo. second edition, price 12s. boards.

**HISTORICAL DISSERTATIONS ON THE LAW AND PRACTICE OF GREAT BRITAIN,** particularly of Scotland, with regard to the Poor, on the Modes of Charity, and on the Means of promoting the Improvement of the People, together with a Selection of Facts and Documents, and Miscellaneous Enquiries, illustrative of the Management of the Poor in Scotland, and in various parts of the Continent of Europe, &c. By the Rev. ROBERT BURNS, one of the Ministers of Pauley. Edinburgh: Printed for Peter Hill and Co.; and Longman and Co. London.

In 3 vols. 12mo. price 1l. 4s. boards.

**THE MONASTERY; a Romance.** By the Author of *Waverley*, &c. Printed for Longman, Hurst, Kees, Orme, and Brown, London; Constable and Co., and John Ballantyne, Bookseller to the King, Edinburgh.

*Edited, by Cresswell.*

**A TREATISE OF GEOMETRY,** containing the first six Books of Euclid's Elements, methodically arranged, and concisely demonstrated; together with the Elements of Solid Geometry. By D. CRESSWELL, M. A. Fellow of Trinity College, Cambridge. Printed for G. and W. B. Whittaker, 15, Ave-Marine; and Deighton and Sons, Cambridge.

On the first of April will be published, handsomely printed in one neat volume, foolscap. 8vo, and illustrated with 21 Vignettes from the Author's Designs, **SKETCHES FROM ST. GEORGE'S FIELDS,** by GIORGIO DI CASTELNUOVO.

"All hope abandon ye who enter here."—*Cory's Dome.* Printed for Stodart and Stewart, 81, Strand.

In two large volumes, 8vo. illustrated by twenty-four Engravings, price 3l. 2s. boards.

**AN ACCOUNT OF THE ARCTIC REGIONS,** with a History of the Discoveries in the Northern Whale Fishery. By WILLIAM SCORESBY, Junior, F. R. S. E. Printed for Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. Chesapeake, London.

"This work is addressed both to the scientific and the mercantile world, the first volume containing a full Description of the physical Condition of the Arctic Regions, and the second volume, a detailed Account of the Northern Whale Fishery, including the outfit of the vessel, the mode of fishing, the expenses, profits, &c. The most ample testimony has of late years been borne to Captain Scoresby's character, as a man of science, by some of the most distinguished philosophers of this country and the Continent; and the experience derived from seventeen voyages to Greenland, joined to the invariable success which he has experienced in the whale fishery, must render Captain Scoresby's Work the most desirable guide to those who embark their capital in this important branch of our trade.

*Hurwit's Hebrew Dirge.*

**THE TEARS OF A GRATEFUL PEOPLE; a Hebrew Dirge and Hymn,** chanted in the Great Synagogue, St. James's Place, Aldgate, on the day of the Funeral of his late Majesty King George the Third. Price 1s. Also the same, with an English Translation in Verse, price 2s. Printed for Boney and Sons, 4, Broad Street, City; sold also by Larkington and Co.; Burton, Leadenhall Street; Hatchard and Co.; J. H. Barnard, St. James's Place.

Beautifully printed by Ballantyne and Co. price 14s. bds.

**MISCELLANEOUS POEMS.** By WALTER SCOTT, Esq.

"This volume contains the Bridal of Triermain, Harold the Dauntless, 'William and Helen,' imitated from the 'Helen' of Burns, and all the smaller Pieces, collected for the first time in the recent edition of the Author's Poems. It is printed uniformly with the octavo editions, in order to accommodate purchasers of sets of Mr. Scott's Poetry in that size, which this volume will complete.

Printed for Archibald Constable and Co. Edinburgh; and Hurst, Robinson, and Co. Chesapeake, London. Of whom may be had, Mr. Triestram, a metrical Romance of the Thirteenth Century. By Thomas of Ercolodow, called the Rhymer. Edited from the Auchinleck MS. By Walter Scott, Esq. Fourth edition. Octavo. 15s. boards. New editions of the Lady of the Lake, Rokeby; also Mr. Scott's other Poems, uniformly printed in octavo.

Handsomely printed in small 8vo, similar to Domestic Cookery, price 7s. 6d. in boards, a New Edition, greatly improved.

**THE NEW FAMILY RECEIPT-BOOK: A Collection of more than Eight Hundred truly valuable Receipts (omitting those in Medicine and Cookery)** in various Branches of Domestic Economy, selected from the Works of British and Foreign Writers of unquestionable experience and authority, and from the annotated Communications of Scientific Friends. Dedicated, by permission, to Dr. CHARLES TAYLOR, Secretary to the Society of Arts, Manufactures, and Commerce; to whose superintendence the work has been submitted, and to whom the Editor has been indebted for many valuable Communications.

"This book is a proper and almost indispensable companion for the 'New System of Domestic Cookery.' It contains a larger quantity of truly valuable Receipts than any book of the same kind ever contained. There are few things which the reader can seek for Domestic Use, on which he will not find some useful information."

Printed for John Murray, Albemarle Street; sold also by every other Bookseller in England, Scotland, and America. The price may be had, lately published.

**A NEW SYSTEM OF DOMESTIC COOKERY; a New Edition, small 8vo. 7s. 6d. boards.**

London: Printed for the Proprietors, by W. POPE, 67, Chancery Lane: Published every Saturday, by W. A. SMITH, at the Literary Gazette Office, 67, (Breter Change; Strand, where Communications, (post paid) are requested to be addressed to the Editor.

# THE LONDON LITERARY GAZETTE, AND Journal of Belles Lettres, Arts, Sciences, etc.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen throughout the Kingdom: but to those who may desire its immediate transmission, by post, we beg to recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 167.

SATURDAY, APRIL 1, 1820.

PRICE 8d.

## REVIEW OF NEW BOOKS.

*The Cenci. A Tragedy, in five Acts.* By Percy B. Shelley. Italy: Printed for Olliers. London, 1819. pp. 104.

Of all the abominations which intellectual perversion, and poetical atheism, have produced in our times, this tragedy appears to us to be the most abominable. We have much doubted whether we ought to notice it; but, as watchmen place a light over the common sewer which has been opened in a way dangerous to passengers, so have we concluded it to be our duty to set up a beacon on this noisome and noxious publication. We have heard of Mr. Shelley's genius; and were it exercised upon any subject not utterly revolting to human nature, we might acknowledge it. But there are topics so disgusting... and this is one of them; there are themes so vile... as this is; there are descriptions so abhorrent to mankind... and this drama is full of them; there are crimes so beastly and demoniac... in which *The Cenci* riots and luxuriates, that no feelings can be excited by their obscenity but those of detestation at the choice, and horror at the elaboration. We protest most solemnly, that when we reached the last page of this play, our minds were so impressed with its odious and infernal character, that we could not believe it to be written by a mortal being for the gratification of his fellow-creatures on this earth: it seemed to be the production of a fiend, and calculated for the entertainment of devils in hell.

That monsters of wickedness have been seen in the world, is too true; but not to speak of the diseased appetite which would delight to revel in their deeds, we will affirm that depravity so damnable as that of Count Cenci, in the minute portraiture of which Mr. S. takes so much pains, and guilt so atrocious as that which he paints in every one of his dramatic personages, never had either individual or aggregate existence. No; the whole design; and every part of it, is a libel upon humanity; the conception of a brain not only distempered, but familiar with infamous images, and accursed contemplations. What adds to the shocking effect is the perpetual

use of the sacred name of God, and incessant appeals to the Saviour of the universe. The foul mixture of religion and blasphemy, and the dreadful association of virtuous principles with incest, parricide, and every deadly sin, form a picture which, "To look upon we dare not."

Having said, and unwillingly said, this much on a composition which we cannot view without inexpressible dislike, it will not be expected from us to go into particulars farther than is merely sufficient to enforce our warning. If we quote a passage of poetic power, it must be to bring tenfold condemnation on the head of the author—for awful is the responsibility where the head condemns the heart, and the gift of talent is so great, as to remind us of Satanic knowledge and lusts, and of "arch-angel fallen."

The story, we are told, in a preface where the writer classes himself with Shakespeare and Sophocles, although two centuries old, cannot be "mentioned in Italian society without awakening a deep and breathless interest." We have no high opinion of the morality of Italy; but we can well believe, that even in that country, such a story must, if hinted at, be repressed by general indignation, which Mr. Shelley may, if he pleases, call breathless interest. It is indeed, as he himself confesses, "eminently fearful and monstrous; any thing like a dry exhibition of it upon the stage would be insupportable" (preface ix). And yet he presumes to think that that of which even a dry exhibition upon the stage could not be endured, may be relished when arrayed in all the most forcible colouring which his pencil can supply, in all the minute details of his graphic art, in all the congenial embellishments of his inflamed imagination. Wretched delusion! and worthy of the person who ventures to tell us that, "Religion in Italy is not, as in protestant countries, a cloak to be worn on particular days; or a passport which those who do not wish to be railed at carry with them to exhibit; or a gloomy passion for penetrating the impenetrable mysteries of our being, which terrifies its possessor at the darkness of the abyss to which it has conducted him:" worthy of the person who, treating of dramatic imagery, blasphemously and senselessly says, that "imagination is as the immortal God, which should assume flesh for the redemption of mortal passion."

The characters are: Count Cenci, an old grey haired man, a horrible fiendish incarnation, who invites an illustrious company to a jubilee entertainment on the occasion of the violent death of two of his sons; who delights in nothing but the wretchedness of all

the human race, and causes all the misery in his power; who, out of sheer malignity, forcibly destroys the innocence of his only daughter; and is, in short, such a miracle of atrocity, as only this author, we think, could have conceived. Lucretia, the second wife of the Count, a most virtuous and amiable lady, who joins in a plot to murder her husband; Giacomo, his son, who because his parent has cheated him of his wife's dowry, plots his assassination; Beatrice the daughter, a pattern of beauty, integrity, grace, and sensibility, who takes the lead in all the schemes to murder her father; Orsino, a prelate, sworn of course to celibacy, and in love with Beatrice, who enters with gusto into the conspiracy, for the sound reason, that the fair-one will not dare to refuse to marry an accomplice in such a transaction; Cardinal Camillo, a vacillating demi-profligate; two bravos, who strangle the Count in his sleep; executioners, torturers, and other delectable under-parts. The action consists simply of the rout in honour of the loss of two children, of the incest, of the murderous plot, of its commission, and of its punishment by the torture and execution of the wife, son, and daughter. This is the dish of carrion, seasoned with sulphur as spice, which Mr. Shelley serves up to his friend Mr. Leigh Hunt, with a dedication, by way of grace, in which he eulogizes his "gentle, tolerant, brave, honourable, innocent, simple, pure," &c. &c. &c. disposition. What food for a humane, sympathizing creature, like Mr. Hunt! if, indeed, his tenderness be not of a peculiar kind, prone to feast on "gruel thick and slab," which "like a hell-broth boils and bubbles."\*

We will now transcribe a portion of the entertainment scene, to show how far the writer out herods Herod, and outrages possibility in his personation of villainy, by making Count Cenci a character which transforms a Richard III. an Iago, a Sir Giles Overreach, comparatively into angels of light.

Scene III.—A magnificent Hall in the Cenci Palace.—A Banquet. Enter Cenci, Lucretia, Beatrice, Orsino, Camillo, Nobles.

Cen. Welcome, my friends and kinsmen; welcome ye,

Princes and Cardinals, pillars of the church, Whose presence honours our festivity. I have too long lived like an anchorite,

\* We are led to this remark by having accidentally read in one of Mr. Hunt's late political essays, an ardent prayer that Buonaparte might be released from St. Helena, were it only to fight another Waterloo against Wellington, on mere *good terms*. A strange wish for a Briton, and stranger still for a pseudo philanthropist, whether arising from a desire to have his countryman defeated, or a slaughter productive of so much woe and desolation repeated.

And in my absence from your merry meetings  
An evil word is gone abroad of me;  
But I do hope that you, my noble friends,  
When you have shared the entertainment here,  
And heard the pious cause for which 'tis given,  
And we have pledged a health or two together,  
Will think me flesh and blood as well as you;  
Siaful indeed, for Adam made all so,  
But tender-hearted, meek, and pitiful.

1 *Guest*. In truth, my lord, you seem too  
light of heart,  
Too sprightly and companionable a man,  
To act the deeds that ragout pain on you.

(*To his companion.*)  
I never saw such blythe and open cheer  
In any eye!

2 *Guest*. Some most desired event,  
In which we all demand a common joy,  
Has brought us hither; let us hear it, count.

*Cen.* It is indeed a most desired event,  
If when a parent from a parent's heart  
Lifts from this earth to the great father of all  
A prayer, both when he lays him down to sleep,  
And when he rises up from dreaming it,  
Oue supplication, one desire, one hope,  
That he would grant a wish for his two sons  
Even all that he demands in their regard—  
And suddenly beyond his dearest hope,  
If he accomplished, he should then rejoice,  
And call his friends and kinsmen to a feast,  
And task their lore to prove his meritment,  
Then honour us thus far—for I am he.

*Beatr.* (*to Lucetta*.) Great God! how horri-  
ble! Some dreadful ill  
Must have befallen my brothers.

*Lucr.* Fear not, child,  
He speaks too frankly.

*Beatr.* Ah! My blood runs cold.  
I fear that wicked laughter round my eye  
Which wrinkles up the skin even to the hair.

*Cen.* Here are the letters brought from Sala-  
manca;

Beatrice, read them to your mother. God!  
I thank thee! In one night didst thou perform,  
By ways inscrutable, the thing I sought.  
My disobedient and rebellious sons  
Are dead!—Why dead!—What means this  
change of cheer?

You hear me not, I tell you they are dead;  
And they will need no food nor raiment more;  
The tapers that did light them the dark way  
Are their last cost. The Pope, I think, will not  
Expect I should maintain them in their coffins.  
Rejoice with me—my heart is wondrous glad.

*Beatr.* (*Lucetta sinks, half fainting; Beatrice supports her.*)

It is not true!—Dear lady, pray look up.  
Had it been true, there is a God in Heaven,  
He would not live to boast of such a boon.  
Unnatural man, thou knowest that it is false.

*Cen.* Aye, as the word of God; whom here  
I call

To witness that I speak the sober truth;—  
And whose most favouring Providence was  
shown

Even in the manner of their deaths. For Rocco  
Was kneeling at the mass, with sixteen others,  
When the church fell and crushed them to a  
mummy,

The rest escaped unhurt. Cristofano  
Was stabled in error by a jealous man,  
Whilst she he loved was sleeping with his rival;  
All in the self same hour of the same night;  
Which shews that Heaven has special care of me.  
I beg those friends who love me, that they  
mark

The day a fast upon their calendars.

It was the twenty-seventh of December:

Aye, read the letters if you doubt my oath.

(*The assembly appears confused; several of the  
guests rise.*)

1 *Guest*. Oh, horrible! I will depart.

2 *Guest*. And I!

3 *Guest*. No, stay!

I do believe it is some jest; tho' faith!  
'Tis mocking us somewhat too solemnly.

I think his son has married the infanta,  
Or found a mine of gold in El dorado;

'Tis but to season some such news: stay, stay!  
I see 'tis only raillery by his smile.

*Cen.* (*filling a bowl of wine, and lifting it up.*)  
Oh thou bright wine whose purple splendour  
leaps

And bubbles gaily in this golden bowl  
Under the lamp light as my spirits do,  
To hear the death of my accursed sons!

Could I believe thou wert their mingled blood,  
Then would I taste thee like a sacrament,  
And pledge with thee the mighty Devil in hell,  
Who, if a father's curses, as men say,  
Climb with swift wings after their children's  
souls,

And drag them from the very throne of Heaven,  
Now triumphs in my triumph!—But thou art  
Superfluous; I have drunken deep of joy  
And I will taste no other wine to-night.

Here, Andra! Hear the bowl around,  
'A *Guest* (*rising*). Thou wretch!

Will I name among this noble company  
Check the abandoned villain?

*Cen.* For God's sake  
Let me dismiss the guests! You are insane;  
Some ill will come of this.

2 *Guest*. Seize, silence him!

1 *Guest*. I will!

3 *Guest*. And I!

*Cen.* (*Addressing those who rise with a threaten-  
ing gesture.*)

Who moves? Who speaks?  
(*Turning to the Company.*)

'tis nothing.

Enjoy yourselves.—Beware! For my revenge  
is as the sealed commission of a king  
That kills, and none dare name the murderer.

(*The Banquet is broken up.*)

This single example, which is far from  
being the most obnoxious, unnatural, and  
infernal in the play, would fully justify the  
reprobation we have pronounced. Mr.  
Shelley, nor no man, can pretend that any  
good effect can be produced by the delinea-  
tion of such diabolism; the bare suggestions  
are a heinous offence; and whoever may be  
the author of such a piece, we will assert,  
that Bezebub alone is fit to be the prompter.

The obscenity too becomes more refinedly  
vicious when Beatrice, whose "crimes and  
miseries," forsooth, are as the mask and the  
mante in which *circumstances clothed her*  
for her impersonation on the scenes of the  
world—"is brought prominently forward.  
But we cannot dwell on this. We pass to a  
quotation which will prove that Mr. Shelley  
is capable of powerful writing: the descrip-  
tion of sylvan scenery may be grand, and  
Salvator-like, were it not put into the mouth  
of a child pointing out the site for the murder  
of the author of her being, "unfit to  
live, but more unfit to die."

\* Preface, xiii., and a sentence, which, if  
not profane, is a most pernicious sophistry.  
There is some foundation for the story, as the  
Cenci family were devoured by a terrible catastro-  
phe; and a picture of the daughter by Guido, is  
still in the Colonna Palace.

Two miles on this side of the fort, the road  
Crosses a deep ravine; 'tis rough and narrow,  
And winds with short turns down the precipice;  
And in its depth there is a mighty rock,  
Which has, from unimaginable years,  
Sustained itself with terror and with toil  
Over a gulph, and with the agony

With which it clings seems slowly coming down;  
Even as a wretched soul, hour, after hour,  
Clings to the mass of life; yet clinging, leans;  
And leaning, makes more dark the dread abyss  
in which it fears to fall: beneath this crag,  
Inge as despair, as if in weariness,  
The melancholy mountain yawns—below,  
You hear but see not an impetuous torrent  
Raging among the caverns, and a bridge  
Crosses the chasm; and high above there grow,  
With intersecting trunks, from crag to crag,  
Cedars, and yews, and pines; whose tangled  
hair

Is matted in one solid roof of shade  
By the dark ivy's twine. At noon day here  
'Tis twilight, and at sunset blackest night.

*Ora.* Before you reach that bridge make some  
excuse

For spurring on your mules, or loitering  
Until—

*Beatr.* What sound is that?  
*Lucr.* Hark! No, it cannot be a servant's  
step;

It must be Cenci, unexpectedly  
Returned—Make some excuse for being here.

*Beatr.* (*to ORSINO, as she goes out.*)  
That step we hear approach must never pass  
The bridge of which we spoke.

It will readily be felt by our readers why  
we do not multiply our extracts. In truth  
there are very few passages which will bear  
transplanting to a page emulous of being  
read in decent and social life. The lamenta-  
ble obliquity of the writer's mind pervades  
every sentiment, and "corruption mingles  
all within," renders his florid tints and imi-  
tations of beauty only the more loathsome.

Are loveliness and wisdom incompatible?  
Mr. Shelley makes one say of Beatrice, that  
Men wondered how such loveliness and wisdom  
Did not destroy each other!

Cenci's imprecation on his daughter,  
though an imitation of Lear, and one of a  
multitude of direct plagiarisms, is abso-  
lutely too shocking for perusal; and the dy-  
ing infidelity of that paragon of pericides, is  
all we dare to venture to lay before the public.

Whatever comes, my heart shall sink no more.  
And yet, I know not why, your words strike  
chill:

How tedious, false and cold seem all things. I  
Have met with much injustice in this world;  
No difference has been made by God or man,  
Or any power moulding my wretched lot,  
'Tis good or evil as regarded me.

I am cut off from the only world I know,  
From light, and life, and love, in youth's sweet  
prime.

You do well telling me to trust in God,  
I hope I do trust in him. In whom else  
Can I trust? And yet my heart is cold.

We now most gladly take leave of this  
work; and sincerely hope, that should  
we continue our literary pursuits for  
fifty years, we shall never need again  
to look into one so stamped with pol-  
lution, impiousness, and infamy.

*Scoreby's Account of the Arctic Regions,*  
 &c.

[Resumed from page 184. No. 165.]

The following general picture is very curious.

Spitzbergen and its islands, with some other countries within the Arctic circle, exhibit a kind of scenery which is altogether novel. The principal objects which strike the eye, are innumerable mountainous peaks, ridges, precipices, or needles, rising immediately out of the sea, to an elevation of 3000 or 4000 feet, the colour of which, at a moderate distance, appears to be blackish shades of brown, green, grey and purple; snow or ice in strise or patches, occupying the various clefts and hollows in the sides of the hills, capping some of the mountain summits, and filling with extended beds the most considerable valleys; and ice of the glacier form, occurring at intervals all along the coast, in particular situations as already described, in prodigious accumulations. The glistening or vitreous appearance of the icy precipices; the purity, whiteness, and beauty of the sloping expanse, formed by their snowy surfaces; the gloomy shade presented by the adjoining or intermixed mountains and rocks, perpetually "covered with a mourning veil of black lichens;" with the sudden transitions into a robe of purest white, where patches or beds of snow occur, present a variety and extent of contrast altogether peculiar; which, when enlightened by the occasional ethereal brilliancy of the Polar day, and harmonized in its serenity with the calmness of the ocean, constitute a picture both novel and magnificent. There is, indeed, a kind of majesty, not to be conveyed in words, in these extraordinary accumulations of snow and ice in the valleys, and in the rocks above rocks, and peaks above peaks, in the mountain groups, seen rising above the ordinary elevation of the clouds, and terminating occasionally in crsts of everlasting snow, especially when you approach the shore under shelter of the impenetrable density of a summer fog; in which case the fog sometimes disperses like the drawing of a curtain, when the strong contrast of light and shade, heightened by a cloudless atmosphere and powerful sun, bursts on the senses in a brilliant exhibition, resembling the production of magic.

To this strong contrast of light and shade, with the great height and steepness of the mountains, is to be attributed a remarkable deception in the apparent distance of the land. Any strangers to the Arctic countries, however well acquainted with other regions, and however capable of judging of the distance of land generally, must be completely at a loss in their estimations when they approach within sight of Spitzbergen. When at the distance of twenty miles, it would be no difficult matter to induce even a judicious stranger to undertake a passage in a boat to the shore, from the belief that he was within a league of the land. At this distance, the portions of rock and patches of snow, as well as the contour of the different hills, are as distinctly marked, as similar objects, in many

other countries, not having snow about them, would be at a fourth or a fifth part of the same distance. Not, indeed, strangers only, but persons who have been often to Spitzbergen, such as the officers and seamen of the whale-ships, have not unfrequently imagined, that their ship could not stand an hour towards the land without running aground; and yet, perhaps, the ship has sailed three or four hours directly "in shore," and still been remote from danger. This is a fact which I have seen realized among my own officers repeatedly. There are circumstances, indeed, when, by a slight change in the density of the atmosphere, a ship, after sailing towards the land for some hours, may appear to be as far off as at first. Thus, in clear weather, the high land of Spitzbergen is perfectly well defined, and every thing on it appears distinct, when at the distance of forty miles. If, after sailing five hours towards the shore, from this situation, at the rate of four or five knots per hour, the atmosphere should become a little hazy, or even only dark and cloudy, the land might appear to be further distant than before. Hence we can account, on a reasonable ground, for a curious circumstance related in a Danish voyage, undertaken for the recovery of the last colony in Greenland, by Mogens Heinson. This person, who passed for a renowned seaman in his day, was sent out by Frederick II. King of Denmark. After encountering many difficulties and dangers from storms and ice, he got sight of the east coast of Greenland, and attempted to get to it; but though the sea was quite free from ice, and the wind favourable, and blowing a fresh gale, he, after proceeding several hours without appearing to get any nearer the land, became alarmed, tacked about, and returned to Denmark. On his arrival, he attributed this extraordinary circumstance, magnified, no doubt, by his fears, to his vessel having been stopped in its course by "some loadstone rocks hidden in the sea." Most authors who have had occasion to refer to Heinson's voyage, have speculated on this circumstance; but no one, I believe, has satisfactorily explained the origin of his fears. The true cause, however, of what he took to be a submarine magnetic influence, arose, I doubt not, from the deceptive character of the land as to distance, which I have attempted to describe.

Captain Scoreby landed on Spitzbergen, and ascended one of the highest eminences near the shore.

From the brow of the mountain, on the side by which we ascended, many masses of stone were dislodged by design or accident, which, whatever might be their size, shape or weight, generally made their way with accelerated velocity to the bottom. As they bounded from rock to rock, they produced considerable smoke at each concussion, and setting in motion numerous fragments in their course, they were usually accompanied by showers of stones, all of which were lodged in a bed of snow, lying 2000 feet below the place where the first were disengaged. This may afford some idea of the nature of the

inclination. Most of the larger stones which were set off, broke into numbers of pieces; but some considerable masses of a tabular form, wheeled down upon their edges, and though they made bounds of several hundred feet at a time, and acquired a most astonishing velocity, they sometimes got to the bottom without breaking.—He continues;—

The effect of the elevation, and the brightness of the picture, were such, that the sea, which was at least a league from us, appeared within reach of a musket shot; mountains a dozen miles off, seemed scarcely a league from us; and our vessel which we knew was at the distance of a league from the shore, appeared in danger of the rocks.

After a short rest, in which we were much refreshed with a gentle breeze of wind that here prevailed; and after we had surveyed the surrounding scenery as long as it afforded any thing striking, we commenced the descent. This task, however, which before the attempt, we had viewed with indifference, we found really a very hazardous, and in some instances a painful undertaking. The way now seemed precipitous. Every movement was a work of deliberation. The stones were so sharp that they cut our boots and pained our feet, and so loose that they gave way almost at every step, and frequently threw us backward with force against the hill. We were careful to advance abreast of each other, for any individual being below us would have been in danger of being overwhelmed with the stones, which we unintentionally dislodged in showers. Having by much care, and some anxiety, made good our descent to the top of the secondary hills, to save the fatigue of crawling along the sharp ridge that we had before traversed, we took down one of the steepest banks, the inclination of which was little less than fifty degrees. The stones here being very small and loose, we sat down on the side of the hill, and slid forward with great facility in a sitting posture. Towards the foot of the hill, an expanse of snow stretched across the line of descent. This being loose and soft, we entered upon it without fear, and our progress at first was by no means rapid; but on reaching the middle of it, we came to a surface of solid ice, perhaps a hundred yards across, over which we launched with astonishing velocity, but happily escaped without injury. The men whom we left below, viewed this latter movement with astonishment and fear.

On the flat of land next the sea, we met with the horns of rein-deer, many skulls and other bones of sea-horses, whales, narwhales, foxes and seals, and some human skeletons laid in chest-like coffins, exposed naked on the strand. Two Russian lodges formed of logs of pine, with a third in ruins, were also seen; the former, from a quantity of fresh chips about them, and other appearances within them, gave evidence of their having been recently inhabited. One of them, though small, seemed a middling kind of lodging, but smelt intolerably of the smoke of wood and steam of oil. Many domestic utensils were within and about it. A new hurdle lay by the door, and traps for foxes

and birds were scattered along the beach. These huts were built upon the ridge of shingle adjoining the sea.

Among the shingle on the beach, were numbers of nests, containing the eggs of terns, ducks, and burgomasters, and in some of them were young birds. One of the latter, which we took on board, was very lively, and grew rapidly; but having taken a fancy to a cake of white lead, with which the surgeon was finishing a drawing, he was poisoned. The nests were all watched by the respective birds they belonged to; which, with loud screams and bold attacks, defended them from the arctic gulls and other predatory birds that hovered about the place. They even descended within a yard or two of some of the sailors, who were so cruel as to take their eggs or young, and followed them for a considerable time, screaming most violently. Several of these eggs were afterwards hatched in warm saw-dust, but the young birds generally died soon after they left the shell.

The only insect I saw was a small green fly, which swarmed upon the shingle about the beach. The sea along the coast teemed with a species of helix, with the *clio borealis*, and with small shrimps. But no animal of the class *Vermes* was seen on the shore. The birds seen were the puffin, tern, little auk, guillemot, black guillemot or tyste, kittiwake, fulmar, burgomaster, arctic gull, brent-goose, eider-duck, crimson-headed sparrow (*Fringilla flammea*), sandpiper, &c.; but no living quadruped was observed.

The climate of Spitzbergen is no doubt more disagreeable, to human feeling, than that of any other country yet discovered. Extending to within ten degrees of the Pole, it is generally intensely cold, and even in the three warmest months, the temperature not averaging more than  $34\frac{1}{2}$  degrees, it is then subject to a cold occasionally of three, four, or more degrees below the freezing point. It has the advantage, however, of being visited by the sun for an uninterrupted period of four months in each year, thus having a Summer's Day, if so long an interval between the rising and setting of the sun may be so denominated, consisting of one-third part of the year. But its winter is proportionally desolate; the sun, in the northern parts of the country, remaining perpetually below the horizon from about the 22d of October to about the 22d of February. This great Winter Night, though sufficiently dreary, is by no means so dark as might be expected, as the sun, even during its greatest south declination, approaches within  $134^\circ$  of the horizon, and affords a faint twilight for about one-fourth part of every twenty-four hours. Added to this twilight, the aurora borealis, which sometimes exhibits a brilliancy approaching to a blaze of fire,—the stars, which shine with an uncommon degree of brightness,—and the moon, which, in north declination, appears for twelve or fourteen days together without setting,—altogether have an effect which, when heightened by the reflection of a constant surface of snow, generally give sufficient light for going abroad;—but, with the

light afforded by the heavens, when the moon is below the horizon, it is seldom possible to read.

Bears seem to be the only quadrupeds which stir abroad throughout the winter; for, though foxes and rein-deer remain constantly in the country, they are only to be met with, in any quantity, at certain seasons. Foxes begin to appear in the month of February, and are to be seen in March in great numbers. Bears, at the same time, become more abundant, and the birds reappear in the month of April.

Spitzbergen does not afford many vegetables. It may be remarked, that vegetation grows on uncommonly quickly in this country. Most of the plants spring up, flower, and afford seed, in the course of a month or six weeks. They are chiefly of dwarfish size; some of the flowers are really pretty, but exhibit few colours, excepting yellow, white, and purple. And it is not unworthy of observation, that the only plant I met with in Spitzbergen, partaking of the nature of a tree, (a *Salix* allied to *S. herbacea*.) grows but to the height of three or four inches.

On Cherie Island, which is about 10 miles in its greatest extent 1000 morses (Sea-Horses) have been killed in seven hours; but the greater emolument derivable from the whale fishing has procured a respite for these animals.

The third chapter, allotted to a hydrographical survey of the Greenland seas, is a most ingenious paper, replete with important facts, and enriched with useful experiments. The colour of the sea, the nature of the currents, the appearance of the waves, &c. are all satisfactorily investigated and philosophically explained.

The very slight difference in the saltness of the waters of the ocean, from the tropics to the arctic circle is well known, but, perhaps, our readers are not aware that their specific gravity is so nearly the same that the *lowest*, observed by Mr. Scoresby in lat.  $78^\circ$  and long.  $7^\circ$  east, was 1.0259, while the highest, observed by Mr. Lamarche, lat.  $20^\circ 21'$  south, and long.  $27^\circ 5'$  west of Paris, was only 1.0207—a difference of no more than .0033.

The colour of the Greenland Sea varies from ultramarine blue to olive green, and from the most pure transparency to striking opacity. These appearances are not transitory, but permanent; not depending on the state of the weather, but on the quality of the water. The green occurs in considerable quantity, forming, perhaps, one-fourth part of the surface of the Greenland Sea, between the parallels of  $74^\circ$  and  $80^\circ$ . It is liable to alterations in its position, from the action of the current; but still it is always renewed, near certain situations, from year to year. Often it constitutes long bands or streams, lying north and south, or north-east and south-west; but of very variable dimensions;

sometimes, I have seen it extend two or three degrees of latitude in length, and from a few miles, to ten or fifteen leagues in breadth. It occurs very commonly about the meridian of London, in high latitudes. In the year 1817, the sea was found to be of a blue colour, and transparent, all the way from  $12^\circ$  east, in the parallel of  $74^\circ$  or  $75^\circ$ , to the longitude of  $0^\circ 12'$  east, in the same parallel. It then became green, and less transparent. The colour was nearly *grass-green*, with a shade of black. Sometimes the transition between the green and blue water is progressive, passing through the intermediate shades in the space of three or four leagues; at others, it is so sudden, that the line of separation is seen like the rippling of a current; and the two qualities of the water keep apparently so distinct as the waters of a large muddy river, on first entering the sea. In 1817, I fell in with such narrow stripes of various coloured water, that we passed streams of pale green, olive green, and transparent blue, in the course of ten minutes sailing.

The food of the whale occurs chiefly in the green coloured water; it therefore affords whales in greater numbers than any other quality of the sea, and is constantly sought after by the fishers. Besides, whales are more easily taken in it, than in blue water, on account of its great obscurity preventing the whales from seeing distinctly the approach of their enemies.

This colour, singular to say, results from animals of the medusa kind, some resembling small portions of fine hair, and others semi-transparent globules, of from one twentieth to one thirtieth of an inch in diameter. So minute is the food of the stupendous whale!

The number of medusæ in the olive-green sea was found to be immense. They were about one-fourth of an inch asunder. In this proportion, a cubic inch of water must contain 64; a cubic foot 110,592; a cubic fathom 23,887,872; and a cubical mile about 23,888,000,000,000. From soundings made in the situation where these animals were found, it is probable the sea is upwards of a mile in depth; but whether these substances occupy the whole depth is uncertain. Provided, however, the depth to which they extend be but 250 fathoms, the above immense number of one species may occur in a space of two miles square. It may give a better conception of the amount of medusæ in this extent, if we calculate the length of time that would be requisite, with a certain number of persons, for counting this number. Allowing that one person could count a million in seven days, which is barely possible, it would have required, that 80,000 persons should have started at the creation of the world, to complete the enumeration at the present time!

What a stupendous idea this fact gives of the immensity of creation, and of the bounty of Divine Providence, in furnishing such a profusion of life in a region so remote from the habitations of men! But if the number

of animals in a space of two miles square be so great, what must be the amount requisite for the discolouration of the sea, through an extent of perhaps twenty or thirty thousand square miles?

These animals are not without their evident economy, as on their existence possibly depends the being of the whole race of mysticete, and some other species of cetaceous animals. For, the minute medusæ apparently afford nourishment to the sepia, cuttle, cancri, helices, and other genera of Mollusca and Aptera, so abundant in the Greenland Sea, while these latter constitute the food of several of the whale tribe inhabiting the same region; thus producing a deplorable chain of animal life, one particular link of which being destroyed, the whole must necessarily perish.

Besides the minute medusæ and moniform substances, the water of the Spitzbergen Sea, taken up in latitude 77° 30', was found to contain several species of animalcules. Of these I discovered three kinds, full of animal life, but invisible to the naked eye.

There can be no doubt, I think, after what has been advanced, that the medusæ and other minute animals that have been described, give the peculiar colour to the sea, which is observed to prevail in these parts; and that from their profusion, they are, at the same time, the occasion of that great diminution of transparency which always accompanies the olive-green colour. For in the blue water, where few of the little medusæ exist, the sea is uncommonly transparent. Captain Wood, when attempting the discovery of a north-east passage, in the year 1676, sounded near Nova Zembla in 80 fathoms water, where the bottom was not only to be seen, but even the shells lying on the ground were clearly visible.

(To be concluded.)

SOUTHERY'S LIFE OF JOHN WESLEY. 2 vols. 8vo. (continued.)

Wesley's first important alteration after this period was to resort to extemporaneous prayer. Between 40 or 50, now (1738) congregated in London, agreeing to meet weekly and draw up the fundamental rules of their society, "in obedience to the command of God by St. James, and by the advice of Peter Boehler."

"They were to be divided into several bands or little companies, none consisting of fewer than five, or more than ten persons; in these bands every one in order engaged to speak as freely, plainly, and concisely as he could, the real state of his heart, with his several temptations and deliverances since the last meeting. On Wednesday evenings, at eight o'clock, all the bands were to have a conference, beginning and ending with hymns and prayer. Any person who desired admission into this society was to be asked, what were his motives, whether he would be entirely open, using no kind of reserve, and whether he objected to any of the rules. When he should be proposed, every one present who felt any objection to his admission, should state it fairly and fully: they who were received on trial were to be formed into

distinct bands, and some experienced person chosen to assist them; and if no objection appeared to them after two months, they might then be admitted into the society. Every fourth Saturday was to be observed as a day of general intercession; and on the Sunday sevennight following, a general love-feast should be held, from seven till ten in the evening. The last article provided that no member should be allowed to act in any thing contrary to any order of the society, and that any person who did not conform to those orders after being thrice admonished, should no longer be esteemed a member. These rules were in the spirit of the Moravian institutions, for Wesley was now united with the Brethren in doctrine, as far as he understood their doctrine, and well disposed to many parts of their discipline. Charles also now yielded to Peter Boehler's commanding abilities, and was by him persuaded of the necessity of a faith differing from any thing which he had yet felt or imagined. The day after he had won this victory, Boehler left London to embark for Georgia."

Thus gradually approaching what the methodists denominate *efficient faith*, Wesley continued till "Wednesday May 24th, a remarkable day in the history of Methodism, for upon that day he dates his conversion,—a point, say his official biographers, of the utmost magnitude, not only with respect to himself but to others.

"On the evening of that day he went very unwillingly to a Society in Aldersgate Street, where one of the assembly was reading Luther's preface to the Epistle to the Romans.—What followed is considered by his disciples as being of deep importance; it may therefore best be given in his own words: 'About a quarter before nine, while he was describing the change which God works in the heart through faith in Christ, I felt my heart strangely warmed; I felt I did trust in Christ, Christ alone, for salvation: and an assurance was given me, that He had taken away my sins, even mine, and saved me from the law of sin and death. I began to pray with all my might for those who had in a more especial manner despitely used me and persecuted me. I then testified openly to all there what I now first felt in my heart. But it was not long before the enemy suggested, This cannot be faith, for where is thy joy?'—How many a thought arising from that instinctive logic which is grounded on common sense, has been fathered upon the personified principle of evil! Here was a plain contradiction in terms,—an assurance which had not assured him. He returned home, and was buffeted with temptations; he cried out and they fled away; they returned again and again. 'I as often lifted up my eyes,' he says, 'and He sent me help from his holy place. And herein I found the difference between this and my former state chiefly consisted, I was striving, yea fighting with all my might under the law, as well as under grace: but then I was sometimes, if not often conquered; now I was always conqueror.'"

About a fortnight subsequent to this *new birth*, and in the full career of fanatical en-

thusiasm, Wesley, together with Ingham and six others, left England for the Moravian Establishment at Herrnhut in Germany, of the origin and progress of which sect the author takes a rapid view. Count Zinzendorf, and the Herrnhuters were at that era in a state of the grossest abomination, which was afterwards reformed, for their means were evil. Wesley returned to London after a short absence, and Whitefield also came back from America. At this time began the practice of fitting condemned criminals for execution, which has since been carried to so deplorable a length that murderers go out of the world in the persuasion of martyrs, and the vilest wretches (through a momentary delusion mis-called faith) die the death of saints in glory. But this was at the height of the Wesleyan excitement and enthusiasm, and before Methodism had assumed, with a consistent form, a sober character. On the 17th of February, 1739, Whitefield appeared in his "first field pulpit" at Rose Green near Bristol, and preached for the colliers of Kingswood. The Chancellor of the diocese interfered, and a rupture ensued, which finally led to the separation of the new sect from the Church of England. The dreadful paroxysms which in the earlier stages of Methodism, manifested that the disciples had been born again in grace, are now only to be found in America; and the love-feasts have, we trust, no likeness in these wiser times. On the 12th of May, 1739, the foundation-stone of the first Methodist preaching house was laid, in a piece of ground obtained for that purpose, near St. James's Church-yard, Bristol. Whitefield was now preaching in London, and "a layman, whose name was Shaw, insisted that a priesthood was an unnecessary and unscriptural institution, and that he himself had as good a right to preach, baptize, and administer the sacraments, as any other man. Such a teacher found ready believers; the propriety of lay-preaching was contended for at the society in Fetter-Lane, and Charles Wesley strenuously opposed what he called these pestilent errors. In spite of his opposition, a certain Mr. Bowers set the first example. Two or three more ardent innovators declared that they would no longer be members of the Church of England." Howel Harris, the first great promoter of Methodism in Wales, started at this period; and Whitefield's first celebrated preachings in Moorfields, and Kennington Common, took place. A picture of the effect of these sermons may be copied from Wesley's statement of what happened to him at Wapping. "'While,' he says, 'I was earnestly inviting all men to enter into the *Holiest* by this new and living way, many of those that heard began to call upon God with strong cries and tears; some sunk down, and there remained no strength in them; others exceedingly trembled and quaked; some were torn with a kind of convulsive motion in every part of their bodies, and that so violently, that often four or five persons could not hold one of them. I have seen many hysterical and epileptic fits, but none of them were like these in many respects.

I immediately prayed that God would not suffer those who were weak to be offended; but one woman was greatly, being sure they might help it if they would, no one should persuade her to the contrary; and she was got three or four yards, when she also dropped down in as violent an agony as the rest. Twenty-six of those who had been thus affected (most of whom, during the prayers which were made for them, were in a moment filled with peace and joy,) promised to call upon me the next day; but only eighteen came, by talking closely with whom I found reason to believe that some of them had gone home to their houses justified; the rest seemed to be patiently waiting for it. A difference of opinion concerning these outward signs, as they were called, was one of the subjects which had distracted the London Methodists, and rendered Wesley's presence among them necessary. Over these new prophets, the Methodists prevailed, though not without a considerable struggle; and luminar preaching began to grow common. Samuel Wesley, the elder brother, thus writes to his mother at this date—"It was with exceeding concern and grief I heard you had countenanced a spreading delusion, so far as to be one of Jack's congregation. Is it not enough that I am bereft of both my brothers, but must my mother follow too? I earnestly beseech the Almighty to preserve you from joining a schism at the close of your life, as you were unfortunately engaged in one at the beginning of it. They boast of you already as a disciple. Charles has told John Beathan that I do not differ much, if we understand one another. I am afraid I must be forced to advertise, such is their apprehension, or their charity. But they design separation. Things will take their natural course, without an especial interposition of Providence. They are already forbid all the pulpits in London, and to preach in that diocese is actual schism. In all likelihood it will come to the same all over England, if the Bishops have courage enough. They leave off the liturgy in the fields; though Mr. Whitefield expresses his value for it, he never once read it to his utter denunciations on a common. Their societies are sufficient to dissolve all other societies but their own: will any man of common sense or spirit suffer any domestic to be in a bond engaged to relate every thing without reserve to five or ten people, that concerns the person's conscience, how much soever it may concern the family? Ought any married persons to be there, unless husband and wife be there together? This is literally putting asunder whom God hath joined together. As I told Jack, I am not afraid the church should excommunicate him, discipline is at too low an ebb; but that he should excommunicate the church. It is pretty near it. Holiness and good works are not so much as conditions of our acceptance with God. Love-feasts are introduced, and extemporary prayers and expositions of Scripture, which last are enough to bring in all confusion: nor is it likely they will want any miracles to support them. He only can stop them from being a formed sect, in a

very little time, who *ruleth the madness of the people*. Ecclesiastical censures have lost their terrors, thank fanaticism on the one hand and atheism on the other. To talk of persecution therefore from thence is mere insult. Poor Brown, who gave name and rise to the first separatists, though he repented every vein of his heart, could never undo the mischief he had done."

"Samuel Wesley" died within three weeks after the date of this letter; and John says in his journal, "We could not but rejoice at hearing from one who had attended my brother in all his weakness, that several days before he went hence, God had given him a calm and full assurance of his interest in Christ. Oh! may every one who opposes it be thus convinced that this doctrine is of God!" Wesley cannot be suspected of intentional deceit: yet who is there upon reading this passage would suppose that Samuel had died after an illness of four hours?—well might he protest against the apprehension or the charity of those who were so eager to hold him up to the world as their convert. The state of mind which this good man enjoyed had nothing in common with the extravagant doctrine of assurance which his brothers were preaching with such vehemence during the ebullition of their enthusiasm; it was the sure and certain hope of a sincere and humble Christian who trusted in the merits of his Saviour and the mercy of his God. He died as he had lived, in that essential faith which has been common to all Christians in all ages;—that faith wherein he had been trained up, which had been rooted in him by a sound education, and confirmed by diligent study, and by his own ripe judgment. And to that faith Wesley himself imperceptibly returned as time and experience taught him to correct his aberrations. In his old age he said to Mr. Melville Horne these memorable words: "When fifty years ago my brother Charles and I, in the simplicity of our hearts, told the good people of England, that unless they *knew* their sins were forgiven, they were under the wrath and curse of God, I marvel, Melville, they did not stone us! The Methodists, I hope, know better now: we preach assurance; we always did, as a common privilege of the children of God; but we do not enforce it, under the pain of damnation, denounced on all who enjoy it not."

Not long after this, Wesley separated from the Moravians, with strong feelings on both sides; but these time considerably healed. The Wesleys, however, maintained the doctrine of Christian perfection in the new man; the Moravians, that a heaven

"In the History of Dissenters by David Boggs and James Beazer, (vol. iii. p. 9.) Samuel Wesley is called "a worldly priest, who hated all pretence to more religion than our neighbours, as an infallible mark of a dissembler!" The amiable spirit which is displayed in this sentence, its liberality, its charity, and its regard to truth, require no comment.

† This passage may probably have been the cause of the breach between John Wesley and his brother's family, and to that breach the preservation of Samuel's letter is owing.

of corruption remained in the old till death. But a more memorable event was the separation between Wesley and Whitefield.

"Wesley wished to obtain Whitefield's acquiescence in his favourite doctrine of perfection, the 'free, full, and present salvation from all the guilt, all the power, and all the in-being of sin'; a doctrine as untenable as it was acceptable to weak minds and inflated imaginations. He knew also that Whitefield held the Calvinistic tenets of election and irreversible decrees; tenets which, if true, would make God unjust, and the whole Gospel a mere mockery. Upon both these subjects he wrote to his old friend and disciple, who at this time, though he could yield to him upon neither, wished earnestly to avoid all dispute. 'My honoured friend and brother,' said he in his reply, 'for once hearken to a child who is willing to wash your feet. I beseech you, by the mercies of God in Christ Jesus our Lord, if you would have my love confirmed towards you, write no more to me about misrepresentations wherein we differ. To the best of my knowledge, at present no sin has dominion over me, yet I feel the strugglings of indwelling sin day by day. The doctrine of election, and the final perseverance of those who are in Christ, I am ten thousand times more convinced of, if possible, than when I saw you last. You think otherwise. Why then should we dispute, when there is no probability of convincing?' The Calvinistic Methodists in England, however, forced on the separation which their leader Whitefield thus deprecated in his letters from America, (1740). "One of the leading members in London, by name Acourt, had disturbed the society by introducing his disputed tenets, till Charles Wesley gave orders that he should no longer be admitted. John was present when next he presented himself and demanded whether they refused admitting a person only because he differed from them in opinion. Wesley answered no, but asked what opinion he meant. He replied, 'that of election. I hold that a certain number are elected from eternity, and these must and shall be saved, and the rest of mankind must and shall be damned.' And he affirmed that many of the society held the same; upon which Wesley observed that he never asked whether they did or not; 'only let them not trouble others by disputing about it.' Acourt replied, 'Nay, but I will dispute about it.' 'Why then,' said Wesley, 'would you come among us, who you know are of another mind.' 'Because you are all wrong, and I am resolved to set you all right.' 'I fear,' said Wesley, 'your coming with this view would neither profit you nor us.' 'Then,' rejoined Acourt, 'I will go and tell all the world that you and your brother are false prophets. And I tell you in one fortnight you will all be in confusion.'"

Wesley now turned to the organization of those who adhered to his opinions. The system of classing, still in practice, was adopted; itinerancy was taken up, and lay preachers soon laboured in common with those who were originally in orders. Nelson, a stone mason in Yorkshire, greatly

distinguished himself among the first in this line. The Quakers had long before given up this custom, so that it was quite a novelty: but "Cotton Mather has preserved a choice specimen of invective against Dr. Owen, by one of the primitive Quakers, whose name was Fisher. It was, indeed, a species of rhetoric in which they indulged freely, and exceeded all other sectarians. Fisher addressed him thus: 'Thou fiery fighter and green-headed trumpeter; thou hedgehog and grinning dog; thou bastard, that tumbled out of the mouth of the Babylonish bawd; thou mole; thou finker; thou lizard; thou bell of no metal, but the tone of a kettle; thou wheelbarrow; thou whirlpool; thou whirlingig; O thou firebrand; thou adder and scorpion; thou louse; thou cow-dung; thou moon-calf; thou ragged tatterdemalion; thou Judas: thou livest in philosophy and logic, which are of the Devil.'"

(To be concluded.)

## HISTORY OF THE FIRST CRUSADE.

(Uncluded.)  
[From Mills' History of the Crusades.]

The events of importance which followed the taking of Antioch, were the desertion of the cause by the Count of Vermandois, the death of Adhemar, and the march of the crusaders to Jerusalem. We may also notice, that the discussions among the chiefs led even to bloodshed, and that the commonality became so depraved as to be guilty of cannibalism. The enmity of the caliph of Egypt, and of the Turks and Persians, however, acted as a bond of union, and the approach to the holy city was the memorable consequence. "The emir of Tripoli attempted to oppose the torrent of invaders; but he was soon compelled to deprecate their vengeance; and though Raymond wished that the town should be sacked, yet mercy prevailed in the minds of the other generals; and they were contented with large supplies of provisions, the liberation of three hundred Christian slaves, and the payment of fifteen thousand pieces of gold. The soldiers crossed the plain of Beritus, went through the country of Sidon, Atharab or Sarfend, Ptolemais or Acre; and when they arrived at Jaffa, they left their maritime route, and marched to and halted at Ramla, sixteen miles from Jerusalem. The Saracens fled from the town; and the crusaders, in their grateful joy at the possession of its riches, vowed that they would raise a bishopric to the honour of St. George, whose canonized bones reposed there, but whose virtuous spirit had procured them the

\* The Crusaders found the sugar-cane near Tripoli. Albert's account of it is curious. "It is annually cultivated with great labour. When ripe they pound it, strain off the juice, and keep it in vessels till the process of coagulation is complete, and it hardens in appearance like salt or snow. They eat it scraped and mixed with bread, or dissolved in water." P. 270. These remarks are interesting, inasmuch as they are the first on record which any European ever made concerning a plant, the cultivation whereof forms so large a chapter in the annals of human misery.

favour of Heaven. Some daring chieftains proposed to march into Egypt and destroy the head itself of the Mohammedan power; an event which would be followed by the immediate submission of Jerusalem. But the counsel was overruled on the strong arguments of the length and difficulty of the march, and the inadequacy of a small army to the accomplishment of so great an end. On the third day after their arrival at Ramla, the soldiers and people took the road to Jerusalem, and soon reached the town which, in the history of its sacred and its Roman days, had assumed the different names of Emmaus and Nicopolis. The holy city was then in view; every heart glowed with rapture; every eye was bathed in tears. The word Jerusalem was repeated in tumultuous wonder by a thousand tongues; and those who first beheld the blessed spot, called their friends to witness the glorious sight. All passed pains were forgotten; a moment's happiness outweighed years of sorrow. In their warm imaginations the sepulchre was redeemed, and the cross triumphed over the crescent. But with that rapidity of thought which distinguishes minds when strongly agitated by passion, the joy of the stranger, and the fierceness of the warrior, were changed in a moment for religious ideas and feelings. Jerusalem was the scene of the resurrection of Christ; and, therefore, the subject of holy rejoicing; but it was the place of his sufferings also; and true devotion, full of self abasement and gratitude, is as strongly affected by the causes and circumstances as the consequences of the Great Sacrifice. The soldier became in an instant the simple pilgrim; his lance and sword were thrown aside; he wept over the ground which, he said, his Saviour had wept over; and it was only with naked feet that he could worthily approach the seat of man's redemption.

Of the millions of fanatics who had vowed to rescue the sepulchre from the hands of the infidels, forty thousand only encamped before Jerusalem: and of these remains of the champions of the cross, twenty-one thousand five hundred were soldiers,—twenty thousand foot and fifteen hundred cavalry. The destruction of more than eight hundred and fifty thousand Europeans had purchased the possession of Nice, Antioch, and Edessa.

Jerusalem was invested on the 7th of June 1099, and stormed on the 15th of July. The Musselmans fought for a while, then fled to their temples, and submitted their necks to slaughter. Such was the carnage in the Mosque of Omar, that the mutilated carcases were hurried by the torrents of blood into the court; dismembered arms and hands floated into the current that carried them into contact with bodies to which they had not belonged. Ten thousand people were murdered in this sanctuary. It was not only the lacerated and headless trunks which shocked the sight, but the figures of the victors, themselves reeking with the blood of their slaughtered enemies. No place of refuge remained to the vanquished, so indiscriminately did the insatiable fanaticism of

the conquerors disregard alike supplication and resistance. Some were slain, others were thrown from the tops of the churches and of the citadel. On entering the city, the Duke of Lorraine drew his sword and murdered the helpless Saracens, in revenge for the Christian blood which had been spilt by the Moslems, and as a punishment for the rallies and outrages to which they had subjected the pilgrims. But, after having avenged the cause of heaven, Godfrey did not neglect other religious duties. He threw aside his armour, clothed himself in a linen mantle, and, with bare head and naked feet, went to the church of the sepulchre. His piety (unchristian as it may appear to enlightened days,) was the piety of all the soldiers: they laid down their arms, washed their hands, and put on habiliments of repentance. In the spirit of humility, with contrite hearts, with tears and groans, they walked over all those places which the Saviour had consecrated by his presence. The whole city was influenced by one spirit; and "the clamour of thanksgiving was loud enough to have reached the stars." The people vowed to sin no more; and the sick and poor were liberally relieved by the great, who thought themselves sufficiently rich and happy in living to see that day. All previous misfortunes were forgotten in the present holy joy. The ghost of the departed Adhemar came and rejoiced; and, as at the resurrection of Christ, the bodies of the saints arose, so, at the resurrection of the temple from the impurity of the infidels, the spirits of many of those who had fallen on the road from Europe to Jerusalem, appeared and shared in the felicity of their friends. Finally, the hermit, who, four or five years before, had wept over the degraded condition of the holy city, and had commiserated the oppressed state of the votaries of Christ, in Palestine, was recognized in the person of Peter. It was remembered that he had taken charge of the letters from the patriarch to the princes of Europe: it was acknowledged that he had excited their piety, and inflamed their zeal; and the multitude fell at his feet in gratitude for his faithful discharge of his trust, praising God who was glorified in his servant. In wars of ambition subjugated cities, after the oblation of military lawlessness, become the possessions of the victorious state and public. But in the Crusades each soldier fought from personal motives; and the cause of the war, and not submission to authority, was the principle of union. Personal interest frequently prevailed; and, accordingly, each Crusader became the owner of any particular house on the portal of which he had set his knicker. But the treasures of the mosques were converted to the use of the church and of the poor; and among the splendid spoils of two of the principal temples were seventy large chandeliers, fifty of silver, and the remainder of gold.

The massacre of the Saracens on the capture of the holy city did not proceed from the inflamed passions of victorious soldiers, but from remorseless fanaticism. Benevolence to Turks, Jews, infidels, and heretics, was no part

of the piety of the day; and as the Muslims in their consciences believed that it was the will of Heaven that the religion of Muhammad should be propagated by the sword, so the Christians were under the mental delusion that they were the minister of God's wrath on disobedient man. The Latins, on the day after the victory, massacred three hundred men to whom Tancred and Gaston de Bearn had promised protection, and had given a standard as a warrant for their safety. Though the religion of Tancred was as cruel as that of his comrades, though his deadly sword had explored every corner of the mosque of Omar, yet he respected the sacredness of his word; and nothing but the interposition of the other chiefs prevented him from retaliating on the murderers. It was resolved that no pity should be shown to the Muslims; and the most humane justified the determination by the opinion that, in conjunction with the Saracens of Egypt, they might molest the Christians and recover the city. The subjugated people were therefore dragged into the public places, and slain as victims. Women with children at the breast, girls and boys, all were slaughtered. The squares, the streets, and even the uninhabited places of Jerusalem again were strewn with the dead bodies of men and women, and the mangled limbs of children. No heart melted into compassion or expanded into benevolence. The city was washed, and the melancholy task was performed by some Saracenic slaves. No contemporary rejoiced out of general regard to humanity; but every one condemned the count of Tholomee, whose avarice was more alive than his superstition, and whose favourite passion made him save and conduct to Acalon the only few Muslims, except the slaves, who escaped the general butchery. The synagogues were set on fire, and the Jews perished in the flames.

Thus closed the First Crusade; and we shall only add, that, by a curious coincidence, the publication of Mr. Mills' admirable account of it is almost to a day contemporary with the arrival of letters from Genoa, which state that the Pasha of Egypt has entered Palestine, and taken Jerusalem!! Our analysis of this portion of Mr. Mills' labours will afford very competent grounds whereon to form a fair opinion of the remaining two thirds of Mr. Mills' excellent work. We shall therefore perhaps only very briefly run over in a future Number, the principal features of the events subsequently described.

## ORIGINAL CORRESPONDENCE.

### HIMALAYAH MOUNTAINS.

In the months of October, November, and December, 1813, a young traveller from Sabathoo ascended the prodigious chain of the Himalaya Mountains; and from his letters, dated Sabathoo, 11th June, 1817, we

extract the most interesting particulars relating to these giants of the east, from whose foot the mighty peninsula of India stretches to Cape Comorin.\*

The travellers ascended the slope of the parent ridge of the Himalayah, until they reached a plain, whose height above the level of the sea, as measured by the barometer, was 13,600 feet. On the surface of this plain, vegetation was abundant, and the earth productive; and about a quarter of a mile from their path was seen the river Pahur making its first burst from impenetrable obscurity, and flowing over an impetuous wall of shattered rock of six or seven hundred feet in height, forcing its way into the valley, where it is joined by a stream from the pass.

After a series of difficulties, amidst the wild beauties of the most grand and terrific scenery, they ascended still higher, with the vegetation progressively declining, until they reached a pass where the latter says, "We arrived at half past three p. m. The wind blew from the north, and as it swept up the vast surface of snow was extremely cold. The thermometer stood at 40° a higher temperature than was looked for, considering the latitude and elevation at which we were; the snow had melted from off the southern face of the range, and disclosed the slope of the crest, upon which we pitched our tent, of no great size, yet including within its area part of the inferior boundary of snow that extended contiguous to the summit of the eastern peak or wall of the pass. We were only four yards from the ridge which was clothed with unfathomable snow and ice, descending in one sheet along a declivity which terminates with the Sutluj, at the prodigious depth of 9,000 feet.

It is impossible to describe the scene of admiration and wonder that presents itself to the astonished eye of the traveller, who from

\* Since this article, for which we are indebted to the *Calcutta Journal*, was prepared for the press, six weeks ago, the attention of the public has been more directly called to the subject by an interesting paper in the *Quarterly Review*. That paper appears to subvert entirely not only Baron De Humboldt's theory of "isothermal lines," but also Professor Leslie's system, relative to climate, and the lines of perpetual congelation. It is evident that in Asia at least we have vegetation, where, according to these doctrines, we ought to have nothing but frost; and had not M. De Humboldt given up his design of travelling in the east, he must have had ocular demonstration of the fact.

Captain Webb, the correspondent of the *Quarterly Review*, verifies many of Mr. Moorcroft's observations. He finds two species of cedar, one creeping along the ground; the deodar, a very large tree; the pinus strobus; the cypress, the berry-bearing yew; the walnut, hazel, birch, poplar, rhubarb, several new and stately pines and junipers, and some highly interesting sorts of grain, used by the Tartars; especially a species of barley or wheat, called Ooa, cultivated by the Bootcas on the southern ridge, and forming the bread of the natives. This grain grows 13,600 feet above the level of the sea. The highest elevation stated by Captain Webb, is nearly 17,000 feet. Fossil bones of the deer kind, and organic remains, have been brought from the Himalayah.—*Edt.*

so elevated a spot beholds ranges of mountains, confounded in shapeless irregularity, and raising their mural crests high into the circle of perpetual winter. The view to the northward baffles description; nor is the nearer prospect at all inferior; for here you stand encompassed with wreck and desolation on every side; and the straining eye, at last dim with the snowy splendour of the more distant landscape, finds no relief in the surrounding objects, which show no trace of industry, no vestige of animated existence, except a scanty growth of moss that studs the last remains of soil, and a few lichens that appear more elevated in the crevices of the rusty crags, while the last stage of organic life is recognized in the birds that have their dwelling in the snow.

Those monuments of primitive creation, though of iron texture, yield to the slow influence of destructive time, so that the most durable of the productions of nature are seen hurrying into decay; yet so gigantic, so solid, and so imposing, is the aspect of these mountains, that it is difficult to reconcile the mind to any idea of a period for their entire destruction.

The first object of attraction to the spectator, is the singular and extraordinary appearance of the peaks, their magnitude, height, and variety of figures and forms.

There are some with spiry summits; these show their naked granite sides, shattered and warped by the action of interminable frost; a group of these rises from the bed of the Sutluj, and attain an elevation of about 20,000 feet; they rise pyramidally, and shoot into spires, while thousands of feet are occupied in such steep slopes as to be unable to sustain the snow but in the hollows that have been formed in them. The portions of the bare surface consequently suffer most from the efforts of unceasing frost, which acts upon them in such a way as that when viewed with a glass, they have the singular appearance of shelves or layers of banks heaped one upon the other.

Others form perfect cones; one of vast magnitude is seen north of the pass. The surfaces of these are so entirely incased, that they appear, not snowy mountains, but mountains of pure snow. Then come the inclined planes, of astonishing grandeur, descending from the highest peaks, breaking off with a precipitous fall of many hundred feet, and backed upon their northern side by a mural face of great depth. Two of these remarkable appearances are seen amongst the declining slopes of the eastern range of the hills and even from the plains.

The obliquity of their position, while it exposes them to a heavy coat of snow, prevents their being divested of it by an avalanche, and at all seasons they exhibit the same appearance; but in May and June, till the commencement of the rains, they are open to the influence of a cloudless sky, with a thawing and freezing alternately, which encrusts their surface, and produces the sparkling beauty of a glacier, forming certainly the grandest scenery of the Himalayah. Of all the singular and imposing forms, the most magnificent are the table summits,

One of these enormous masses rises near Wangtoo; its summit is perfectly level, and throws down a precipitous rugged front, which stretches out into a slope or bosom covered with snow. Upon its table surface is a vertical layer of great depth, and the line of union of this wall of snow with its craggy face, is well defined, and has a very strange effect. The base of this mountain sends forth a river, whose channel of solid granite is couped and worn into cavities, recording the violence and turbulence of its stream.

Such are a few of those remarkable natural appearances which baffle all attempts at faithful description; and if within the range of vision, which is not extensive, such singularly striking objects arrest the eye, what may not be anticipated throughout a chain of such extent. A vertical wall of 3000 feet has in vain been searched for amongst the European Alps; yet here, where nature astonishes by her unparalleled magnitude, she may present even something more wonderful, in the deep valleys which every where intersect the great ridges of this stupendous range.

By a series of barometrical observations, the extreme altitude of the pass is not under 15,100 feet, a height, according to theory, abandoned by animal and vegetable life. The peaks or walls on each side shew the ravages of time and weather.

The eastern wall rises with a considerable inclination for five or six hundred feet; thence starting backwards, it terminates in a crown of snow perhaps one thousand five hundred or two thousand feet higher.

The western peak, or rather wall, is literally a pile of mouldering fragments, and rises to about five or six hundred feet; the ascent is impracticable, higher than thirty or forty feet, where are the usual emblems of elevation; so that a spectator, standing on the crest, is not forcibly attracted by the imposing figure or magnitude of the bending cliffs. Beyond the west wall, is another break or pass, which the work of ruin has not yet made traversable; but so rapid is the decay that a few years must level the dividing ridge, and leave a grand breach. Its western side rises to a towering summit deeply clad in snow, and corresponds with the opposite or eastern one, being about two thousand feet in height. The space within these may exceed a mile. In the descent on either side, the cliffs recede, forming a dell; into the north carrying the stream from the thawing snow to the Sutlej, and on the south sending a branch to the Pubbur.

The prospect towards that stream is banked up by an arm of the grand range, which is crossed by the pass. The Pubbur has its source at the junction, and washes its base in its primitive form, for ten or twelve miles to Jungleg'h, where it loses its peaked and disordered figure, exchanging its cap of snow for a coat of grass, and continuing a few miles at a height of twelve thousand feet, with a surface of partial vegetation and patches of snow.

The Pubbur, now strengthened by the numerous streams that roll down from the

whole extent of the last mountains of Himalayah, runs south-west, to about thirty or thirty-five miles from its source, then at one bend flowing easterly, nearly parallel with the great chain, receiving many supplies, it finally joins the Jans.

The descent upon the Pubbur side is very abrupt, much exceeding in extent that on the north side, and seems to owe it to a southern aspect, ploughed and torn by the loosened fragments, and its surface swept by rushing streams, which, descending abruptly from the snows, roll away the soil that can hardly be renewed.

A bright and even powerful sun in the day, thaws the snow that sinks into the crevices, and this freezing with the approach of night, bursts the rocks asunder with a tremendous noise. This is the season when the vast crashes happen, yet they are equally liable to occur in the spring, when the supporting ledge, already shattered, is borne down by the load of snow. From the bulk of some of the pieces now at the foot of the mountains, an idea may be formed of their destructive conflict when in full motion; some are detached with their supporting bed, and in their course, carrying before them all that they meet in their way, bring down even whole fields, which settle in the soil of the first level in their way; others, more remotely displaced, and perhaps of greater magnitude, set off with a bound, and their superior velocity and impelling massiveness, as they strike against other rocks in their passage, instead of loosening them, only wedge them into greater firmness; so that, unincumbered, they keep on, till opposed by masses which are fixed in immovable security, when they are shivered into thousands of fragments; others again, meeting in their route with no obstacles, acquire an overwhelming impulse, which their length of passage increases, and these tear up the grassy slope, and sweep before them every thing in their way.

The soil near the summit of the pass certainly cannot be generated; the scanty growth of inorganic life is insufficient to maintain a re-production, as is the case along the slope near the base, where the exuberance of vegetation replenishes the waste, and produces noble trees of thirty and thirty-six feet circumference; and the rock of the Himalayah, even if decomposed, is quite unfavourable to vegetation.

For half a mile, the declivity upon the Pubbur side is amazingly steep, and then it softens into a plain, thickly studded with the hardiest productions of the earth, yet it is not of a less elevation than 13 or 14,000 feet, which in latitude 31° 23' is much above the line of perpetual frost, as laid down theoretically. This, and other observations more prominent, must considerably affect the foundation of the general principles of congelation.

Upon the northern declivity of the pass lies a vast unbroken sheet of snow, which never melts; it descends from the crest in a wall form, and is thence expanded over the whole of the valley for about a mile, where this astonishing mass reclines against the brow of the pass. The depth of

snow must be great; the general quality of the rock of the pass and its surrounding peaks is gneiss and quartz, but it is difficult to ascertain the true substance, as all the pieces within reach are detached from above; no real granite was observed, so that we may conclude none exists upon the more lofty eminences that rise on each side.

The ridge of the pass, according to the formula of congelation, is 4000 feet within that limit, yet this prodigious altitude is not abandoned by nature; tufts of moss and grass, with a light snail, are seen all the way to the top, and even rise on each side to 2 and 300 feet, while higher up, on the rugged cliffs that are doomed to sustain perpetual snow, animated nature finds a habitation, and ravens and small birds have their nests there.

On our arrival here we found it necessary, from the scanty supply of fire wood brought with us, to part with the best proportion of our servants, who had just time to reach the wooded valley. It would have been a fine task for a painter, to have sketched the physiognomy of our servants. Although the sun shone brightly, the wind chilled the temperature, which was at 40°; the sudden transition was strongly experienced by them, and now the warmest hour of the day produced some thoughts of the rigour of approaching night. Those who had to remain, shewed miserable contortions, while the others, who had the prospect of comfort before, forced into a better shape their spasmodic visages of despair.

As evening advanced, clouds gathered, which threw down a light shower of snow, and when these cleared away, they left a sky of deep azure. By sun set the thermometer had fallen to 32°; before it grew dark, we banked ourselves round with snow, and our proximity to it, (being inside) we thought extremely lucky. The tent was very crazy, and we were obliged to load it with snow to keep it from being blown away; a single bundle of wood had to last for the night, and part of next day, till fresh supplies arrived. People of all sorts and descriptions crowded into the tent, and added to the temperature; as we could not afford a blaze, we sat in a cloud of smoke, which the frosty wind forced into our eyes, and down our throats; yet this, however disagreeable, was more adapted to our feelings than the biting air without.

The fire was a source of comfort to look at, for warmth was generated only by the exertion necessary to keep it alive. Spirits seemed ready to have lost their strength, and had scarcely any effect in keeping us warm. Having to inhale the smoky atmosphere, we formed a circle around the fire, which only appeared at times, and then by the application of the blow-pipe. The snow within the tent was very convenient for a supply of water, of which we ascertained the excellent qualities in punch. To avert in some degree the annoyance of the smoke, we used tobacco; but this too, like the spirits, fell short of its usual stimulating powers, and was only of some benefit when burning as fuel.

The wind blew in puffs, and shook off the

show from our test, so to as to under it less stable. The only chair we had, served to support the barometer, and we sat upon the ground. We formed altogether a motley groupe, but such a scene was neither foreign to our experience or feelings, and was not without its interest. For a while, indeed, we might have forgotten our lofty situation, guarded by frowning peaks with their eternal winter, till the faint sound of a distant crash broke the silence, and the noise of nearer destruction pressed closely upon our thoughts, while the hard texture of our beds often acutely reminded us of our position, and obliged us to shift about for some accommodation rest, so that there was a perpetual stirring and agitation inside as well as out. A blink of the fire occasionally shewed us the self-arranged fragments that had perhaps once crowned the walls of the pass. The ground upon which we sat was encrusted with the ice, and thawing by the fire, gave to some uneasiness, and to others amusement. Every thing had its time, and at length the scene changed into one more distressing than I can describe. An unpleasant sensation of drowsiness felt in the evening gradually increased after dusk, and by nine o'clock had almost overpowered any attempt to sit up. The whole party but myself lay asleep; the fire hardly threw a faint shadow, and the cold increased with the night. I had hoped for some relief from my head-ache by rest, but the deep pain and fullness about my temples became more violent, with a tightness across my eyes; and a reclining posture seemed to add to it. Towards midnight the pain grew insupportable, and occasioned loud sighs and groans. I can compare it to nothing less than what could arise from an iron hoop screwed to its last hold. It was a sensation unlike to any thing I ever before experienced. There was no affection of the breathing. At daylight the acuteness of the pain passed into a confused numbness, and all the next day my head was like a burthen of lead; I in vain tried to trace it to the punch we had drank; I recollected Mr. Moorcroft's similar situation, and that I had felt it myself in a small degree at our preceding encampment at an elevation of 12,000 feet. I was aware of the rarefaction of the atmosphere, and of the poisonous plants said (but I believe erroneously) to be the cause of the tenacity of the air. Was this the sole cause, we should expect to find the effect more regularly present; the Goorkalles and servants suffered slightly: the former were aware of the circumstance, but ascribed it to the influence of a plant that flourishes beneath the snow.

The temperature at sunrise ranged from 22° to 27°; by 3 p. m. the thermometer had mounted to 40° and 43°; and by evening it had fallen to 32°. The sun did not appear to us till 8 A. M., and the temperature had not then risen above one degree.

Not expecting our route to lie out of the valley of Sutlej, and in the hopes of expanding the view south, we resolved to climb up the slope of the eastern peak, which seemed to favour the attempt. Commenc-

ing with rock and soil mixed, the latter soon disappeared, and left unsupported, the jutting crags rent to their centre; blocks of quartz, and gneiss veined with quartz, lay loose. Passing these, we came to shelves of black horizontally disposed strata now leaning on each other for support. A dyke of these appeared so threatening as to destroy my resolution of proceeding; but the Goorkalles mounted, and we followed, not however without reflection that we had no business there.

After ascending what appeared the most formidable bar to our advance, we held on, now meeting with the snow, which lay in patches and yielded at first slightly to the foot; for awhile we followed as much as possible the line of it, hoping in this manner to reach the slope of the hardened summit; but this deepening with the increasing altitude, we tried the nature of the tract beneath. We still kept on, sinking as we rose: all before us was jumble of points of rock, the space between being filled up with snow, which latterly became a treacherous guide, giving way to our knees, and appalled us from proceeding. Yet I think the passage to the frozen summit might be effected with caution, and the prospect enlarged. A series of bearings taken from either of the peaks would be of vast importance towards fixing the relative positions of many principal points. We had risen about four hundred feet, and seemed level with the western wall of the pass; and had the rainy season terminated ten days earlier, we might have succeeded.

On the third day of our halt we resolved to seek the source of the Pubbur, and with a barometer of unexceptionable accuracy, and a good thermometer, we descended to the emanating plain, crossed the streams that flowed from the pass in many rills prior to their union with the Pubbur, and ascending steep slopes, wound along a grassy bank studded with rocks, and at last getting upon the ridge which encompassed the collected fountains of the river, were brought into the view of a beautiful lake, encircled with rock, sheeted with snow and ice. The effect produced was inexpressibly grand; it was a surface of ice coated with snow of a foot in depth, and contained the springs of the river which emerged from beneath an arched canopy of solid ice. The circumference exceeded a mile, and upon its southern and eastern sides, was bounded by rocks. In the centre of the lake was a chasm of perhaps twenty feet in depth. I looked down the gap of solid ice, and saw the springs of the streams which feed the Pubbur dripping from the mass I stood upon. I paced along the base of the rocks, which rise with an abrupt face, and shew a strangely packed mass, not of shattered but of wrinkled aspect, and resisting from their peculiar structure the decay of time and weather. The strata seemed vertical, and their wall-sided form is continuous with the chain that limits the southern side of the valley of the Pubbur, and which is here united with the parent range, at the bend of the lake, and running down parallel with the stream,

preserves an elevation of between fifteen and sixteen thousand feet, to near Janglegh. The nature of the rock appears to be gneiss, granite, and quartz; and it has a most curious rusty aspect.

Above the mural portion, which is of considerable height, the rocks slant towards the summit, and upon the slope lie banks of congealed snow and ice, having a perpendicular brow of packed appearance, so much resembling blocks of marble and quartz, that I doubted for some time of their reality. No fragments of rock lay upon the ice, or within the circle, which argues that this structure crumbles at its surface, and is not fractured or split into shelves. Upon the expanse of it were ridges of pebbles and sand mixed, shaped into the figure of graves. The pebbles were of all varieties, not so much worn as those found upon a sea-shore, but singularly smooth; by what action is difficult to say, for no river falls over them. The sand was exactly the same as sea-sand. Upon the ice grew a solitary violet surrounded by a tuft of earth, far from either bank; how it came there, and by what means it flourished, it would be difficult to say. It was the only living thing upon the ice, and truly might be said to be among the flowers that the poet describes as

“—born to blush unseen,  
And waste its sweetness on the desert air.”

At the exit of the stream the barometer showed 18° 300°, thermometer 40°; temperature of the water 36°, depth about four inches, breadth three feet, the arch very low, but affording room for the eye to trace the current to its inaccessible source. The under surface of the sheet of ice was thawing in the form of a shower of rain, and afforded from its extent the greater mass of the water. Above this there was about a hundred feet of vertical side, which barred all access. A second basin seemed to receive its waters from the frozen banks of snow, and sent down a stream which entered at the margin of the lake, or union of the rock, so that the original springs of the Pubbur and all the great rivers that flow from the snow, may not inaptly be said to be on the highest peaks of the Himalayah.

The open or western edge of the lake is supported by a steep face of rock, seven or eight hundred feet, rising from the valley, which it closes; and almost immediately after the escape of the stream from its icy source, it is tumbled over the precipice. The cleft passage for its transit, is the work of the current. The Pubbur falls over a vertical wall of rock from hence, and meeting with sharp points and angles in its way, it is precipitated in a showery cascade to the valley, and after quitting the rock of its source for a sandy bed, receives the stream of the pass, and glides in union with it along the dell, in tortuous silvery brilliancy.

The northern bank of the lake is coated with soil, and was overspread with many Alpine plants, some in flower, others running to seed; they enlivened the gloom of perpetual winter that hung over us, yet exhibited how transient was the season of summer at this altitude.

The route of our return was not without considerable difficulty and danger, frequently crossing the paths of avalanches, and of loose masses of rock. Some of the passages were extremely hazardous to get over, and the delay and caution necessary for our security brought to a nearer view the effect of those ponderous messengers of destruction. Notwithstanding we took what we conceived to be a road that would land us high upon the slope of the pass, we were brought to the grassy plain, and finding a flock of birds of novel appearance, we loitered amongst them till sunset, without having a single shot.

In ascending to the tent, which we did not reach till dark, although the perpendicular height could not have exceeded 1,500 feet, I was quite exhausted. The oppression which interrupted respiration and affected me with giddiness, together with a general lassitude and sluggishness, obliged me to rest about twenty times. A light headache and throbbing in the temples was also occasioned. These, and other symptoms far more decisive, which I shall hereafter mention, strengthen the supposition that the subtlety of the atmosphere at these altitudes is the direct cause which acts in different degrees on the human constitution, proportionally to the susceptibility of the individual subjected to it.

At Ranpoor, the capital at Bussahir, the breadth of the Sutlej is two hundred and ten feet, and it is called there the *Satrodra*, or *Sutaj*, i. e. Sutledge, a corruption.

## LEARNED SOCIETIES.

### OXFORD, MARCH 18.

On Thursday last the following Degrees were conferred:—

**BACHELORS IN DIVINITY.**—Rev. Rowland Grove Curtois; Rev. Edward Whitehead, Fellows of C. C. C.

**MASTERS OF ARTS.**—Rev. James Evans Phillips, of Queen's College; Stephen Cryke, Scholar of Corpus Christi College; John Blake Kirby, of Magdalen Hall; Rev. Samuel Hollinsed Burrows, of Pembroke College.

**BACHELORS OF ARTS.**—William Armstrong, of Brasenose College; Duncombe Steele Perkins, of Trinity College.

25th, Wednesday last, the Rev. Charles Crane, M. A. of Wadham College, was admitted to the degrees of Bachelor and Doctor in Divinity. Same day Thomas Bracken, Scholar of Queen's College, was admitted Bachelor of Arts.

### CAMBRIDGE, MARCH 17.

The Chancellor's Medallists for the present year (Messrs. Waddington and Platt, of Trinity College) have been decided by the examiners to be equal.

The Rev. William Jones, Fellow of St. John's College, has presented to the Fitzwilliam Museum, a beautiful set of casts, taken from a collection of antique medals, which he brought with him from Greece.

## FINE ARTS.

### BRITISH GALLERY.

No. 132. *A Village Concert.*—W. Ingham.

It is said, that "In a multitude of counsellors there is safety." But art, it may be truly observed, that in a multitude of figures there is danger: more especially before the judgment is matured, and the practice sufficient to enable the painter to dispose of them judiciously. Otherwise so many claims are made upon the attention, that nothing is seen to advantage. It is under this view we consider the *Village Concert*; in which there is no want of individual excellence, or of just and striking expression, which might have been husbanded to advantage.

Something of meagreness is evident in the present performance, which a better use of the means, and a more competent knowledge of the fundamental principles of the art, will enable Mr. Ingham to overcome.

No. 186. *The Dull Lecture.*—G. S.

*Newton.*

Frostie age! frostie age!  
Vaine all your learning,  
Drowsie page, drowsie page,  
Evermore turning  
Young heads no lore will breed,  
Young hearts a reckless rover,  
Young beauty while you read,  
Sleeping, dreams of absent lover.

A very little little picture, in which the story is well told, and very appropriate to the lines quoted; but would have been readily understood even without them.

No. 275. *A Heath Scene near Rygate.*—

*J. Wilson.*

This little inartificial scene is entitled to every commendation; simple in its character, unaffected in its colouring, its truth of imitation at once stamps its value, and shows the study and skill of the artist.

No. 207. *Coast Scene; Morning.*—J.

*Wilson.* *A Watering Place, &c.* and several others, are in the same style of simplicity and truth.

No. 118. *The visit of Sir Hudibras to the Lady.*—F. P. Stephens.

Madam, I do, as is my duty,  
Worship the shadow of your shoe-tie.

This is one of the prettiest little cabinet pictures we have seen of this master, whether we consider it as a pleasing composition, a just delineation of character and expression, or a variety of well applied and interesting accessories. Its colouring is brilliant, and the pencilling firm without harshness. We are amused by the ridiculous presumption of the Knight, with so grotesque a form, aspiring to the love of so fair a lady, whose arch looks are sufficient to show the esteem in which she holds the addresses of such a lover. A looking-glass on the table is well contrived to show the eye of Hudibras, which his bent posture otherwise conceals. It is upon the whole, a very fascinating performance; though in the purple tints we somewhat miss the portrait drawn by Butler, with beard resembling a tile.

No. 16. *A scene from the Devil upon Two Sticks.*—A. E. Chalon, R. A.

This Chamber Scene is much indebted to

the quotation for its explanation, for without it we could not have entered into that compound and complicated expression which we are instructed to look for; and should only have admired the skill of the artist in producing a very clever effect of light and form; and have guessed at the *idiot-stale* conversation that was going on. It is a voluptuous picture.

No. 18. *Maternal Happiness.*—by the same.

Is rather monotonous, but with a considerable share of just expression and character.

No. 151. *L'Escamoteur, or the Jugglers.*

No. 185. *Garden of the Thulerias.*—J. T. Chalon.

We are again introduced to the scenes and characters of Paris, with the same spirit and vivacity of pencil by which this artist has heretofore entertained us.

The humour of the jugglers is most happily hit off, and the girl blowing upon the cards, in all the simplicity of wonder, is well contrasted by the ostentatious character of the mountebank. The other figures find their places in an appropriate manner, with all the gaud of Paris fiery. We have only to lament that a crudeness of colours takes so much from the value of a very capital (i. e. Parisian) performance.

No. 301. *Mercury bringing the golden apple to Paris.*—C. L. Eastlake.

Mr. Eastlake has occupied himself in conformity to the school of design, and evinced sufficient talent to warrant our favourable expectations. To display skill in composition, the choice of subject is of small importance; but the heathen mythology has little interest in the present day, unless accompanied with extraordinary merits in form or colouring: the colouring of Mr. Eastlake is dry and opaque.

No. 263. *The Old Piper.*—J. G. Strutt.

Mr. Strutt's is a very excellent performance. We think the head of the old man would have had still more interest without the introduction of the child, which is very inferior in its execution, and takes from the effect of the picture.

No. 266. *A View in Rotterdam.*—J. B. Crome, Jun.

To the breadth and clearness by which this view is distinguished, we may add that it possesses a tone of colour equally advantageous to its character and effect. We have seldom seen water painted so truly transparent, or reflections more just.

No. 150 and 159. *The Colter, &c.*—Hidd.

High finishing and great labour is often exercised upon subjects little deserving the pains bestowed; and where effect is wanting, whether it arise from the failure of just expression, or the ill management of the light and shade, the means, however excellent, will by the judicious be overlooked: we do not mean to apply these remarks directly to this artist, who is young and extremely clever; but something of them we think attaches to his works.

No. 19. *A celebrated Scotch Stag Hound, &c.*—G. Hayter.

There is great interest given to the portrait of this dog, as well by the judicious ac-

cessories, as by the contrast of colour. The back ground is in a bold and appropriate style, and the whole presents fidelity of imitation with a sufficient union of the picturesque. The action is however very feeble: the dog is quite destitute of the animation which its situation requires.

No. 29. *Bitch and Puppies*.—T. Christmass. A beautiful group, highly finished, and displaying great skill in the variety of form and character.

No. 158. *Earthen Ware*. No. 174. *Still Life*. No. 178. *The Combat*: and 181, *Battle, a Study*.—A. B. Cooper. R. A.

There is little to distinguish these several performances, from preceding productions of this artist. He has contrasted the objects of domestic and still life, with those of war and destruction. The battle and the combat have great energy of character, with more that appears like locality, than generally belongs to subjects of this class. His still life might vie with the best productions of the Flemish School. That of earthen ware is sweetly pencilled, but we think is wanting in effect. The drawing of some of Mr. Cooper's horses is faulty, which must be the result of carelessness, for he possesses high powers in this line.

No. 75. *The Coolin from Loch Scavich*. No. 123. *Dunrobin Castle*.—W. Daniel. R. A.

The first of these is a stupendous specimen of the sublime in nature, brought into view by the power of art, displaying the skill of the artist equally in the choice and in the management of his subject. Clothed with a gloomy grandeur, the effect of light and shade is made to bear both upon the near and distant objects, but in a manner well suited to the romantic appearance of the scene.

No. 201. *Idea of Jupiter Pluvius, &c.*—J. M. Gandy.

This picture has already had our remarks in the last exhibition at the Royal Academy. Mr. Gandy has no fewer than nine other subjects at this Institution, all of them so much alike in character (though upon a smaller scale), that they appear as satellites to the Pluvian Jupiter. There is something too much of this; and the want of variety in style is no advantage to abundance. We mention this rather as a hint, that the talents of this artist (which are acknowledged to be of the highest class in this walk of art) ought to be reserved and cherished, and not made cheap by frequency or number.

No. 105. *A Country Girl*. No. 52. *A Student*. No. 143. *A Pastoral*.—H. P. Bone.

The first of these is a clear and pleasing specimen of Mr. Bone's pencil, and also possesses that character of simplicity and innocence which should belong to the character. The situation of this, as well as No. 52, is very unfavorable to investigation. The pastoral is a congenial scene: the composition is well imagined, and executed with much skill.

No. 24. *Attachment*.—W. Davison. A pretty picture of a child and dog, with some clever colouring. This young artist does well in looking so attentively to Sir Joshua.

No. 58. *Danger*.—W. Willes.

As we are not acquainted with the performances of this artist, we take occasion to say that this work displays considerable powers of imagination, and originality of composition. The effect of light and shade is also well suited to the subject.

No. 69. *View near the Beach*.—S. Woodin. Jun.

A very picturesque assemblage of buildings, with a good deal of the Flemish School in it. The children at fun in the water, are whimsically employed, and impart comic interest to the scene; which wants a little airt alone to render it uniformly honourable to the young painter.

No. 140. *A Cottage near Sudbury, by the same Artist*—is in a fine mellow tone of colour, and shows his powers to great advantage.

Mr. Rippinghill's picture of the Razor Grinder, is placed far below the level of its merits; and Mr. Vincent's View of Edinburgh is obtruded upon the eye with equal disadvantage to its effect. We have no hesitation in pronouncing it an extraordinary work, if it could be seen in its proper place, which requires a greater distance than has been allowed.

*Christ's Triumphant Entry into Jerusalem, and other Pictures*.—By Mr. Haydon.

Few pictures have come before the public under more disadvantage than Mr. Haydon's Triumphant Entry of Christ into Jerusalem, now exhibiting in Mr. Bullock's Great Room: it has been much spoken of, long delayed, and an object of high expectation. The artist has also some adversaries in the Royal Academy, with which body he has been at war; and, as a general controversialist on subjects of art, he has further exposed his pretensions to individual opposition. His claims may therefore look to be critically canvassed.

At the same time there are some considerations peculiar to the present time, on his side. He puts forth his strength most opportunely, at the very moment when our National School is deploring the loss of such abilities as those of Mr. West, unrivalled as, in many respects, his historical compositions undoubtedly were. At such an epoch it is consoling to the admirers of British art to witness the exhibition of other talents supplying to the public regard an assurance of the sustentation of our fame.

The grandeur of the attempt is another fact favourable to the artist; and it is to be hoped, that whenever we have painters who aim at the noblest achievements in their profession, we shall find a sentiment in the country kind towards them, and encouraging towards their arduous exertions. In this spirit, at least, we shall speak of this superb work; and where we happen to differ from the genius which conceived and executed it, that opinion shall be expressed not only with candour leaning to partiality, but with deference allied to doubt. That the picture is splendid and imposing, every eye will confess at the first glance; that it is one of the most sublime productions of this age and country, will, we think, be acknowledged on reflection,

by every intelligent mind. Yet, notwithstanding this excellence, and the notion of Mr. Haydon, respecting his principal figure, we cannot help considering it to be the least felicitous part of his design. The salmon colour of the dress does not accord with our taste; nor can we imagine that either in broad simplicity of drapery, in personal dignity, or in divine expression of countenance, the Christ is equal to that ideal perfection which we require from a master's hand.\* The forms of the features do not seem to us to be physiognomically fine; and the light hair, by depriving the painter of all those accessory powers which are seated in the eye-brows has confirmed the inferior cast of the face. We reluctantly say this, because, if we are correct, it is a blemish of no slight magnitude; and if not well founded it is a double wrong, contrary to our inclination, depreciating Mr. Haydon's skill, and impeaching our own judgement. We shall endeavour, however, to get briefly over our other critical objections. The general tone of colour is undoubtedly too crude and harsh for any picture;—and above all, for a sacred subject, the glands of a bed of tulips are inappropriate. But a few years will, we presume, do much in remedying this defect; and then the eye of the spectator will find that necessary repose which is now denied it. We must believe that Mr. Haydon has been trying experiments in colouring, and it is not unlikely that what now appears violent, may, by time, be sobered down till as exquisite as parts of the Judgement of Solomon, or that sleeping Page in Macbeth, one of the finest things, in every respect, of ancient or modern art. Having honestly stated our chief objections, it is with unmixed satisfaction that we turn to the merits of this performance, many of which are of the highest order. The whole conception is grand, and full of genius. The Saviour is in the centre, riding on an ass, surrounded by groups celebrated in the history of his earthly mission and celestial miracles. On the foreground are colossal figures of the Canaanitish woman, spreading her garment on his path, and the centurion, laying his civic crown and sword at his feet, and Lazarus prostrate in adoration. On the left of the beholder, a mother bringing a black-haired and repentant daughter for pardon; behind whom is a married sister, with a child, and another female friend. The attitudes and expression in these are truly admirable. A little further on is Joseph of Arimathea. On the right are the disciples, of whom John is a delightful head, replete with beautiful enthusiasm, and Peter a powerful study. On the right of these, among the Spectators, are portraits of Newton, Voltaire, and Wordsworth—intelligence, scepticism, and patriarchal simplicity personified. A little lower

\* To show what different opinions may exist on this subject, it may suffice to mention that Mrs. Siddons (no inexperienced judge of the majestic and awful) expressed her decided admiration of the Christ. Quite unlike any other representation of his divinity, it would be astonishing if all connoisseurs agreed upon its character.

down, a capital head of Jairus and his daughter, in humble thankfulness; a sweet figure, though we should have preferred natural shadow to the brown flesh-colour which, owing to the rawness of the whole, the painter has felt to be requisite in this individual, placed where she is on the canvass. The Mount of Olives is in the distance, with a brilliant sky of Palestine. The multitude is represented by an ocean of heads, at once picturesque and magnificent. On one side are two pillars, on the other a building. Such are the prominent features of the Triumphant Entry. If we do not dwell on the elegance, grace, and interest of the female group; on the grand manner displayed in the Centurion and Woman of Canaan; on the feeling and pathos in Jairus and his daughter; on the fine character in John; on the boldness of the invention, in regard to the innumerable faces; and on the excellencies of the whole composition, it is only because our limits are too small for that adequate eulogy to which we consider the work to be so justly entitled.

## ORIGINAL POETRY.

## A STORM.

EXTRACT FROM AN UNPUBLISHED POEM, BY A DISTINGUISHED AUTHOR.

There was a Tempest brooding in the air,  
Far in the west. Above, the skies were fair,  
And the sun seemed to go in glory down;  
One small black cloud, (one only,) like a crown  
Touched his descending disk and rested there;  
Slow then it came along, to the great wind  
Rebellious, and, altho' it blew and blew,  
Came on increasing, and across the blue  
Spread its dark shape and left the sun behind.  
The daylight sank, and the winds walked about  
The barque wherein the luckless couple lay,  
And from the distant cloud came scattering out  
Rivers of fire: it seemed as tho' the day  
Had burst from out the billows far away.  
No pilot had they their small boat to steer  
Aside from rocks; no sea-woman mariner,  
Who knew each creek and bay and sheltering  
steep,  
And all the dangers of the turbulent deep,  
They fled for life,—(for happiness is life.)  
And met the Tempest in his hour of strife  
Abroad upon the waters: They were driven  
Against him by the angry winds of Heaven;  
Or thus it seemed:—The clouds, the air, the  
sea,  
Rose from unnatural dead tranquillity,  
And came to battle with their legions: Hail  
Shot shattering down, and thunders roared  
around,  
And the wild lightning from his dripping shroud  
Unbowed his arrowy pinions blue and pale,  
And darted through the heavens. Below, the  
gale  
Sang like a dirge, and the white billows lashed  
The boat, and then like ravenous lions dashed  
Against the deep wave-hidden rocks, and told  
Of ghastly perils as they backward rolled.

The lovers driven along from hour to hour,  
Were helpless—hopeless—in the ocean's power.  
The storm continued; and no voice was heard,  
Save that of some poor solitary bird,  
That sought a shelter on the quivering mast;  
But soon borne off by the tremendous blast,

Sank in the waters screaming. The great sea  
Barred, like a grave, its bosom silently,  
Then fell and panted like an angry thing  
With its own strength at war: The vessel flew  
Towards the land, and then the billows grew  
Larger and white, and roared as triumphing,  
Scattering afar and wide the heavy spray,  
That shone like bright snow as it passed away.  
At first, the dolphin and the porpoise dark  
Came rolling by them, and the hungry shark  
Followed the boat, patient and eager-eyed,  
And the gray curlew slanting dipped her side,  
And the boar and his wings within the foam;  
But some had sunk—the rest had hurried home.  
And now pale Julia and her husband clasped  
Each in the other's arms, ate viewing death;  
She, for his sake in fear, silently gasped,  
And he to cheer her kept his steady breath,  
Talking of hope, and smiled like morning.—

Then  
They sat together in their sweet despair:  
Sometimes upon his breast she laid her head,  
And he upon her silent beauty fed,  
Hushing her fears, and 'twixt her and the storm  
Drew his embroider'd cloak to keep her warm;  
She thanked him with a look upturned to his,  
The which he answered by a tender kiss,  
I pressed and prolonged to pain: her lip was cold,  
And all her love and terror mutely told.  
—The vessel struck.—

## THE INCONSISTENT.

When I sent you my melons, you cried out with  
scorn,  
"They ought to be heavy, and wrinkled and  
yellow;"  
When I offered myself, whom these graces adorn,  
You flouted, and called me an ugly old fellow.

## EPIGRAM, IMITATED FROM THE FRENCH.

A certain specious German vender,  
A Jew—by trade a money lender;  
At cent per cent, received from Paul  
His last and best pledge, his little all.  
"Here!" said the profligate young man,  
"Rascal! now do the best you can,  
Give me the cash, I say you must,  
And to your conscience, Sir, I trust."  
Abraham, now being left alone,  
On Paul's advice began to drone;  
"Rascal's term," said he, "I know full well;  
What conscience MEANS, I swear, I cannot tell."  
March, 1820. A. A.

## SKETCHES OF SOCIETY.

## ORIENTAL PRESENTS AND STYLE.

St. Petersburg, Jan. 21st.—The Persian Ambassador, Abdul Hassan Khan, on his visit to this city, was directed to deliver to the empress mother an autograph letter, accompanied by several magnificent presents, from the wife of the Schah:—the Russian journals have published the following translation of the letter.

"As long as the elements of which the world is composed shall last, may the august lady of the palace of grandeur—the cluster of pearls of the king dom—the constellation of the stars of sovereignty—she who bore the sun of the great empire—the centre of the circle of sovereignty—the palm tree of the fruit of supreme authority—may that august prin-

cess be ever happy, and protected from danger. After offering you my sincere good wishes, I have the honour to inform you that, at the happy period in which we live, and through the great mercy of the Almighty, the gardens of the two great powers produce fresh roses, and that the difficulties which had risen up between the two courts, are now removed by a sincere reconciliation and union; all who are connected with these two courts, acknowledging the great blessing, will never cease to maintain amicable relations and correspondence between them.

"Now that his excellency Mirza Abdul Hassan Khan, the ambassador to the grand court of Russia, is about to depart for the capital of that empire, I have resolved to open the gates of friendship with the key of this sincere letter; and, as it is an ancient custom, conformable to the principles of friendship and cordiality, that friends should send presents to each other, I beg of you to accept a few of the finest products of our country. I hope that you will refresh with a few drops of friendly correspondence the garden of a heart which sincerely loves you. I entreat you will favour me with some commissions, that I may enjoy the pleasure of fulfilling them. May heaven preserve your days serene, happy, and glorious!"  
(Here follows the signature.)

The presents sent with the letter consisted of a pearl necklace, weighing 498 carats; five Indian shawls; a casket, a writing box, and dressing case, furnished with every necessary; and five pieces of brocade of the most superb manufacture.

## SAVOIS AND THE UNIVERSITY OF PARIS.

—The University of Paris is certainly an admirable institution; but, like most privileged corporations, it attaches more importance to the extension of its rights than to the maintenance of salutary and impartial discipline. The Rue Pavée Saint Antoine was once the theatre of an event, which, had it occurred in our times, would have been immediately repressed, without being attended by any deplorable excess. Pignatoli thus relates the principal circumstances of a curious contest, which was kept up with animosity for upwards of a century.

"On the 14th of July, 1408, as the procession of the students was passing through the Rue du Roi de Sicile, on its way to the Church of Sainte Catharine, Duval des Escliers, one of the servants of Charles Savois, who had been watering his horse, made it gallop across the street, through the procession, by which one of the students was covered with mud. The student struck the servant, who called the rest of his master's domestics to his aid. They pursued the students to the door of the Church of Sainte Catharine, where one of the servants shot several arrows into the Church, one of which flew to the grand altar, during the performance of mass. The University pur-

• René, Duke of Anjou, being called to the throne of Sicily, gave his name to the street in which he lived before he was invested with the Neapolitan crown. Under the reign of this prince, the horrible massacre of the Sicilian Vespers took place.

aned Savaisi rigorously for this insult; and by a decree of the council of state, at which the king presided, with the princes of the blood, it was ordained that his house should be demolished; and he was condemned to pay a fine of 1500 livres to the wounded, and 1000 livres to the university. Three of Savaisi's servants were condemned to perform penance, stripped to their shirts, with torches in their hands, before the churches of Sainte Genevieve, Sainte Catharine, and Saint Severin; after which they were whipped at the cross-roads of Paris, and banished for three years."

Two years afterwards the king permitted Savaisi to rebuild his house; but the University obstinately opposed this act of royal clemency. It was not until twelve years had elapsed, that they suffered Savaisi to rebuild his house, on the express condition, that the sentence pronounced on him should be engraven on a stone, and placed above the door. The inscription was made, but the stone was fixed up against a wall in the garden. (*French Journal*.)

### THE DRAMA.

This being Passion-week, there have been no performances. We observe from the *Guardian*, Sunday News-paper, that Mr. Young is making a triumphant tour in the provinces; and from the *Bath Chronicle*, that Conway has had a benefit worthy of his great talents at Bath, where his acting is so much and so justly admired.

### VARIETIES.

The annual quantity of salt raised from the bowels of the earth in Europe, by salt mines and salt springs, is calculated at between 25 and 30 millions of Cwts.

*Sepia-colour from peat.* The stagnant water in peat-bogs affords, on evaporation, a substance whence a colour may be extracted equal to that of Sepia.

*Edin. Phil. Journal*, No. III.

**ANECDOTES.**—Buonaparte always considered Moreau as his enemy. To beget a more friendly disposition, he tried to attach him with the bonds of relationship. He with this design caused an article to be inserted in the papers, circulating a report, that Moreau was to marry Napoleon's sister Caroline. Buonaparte purposely put this paper into Moreau's hands, and asked him what he thought of it? Moreau said nothing, but spoke of something else. From this it appeared clear to Buonaparte, that Moreau declined the offer. The relator of this anecdote affirms, that had Buonaparte succeeded in this manoeuvre he would have declared himself Emperor directly after the battle of Marengo.

After the battle of Jena, in which Davoust gained his reputation, somebody asked a French officer who was acquainted with him, what kind of a man he was? he answered, C'est le Duc d'Albe de notre Philippe.

**Earthquake.**—On the 6th of October last, a violent earthquake took place at Martinique. The shocks were more remarkable for their duration than their force. No accident however occurred. The earthquake took place during a violent gale; and in the Antilles this singular coincidence between the geological and atmospheric phenomena is by no means infrequent. In the West Indies and the United States, the yellow fever is attributed to the vapours which rise from the cracks occasioned by earthquakes; and it is asserted that the disease was unknown in Jamaica previous to the year 1692, when the city of Port-Royal was destroyed by an earthquake. This opinion is not however confirmed by facts: for the last eighteen months no earthquake has taken place at Martinique, and this intermission, which has been much longer than usual, has had no influence on the yellow fever. It has continued to rage during the above interval with more or less violence.

A lithographic caricature, just published at Paris, represents John Bull leading his wife to Smithfield market with a halter about her neck, and with his other hand giving liberty to a female negro slave. This fancied incongruity of national characteristic affords great delight to the French.

St. Patrick's Day was observed with due festivity by the Irish in the French capital; and the Journalists, with their usual accuracy in British names, inform us that "Sir Thomas Moer," was among the company.

The Pasha of Egypt, it is said, is about to send several young Arabs to Europe, to study the languages and sciences of this quarter of the globe.

Caesars has left Rome for Naples, in order to superintend in person the placing of his statue of Charles III., upon the horse, by the late Rightetti. The human figure is cast by the son of the last named artist.

In the language of Ara, the letter *r* is generally softened into *g*; and only pronounced *r* by the priests upon very solemn occasions.

A carriage with sails has recently been exhibited in the Garden Marbent, at Paris: the model having been previously submitted to the inspection of the King, by Mesdames Dering and Zettelly. It is said that this machine can travel at the rate of twelve leagues an hour without horses, and upon ice sixteen leagues. Among its admirers, the Proprietors announce the Persian Ambassador, who must consider it a fine invention for caravans traversing the deserts. Perhaps, like the dandy-horses, it will not last beyond the period of exhibition.

### LITERARY NOTICES.

Lord Byron's works have been translated into French.

**RHYMES ON THE ROAD.**—By a member of the Peco-curante Society, extracted from his Journal, by Thomas Brown the Younger, author of the "Fudge Family," "Tropeu-

ny Post Bag," &c., is we hear to make its appearance before the Fudge Family in Italy, which was previously announced.

### METEOROLOGICAL JOURNAL.

MARCH, 1820.

*Thursday*, 16—Thermometer from 43 to 53.  
Barometer from 30, 53 to 30, 56.  
*Friday*, 17—Thermometer from 28 to 51.  
Barometer from 30, 46 to 30, 42.  
*Saturday*, 18—Thermometer from 31 to 46.  
Barometer from 30, 53 to 30, 49.  
*Sunday*, 19—Thermometer from 34 to 43.  
Barometer from 30, 45 to 30, 39.  
*Monday*, 20—Thermometer from 33 to 47.  
Barometer from 30, 44 to 30, 40.  
*Tuesday*, 21—Thermometer from 30 to 49.  
Barometer from 30, 33 to 30, 12.  
*Wednesday*, 22—Thermometer from 35 to 52.  
Barometer from 29, 46 to 29, 99.  
*Thursday*, 23—Thermometer from 41 to 52.  
Barometer from 29, 56 to 29, 28.  
Wind S. W. 1 and 3.—Clouds generally passing, till the evening when it became clear.  
Rain fallen, .65 of an inch.  
*Friday*, 24—Thermometer from 31 to 51.  
Barometer from 29, 27 to 29, 10.  
Wind S. W.  $\frac{1}{2}$ —Generally cloudy, with sunshine. A fine halo formed in the evening.  
Rain fallen, .025 of an inch.  
*Saturday*, 25—Thermometer from 31 to 51.  
Barometer from 29, 36 to 29, 73.  
Wind N. and N. W. 1.—Generally clearing, with clouds passing.  
*Sunday*, 26—Thermometer from 24 to 50.  
Barometer from 29, 52 to 29, 83.  
Wind S. W. 3.—Generally cloudy, with rain and hail at times.  
*Monday*, 27—Thermometer from 45 to 51.  
Barometer from 29, 90 to 30, 00.  
Wind S. W.  $\frac{1}{2}$  and 2.—Generally cloudy.  
Rain fallen, .05 of an inch.  
*Tuesday*, 28—Thermometer from 35 to 59.  
Barometer from 30, 15 to 30, 22.  
Wind S. W.  $\frac{1}{2}$  and 2.—Generally cloudy, with sunshine. The greater part of a halo formed between 6 and 9 o'clock this evening.  
*Wednesday*, 29—Thermometer from 41 to 60.  
Barometer from 30, 26 to 30, 22.  
Wind S. W. 1.—Morning and noon cloudy, the rest of the day generally clear.  
Edmonton, Middlesex. JOHN ADAMS.

### TO CORRESPONDENTS.

*Of Mr.'s Poem to Sepia, we can only insert the concluding lines.*

But man is born to bear the storm  
Of fate; and when he views the shore  
Of all his joys, fast from him torn,  
Earth then appears but a vale of  
Sadness; he's glad to shuffle off  
Its surface. Come what may, he fears  
No hell worse than—than that which sears  
His heart:—Fell disappointment—ah!

*The Editor has seen The Harp of the Desert, &c. and the impression on his mind was, that he had reviewed it in the Literary Gazette. He does not, however, discover it in the index, and supposes it must have been accidentally mislaid, after being marked out for notice. He will be happy to see the copy of his friendly correspondent.*

*A. B. M. is too warm for us, though we admire his poetry.*

*Ted's is too notorious to be chiefly by the puzzle where, not understanding English, he stole a Greek signature.*

# Miscellaneous Advertisements, (Connected with Literature and the Arts.)

into Jerusalem," is now open for Exhibition,  
at Bullock's Great Room, upstairs to the right, from  
ten till six.—Admission 1s. Catalogue 6d.  
\* Fear not Daughter of Zion; behold the King cometh,  
sitting on an ass's colt.\*

## BOOKS PUBLISHED THIS DAY.

**THE NEW MONTHLY MAGAZINE** for  
April, is embellished with a fine portrait of his  
present Majesty, George IV., and contains among other  
interesting articles.—1. Remarks on the Literary, Sci-  
entific, Political, and Moral Progress of Great Britain,  
during the reign of George III.; with some observa-  
tions on the state of the Empire at the accession of his  
present Majesty George IV. 2. On the genius and in-  
fluence of Woman, with anecdotes. The Monastery, a  
Romance, by the author of Waverley, &c. 3. Health-  
ful elements of a plan for the payment of the national  
debt. 4. On the love of our country. 5. Adven-  
tures of Traveler, in the Island of St. Jago, from an un-  
published MS. 6. On the education of the natives of  
India, 7. Spain, and the Inquisition. 8. On the pre-  
sent state of the English stage, No. 2, comprising  
remarks on Messrs. Munden, Eiliston, C. Kemble, Liston,  
Ferra, Dowton, Farwell, Emery, Knight, Jones, &c.  
Mr. Davison, C. Kemble, and Edwin, Misses Kelly,  
Rivlin, Tree, Byrne, &c. 9. William's Travels in  
Italy, Greece, &c. 10. On Oriental Music. 11. Ottomani,  
a Tale. 12. Mr. Hemming and the Elgin Marbles. 13.  
On the literature and Arts of the early Romans. 14. Re-  
marks on the British Gallery, by Mr. Carey. 15. Dra-  
matic Notices. 16. Italian opera. 17. Varieties,  
Literary and Scientific. 18. Callaud's discoveries in Egypt.  
19. New publications, with critical remarks. 20. New In-  
ventions and Discoveries. 21. Reports, Literary, Metro-  
logical, Agricultural and Commercial. 22. History of  
Political Events. 23. Interesting Occurrences,  
Promises, Births, Marriages, and Deaths; with Bi-  
ographical particulars of the most celebrated persons.  
The three preceding Numbers for the present year are  
embellished with portraits of his late Majesty, the Duke  
of Kent, Viscount Catleburgh, and Antonio Canova;  
and the next Number will be embellished with a fine  
portrait of the late Benjamin West, Esq., engraved in the  
same manner, by Cooke, after the painting by Halloway.  
Persons who may be desirous of commencing with the  
present year are requested to transmit their orders  
without delay to their respective booksellers or news-  
men. London: Printed for Henry Colburn and Co. Con-  
duit Street, to whom communications for the Editor  
are requested to be addressed.

**Embellished with a Portrait of his late Majesty  
George III.** Price 1s.—No. IV. of  
**THE IMPERIAL MAGAZINE.** Containing  
an interesting Narrative of the Baptism of two  
Booths High Priests, by Adam Clarke, L.D. also a  
full Memoir of His late Majesty George III. and  
of his respecting Popery; Copies on study and learn-  
ing; Memoir of His Royal Highness the Duke of Kent;  
Astronomical Observations for April; the Death Watch  
on the Eternal Sonship of Christ; Geological Essay on  
the duration of the Mosaic days of the Creation; Super-  
stitions of the fifteenth Century; Poems of Tyrticus;  
Review of Hoffman's Lectures on Practical Religion; Ber-  
nart's Query, on "Lead us not into temptation;" Re-  
marks on Brunel on the Divine Providence; History  
of the World; Reply to "Christ's not praying for the  
World;" Poetry: The Villager's Boy, Canto III.; Em-  
manu's Sacred Ode; Lines on Good Friday; Commercial  
Report, Prices Current, &c. Printed and Published by  
Henry Fisher, Liverpool, and W. Bartholemew Close  
London, and sold by the Booksellers generally in the  
United Kingdom.

**Encyclopædia Britannica.—New Edition.**  
On the first of April was published, handsomely printed  
in quarto, with new engravings, price 18s. in boards.  
Volume First, Part Second, of  
**THE ENCYCLOPÆDIA BRITANNICA;** or  
Dictionary of Arts, Sciences, and Miscellaneous  
Literature. Sixth edition, revised, corrected, and im-  
proved. Printed for Archibald Constable and Co.  
Edinburgh; and Hurst, Robinson, and Co. W. Cleap-  
side, London, and sold by all booksellers.

\* \* \* The sixth edition of the *Encyclopædia Britannica*,  
now offered to the public, has been much improved,  
particularly by adapting the geographical and statistical  
articles to the present state of the world. References  
have also been made, where necessary, to the new and  
important articles in the Supplement, now in course  
of publication; so that the whole will form the most  
complete repository of general knowledge that has yet  
been given to the public.

Conditions.—1. The work will consist of twenty vol-  
umes, handsomely printed, with nearly six hundred  
engravings, executed in a superior manner; each vol-  
ume containing one hundred sheets letter press, or 800  
pages.—2. To purchase the convenience of every class of  
purchaser, it will be published in Parts or Half Vol-  
umes, each containing fifty sheets letter press, and, at  
at average, fifteen Plates. 3. A part or half-volume will  
be regularly published on the first day of each month,  
till the whole is completed; and as the printing of the  
whole is already considerably advanced, purchasers may  
depend on the most rapid punctuality of publication.

On the first of April will be published, royal 4to. price  
12s. 6d.; large paper, 18s.; India proofs, 1l. 10s.

**HAWKSWILL and TURNER'S VIEWS IN  
ITALY,** illustrate of Addison, Eustace, Forsyth,  
Rose, &c. No. X. containing

**THE LONDON MAGAZINE, No. IV.** pub-  
lished by Baldwin, Cradock, and Joy, contains, 1.  
Memoirs of the Life and Writings of Sir John Suck-  
ling. 2. Observations on Keat's Endymion. 3. The  
Dag-piper in Tottenham Court Road. 4. Song. 5. Me-  
chanics. 6. On the Cultivation of the Ancient Litera-  
ture of the North at the present period. 7. Sentimen-  
tality on the Fine Arts. 8. Observations on some dis-  
tinctions between the English and Scottish Law. 9.  
Sonnet to the author of the Journal of an English Traveller  
in Palestine. 10. The Leper of the City of Aosta. 11. Son-  
nets, by W. Cornelius. 12. Biographical Notices of the  
late Duke of Kent, by a Member of his Household. 13.  
To my Mother. 14. The Drama. 15. Report of Music,  
and Account of new Musical publications. 16. Notices  
of Fine Arts.—Mr. West, the British Institution. 17.  
Gleanings from Foreign Journals. 18. Medical Art. 19.  
20. Rural Economy. 21. Commercial Report. 22. Cri-  
tical Notices of new Books.—Dr. Meisner's Travels  
through Germany, Holland, England, and Scotland.—  
London in 1819, by the author of *A Year in London*.  
24. Literary and Scientific Intelligence: Colonial In-  
fluence; New Acts of Parliament; New Patents; Eccle-  
siastical Preferments; Bankruptcies; Births, Deaths,  
and Marriages; Meteorological Register; Markets, &c.

**PRACTICAL ESSAYS ON STRUCTURES OF  
THE URETHRA AND DISEASES OF THE TETHI-  
CLPS,** including Observations on Fistula in Perineo and  
Hydrocele, illustrated by numerous Cases, and an En-  
graving, with a Preface, and some Remarks on Life and  
Organization, by ROBERT BINGHAM, Fellow of the  
Royal College of Surgeons.

"All extremes are error. The reverse of error is not  
truth but error. Truth lies between these extremes."  
Rev. R. Cecil's Remarks.  
Printed for Longman, Hurst, Rees, Orme, and Brown,  
London.

On the first of April will be published, with engravings,  
wood cuts, &c. in 8vo. 7l. 6d. the

**QUARTERLY JOURNAL OF SCIENCE,  
LITERATURE, AND THE ARTS,** edited by the Royal  
Institution. No. XVII. Contains.—1. Original Jour-  
nal of an Excursion from St. Thome de Angostura, in  
Sp. nish Guayana, to the Capuchin Missions of the Ca-  
non, with a Map of the author's Route. 2. Remarks on  
Laplace's latest computation of the Density and Figure  
of the Earth. 3. Geological Description of the Hills  
which pursue the course of the Wye, from Roast to Chep-  
stone, with remarks upon the characteristics of the  
Hertfordshire Formation, and an outline of the Strati-  
fication of the Forest of Dean, and the opposite shores  
of the Severn. By John Fookrooke, Esq. 4. Descrip-  
tion of the Silures, or Catfish, of the River Ohio. By  
C. S. Rafinesque, Professor of Botany and Natural  
History in the Transylvania University of Lexington,  
in Kentucky. 5. On Fluidity; and an Hypothesis  
concerning the Structure of the Earth. 6. Letter from  
Capt. Wm. Spencer Webb, containing an account of his  
Journey in Tibet, and Pilgrimage to the Temple of  
Kidar Nath. Communicated by H. T. Calverbrook, Esq.  
7. On the Manufacture of British Opium. By the  
Rev. G. Swayne. 8. On the Variation of the Com-  
pass observed in the late Voyage of Discovery to the  
North Pole, under Capt. Buchan. By George Fisher,  
Esq. 9. Observations on the Theory which ascribes be-  
nevolence to the agency of Nature. By W. P. Allard.  
M. D. T. R. 10. On the new mode of En-  
graving on Steel, with an explanatory plate. By Messrs.  
Purkins and Fairman. 11. On the New Hygrometer.  
By J. T. Daniell, Esq. F. R. S. and M. R. L. with a cut.  
12. Account of the exhumation and re-interment of King  
Robert Bruce, with a cut. 13. Reports of the Commis-  
sioners appointed for enquiring into the mode of pre-  
venting the Forgery of Bank Notes. 14. Proceedings of  
the Royal Society. 15. Astronomical and Natural Col-  
lections, Mechanical Science, Natural History, General  
Literature, &c. Meteorological Journal for December,  
1818, and January and February, 1819. Select List of  
New Publications, &c. Printed for John Murray,  
Albemarle Street.

**Hogarth.**  
By Baldwin, Cradock, and Joy. Price to Subscribers  
1l. 1s.—No. 1. of

**THE Original and Genuine WORKS OF WIL-  
LIAM HOGARTH,** from the Plates last in the  
possession of Messrs. Boydell, and others, engraved by  
the eminent artist, in the whole under the superintendence  
of James Heath, Esq. R. A. accompanied by explana-  
tions of the various Subjects. By JOHN NICHOLS, Esq.  
F. A. S. &c. This Number contains.—1. Portrait of  
Hogarth. 2. The Harlot's Progress, Plate II. 3. The  
Rake's Progress, Plate III. 4. Idleness and Industry,

\* \* \* \* \* Having the course of publication, the Work will  
be applied to Subscribers, whose Names and Ad-  
dresses must be forwarded to the publishers through the  
medium of their respective Book or Printers. The  
impressions will be delivered in the exact order of  
the Subscription List; and the name of each Sub-  
scriber will be printed on the Wrapper of his Copy.

The price to Subscribers is 1l. 1s. each Number; but  
every Number not called for within six months from the  
day of its publication will be advanced to 1l. 4s.  
\* \* \* \* \* Also Copies remain of the third Volume of Mr.  
Nichols's "Biographical Anecdotes of Hogarth," in 4to.  
price 4s. 4d. or on large paper, price 6s. 6d. sold by  
Baldwin, Cradock, and Joy; and Messrs. Nichols and  
Son, Parliament Street.

**Fancy.—Second Edition.**  
**LETTERS ON THE EVENTS** which have passed  
IN FRANCE since the Restoration in 1815. By  
HELEN MARIA WILLIAMS. Second Edition, 8vo.  
price 7s. 6d. with a Supplement. London: Printed for  
Baldwin, Cradock, and Joy, Paternoster Row.

**Mrs Burney's New Work.**  
The Second Edition, in 3 vols. 1l. 4s.  
**TALES OF FANCY.** By MISS BURNES,  
Author of *Clarelina*, *Traits of Nature*, &c.  
Vol. 1. containing the Shipwreck, &c. &c. &c. &c. &c.  
Country Neighbors. Either of the Tales may be had sep-  
arately. Printed for Henry Colburn and Co. Conduit  
Street.

In two large volumes, 8vo. illustrated by twenty-one

Engravings, price 2l. 2s. boards.  
**AN ACCOUNT OF THE ARCTIC REGIONS,**  
 with a History and Description of the Northern  
 Whale Fishery. By WILLIAM SCORSBY, Junior,  
 F.R.S.E. Printed for Archibald Constable and Co.  
 Edinburgh; and Hurst, Robinson, and Co. Chesapeake,  
 London.

"\* This work is addressed both to the scientific and  
 the mercantile world, the first volume containing a full  
 Description of the physical Condition of the Arctic Re-  
 gions, and the second volume, a detailed Account of the  
 Northern Whale Fishery, including the outfit of the ves-  
 sel, the mode of fishing, the expenses, profits, &c. The  
 most ample testimony has of late years been borne to  
 Captain Scoresby's character, as a man of science, by  
 some of the most distinguished philosophers of this  
 country and the Continent; and the experience derived  
 from seventeen voyages to Greenland, joined to the in-  
 variable success which he has experienced in the whale  
 fishery, must render this Captain Scoresby's Work the most  
 desirable guide to those who embark their capital in  
 this important branch of our trade.

Beautifully printed by Ballantyne and Co. price 14r. 6d.  
**MICHELLEAU'S VOUS POEMS.** By WALTER  
 SCOTT, Esq.

"\* This volume contains the Bridal of Triermind,  
 Harold the Danless, "William and Helen," imitated  
 from the "Lenore" of Burger, and all the smaller  
 Pieces, collected for the first time in the recent edition  
 of the Author's Poems. It is printed uniformly with  
 the octavo editions, in order to accommodate pur-  
 chasers of sets of Mr. Scott's Poetry in that size, which  
 this volume will complete.

Printed for Archibald Constable and Co. Edinburgh;  
 and Hurst, Robinson, and Co. Chesapeake, London. Of  
 whom may be had, Sir Tristram, a metrical Romance of  
 the Thirteenth Century. By Thomas of Breidenow,  
 called the Rhymer. Edited from the Auchinleck MS.  
 by Walter Scott, Esq. Fourth edition. Octavo. 15s.  
 boards. New edition of the Lady of the Lake, Rob-  
 ert, &c. also Mr. Scott's other Poems, uniformly printed in  
 octavo.

*Life of the King.*  
 In 2 vols. 8vo. embellished with 16 portraits, price 24s.

**GEORGE THE THIRD; his COURT and  
 FAMILY.** This interesting work, which has  
 been long since prepared for the press, will be found  
 to contain a richer collection of original Anecdotes of  
 illustrious and distinguished persons than has ever yet  
 been submitted to the curiosity of the public; and it abounds  
 in relations of those peculiar traits of character  
 for which his Majesty was so distinguished during his  
 long and eventful reign, and which have rendered his  
 personal history so remarkably attractive. Printed for  
 Henry Colburn and Co. Conduit Street.

The third edition, in three thick volumes, 8vo. correct-  
 ed and improved, with a map, 2l. 8s. boards.

**THE HISTORY OF THE ANGLO-SAXONS,**  
 from their first appearance in Europe to the end  
 of their Dynasty in England; comprising the History  
 of England from the earliest period to the Norman Con-  
 quest. By HARRIS TUCKER, F.R.S. Printed for  
 Longman, Hurst, Rees, Orme, and Brown, London.  
 Also by the same author, The History of England, from  
 the Norman Conquest to the conclusion of the reign of  
 Henry V. Also the History of Religion in England.—

 Co., and John Ballantyne, Bookseller to the King, Edin-  
 burgh.

**A SICILIAN STORY, with DIEGO DE  
 MONTILLA, and other Poems.** By BARRY  
 CORNWALL.

"It is delighted to turn awhile from moral and political  
 animosities to the unalloyed sweets of such poetry as  
 Mr. Cornwall's; and to refresh our fancies, and  
 strengthen and compose our good affections among the  
 images of love and beauty, and gentle sympathy and  
 sorrow, with which it every where presents us." *Edin-  
 burgh Review.*

Printed for C. and J. Olliver, Vere-street, Bond-street.  
 Of whom may be had, by the same author, Dramatic  
 Scenes, 2d edition, 7s.
